Page No: 1      **SiteAutoID:** 129698

Physical Type: Rock Wall

BroadAgeCategory: Iron Age

Site Category: Stone walling

**Directions:**

Motor City lies adjacent to Munnik Street/R81 in Polokwane, Limpopo province.

**SiteComments:**

Motor City lies adjacent to Munnik Street/R81 in Polokwane, Limpopo province. Motor city: The terrain under is currently vacant land, adjacent the R81, near Thornhill Centre, Polokwane. The area lies below a known archaeological site that has been preserved. Power cable: The proposed power cable for the motor city is to run alongside De Wet Drive, to the side of the Ndebele site which is located on a hill close to the development area. According to the most recent Iron Age archaeological cultural distribution sequences by Huffman (2007), this area falls within the distribution area of various cultural groupings originating out of both the Urewe Tradition (eastern stream of migration) and the Kalundu Tradition (western stream of migration). Polokwane has a rich history of archaeological occupation, especially related to the Letaba facies these sites bear testimony to Ndebele history.

**StoneArtefactNotes:**

Remains from a small stone walled site were noted. It appears as if the power cable will have a direct impact on it.

**DepositComment:**

archaeological sites are subterranean and only visible when disturbed. Vegetation was moderate and visibility fair.

Damage Types:
