**SiteAutoID:** 83911

**AlternateCode:**

EMP03

BroadAgeCategory: EIA, LIA

Site Category: Artefacts

**Directions:**

1.6km southeast of EMP02. Or from R102 follow signs to sewer works, then 900m NW in sugar cane on eastern side of the dam. There s a trig beacon just uphill from the site.

**SiteComments:**

EMP03 is located near the dam, along the riverbank. The site consists of a wide scatter of pottery sherds. One sherd appears to be patinated suggesting it may date to the Early Iron Age; however, the other sherds probably date to the Late Iron Age. The sherds probably originate further uphill where the current houses are located.

**AdminComments:**

Empangeni southern sewer outfall.doc Conservation Comments: Merits conservation - Threats? y What threat? pipeline Significance: low Mitigation: none Require mitigation: none
