Physical Type: Open Site

**L(m):**  
3.00

**B(m):**  
3.00

BroadAgeCategory: LSA

Site Category: Artefacts

**SiteComments:**

Relict beach deposits form the exposed surface of a blow out of the shore face of the coastal dune. Close to the active face of the blow out is a dense patch of less fragmented shell and nearby a packed stone feature of about 0.5m diameter. The sediment between the packed stones is well carbonised but no ash remains. The stone feature is clearly a hearth.

**AdminComments:**

this site is very difficult to access, the exposure is entirely due to wind erosion and probably occurred fairly recently. The position of the materials at the base of a substantial dune suggests they are quite old.

Stone Artefact Types: Quartzite

**StoneArtefactNotes:**

A few quartzite flakes and one flake quartzite cobble are scattered in amongst the shells.

Organic Artefact Types: Marine Shell

Manufactured Artefact Types: Glass

**DetailsOfCulturalMaterial:**

On the surface of the deflated sand lie numerous fragments shells and water worn shell fragments and pebbles. Shell includes perlemoen, alikreukel, whelk and limpet.

Damage Types:
