Site Category: Shell Midden

**SiteComments:**

Three separate trial excavations were dug on this enormous scatter which extends southwards from Muisbosskerm down the eastern side of the property. Below surface conditions are variable with the third trial hole indicating a dense lens of mussel and limpet below the surface (second GPS location). Shell densities seem to vary from place to place.

**AdminComments:**

Second GPS location for this site 32°08.1802'S 18°18.3884'E
