Page No: 1      **SiteAutoID:** 132101

Physical Type: Open Site

BroadAgeCategory: Stone Age

Site Category: Archaeological

**Directions:**

North East

**SiteComments:**

About 1km to the North East, Middle stone age and later stone age artefacts were documented eroding out of the donga and at the surface surrounding the rocky outcrop. The later stone age comprised mostly of flakes and chips which indicate that people were knapping and manufacturing their tools within this area. Formal tools comprised of a few endscrapers made on hornfels and one segment made of silcrete.

Stone Artefact Types: Hornfels, Silcrete

Damage Types:
