Page No: 1 **SiteAutoID:** 40024

AlternateName:

Site 7

BroadAgeCategory: LSA

Site Category: Stone walling, Artefacts

SiteComments:

Packed stone walling in the form of a circular stone walling feature as well as a stone walling kraal were documented at a koppie marked. Two rock shelters were also observed with packed stone walling, however no obvious archaeological scatters or deposit was observed within the rock shelters, except a pitted lower grindstone and a bead was noted at the rock shelter marked. Random surface scatters of Later Stone Age (LSA) stone artefacts were documented around and on top of the koppie. The stone artefacts comprised mainly of formal tools such as endscrapers, flakes and chips were also observed on top of the koppie. The stone artefacts were mainly manufactured on hornfels and other fine-grained raw materials such as chalcedony and silcrete. A few fragments of porcelain and copper and freshwater mussel were also documented around the circular stone walling feature. The fresh water mussel may have been brought into the area by otters or other animals.

Stone Artefact Types: Silcrete, Hornfels, CCS

Manufactured Artefact Types: Porcelain, Metal Items

DetailsOfCulturalMaterial:

Freshwater mussel

Damage Types:
