Site Category: Structures

**SiteComments:**

The survey identified several ruined buildings and farm structures along the proposed Alternative 1 powerline route. Most of the recorded buildings and structures are located within privately owned farms where access is restricted due to security reasons. As such the study could not establish the exact ages of the structures to determine their significance and subsequent protection. The study team sent questionnaires to farmers along the powerline route to declare heritage resources in their farms and responses are trickling in slowly.

Damage Types:
