	CaseNID	195365
	Coords	-26.070000, 27.780083

Page No: 1 **SiteAutoID:** 90720

AlternateName:

Site RD08

Site Category: Structures

SiteComments:

The study area is scattered with the remains of prospecting and small-scale mining as noted in the archival research. The bulk of the incline shafts identified (RD03, RD05, RD13) are situated in side the conservation section of the development or on the periphery, just inside the developable areas. The remains of the vertical shafts at RD10 are situated in side the developable area and will be impacted by development. A set of prospecting trenches (RD06-RD07) and drill testing positions (R08) situated on the northern most ridge of the property are situated inside the developable area.

Damage Types:
