Page No: 1      **SiteAutoID:** 140194

**CommonName:**

SLD12

Site Category: Shell Midden

**Directions:**

This site was observed in the section of the road cutting near the southern end of the Eastern Loop road.

**SiteComments:**

The observable part of the site is an in situ shell midden (of *P. perna*) with a cultural deposit. The midden is  $\pm 30$ cm below the current topsoil (under dense vegetation) and is  $\pm 3$  cm in depth. The rest of the site probably occurs on both sides of the road. Grindstones fragments were noted further downhill and are probably part of this site.

Damage Types:
