DRAFT AMENDMENT ASSESSENT REPORT

1 INTRODUCTION

Cape EAPrac has been appointed by Postmasburg Solar PV Energy Facility 2 (Pty) Ltd, hereafter referred to as the Applicant, as the independent Environmental Assessment Practitioner (EAP), to facilitate an application for an amendment of the project's Environmental Authorisation (EA) in terms of the National Environmental Management Act (NEMA, Act 107 of 1998), for the authorised 'Postmasburg Solar PV Energy Facility 2' development near Postmasburg in the Northern Cape Province of South Africa.

Postmasburg Solar PV Energy Facility 2 received an environmental authorisation on 25 May 2015. The total authorised generation capacity of Postmasburg Solar PV Energy Facility 2 is 75 Megawatts (MW_{AC}). The applicant intends amending the EA to provide for a Battery Energy Storage Systemm (BESS) of up to 3.9ha within the authorised footprint of the facility.

The purpose of this **Amendment Assessment Report** is to describe the environment to be affected by the proposed BESS and to identify and assess any resulting impacts that may result from the addition of BESS on 3.9ha within the authorised footprint. In compliance with regulatory requirements, this report includes:

- 1. An assessment relating to the impacts of the proposed amendments;
- 2. The advantages and disadvantages associated with the proposed amendments;
- 3. Measures to ensure avoidance, management and mitigation of impacts associated with the proposed amendment; and
- 4. Revised EMPr

The Draft Amendment Assessment Report along with all the the supplementary appendices has been made available to all registered and potential Interested and Affected Parties (I&APs) for a 30 day comment period.

All comments received on the Draft Amendment Assessment Report will be considered, addressed and incorporated into a Final Amendment Assessment Report to be submitted to the DEFF for consideration and decision making.

1.1 Proposed Amendments

The applicant wishes to amend the EA to include a BESS of up to 3.9 ha within the authorised footprint of the Facility. Other aspects included in this application for amendment are:

- 1. Extending the validity period of the EA; and
- 2. Update the contact details of the applicant.

In order to affect these, the following amendments to the Environmental Authorisation will be required.

Table 1: Proposed amendments to the Environmental Authorisation for Postmasburg Solar PV Energy Facility 2.

The amendments applied for are for the following purposes:

- 1. To change the contact details of the Applicant (Amendment 1);
- 2. To extend the validity period of the EA to accommodate the changes that have been applied for as well as to accommodate bidding periods (Amendment 2); and
- 3. To include Battery Energy Storage System (BESS) in the form of Lithium-ion Battery Technologies to the descriptions of the solar facility (Amendments 3, 4 & 5).

The proposed amendments requested below are in chronological order as they appear in the original EA of 25 May 2015 and Amended EA od 08 May 2018.

Amendment 1 – Change Applicant Contact

The contact details on the title page of the Amended EA, 08 May 2018:

Mr Jan Fourie
Postmasburg Solar PV Energy Facility 2 (Pty) Ltd
101, Block A, West Quay Building
7 West Quay Road,
Waterfront

CAPE TOWN 8000

Telephone Number: (021) 418 2596

Email Address: jan.fourie@scatecsolar.com

This should be amended to:

Mr Anthony De Graaf Postmasburg Solar PV Energy Facility 2 (Pty) Ltd. 101 Block A, West Quay Building,

7 West Quay Road, Waterfront, CAPE TOWN 8001

Telephone Number: (021) 446 7080 Email Address: anthony@atlanticep.com

Amendment 2 - Extension of Validity Period

Title page of Amended EA, dated 08 May 2018, stated:

Amendment 1: To extend the validity period of the EA

The activity must commence within a period of five (05) years from the date of expiry of the EA issued on 25 May 2015 (i.e. the EA lapses on 25 May 2023). If commencement of the activity does not occur within that period, the authorisation lapses and a new application for environmental authorisation must be made in order for the activity to be undertaken.

This should be amended to read:

The activity must commence within a period of two (02) years from the date of expiry of the Amended EA of 08 May 2018 (i.e. the EA lapses on 25 May 2025). If commencement of the activity does not occur within that period, the authorisation lapses and a new application for environmental authorisation must be made in order for the activity to be undertaken.

Amendment 3 - Inclusion of BESS

Page 4 of the EA authorises GN R. 546: Activity 14(3)(a)(i) as follows:

Listed activities

GN R. 546: Activity 14(3)(a)(i):

The clearance of an area of 5ha or more of vegetation where 75% or more of the vegetative cover constitutes indigenous vegetation; (3) for a linear activity. (a) In the Northern Cape. (i) All areas outside urban areas.

Activity/Project description

Vegetation clearing for the Solar Panels and associated infrastructure: access roads, cable trenches and onsite substation & axillary buildings etc. outside of the Postmasburg urban edge. Solar Energy Plant to be constructed over an area approximately 225ha on private land. Low-growing intact vegetation will retained as far as possible.

The Activity/Project description should be amended to read:

Vegetation clearing for the Solar Panels and associated infrastructure: access roads, cable trenches, onsite substation, auxillary buildings & Battery Energy Storage System (BESS) etc. outside of the Postmasburg urban edge. Solar Energy

Plant to be constructed over an area of approximately 225ha on private land. Low-growing intact vegetation will be retained as far as possible.

Amendment 4 - Inclusion of BESS

Page 5 & 6 of the EA described the associated infrastructure as:

The infrastructure associated with this facility includes:

- Solar field of PV modules/panel arrays (fixed / tracking technology) with a maximum structure height of ± 3.5 metres;
- Mounting structures foundations to comprise of driven / rammed piles, earth-screws or rock anchors.
- Up to a maximum of ± 60 inverter / transformer stations, including medium voltage (MV) distribution transformers, at a height of ± 3m;
- On-site Substation of ± 120m x 70m in size (including a power transformer/s to allow the
- generated power to be connected to Eskom's electricity grid via the Manganore Substation);
- Overhead 132kV monopole transmission power line to distribute the generated electricity from the
 on-site substation to the existing Eskom Manganore Distribution Substation (located directly
 adjacent to & south east of the site). The transmission line will be a single circuit line, ±500m to
 1km in length, with a maximum height of ± 32m, within a servitude width of between 31m 40m;
- · Auxiliary buildings, including:
 - Control building (±31m x 8m);
 - Office (±22m x 11m);
 - Two warehouses (±50m x 20m);
 - Canteen and visitors centre (±30m x 10m);
 - Staff lockers and ablution (±22m x 11m); and
 - Gate house/security offices (±6m x 6m).
- Internal electrical reticulation network (to be lain ±2-4m underground as far as practical);
- Access road (±6m) and internal road/track (±5m wide) network;
- Laydown areas required for material and equipment (±200m x 150m);
- Rainwater tanks; and
- Parameter fencing and lighting around the solar facility.

This should be amended by the addition of:

• Battery Energy Storage System (BESS) with an area of up to 3.9 hectares, within the approved facility footprint.

Amendment 5 - Inclusion of BESS

Condition 12 on Page 7 & 8 of the EA describes the Management of the activity as follows:

Management of the activity

- 12. A copy of the final development layout map must be made available for comments by registered Interested and Affected Parties and the holder of authorisation must consider such comments. Once amended, the final development layout map must be submitted to the Department for written approval prior to commencement of the activity. All available biodiversity information must be used in the finalisation of the layout map. Existing infrastructure must be used as far as possible e.g. roads. The layout map must indicate the following:
 - 12.1 Compliance with the conditions of this Environmental Authorisation.
 - 12.2 Position of solar facilities and its associated infrastructure:
 - 12.3 Internal roads indicating width;
 - 12.4 Wetlands, drainage lines, rivers, stream and water crossing of roads and cables;
 - 12.5 All sensitive features e.g. heritage sites, wetlands, pans and drainage channels that will be affected by the facility and associated infrastructure;
 - 12.6 Substation(s) inverters and/or transformer(s) sites including their entire footprint;
 - 12.7 Connection routes (including pylon positions) to the distribution/transmission network;
 - 12.8 All existing infrastructure on the site, especially roads;
 - 12.9 Buildings, including accommodation; and,
 - 12.10 All "no-go" and buffer areas.

This should be amended by the addition of:

12.11 Battery Energy Storage System (BESS).

1.2 Reasons / Motivation for Proposed Amendments

The proposed amendments include 3 main changes; namely:

- 1. Inclusion of BESS of up to 3.9ha within the authorised footprint;
- 2. Updating contact details of the applicant; and
- 3. Extension of validity period of the EA

The reasons for applying for these amendments are discussed separately below.

1.2.1 Inclusion of BESS of up to 3.9ha within the authorised footprint

Please refer to the BESS Technical motivation report attached in Appendix D7 for the full details regarding the BESS within the authorised project footprint from which the following is summarised.

South Africa has recognised the need to expand electricity generation capacity within the country. This is based on national policy and informed by ongoing planning undertaken by the Department of Energy (DoE) and the National Energy Regulator of South Africa (NERSA).

In recent years, recurring large-scale power cuts (i.e. load shedding) have highlighted the need to improve reliability and resilience of electricity supply.

One of the main challenges faced by Eskom is managing and balancing electricity demand and supply. While renewable sources can now achieve lower costs than fossil fuels, photovoltaic (PV) arrays and wind turbines both have variable electricity production, since they rely on energy inputs that cannot be controlled (i.e. sunshine and wind). For this reason, fossil fuels currently still have a key role in the energy sector as they can provide electricity on demand and when consumption reaches its peak.

However, cost reductions of energy storage technologies and the wider deployment of battery (particularly lithium-ion) installations globally, now provides an opportunity to combine renewable energy generation with energy storage to provide dispatchable energy (i.e. energy on demand) and reliable capacity.

Figure 1: Showing the proposed location of the BESS within the authorised footprint of the facility.

1.2.2 Updating contact details of the applicant

A change in company directors of the Applicant entity was affected in June 2020. See CIPC certificate indicating Amendment of Company Information, attached as Appendix 11 in the application form

(Appendix H). Please note that this is an administrative decision and will not result in any changes to the overall impacts of the authorised facility.

1.2.3 Extension of EA validity period

Due to various delays in the DOE's Renewable Energy Independent Power Producers Procurement Programme (REIPPPP), the applicant has not had an opportunity to bid this project under the programme. The extension of the validity period of the EA is needed in order to bid this project in future bidding rounds.

1.3 RECOMMENDATION OF THIS ASSESSMENT REPORT

Based on the outcomes of this assessment (which includes input from the participating specialists), as well as the outcome of the risk assessment, it is Cape EAPrac's reasoned opinion that the application for amendment of the Environmental Authorisation be granted, subject to the following conditions:

- 1. That the BESS Revision to the EMPr be adopted and implemented for the life cycle of the project:
- 2. That the additional mitigation measures detailed in section 7 of this assessment report be adopted and implemented;
- 3. That the additional mitigation measures identified in the Risk Assessment be implemented; and

2. OVERVIEW OF THE ACTIVITIES PROPOSED AS PART OF THE AMENDMENT TO THE EA.

As noted above, amendment proposed relates to the Inclusion of BESS of up to 3.9ha within the authorised footprint, the update of the applicants contact details and the the extension of the EA validity period.

The updating of contact details and the extension of the EA validity period do not result in any physical changes to the proposed development. This section therefore focusses on the proposed inclusion of the BESS.

A BESS technical document is included in Appendix D7, from which the following overview of the project is summarised.

2.1 TECHNOLOGY

Unlike conventional energy storage facilities, such as pumped hydro, a BESS has the advantage of being flexible in terms of site location and sizing. Therefore, they can be incorporated into, and placed in close proximity, to a wind or solar facility. They also have the advantage of being easily scaled and designed to meet specific demands.

Different BESS technologies, such as lithium-ion (Li-ion), zinc hybrid cathode, sodium ion, flow (e.g. zinc iron or zinc bromine), sodium sulphur (NaS), zinc air and lead acid batteries, can be used for grid applications. Compared to other battery options, Li-ion batteries are highly efficient, have a high energy density and are lightweight. As a result of the declining costs, Li-ion technology now accounts for more than 90% of battery storage additions globally (IRENA, 2019).

Therefore, in line with the above, it is proposed that Lithium Battery Technologies, such as Lithium Iron Phosphate (LFP) or Lithium Nickel Manganese Cobalt oxides (NCM), be considered as the preferred technology in this amendment process.

Figure 2: Tesla's Megapack Li-ion Battery (Modular System).

2.2 LOCATION AND SIZE OF THE BATTERY STORAGE AREA

The battery storage facility will be constructed within the authorised footprint, adjacent to the on-site substation, as per the figure below (please also refer to the full scale layout plans attached in Appendix Appendix C).

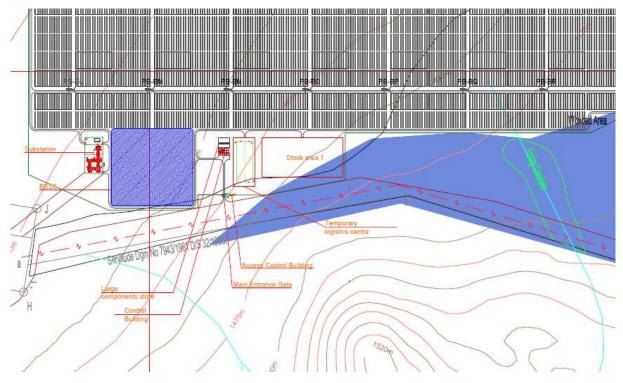

Figure 3: Excerpt of Site Layout plan, showing the proposed position of the BESS (blue polygon) within the authorised footprint.

2.3 GENERAL COMPONENTS

The exact design will depend on the manufacturer, however traditional utility-scale Li-ion battery storage facilities include the following main components:

- 1. Battery cells \rightarrow modules \rightarrow packs \rightarrow racking system (DC).
- 2. Storage container (HVAC system, thermal management, monitors and controls, fire suppression, switchgear, and energy management system).
- 3. Power conversion system (bidirectional inverter to convert AC to DC for battery charging and DC to AC for discharging).
- 4. Transformer (to step up 480-V inverter output to 12-66 kV).

The figures below illustrates the components that generally make up the primary battery system,

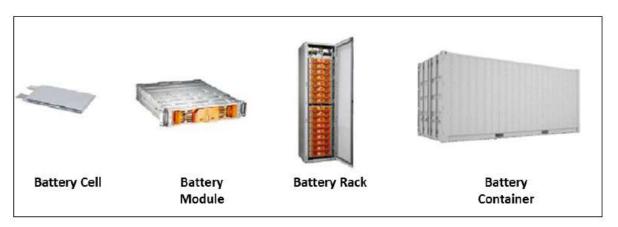

Figure 4: Typical Battery System Components.

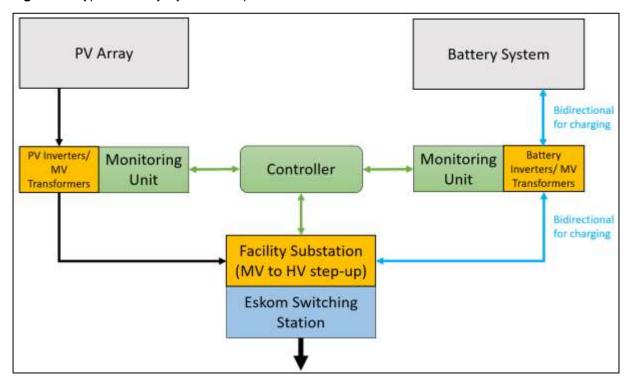

Figure 5: Typical flow diagram of PV plant with battery storage

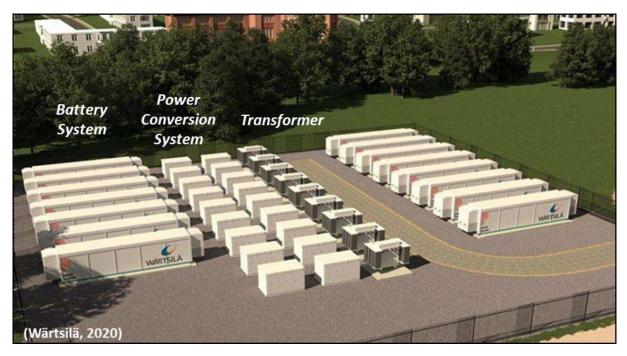

Figure 6: Example of a typical Battery Energy Storage System - Pivot Power's proposed lithium-ion battery in Kemsley, Kent.

3. PROJECT NEED AND DESIRABILITY

The need and desirability of the total project considered in the previous environmental process will remain and is not reiterated as part of this amendment application. The section below, therefore provides a summary of the Need and desirability associated with the proposed BESS amendments only. Please refer to the BESS Technical motivation report in Appendix D7 for further information regarding the need to include Battery Energy Storage Systems within the Authorised footprint.

South Africa has recognised the need to expand electricity generation capacity within the country. This is based on national policy and informed by ongoing planning undertaken by the Department of Energy (DoE) and the National Energy Regulator of South Africa (NERSA).

In recent years, recurring large-scale power cuts (i.e. load shedding) have highlighted the need to improve reliability and resilience of electricity supply.

One of the main challenges faced by Eskom is managing and balancing electricity demand and supply. While renewable sources can now achieve lower costs than fossil fuels, photovoltaic (PV) arrays and wind turbines both have variable electricity production, since they rely on energy inputs that cannot be controlled (i.e. sunshine and wind). For this reason, fossil fuels currently still have a key role in the energy sector as they can provide electricity on demand and when consumption reaches its peak.

However, cost reductions of energy storage technologies and the wider deployment of battery (particularly lithium-ion) installations globally, now provides an opportunity to combine renewable energy generation with energy storage to provide dispatchable energy (i.e. energy on demand) and reliable capacity.

3.1 SITE SELECTION PROCESS

The site and footprint selection process was considered in detail during the previous environmental Assessment Process. The site and footprint position have been authorised and therefore the scope of the amendments are restricted to utilise the same spatial scale as the authorised project.

3.2 PROJECT PROGRAMME AND TIMELINES

The intention of the applicant is to bid the amended project under the Risk Mitigation Independent Power Producer Procurement Programme (RMIPPPP) or otherwise the Renewable Energy Independent Power Producer Procurement Programme (REIPPPP).

Table 2: Preliminary implementation schedule.

	Description	Timeline
1	RFP Release	24 August 2020
2	BID Submission	24 November 2020
3	Preferred Bidder Announcement	15 December 2020
4	Financial Close	30 April 2021
5	Construction	May 2021 – June 2022
6	Commissioning	June 2022

The table above clearly depicts the dependence of the project on the RMIPPPP's timelines. Any delay or acceleration within the RMIPPPP will have a corresponding effect on the timelines of the projects.

4. LEGISLATIVE AND POLICY FRAMEWORK

The applicable legislation remains the same as what was considered in the Final Environmental Impact Report for Postmasburg Solar PV Energy Facility 2 and as such, it is not re-described in this amendment assessment report.

The table below lists the applicable legislation and describes whether any additional considerations are applicable to the amendment (i.e. that were not considered in the final EIR).

Table 3: Legislation applicable to Postmasburg Solar PV Energy Facility 2 including any additional considerations applicable to the amendment of the EA to include the BESS.

Legislation	Additional considerations for the proposed amendment	
	Amendment.	
NATIONAL L	EGISLATION	
The Constitution of the Republic of South Africa	No additional considerations applicable to the amendment	
National Environmental Management Act (NEMA)	This application is being undertaken in terms of this	
	legeslation. No additional activities listed in terms of this	
	legislation are applicable to the Amendment.	
National Environmental Management: Biodiversity (Act 10 of	The proposed positioning of the BESS within the authorised	
2004)	footprint remains on vegetation type classified as least	
	threatened in terms of this legislation. No additional impact	
	or permitting requirements (TOPS permits) are applicable to	
Concernation of Amiguitural December Act. CADA (Act.42)	this amendment.	
Conservation of Agricultural Resources Act – CARA (Act 43 of 1983):	No additional considerations applicable to the amendment.	
The Subdivision of Agricultural Land, Act 70 Of 1970	No additional considerations applicable to the amendment	
National Water Act, No 36 of 1998	No additional considerations applicable to the amendment	
National Forests Act (No. 84 of 1998):	No additional considerations applicable to the amendment	
National Heritage Resources Act, 25 of 1998	SAHRA have approved the development footprint in terms	
I National Heritage Nesources Act, 25 of 1990	of Section 38 of the National Heritage Resources Act. This	
	authorised footprint remains unchanged and it is thus	
	unlikely that further approval in terms of the NHRA will be	
	applicable SAHRA will however be given an opportuity to	
	comment on this amendment assessment report.	
National Energy Act (No. 34 of 2008)	No additional considerations applicable to the amendment.	
	LEGISLATION	
Northern Cape Nature Conservation Act, No. 9 of 2009	No additional considerations applicable to the amendment	
Nature and Environmental Conservation Ordinance, No 19	No additional considerations applicable to the amendment	
of 1974		

Legislation	Additional considerations for the proposed amendment Amendment.	
Astronomy Geographic Advantage Act, 2007 (Act No 21 Of	The Tsansabane local municipality is outside of the AGAA	
2007)	and remains so with this amendment	
Northern Cape Provincial Spatial Development Framework (PSDF) 2012	No additional considerations applicable to the amendment	
	AUTHORITATIVE REPORTS	
National Protected Area Expansion Strategy (NPAES) for	No additional considerations applicable to the amendment.	
S.A. 2008 (2010)	The project footprint remains unchanged and thus outside of	
, ,	any protected area expansion focus areas.	
Critical Biodiversity Areas	No additional considerations applicable to this amendment.	
	The project footprint remains unchanged and thus still	
	outsite of any critical biodiversity areas.	
White Paper on the Renewable Energy Policy of the Republic of South Africa (2003)	No additional considerations applicable to the amendment	
White Paper on the Energy Policy of the Republic of South	No additional considerations applicable to the amendment	
Africa (1998)		
Integrated Energy Plan (IEP), 2015	No additional considerations applicable to the amendment.	
Integrated Resource Plan for Electricity (2010-2030)	No additional considerations applicable to the amendment	
National Development Plan 2030 (2012)	No additional considerations applicable to the amendment.	
Strategic Infrastructure Projects (SIPs)	No additional considerations applicable to the amendment.	
The Convention on the Conservation of Migratory Species	No additional considerations applicable to the amendment.	
of Wild Animals		
Guidelines to minimise the impacts on birds of Solar	No additional considerations applicable to the amendment	
Facilities and Associated Infrastructure in South Africa	The monitoring regime remains the same as was assessed.	
Environmental Impact Assessment Guideline for Renewable	No additional considerations applicable to the amendment.	
Energy Projects		
Sustainability Imperative	No additional considerations applicable to the amendment.	

5. SITE DESCRIPTION AND ATTRIBUTES

As the proposed BESS falls entirely within the previously assessed and authorised footprint, the site description and attributes associated with this amendment remain unchanged from what was presented in the original environmental assessment.

The target property, the Remaining Extent of Farm 436 Kapstewel (RE/436), is located within the ZF Mcgawu District (old 'Hay' District) of the Northern Cape Province, within the jurisdiction area of the Tsantsabane Local Municipality. The property is approximately 1070ha is size and is located approximately 21km north of the nearest town of Postmasburg, and south of Kathu. RE/436 is located approx. 2.5km inland and east of the R325 provincial highway.

The existing Eskom 132/11kV Manganore Substation is located at the mid-way point of, and within, the western property boundary. A number of 132kV overhead powerlines connect to this Substation. Three applicable lines and associated services roads / tracks, include:

- The Manganore–Silverstreams 132kV line A wooden lattice line which crosses the property from the east (and forms the southern boundary of the development site);
- The Manganore-Palingpan 132kV line A steel lattice line which crosses the R325 highway and the neighbouring property (4/436) from the west; and
- A small wooden lattice line which extends from the old open-cast mine, south of the property, along the property western boundary to the Manganore Substation.

Besides the Manganore substation, the only other buildings on proposed study-site are located in the north-eastern corner of property among low hills. These structures include an unoccupied house and outbuilding, as well as handling and watering facilities for cattle. Internal fencing for cattle only occurs close to the house, while old fences have been removed. Water reservoirs and troughs connected to a

borehole and solar pump are located in close proximity to the abovementioned vacant buildings, for use by the cattle.

A location plan is shown below and attached in Appendix A.

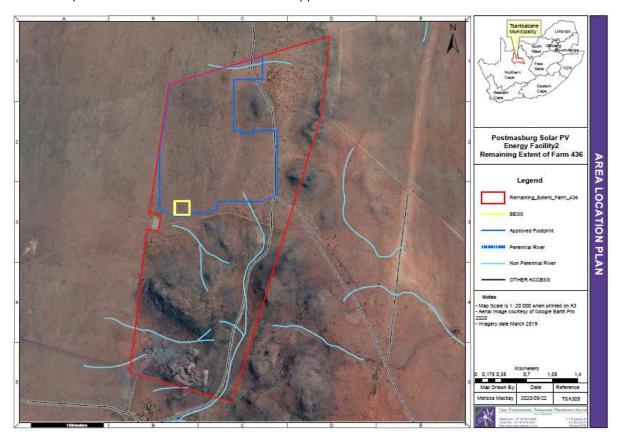

Figure 7: Location of the proposed BESS Amendment within the authorised footprint.

The proposed project area does not fall within any threatened ecosystems, National Protected Areas, National Protected Area Expansion Strategy (NPAES) Focus Areas or areas of conservation planning.

A range of north-south striking hills extend from and onto the south of the property towards the north-east. The majority of these hills are located on the southern portion of the property towards the south (south of the solar development site). One small hill / koppie is located in the north-eastern sector of the proposed solar development site, while a further three are location across or just outside of the property eastern border

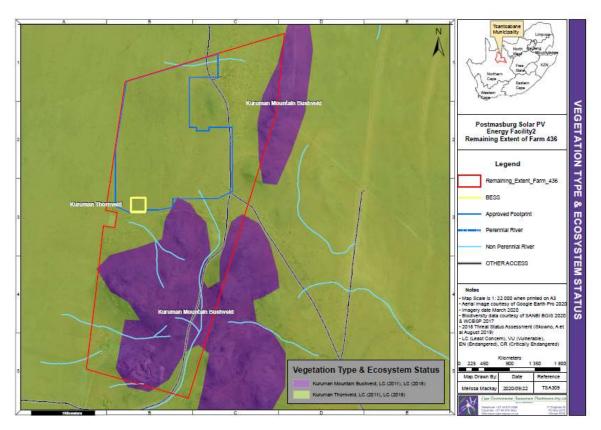

Figure 8: Broad vegetation type associated with the proposed amendments.

The proposed position of the BESS is not situated within a Critical Biodiversity Area, nor an Ecological Support Area.

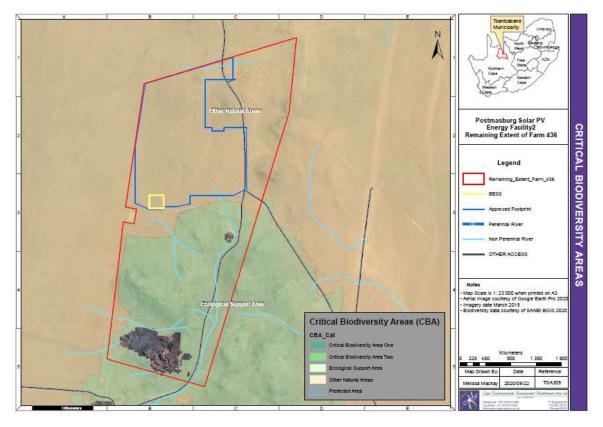

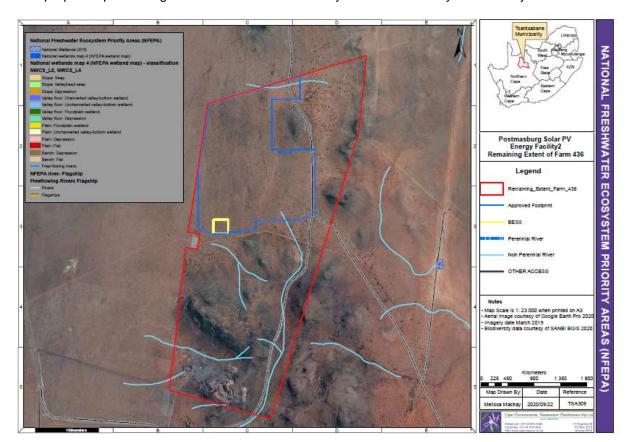

Figure 9: Showing the position of the proposed BESS in relation to CBA's and ESA's

The proposed positioning of the BESS is not within any Freshwater Ecosystem Priority Areas.

Figure 10: Location of the proposed BESS in relation to proposed FEPA's

6. ASSESSMENT OF IMPACTS ASSOCIATED WITH THE PROPOSED AMENDMENTS

In terms of Regulation 32(1)(a)(i), an assessment of the impacts of the proposed amendments must be provided. This section focusses on the amendments that constitute physical changes to the environment (i.e the addition of a BESS to the authorised footprint). The remaining amendments are not envisioned to to result in any additional physical environmental impacts for the following reasons:

- 1. Change in applicants contace details. This amendment is of an administrative nature only.
- 2. Extension of EA validity period. This amendment is of an administrative nature only.

As agreed to with the competent authority, this amendment assessment is supplemented with statements from the following specialists (i.e. the original specialists from the EIA process):

- Ecology (Todd, 2020)
- Agricultural (Lubbe, 2020)
- Palaeontology (Almond, 2020)
- Archaeology and Heritage (Webley, 2020)
- Visual (Stead, 2020)
- Traffic (Aurecon, 2020)

The abovementioned specialists were requested to provide a statement in terms of their specific disciplines to confirm the following:

1. Whether the inclusion of a BESS adjacent to the on-site substation will change the nature or significance any of the impacts assessed in the original study.

- 2. Whether the BESS is likely to result in any additional impacts that where not previously assessed in the original study.
- 3. Whether any additional management outcomes or mitigation measures in terms of each specialist discipline would be applicable to the BESS.

The specialist statements referred to above are attanched in Appendix D1 – D6 and the findings of each of these specialists relating to the potential impacts of the BESS are summarised in the following sections.

6.1 ECOLOGICAL IMPACTS

An Ecological Statement was undertaken by Simon Todd of 3 Foxes Biodiversity Solutions. A copy of this assessment is attached in **Annexure D1**, from which the following is summarised.

The location of the BESS within the previously assessed footprint area of the project as shown in the image below. The BESS is located adjacent to the facility substation and is within a medium - low sensitivity area with no features of concern in close proximity to the BESS.

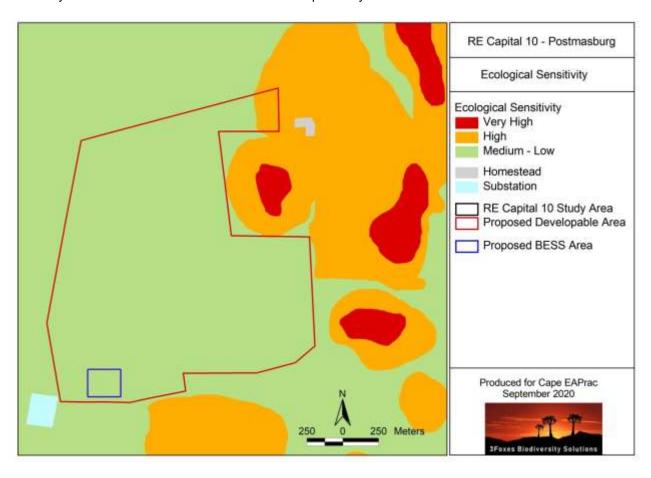

Figure 11: Proposed BESS in relation to authorised project footprint

In the original ecological assessment, it was assumed that the habitat within the facility would be largely lost in its entirety to the development. As such, the addition of the BESS within the assessed footprint would not increase direct habitat loss. In terms of additional risks, there do not appear to be any significant additional risks to ecology associated with the BESS. The original impacts associated with the Postmasburg Solar PV Energy Facility 2 are illustrated in the Table below.

Based on the footprint and technical specifications of the BESS as provided for this statement, there are no changes to the assessed impacts that are warranted based on the inclusion of the BESS into the Postmasburg Solar PV Energy Facility 2.

Table 4: The pre- and post-mitigation ecological impacts associated with the Postmasburg Solar PV Energy Facility 2 as originally assessed which remain applicable.

Phase & Impact	Without Mitigation	With Mitigation	
Planning & Construction			
Impacts on vegetation and listed or protected plant species resulting from construction activities	Medium Negative	Medium-Low Negative	
Direct Faunal Impacts During Construction	Medium Negative	Medium-Low Negative	
Avifaunal impacts due to habitat loss and construction activities	Medium Negative	Medium-Low Negative	
Soil Erosion Risk During Construction	Medium Negative	Low Negative	
Operation			
Alien Plant Invasion Risk During Operation	Medium Negative	Low Negative	
Soil Erosion Risk During Operation	Medium Negative	Low Negative	
Faunal impacts during operation:	Medium-Low Negative	Low-Negative	
Avifaunal impacts due to operational activities	Medium-Low Negative	Low Negative	
Cumulative Impacts			
Impact on broad-scale ecological processes due to cumulative loss and fragmentation of habitat	Medium-Low Negative	Low Negative	

The BESS consists of battery storage units in containers and would not change the nature of impacts associated with the solar facility. However, the BESS would include cooling systems which presumably would include fans that would generate some noise above that which would have occurred at the substation alone. As such, the BESS may increase noise associated with the facility to a small degree. However, since this is likely to be of a low intensity, this is not seen as adding significant impact to the existing development. Overall, there are no additional or novel impacts associated with the BESS that were not already assessed for the existing solar facility.

No additional mitigation measures or changes to the EMPr mitigation measures would be required in terms of this amendment, as no significant change to impacts or new impacts will occur. All the original avoidance and mitigation measures as indicated in the original botanical and faunal study are still relevant and applicable to the amended layout and must be implemented.

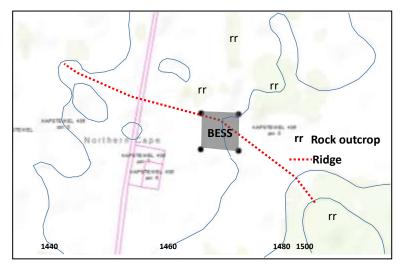

6.2 AGRICULTURAL IMPACTS

An Agricultural Impact Statement was undertaken by Mr Christo Lubbe. A copy of this assessment is attached in **Annexure 2**.

The agricultural specialist reviewed the documentation and confirmed that:

1. The BESS will indeed be placed within the authorised footprint and that no additional agricultural land will be involved or lost;

- The construction of the BESS will have no additional influence on erosion or drainage patterns on site. The slope is flat (2-3%) and the BESS will be located on higher local elevation with no defined drainage lines. The placement in relation to the drainage pattern and rock outcrops is shown in the figure on the right.
- During construction, spillage of fuel or concrete is possible, as with the construction of all other components of the facility. Mitigation measures prescribed will be the same in this case.

4. It is likely that the batteries will require solid foundations like concrete pads or steel decks, which is not different from the foundations for the auxiliary buildings and the substation. Mitigation measures and management practices were included in the original study.

The agricultural specialist concluded that that the BESS

- will not change or increase the nature or severity of any of the agricultural impacts originally identified and reported in 2014;
- Will have no additional impacts to those identified previously in the agricultural impact assessment;
 and
- Will not require any additional management outcomes or mitigation measures for the agricultural environment.

From an agricultural view point, the specialist recommend that the EA is amended to include the BESS.

6.3 HERITAGE IMPACTS

A Heritage Impact Statement was undertaken by Dr Lita Webley of ACO associates. A copy of this assessment is attached in **Annexure D3**. This statement provided the following regarding the potential impact of the BESS on Heritage resources.

The 2014 layout has avoided impacts to the majority of heritage sites (including archaeological sites) identified in the HIA (November 2014). No new impacts to heritage are anticipated with the proposed 2020 amendments. No archaeological sites were identified within the footprint of the proposed BESS. The proposed BESS will be some distance to the south-west from a rectangular stone kraal (corners D006-D009), which is considered to be a recent structure and of low heritage significance. The corners of the kraal are indicated as yellow icons in the figure below. Therefore, no impacts are expected from the construction of the BESS.

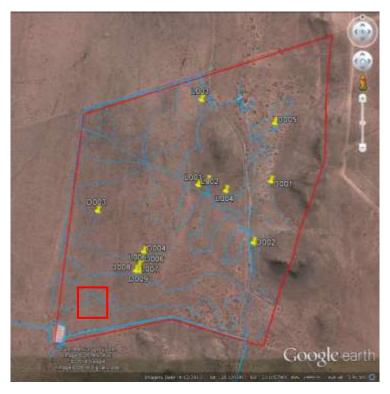

Figure 12: Location of BESS (red) with respect the survey paths and recorded sites (Google Earth 2014).

No archaeological sites were recorded in the lower south-west corner of the property. The tracks recorded during the October 2014 archaeological survey are shown in the figure above. The heritage impacts therefore remain unchanged.

The only mitigation measures in the HIA report which was submitted the South African Heritage Resources Agency in 2014 are concerned with a grave near the Kapstewel farmhouse. This was endorsed in the Final Comment issued by SAHRA dated 10 March 2015. Since the grave is a considerable distance from the proposed BESS, no impact is expected and no mitigation measures are required.

The specialist concluded that her impact ratings for the proposed development have not been changed with the proposed amendments.

6.4 PALAEONTOLOGICAL IMPACTS

A Palaeontological Impact Statement was undertaken by Dr John Almond. A copy of this assessment is attached in **Annexure D4**. As part of this statement, the palaeontology specialist confirmed the following:

Given the generally low palaeontological sensitivity of the Postmasburg Solar PV Energy Facility 2 project area, it is concluded that:

- the inclusion of a BESS adjacent to the on-site substation will not change the nature or significance of any of the impacts assessed in the original PIA study;
- the proposed BESS is unlikely to result in any additional impacts that were not previously assessed; and
- there are no additional management outcomes or mitigation measures in terms of palaeontological heritage that would be applicable to the proposed BESS.

There are no objections on palaeontological heritage grounds to the proposed amendment of the EA for this solar PV energy facility.

6.5 VISUAL IMPACTS

A Visual Impact Statement was undertaken by Mr Stephen Stead of VRMA. A copy of this assessment is attached in **Annexure D5**.

The following impacts were identified as having a likelihood of occurring during the construction and operation of the proposed BESS.

Construction Phase

- Loss of site landscape character from the removal of vegetation and the construction of the BESS structures and associated infrastructure;
- Wind-blown dust due to the removal of large areas of vegetation;
- Windblown litter from the laydown and construction sites.

Operation Phase

 Light spillage making a glow effect that would be clearly noticeable to the surrounding dark sky night landscapes to the north of the proposed site;

• Decommissioning Phase

- Movement of vehicles and associated dust;
- Windblown dust from the disturbance of cover vegetation / gravel.

Cumulative Impacts

 A long-term change in land use setting a precedent for other similar types of solar and wind energy projects.

The visual impact of the construction and operation of the proposed 3m high structures was reviewed in the Table below.

Table 5: Visual impacts associated with the addition of a BESS within the project footprint.

Nature: Change of local and surrounds visual resources due to the construction and operation of the proposed (3m high) structures, and buildings.				
_	Without mitigation	With mitigation		
Extent	Local	Local		
Duration	Long-term	Long-term		
Magnitude	Medium	Low		
Probability	Probable	Probable		
Significance	Medium to Low	Low		
Status (positive or negative)	Negative	Negative		
Reversibility	Possible	Possible		
Irreplaceable loss of resources?	No	No		
Can impacts be mitigated?	Yes	Yes		

Impact Motivation

The proposed BESS development footprint area does not contain any significant visual resources or topographic prominence.

The area is remote with limited receptors and is located adjacent to the already authorized PV projects that clearly define the area as a renewable energy zone.

Mitigation:

To reduce colour contrast, if permitted by the Original Equipment Manufacturer, the container structure should preferably be painted a grey-brown colour so as to blend with the surrounding arid region landscapes. Light spillage reduction management should be implemented (refer to Annexure E).

Cumulative impacts:

Excessive lights at night could reduce the current dark sky sense of place that could detract from tourism opportunities in the area.

From a cumulative perspective, the area is already well established as a renewable energy zone. Therefore, it is unlikely that the addition of the BESS will degrade the regional landscape character.

Residual Risks:

Residual risks post mitigation are rated Low. On decommissioning, the limited earthworks required for the construction of the BESS plant would allow for effective rehabilitation of the impacted area back to the current agricultural land use and associated rural sense of place.

The original environmental mitigations submitted for the initial PV EIA need to be adhered to. The only addendum regarding the BESS mitigation is:

 To reduce colour contrast, if permitted by the Original Equipment Manufacturer, the container structure should preferably be painted a grey-brown colour so as to blend with the surrounding arid region landscapes.

Due to the relative remoteness of the locality and some topographic screening, no sensitive receptors were identified for the site. As such, the Visual Exposure and Sensitivity of the landscape to the proposed BESS is defined as **Low**. Based on the VRM methodology, the Scenic Quality of the area is defined as **Low**.

There is a good policy fit for the Postmasburg Solar PV Energy Facility 2 BESS as two PV projects have already be authorised adjacent to the site, and the area is well recognised as a mining region with mining landscapes in the surrounding area.

Thus, the findings of the visual statement are that the BESS development is unlikely to result in the loss of significant visual and scenic resources, and as such should be allowed to proceed

6.6 TRAFFIC IMPACTS

A Traffic Impact Statement was undertaken by Aurecon. A copy of this assessment is attached in **Annexure D6**. The following is summarised from that the traffic statement

One of the potential environmental issues identified during the former EIA process was the potential traffic and transportation impacts caused by the construction and operation activities. A Traffic and Transportation Assessment, conducted by Aurecon in 2014.

The original assessment estimated that the total trips would be between 3 000 and 4 000 heavy vehicle trips, which will be made over an estimated period of 9 to 12 months. Choosing the worst case scenario of 4 000 heavy vehicles over this period travelling on an average of 22 working days per month, the resulting daily number of vehicle trips will be in the order of 15-20. The impact of this on the general traffic would therefore be negligible as the additional peak hour traffic would be at most 2 trips.

The exact design of the BESS will depend on the specific manufacturer. A BESS typically includes batteries that have been assembled in containerised/modular enclosures. While each manufacturer has slightly different individual battery container/module dimensions, they all typically fall within the following ranges:

Length: 6m – 12m
 Width: 1.5m – 2.5m
 Height: maximum of 3m

Based on research it is estimated that for BESS, approximately 160-240 pre-assembled containers/modules would be required. Each one of these pre-assembled containers/modules would be transported to site on a flatbed trailer.

240 heavy vehicles over a 9-12 month construction period travelling on an average of 22 working days per month, results in daily number of vehicle trips in the order of 0.9 -1.2. Based on the above a BESS system, could be expected to add up to 500 additional trips or up to 2.5 additional trips per day over the construction period. The additional impact on general traffic of a BESS system is deemed negligible.

The specialist concluded that the proposed amendments would not cause a significant change in the number of trips required and thus will not introduce any new traffic impacts, nor significantly alter the

impacts considered in the former 2014 Report, for which the original project received Environmental Authorisation.

6.7 CUMULATIVE IMPACT ASSESSMENT

The cumulative impact of the facility as a whole was considered and assessed in detail in the previous Basic Assessment Process. The main cumulative impact assessed in the original EIA process was the potential fragmentation of the landscape and the ability to attain conservation targets in the affected vegetation type. The proposed amendment includes the construction and operation of a BESS that falls within the authorised footprint and as such will not have any additional cumulative impact in terms of landscape fragmentation and the ability to achieve conservation targets.

6.8 IMPACT SUMMARY

The table below provides a comparative summary of the nature and significance of overall impacts originally assessed versus those associated with the addition of the BESS. As can be seen in this summary table, the proposed amendment does not change the nature, nor the significance of the impacts already assessed.

Table 6: Comparative summary of the post mitigation significance of impacts associated with Postmasburg Solar PV Energy Facility 2 as authorised and those associated with the addition of the BESS.

Impact	Facility as Authorised	Facility with BESS
Impacts on vegetation and listed or protected plant species resulting from construction activities	Medium-Low Negative	Medium-Low Negative
Direct Faunal Impacts During Construction	Medium-Low Negative	Medium-Low Negative
Avifaunal impacts due to habitat loss and construction activities	Medium-Low Negative	Medium-Low Negative
Soil Erosion Risk During Construction	Low Negative	Low Negative
Alien Plant Invasion Risk During Operation	Low Negative	Low Negative
Soil Erosion Risk During Operation	Low Negative	Low Negative
Faunal impacts during operation:	Low-Negative	Low-Negative
Avifaunal impacts due to power lines and operational activities	Low Negative	Low Negative
Impact on broad-scale ecological processes due to cumulative loss and fragmentation of habitat	Low Negative	Low Negative
Potential impact on Pre-colonial Archaeology	Very-Low Negative	Very-Low Negative
Potential impacts on Graves	Low Negative	Low Negative
Visual Impact of Solar Facility on Landscape Character / Environment	Low Negative	Low Negative
Visual Impact of Road Access Option 1 on Landscape Character / Environment	Low Negative	Low Negative
Visual Impact of Road Access Option 2 on Landscape Character / Environment	Low Negative	Low Negative
Visual Impact of Grid Connection Powerline on Landscape Character / Environment	Low Negative	Low Negative
Visual Impact of On-site Substation on Landscape Character / Environment	Low Negative	Low Negative
Cumulative Visual Impact of on Landscape Character / Environment	Regional Positive	Regional Positive

As can be seen in in the table above, the proposed amendment does not change the nature, nor the significance of the impacts already assessed.

6.9 IMPACT STATEMENT

None of the participating specialists identified any new impacts that were not previously assessed, nor did they identify any major changes in the significance of the impacts that were previously assessed. The BESS will marginally increase the level of transformation of available habitat, but not to such a degree that it would increase the significance thereof.

It can therefore be stated with a relatively high level of confidence that the addition of the BESS to the authorised facility will not result in any unacceptable environmental impacts.

7. ADVANTAGES AND DISADVANTAGES OF THE PROPOSED AMENDMENTS.

In terms of Regulation 32(1)(a)(ii), the amendment assessment report must include the details of the advantages and disadvantages of the proposed amendment. These are summarised in the table below for each for each of the proposed amendments.

Table 7: Advantages and Disadvantages of the proposed amendments.

Advantages of Proposed Amendment	Disadvantages of Proposed Amendment			
Inclusion of BESS of up to 3.9ha within the authorised footprint				
The construction and operation of the BESS will allow for the PV facility to provide energy into the National Grid outside of sunlight hours and as such be able to provide stored energy during peak times when traditional PV is not available. This will eliminate the need to construct additional non-renewable energy generation facilities to provide energy to the national grid during these peak times.	None. All of the participating specialists confirmed that the addition of the BESS within the authorised project footprint would not increase the level or nature of the impacts previously assessed.			
Updating applicant contact details				
None	None			
Extension of validity period.				
This would allow the applicant to bid the project in future bidding rounds of the REIPPPP.	None			

It is concluded that the advantages of the proposed amendments outweigh the disadvantages from an environmental perspective.

As a result, the implementation of the proposed amendments is considered acceptable from an environmental and social perspective and will not result in additional environmental impacts which were not considered in the original environmental process for the proposed development.

8. MANAGEMENT AND MITIGATION MEASURES

As required in terms of Regulation 32(1)(a)(iii), this assessment report must provide any additional measures to ensure avoidance, management and mitigation of impacts associated with the proposed amendment.

Based on the outcome of this environmental assessment, it is reccomended that the following additional mitigation measures be included as conditions of authorisation of the amendment decision:

- The applicant must compile and implement a Lifecycle Battery Recycling Programme. This programme should be submitted to the competent authority for approval prior to the commencement of construction of the BESS.
- The applicant must compile and implement a thermal management and monitoring programme. This programme should be completed prior to the operation of the BESS.
- During the construction phase of the project, first responders from Postmasburg (such as fire
 fighters and paramedics) must be given appropriate training on dealing with any emergency
 situation that may occur as a result of the BESS; such training must be provided by the
 technology suppliers or an appointed service provider.
- The applicant must compile and implement a comprehensive BESS operations and maintenance programme to ensure all monitoring and protective devices remain in good

- working order; this comprehensive operations and maintenance programme must amongst others ensure thermal management safety protocols are in place.
- In the unlikely event of a thermal runaway, any contamination of land that occurs as a result of
 this event needs to be contained and cleaned up by a specialist contractor and the area
 rehabilitated to its former state.

A BESS risk assessment is attached in Annexure F. This risk assessment identified additional mitigations that would need to be implemented prior to the construction of the BESS facility.

Table 8: BESS risk assessment detailing additional mitigation measures required prior to commencement of construction.

Risk / Impact	Discussion	Likelihood of Risk	Impact of risk	Management / Mitigation
BESS compone	nt / equipment risks	-		
Mishandling	Considering that a battery is a source of energy, there is a danger that should it be punctured, incinerated, crushed,		Electrocution. On site fires.	Training and well managed operations and maintenance.
	immersed, have a forced discharge or exposed to temperatures above the declared operating temperature range of the product, there is a risk that an internal or external short circuit may		Electrical failure. Potential spillage of	Under normal conditions of use, the electrode materials and electrolyte they contain are not exposed, provided the battery integrity is maintained and seals
	occur. An internal or external short circuit can cause significant overheating which in some cases could result in fire, that could affect surrounding materials or materials within the cell or battery.			remain intact. Risk of exposure may occur only in cases of abuse (mechanical, thermal, electrical).
Mechanical Damage	If batteries are not properly stored when not in use prior to installation, there is a possibility that mechanical damage may occur leading to:		On site fires. Electrical failure.	Adequate on-site management during the construction and operations and maintenance periods.
	Leaked battery pack coolant Leaked refrigerant Leaked cell electrolyte Rapid heating of individual cells due to exothermic reaction of constituent materials (cell thermal runaway), venting of cells, and propagation of self-heating and thermal runaway reactions to neighbouring cells.		Potential spillage of electrolytes or refrigerant.	
Leaked Coolant of Refrigerant	• Fire or Thermal management of some Li-ion battery packs is achieved via liquid cooling using coolant or refrigerant products. Mechanical damage of a battery pack that has been installed could result in leakage of the coolant. The fluid is generally blue in colour and does not emit a strong odour. This coolant if released has toxicological hazards and ecological effects as well as additional impacts relating to the disposal of leaked fluids.		Potential spillage of electrolytes. Ecological damage. Electrical failure.	Maintenance. Source from reputable manufacturers. Safe and appropriate storage. Safe handling which must include battery inspection prior to installation.
	Additionally, extended exposure of the battery system to leaked coolant could cause additional damage to the product such as corrosion and compromising of protection electronics.			

Risk / Impact	Discussion	Likelihood of Risk	Impact of risk	Management / Mitigation
Vented Electrolyte	Li-ion cells are sealed units, and thus under normal usage conditions, venting	Low	On site fires.	Maintenance.
	of electrolyte should not occur. If subjected to abnormal heating or other		Electrical failure.	Source from reputable manufacturers.
	abuse conditions, electrolyte and electrolyte decomposition products can vaporize and be vented from cells.		Vent gases.	Safe and appropriate storage.
	Accumulation of liquid electrolyte is unlikely in the case of abnormal heating. Vented gases are a common early indicator of a thermal runaway reaction —			Safe handling which must include battery inspection prior to installation.
Thermal Runaway	an abnormal and hazardous condition. Li-ion battery thermal runaway occurs when a cell, or area within the cell,		On site fires.	Maintenance.
(III)	achieves elevated temperatures due to thermal failure, mechanical failure, internal/external short circuiting and electrochemical abuse. At elevated temperatures, exothermic decomposition of the cell materials begins. Eventually, the self-heating rate of the cell is greater than the rate at which heat can be dissipated to the surroundings, the cell temperature rises exponentially, and stability is ultimately lost. The loss in stability results in all remaining thermal and electrochemical energy being released to the surroundings. It's widely accepted that most TRs are caused by mechanical, electrical or thermal abuses.		Electrical failure. Potential spillage of electrolytes.	Despite various factors that may lead to TR, materials including electrode materials as well as electrolytes, and battery design such as negative/positive capacity ratio and venting control, to name but a few, are the intrinsic approaches to enhance the battery safety. Source from reputable manufacturers. Safe and appropriate storage. Safe handling which must include battery inspection prior to installation. Development and implementation of Thermal
and experience of First Responders to deal with emergency incidents.	responders in an unlikely event of an incident may not have the necessary knowledge or experience to deal with an emergency situation such as fire or leakage.		spillage.	Management Plan. During the construction phase of the project, first responders from the nearest major centre (such as fire fighters and paramedics) must be given appropriate training on dealing with any emergency situation that may occur as a result of the BESS. Such training must be provided by the technology suppliers or an appointed service provider. Appropriate warnings and Standard Operating Procedure for emergency events must be developed and must be provided to the local emergency services and the O&M staff on site.
Disposal at end of life	Disposal of Li-ion batteries to landfill is problematic and recycling should be prioritised. Research in Australia found that just 2% of the country's 3,300		fluids from the batteries leaking into	Recovery of metals at end of life can significantly reduce these life cycle impacts. This is because the extraction and processing of

Risk / Impact	Discussion	Likelihood of Risk	Impact of risk	Management / Mitigation
	tonnes of Li-ion waste is recycled. South Africa fares far worse (as of November 2019, there was no Li-ion battery recycling facility in South Africa (eWASA)) and Li-ion batteries along with significant amounts of e-waste are not properly disposed of or sent for recycling. In addition to the lithium, manufacturers are secretive about what actually goes into their batteries, which makes it harder to recycle them properly. And while lithium itself isn't of great concern from a pollution angle, these batteries do contain metals like cobalt, nickel, and manganese. The potentially toxic materials contained in batteries means that they are classified as hazardous materials in terms of NEM:WA. There are only a few licensed hazardous waste sites in South Africa and recycling of batteries and e-waste has been identified as a sure way of improving the lifespans of such sites.		chemicals through leaching, spills or air emissions can harm communities, ecosystems and food	virgin materials are key contributors to impacts for all battery chemistries. Prior to commencement of the activity, a dedicated Battery Recycling Programme must be compiled and adopted.

Dust	Dust fall out from construction activities.	Medium	Health and safety impacts. Impacts on surrounding vegetation.	the limitation of on-site batching. Implementation of the Management actions already included in the EMPr. Implementation of a dust fall out monitoring programme.

Risk / Impact	Discussion	Likelihood of Risk	Impact of risk	Management / Mitigation
Protection of Archaeological Resources	Subterranean resources could be exposed during excavations.	Low	Loss of archaeological resources.	Implementation of the Management actions already included in the EMPr.
				ECO Inspection of all excavations.
				Compliance with requirements of SAHRA authorisation.
Loss of topsoil resources	All construction activities will have the possibility to impact on topsoil resources.			Implementation of the Management actions already included in the EMPr particularly with regard to topsoil handling and the stripping and stockpiling of topsoil from the BESS footprint prior to construction.
Noise Impact	Although the proposed development is located outside of an urban area, construction noise could have an impact on sensitive receptors.		staff. Impact on displacement of fauna.	Implementation of the Management actions already included in the EMPr and compliance with the relevant legislation with respect to noise inter alia Section 25 of ECA (73 of 1989) and standards applicable to noise nuisances in the Occupational Health and Safety Act (No. 85 of 1993).
Siltation and erosion	Stormwater and wash water have the potential to cause erosion or pollution of the receiving environment.			Implementation of the Management actions already included in the EMPr. Implementation of the Stormwater Management Plan.
Theft and other crime.	An increase in crime during the construction phase is often a concern during the development of the overall facility, including the BESS. This is likely to be negligible due to the extremely remote nature of the site.		Theft at surrounding properties.	Implementation of a site security plan.
Wildfires	The solar development site including the BESS is arid, with sparse vegetation cover and fires are not a natural phenomenon in the area. However, under exceptional circumstances, such as following years of very high rainfall, sufficient biomass may build up to carry fires.		infrastructure.	Implementation of the Management actions already included in the EMPr. Maintaining a firebreak around the total project footprint in the form of a perimeter road.

9. PUBLIC PARTICIPATION PROCESS

A public participation plan has been compiled and approved by the competent authority. Please refer to Appendix E6 for a copy of the Public Participation Plan and Annexure E7 for the DEFF approval of the PPP Plan.

This plan was submitted in compliance with regulation GNR660 published on 05 June 2020 in terms of the Disaster Management Act (57/2002) and titled: <u>Directions Regarding Measures to Address, Prevent and Combat the Spread of COVID-19 Relating to National Environmental Management Permits and Licences</u>. In compliance with section 5.1 and annexure 2 of these regulations, a public participation plan must be presented to the competent authority for approval prior to implementation. This plan was approved by DEFF.

This application is for a part 2 amendment of an existing EA and is submitted in terms of regulation 31. The public participation requirements for a part 2 amendment are contained in regulation 32(1)(aa), which requires that the report (i.e. amendment assessment report) be subjected to a public participation process, which had been agreed to by the competent authority, and which was appropriate to bring the proposed change to the attention of potential interested and registered interested and affected parties, including organs of state, which have jurisdiction in respect of the relevant activity and the competent authority.

Cape EAPrac's proposal to comply with regulation 32(11)aa of the NEMA EIA regulations and Regulation 660 in terms of the disaster management act is as follows:

An amendment assessment report will be compiled to assess the impact of the addition of a Battery Energy Storage System (BESS) within the footprint authorised for the project. This Amendment Assessment Report will include:

- Statements from all participating specialists confirming whether or not the addition of the BESS will change the nature or impact of any of the impacts that were assessed as part of specialist studies.
- Statements from all participating specialists to confirm whether or not the addition of a BESS within the assessed footprint will result in any additional impacts in respect of their particular specialist discipline.
- 3. Statements from participating specialists to confirm whether any additional management actions or mitigations are applicable to the addition of a BESS.
- 4. A BESS technical study.
- 5. A High-level BESS risk assessment.
- 6. An addendum to the existing EMPr (incorporating an application to amend the existing EMPr) to incorporate additional management outcomes and actions associated with the BESS.

Notification of the availability of the amendment assessment report (incorporating points 1-6 above) will be sent to the following parties:

- (a) the competent authority;
- (b) every State department that administers a law relating to a matter affecting the environment relevant to an application for the amendment of an environmental authorisation;
- (c) all organs of state which have jurisdiction in respect of the activity to which the application for amendment relates;
- (d) all I&AP's that were registered as part of the original EIA process;
- (e) all I&AP's that were registered on other EIA's that took place on the same properties; and
- (f) all neighbouring property owners.

The amendment assessment report will be accessible to the abovementioned parties via the following mechanisms:

- 1. The competent authority will be provided copies of the applications and assessment report via their file upload portal;
- 2. All State Departments and Organs of State who have online submission platforms (e.g. SAHRA via their SAHRIS system) will receive copies of the reports via these platforms.
- 3. The digital copy of the documentation that will be available on the Cape EAPrac website

- 4. A download link (via dropbox or sharepoint) will be provided to all I&APs.
- 5. All notification letters will include a copy of the executive summary of the Amendment Assessment Report.
- 6. The ward councillor will be approached for assistance to distribute notification letters along with the executive summaries via their communication channels (community WhatsApp groups, social media and physical communiques).
- 7. I&AP's that do not have access to digital platforms will be provided with printed hardcopies of the executive summary and any specialist reports that they may have interest in. Such copies will be provided by courier or postal service.
- 8. Potential and registered I&APs will be informed that copies of the documentation can be provided via postal or courier services.
- 9. All notifications sent out will include the details of all the mechanisms available to access the report, including those available to parties that cannot easily access digital platforms.

Due to the extensive consultation processes that have preceded the environmental application for this property in question, Cape EAPrac is of the opinion that there is general awareness of the fact that the property is earmarked PV development and particulars about the type of development on this property.

Stakeholder fatigue is a real challenge with projects that undergo this level of stakeholder engagement as part of different processes and should be considered when planning further stakeholder engagement as part of the environmental amendment application process.

We therefore do not propose to undertake pre-application stakeholder consultation as part of the environmental process.

Section 41 in Chapter 6 of regulation 982 details the public participation process that has to take place as part of an environmental process. The table below lists these requirements along with the proposed actions in order to comply with both section 41 in regulation 982 as well as section 5.1 and annexure 2 of regulation 660.

Regulated Requirement	Proposed Actions	
(1) If the proponent is not the owner or person in control of the land on which the activity is to be undertaken, the proponent must, before applying for an environmental authorisation in respect of such activity, obtain the written consent of the landowner or person in control of the land to undertake such activity on that land.	A landowner consent for the development has been obtained in terms of this requirement. No deviation or additional actions in terms of regulation 660 are required.	
(2) Subregulation (1) does not apply in respect of		
(a) linear activities;		
The person conducting a public participation process must take into account any relevant guidelines applicable to public participation as contemplated in section 24J of the Act and must give notice to all potential interested and affected parties of an application or proposed application which is subjected to public participation by -		
(a) fixing a notice board at a place conspicuous to and accessible by the public at the boundary, on the fence or along the corridor of -	A site notice will be placed at the boundary of the property. No deviation or additional actions in terms of regulation 660 are required.	
(i) the site where the activity to which the application or proposed application relates is or is to be undertaken; and		
(ii) any alternative site;		
(b) giving written notice, in any of the manners provided for in section 47D of the Act, to -		
(i) the occupiers of the site and, if the proponent or applicant is not the owner or person in control of the site on which the activity is to be undertaken, the owner or person in control	There are no tenants on the affected portions, other than the landowner who has provided consent for the development.	

Regulated Requirement	Proposed Actions
of the site where the activity is or is to be undertaken or to any alternative site where the activity is to be undertaken;	No deviation or additional actions in terms of regulation 660 are required.
(ii) owners, persons in control of, and occupiers of land adjacent to the site where the activity is or is to be undertaken or to any alternative site where the activity is to be undertaken;	Owners of adjacent properties will be notified of this environmental process and will be provided with digital copies of the documents via postal or courier services (where available), if they do not have access to online platforms. Such owners have been requested to inform the occupiers of the land of this environmental process and the process to obtain copies of the relevant reports.
(iii) the municipal councillor of the ward in which the site or alternative site is situated and any organisation of ratepayers that represent the community in the area;	The ward councillor will be notified of this environmental process and will be provided with a digital copy of the documentation via postal or courier services.
(iv) the municipality which has jurisdiction in the area;	The Tsantsabane Local Municipality (Planning and Technical Services) will be notified of this environmental process and will be provided via download links.
(v) any organ of state having jurisdiction in respect of any aspect of the activity; and	All organs of state that have jurisdiction in respect of the activity will be notified of this environmental process and will be provided with digital copies of all documentation via download links (in instances where these parties do not have access to internet connectivity) a CD with documentation will be provided.
(vi) any other party as required by the competent authority;	DEA will be given an opportunity to comment on the Draft BAR and EMPr. These will be provided to the competent authority via the upload site as directed. Should they identify additional parties that need to provide comment, copies of the documentation and opportunity to comment will be provided to such parties.
(c) placing an advertisement in -	An advert calling for registration of I&APs will be placed in
(i) one local newspaper; or	local newspaper.
(ii) any official Gazette that is published specifically for the purpose of providing public notice of applications or other submissions made in terms of these Regulations;	There is currently no official Gazette that has been published specifically for the purpose of providing public notice of applications.
(d) placing an advertisement in at least one provincial newspaper or national newspaper, if the activity has or may have an impact that extends beyond the boundaries of the metropolitan or district municipality in which it is or will be undertaken: Provided that this paragraph need not be complied with if an advertisement has been placed in an official Gazette referred to in paragraph (c)(ii);and	Adverts will not be placed in provincial or national newspapers, as the potential impacts will not extend beyond the borders of the municipal area.
(e) using reasonable alternative methods, as agreed to by the competent authority, in those instances where a person is desirous of but unable to participate in the process due to -	Notifications will include provision for alternative engagement in the event of illiteracy, disability or any other disadvantage. In such instances, Cape EAPrac will engage with such individuals in such a manner as agreed on with the competent authority.
(i) illiteracy;	
(ii) disability; or	
(iii) any other disadvantage.	
(3) A notice, notice board or advertisement referred to in subregulation (2) must -	All notification and adverts will comply with this requirement. No deviation or additional actions in terms of regulation 660 are required.
(a) give details of the application or proposed application which is subjected to public participation; and	

Regulated Requirement	Proposed Actions
(b) state -	
(i) whether basic assessment or S&EIR procedures are being applied to the application;	
(ii) the nature and location of the activity to which the application relates;	
(iii) where further information on the application or proposed application can be obtained; and	
(iv) the manner in which and the person to whom representations in respect of the application or proposed application may be made.	
(4) A notice board referred to in subregulation (2) must -	The notice board which will be placed on the site boundary
(a) be of a size at least 60cm by 42cm; and	will comply with this requirement.
(b) display the required information in lettering and in a format as may be determined by the competent authority.	
(5) Where public participation is conducted in terms of this regulation for an application or proposed application, subregulation (2)(a), (b), (c) and (d) need not be complied with again during the additional public participation process contemplated in regulations 19(1)(b) or 23(1)(b) or the public participation process contemplated in regulation 21(2)(d), on condition that -	This will be complied with if final reports are produced later in the environmental process.
(a) such process has been preceded by a public participation process which included compliance with subregulation (2)(a), (b), (c) and (d); and	
(b) written notice is given to registered interested and affected parties regarding where the -	
(i) revised basic assessment report or, EMPr or closure plan, as contemplated in regulation 19(1)(b);	
(ii) revised environmental impact report or EMPr as contemplated in regulation 23(1)(b);or	
(iii) environmental impact report and EMPr as contemplated in regulation 21(2)(d);	
may be obtained, the manner in which and the person to whom representations on these reports or plans may be made and the date on which such representations are due.	
(6) When complying with this regulation, the person conducting the public participation process must ensure that -	All reports that are submitted to the competent authority will be subject to a public participation process. These include:
(a) information containing all relevant facts in respect of the application or proposed application is made available to potential interested and affected parties; and	 Application for Amendment Environmental Assessment Report All specialist studies and statements submitted in this regard.
(b) participation by potential or registered interested and affected parties is facilitated in such a manner that all potential or registered interested and affected parties are provided with a reasonable opportunity to comment on the application or proposed application.	
(7) Where an environmental authorisation is required in terms of these Regulations and an authorisation, permit or licence is required in terms of a specific environmental	

Regulated Requirement	Proposed Actions
management Act, the public participation process contemplated in this Chapter may be combined with any public participation processes prescribed in terms of a specific environmental management Act, on condition that	
all relevant authorities agree to such combination of processes.	

Proof of public participation will be included in the final Amendment Assessment Report.

10. CONCLUSION AND RECOMMENDATIONS

This environmental process is currently being undertaken to present the details of the proposed amendment to potential and registered I&APs and to identify and assess environmental impacts, issues and concerns that may result from the proposed amendment to the Environmental Authorisation.

Cape EAPrac is of the opinion that the information contained in this Amendment Assessment Report and the documentation attached hereto is sufficient to allow the registered and potential I&APs to apply their minds to the potential negative and/or positive impacts associated with the development, in respect of the amendments applied for.

This environmental process has not identified any fatal flaws nor major irreversible impacts with the proposed amendments. As such, it is the EAP's view that the proposed amendments can be considered for authorisation.

All participating specialists have confirmed that the inclusion of the BESS is unlikely to result in any additional impacts nor increase any of the respective impacts previously assessed.

All stakeholders are requested to review this Draft Amendment Assessment Report and the associated appendices, and provide comment, or raise issues of concern, directly to *Cape EAPrac* within the specified 30-day comment period. All comments received during this comment period will be considered and incorporated into the Final Amendment Assessment Report that will be submitted to DEFF for decision making.

Based on the outcomes of this assessment (which includes input from the participating specialists), as well as the outcome of the risk assessment, it is Cape EAPrac's reasoned opinion that the application for amendment of the Environmental Authorisation be granted, subject to the following conditions:

- 1. That the BESS Addendum to the EMPr be adopted and implemented for the life cycle of the project;
- 2. That the additional mitigation measures detailed in section 7 of this assessment report be adopted and implemented; and
- 3. That the additional mitigation measures identified in the Risk Assessment be implemented.
