	Site Name	21/2/2020/Archaeological site
	Date	13/01/2020 - 08:28
	Project	
	CaseNID	
	Coords	-28.883167, 19.551000

Page No: 1 **SiteAutoID:** 129861

Physical Type: Open Site

Site Category: Archaeological

Directions:

far north-western area

SiteComments:

The only area of real concern for the power corridors lies in the far north-western area where Alternatives 2 and 3 pass through an area with many small rocky hills. There are numerous archaeological sites associated with these hills. The most important site was located, It was an area on the north side of a small rocky hill that had many large quartz artefacts scatter and much ostrich eggshell fragments on it. In front of the scatter is a bedrock outcrop with at least 15 grinding patches on it. The scatter includes quartz, CCS, 'other', ostrich eggshell and a few pieces of bone. It is even possible that a subsurface deposit might be present. A fragment of sponge-printed ceramic was also found.

Stone Artefact Types: CCS, Quartz

StoneArtefactNotes:

Bedrock exposure with at least 15 ground patches, and a small rocky hill.

Organic Artefact Types: Bone, Ostrich Eggshell

Manufactured Artefact Types: Ceramics

DetailsOfCulturalMaterial:

A fragment of sponge-printed ceramic was also found.

Damage Types:
