	Site Name	Pandamsfontein 008
	Date	01/08/2014 - 06:29
	Project	
	CaseNID	128913
	Coords	-28.905808, 24.955608

Page No: 1 **SiteAutoID:** 39438

Site Category: Artefacts

SiteComments:

These artefacts appear principally to be Middle Stone Age in character. Artefact densities in this featureless plain are low where they occur at the surface and it is estimated that they would be similarly fairly sparse over the entire PV array footprint. A relevant observation made some distance away from the solar energy facility site is of similar Stone Age material occurring at the edge of a small vlei which in all likelihood held water in times of wetter climate. At relatively high densities of this material occur at the margins of the vlei.

Damage Types:
