SECTION B: BACKGROUND

Steven Henwood, as an Independent Environmental Consultant and Impact Assessor, has been appointed Boschkom Estates Pty Ltd to facilitate the Integrated Environmental Management (IEM) procedure, for the clearing and Clearing and cultivation of approximately 17.46ha on the Farm Boskom, 1025 JT.

This document forms part and is appended to the Draft Basic Assessment report and will be submitted to as part of the Final EIR to be approved by the DARDLEA.

Project Description

Nico Van Zyl (Boschkom Estates Pty Ltd) (the applicant) proposes clearing and cultivation of macadamias on the Farm Boskom, 1025 JT.

The proposed development site is adjacent to existing agricultural fields and therefore no new infrastructure will be developed on site. Although the site is zoned for Agriculture, it is currently undisturbed natural bush.

To this end the following components constitute the project:

Macadamia Farming:

- Macadamia trees will be planted on the suitable soils.
- A total area of 17.46ha is to be cleared and utilized for agriculture (macadamia tree)
- The trees will be farmed according to best practice standards.

See proposed layout for orientation and reference Appendix A.

G.P.S co-ordinates

25°	25'	18.8047"	30°	44'	49.8335"

KEY ENVIRONMENTAL ISSUES RAISED

A baseline description of the environment was gathered through visual inspections of the site and its surroundings, desktop studies as well as preliminary specialist findings. This information was used to assess the potential areas of study, as a result of the proposed development.

The key issues identified include:

- Access roads, maintenance, and potential erosion.
- Impact that the proposed clearing and cultivation may have on fauna and flora.
- Impact of the proposed fields on wet areas.
- General land degradation.
- Chemical use.
- Runoff

As a result of the above-mentioned anticipated impacts, the specialist studies as listed below, will be undertaken during the EIA phase of the process. Such specialist studies assist with the development of an understanding of the processes involved and the potential positive and negative impacts of the proposed development on both the social and biophysical environments:

1. Wetland Delineation and Functionality Assessment

- 2. Cultural and Historical Assessment
- 3. Ecological Sensitivity Assessment

PUBLIC PARTICIPATION PROCESS

The Public Participation Process (PPP) was undertaken according to Regulation 54 of the EIA Regulations, 2014, and took into consideration the Public Participation 2010 Guideline Document (DEA, 2010).

The level of public participation was determined by taking into account the scale of the anticipated impacts of the proposed project, the sensitivity of the affected environment and the degree of controversy of the project, and the characteristics of the potentially affected parties. Based on the findings of the aforementioned consideration, there was no reason to elaborate on the minimum requirements of the public participation process outlined in the EIA Regulations, 2014 or use reasonable alternative methods for people desiring of but unable to participate in the process due to illiteracy, disability or any other disadvantage.

Potentially interested and affected parties were notified of the proposed application by –

- Fixing a notice board at a place conspicuous to the public.
 There was no reasonable alternative site.
- Placing an advertisement in a local newspaper, the Lowvelder. No official Gazette existed at the time of the application. The proposed activity shall not have an impact that extends beyond the boundaries of the metropolitan or local municipality in which it will be undertaken.

 Giving written notice to owners and occupiers of land adjacent, and organs of state having jurisdiction in respect of the proposed activity. The applicant, Boschkom Estates Pty Ltd, is the owner of the land. Consequently, a Background Information Document (BID) was prepared and distributed via email.

SECTION B: ROLE PLAYERS

1 RESPONSIBILITIES OF THE ROLE PLAYERS

1.1 Developer

The developer remains ultimately responsible for ensuring that the development is implemented according to the requirements of the EMPR. Although the developer appoints specific role players to perform functions on his/her behalf, this responsibility is delegated. The developer is responsible for ensuring that sufficient resources (time, financial, human, equipment, etc.) are available to the other role players (e.g. the ECO, ELO and farm management) to efficiently perform their tasks in terms of the EMPR. The developer is liable for restoring the environment in the event of negligence leading to damage to the environment.

The developer must ensure that the EMPR is included in the tender documentation so that the farm management who is appointed is bound to the conditions of the EMPR. The developer must appoint an independent Environmental Control Officer (ECO) during the planning phase to oversee all the environmental aspects relating to the development.

Fourteen (14) days written notice must be given to the Department that the activity will commence. Commencement includes sites preparation. The notice must include a date on which it is anticipated that the activity will commence and must include the name and contact details of the appointed ECO.

Any changes to, or deviations from, the project description set out in the RoD must be approved, in writing, by the Department before such changes o deviations may be effected. In assessing whether to grant such approval or not, the Department may request such information as it deems necessary to evaluate the significance and impacts of such changes o deviations and it may be necessary for the holder of the RoD to apply for further authorisation in terms of the regulations.

Where any of the applicant's contact details change, including the name of the responsible person, the physical or postal address and/or telephonic details, the applicant must notify the Department (DARDLEA) as soon as the new details become known to the applicant.

The holder of the authorisation (RoD) must submit an environmental compliance audit report to the Department within 30 days of completion of the clearing and cultivation phase. The environmental audit report must be compiled by an independent auditor, and must indicate the date of the audit, the name of the auditor and the outcome of the audit in terms of compliance with the conditions of the RoD as well as this EMPR.

The holder of the RoD is responsible for compliance with the provisions for Duty of Care and Remediation of Environmental

Damage contained in Section 28 of the National Environmental Management Act, 1998 (Act 107 of 1998).

A copy of the Record of Decision must be kept at the property where the activity will be undertaken. The authorization must be produced to any authorised official of the department who requests to see it and must be made available for inspection by any employee or agent of the holder of the authorization who works or undertakes work at the property.

1.2 Farm management

The farm management, as the developer's agent on sites, is bound to the EMPR conditions through his/her contract with the developer and is responsible for ensuring that she/he adheres to all the conditions of the EMPR. The farm management must thoroughly familiarise him/herself with the EMPR requirements before coming onto sites and must request clarification on any aspect of these documents, should they be unclear. The farm management must ensure that he/she has provided sufficient budget for complying with all EMPR conditions at the tender stage. The farm management must comply with all orders (whether verbal or written) given by the ECO, project manager or sites engineer in terms of the EMPR.

1.3 Environmental Control Officer (ECO)

The Environmental Control Officer (ECO) is appointed by the developer as an independent monitor of the implementation of the EMPR. He/she must form part of the project team, appointed prior to commencement of clearing and cultivation (including clearing and cultivation camp selection and sites clearing) and be involved in all

aspects of project planning that can influence environmental conditions on the sites. Where possible, the ECO must attend relevant project meetings, conduct inspections to assess compliance with the EMPR and be responsible for providing feedback on potential environmental problems associated with the development. In addition, the ECO is responsible for:

- Liaison with relevant authorities;
- Liaison with farm management regarding environmental management; and
- Undertaking routine monitoring and appointing a competent person/institution to be responsible for specialist monitoring, if necessary.

The ECO has the right to enter the sites and undertake monitoring and auditing at any time, subject to compliance with health and safety requirements applicable to the sites (e.g. wearing of safety boots and protective head gear).

(a) Liaison with Authorities

The ECO will be responsible for liaising with the Department. The ECO must submit monthly environmental compliance reports to the authorities. These reports must contain information on the farm management and developer's levels of compliance with the EMPR; a description of all activities on sites, problems identified, transgressions noted and remedial action implemented. All reports must reflect the Department's reference number on the cover. The ECO is to suggest corrective action measures to eliminate the occurrence of the non-compliance incidents. In order to keep a record of any impacts, the ECO must keep on-sites: an Environmental Sites Diary (which needs to be kept up-to-date),

copies of all reports submitted to the Department, a complaints register of all public complaints and the remedies applied to such complaints. The ECO must remain employed until all rehabilitation measures as well as sites clean-up are completed.

(b) Liaison with Farm management

The ECO is responsible for informing the farm management of any decisions that are taken concerning environmental management during the clearing and cultivation phase. This would also include informing the farm management of the necessary corrective action to be taken.

1.4 The Authorities

The Department (DARDLEA) retains the right to monitor and/or inspect the proposed project during both clearing and cultivation and operational phases.

Layout & Sensitivity Map - The clearing and cultivation of approximately 14.6 ha on the farm Boskom1025 JT. Issue/Activity	Action Required	Responsible person	Frequency
1. <u>EMPR</u>	An approved ECO must be appointed before any clearing and cultivation activities commence. It is recommended that for the initial commencement phase the ECO is on sites once a week as a minimum, thereafter the frequency can be negotiated between the ECO and the farm management as required. This EMPR must be made binding to the farm management and possible farm managements and should be included in tender documentation for the clearing and cultivation contract. The farm management must also ensure that the clearing and cultivation crew is aware of the requirements set out in the EMPR for this development prior to commencing activities on		Prior to clearing and cultivation starting.

2. <u>Preparation for clearing</u>	a)	Erect a barrier demarcating the proposed sites.	Farm management	Once-off
and cultivation-	b)	Ensure that perimeter marking is kept and maintained in good	Farm management	Continuous
		working order for the total duration of the clearing and		
Sound environmental principles		cultivation project.		
need to be adopted in the	c)	The area outside of the proposed fields footprints (no	Farm management	Prior to clearing and
reparation of the sites.		development) as well as the buffers and riparian zones, need		cultivation commencing
		to be appropriately demarcated and staff need to be instructed		
		to only conduct approved activities within these areas (i.e.		
		alien invasive species removal). The proposed barrier needs		
		to be checked by the ECO for efficacy.		
	d)	Do not use the sites for any other purpose other than for the	ECO	Bi-weekly
		proper carrying out of the Works under the Contract.		
	e)	Marking for surveying and other purposes must be done using	Farm management	Continuous
		pegs, beacons or rope and droppers.		
	f)	That all protected trees be identified before the development	ECO	Once off
		takes place to ensure that they are not damaged.		
	g)	An ECO needs to be appointed to oversee clearing and	Farm management	Once-off
		cultivation, including the identification and relocation of plants	ECO/Specialist	
		of conservation concern prior to clearing and sites preparation.		
	h)	The surveyor and farm management must clearly demarcate	Farm management/ECO	Once-off
		the centre or boundary of a servitude or footprint prior to		
		clearing (for clearing and cultivation or surveying) so that the		
		ECO can search for plants of conservation concern, mark		
		them with danger tape and record protected plants that are		
		going to be disturbed or destroyed. Searches also need to be		
		carried out on temporary access roads and stockpile sites.		
	i)	The Developer must obtain a permit from the MTPA or a	Farm management	Once-off
		licence from the DWAF, to disturb or destroy protected plants		
		before any clearing takes place.		
	j)	The developer must allocate a sufficient budget for rescuing	Farm management	Once-off
		and nursing plants of conservation concern, including		
		translocation or transplanting, training, supervision, labour,		Continuous
		black bags, compost, watering, maintenance and a nursery.		
	k)	The ECO must induct, and train (at least 2 full days) the farm	ECO	Once-off

	management's labourers and supervisor how to successfully translocate and transplant local plants.		
1)	All plants of conservation concern, excluding large trees that exceed the capabilities of the contractor's excavator, must be	ECO/Farm management	Once-off
	either transplanted into a nursery, i.e. Aloe and bulbous sp. or		
	translocated outside the working servitude, i.e. seedlings,		
	saplings & mature trees. Translocated trees will need to be watered. Rescued plants are to be used in landscaping and		
	rehabilitation.		
m)	The farm management may not dump cleared vegetation onto	Farm management	Continuous
	living plants unless it is on a site that has been searched for		
	plants of conservation concern and approved by the ECO for		Once-off
n)	stockpiling cleared vegetation. All areas, other than the clearing and cultivation areas (camp,	Farm management	Once-off

	it is stockpiled separately from subsoil and rocky material.		
s)	In the absence of a recognisable topsoil layer, strip the upper	Farm management	Once-off, monitor
	most 300mm of soil. Co-ordinate excavation to limit unnecessarily prolonged	Farm management	regularly Once-off, monitor
')	exposure of stripped areas and stockpiles. Retain vegetation	i aiiii illallayelllelli	regularly
	and soil in position for as long as possible, removing it		
	immediately ahead of clearing and cultivation / earthworks in		

	that area. u) Strip and stockpile herbaceous vegetation, overlying grass and other fine organic matter along with the topsoil. v) Do not strip topsoil when it is wet. w) Store stripped topsoil in an approved location and in an approved manner for later re-use in the rehabilitation process.		Once-off, monitor regularly Once-off, monitor regularly
3. Clearing and cultivation	3.1. Structures and accommodation		
<u>sites</u>	a) Erect all temporary buildings and structures; including offices,	Farm management	Initial set-up period
Careful planning of the Clearing workshops, and stores, within predetermined zones as per the			
and cultivation sites can ensure	approved sites plan.		

and cultivation sites can ensure that time and costs associated with environmental management and rehabilitation are reduced.

With regards to the
establishment of the
campsites, mitigation
measures as detailed in the
section to the right will only
be applicable should the
workforce of the appointed
contractors stay overnight.
This aspect will, therefore,
have to be confirmed first, on
sites prior to commencement
of any activities.

- b) Erect all temporary and permanent labour housing within predetermined zones off the clearing and cultivation sites as per the approved sites plan and / or relevant Sketch Plans.
- c) Ensure that essential services (including showers, appropriate sanitation and drinking water facilities) are provided for all housing and/or campsites.
- d) Maintain essential services in a functional state. These may not be overloaded. Defects and inadequacies must be rectified immediately.
- e) Scavenger and weather proof bins will be provided in a suitable waste storage area for temporary storage. These bins will be emptied and transported to an appropriate facility once a week.
- f) Provide a designated place for food storage, preparation and consumption. Food storage must be separate from sleeping quarters and waste storage areas.
- g) Ensure that cooking facilities, as approved by the Project Manager is made available preferably gas or electricity. Ensure regular checks of the mentioned facilities as per OSH Act and/or sites safety plan by the relevant appointed personnel.
- h) Allow for household amenities, such as washing and drying of clothes, as well as areas for social interaction.

5. <u>Alien Invasive Species</u> It is important at the outset of a	a. Areas such as watercourses, wetlands, riparian and pristine areas must be prioritised.b. Alien vegetation need only be eradicated on sites where the	Farm management / ECO	Prior to sites clearing and clearing and cultivation
project to establish a program for the eradication and control of alien invasive vegetation	 entire site is not cleared. c. The ECO is responsible for the identification of alien invasive species. The specie-specific method of control and eradication should be implemented. d. The ECO is responsible to provide the specific training 	Farm management / ECO ECO	To be determined prior to sites clearing Prior to sites clearing
	required to implement the required control method. Only personnel who have been appropriately trained is allowed to engage in this activity. e. All personnel tasked to engage in the process of alien invasive	ECO	Prior to sites clearing
	vegetation control needs to receive proper training in the following: - Methods and control measures. - Equipment and techniques - Types of herbicide (selective and non-selective) - Health and safety issues	ECO / Farm management	Prior to sites clearing
	 Safety gear f. Prior to the actual eradication process the ECO or farm management must ensure the following: All personnel have adequate training required All personnel have essential safety equipment Only identified alien species are targeted Ensure correct application of herbicides 	ECO / Farm management	Prior to sites clearing
	 g. Team supervisors must receive training in the following: Herbicide awareness. Basic training on the mode of action of herbicides. Operator safety. Handling of concentrates and spray mixtures, personal hygiene and protective clothing. Safe storage of products at depots and operational sites 	ECO / Farm	Prior to sites clearing

and spray mixtures at operational sites. Mixing. Handling of concentrates and mixing techniques. Safety procedures to be observed during transportation of product spray mixtures, equipment and personnel. Care and maintenance of application equipment, saws etc. Record keeping in respect of quantities of product/spray mixtures used, area treated, person hours per area/operation, stock control Planning. Advanced planning for follow-up operations, transportation, equipment and spares requirements, product procurement and availability. Team management First aid. Actions to be taken in case of accidental contamination, suspected and actual poisoning, chronic poisoning, eye contamination and other physical injuries. Health of operators. Persons unsuitable for use as application operators would include e.g. chronically ill, disabled, pregnant women. Awareness of possible allergic reactions. Wearing of protective apparel. Managing major and minor spills, accident sites. Spill kits must be available on sites in case of any accidental contamination or spillages.	management	Initial set-up period
	Farm management	

6.	<u> Fire</u>	<u> Management</u>

The National Veld and Forest Fire Act (No. 101 of 1998) provides requirements in terms of fire management and responsibilities of land owners in terms of fire breaks and management.

- a) Adhere to requirements and guidelines of the National Veld and Forest Fire Act (No. 101 of 1998).
- b) Veld and Forest Fire Act (No. 101 of 1998) "prepare and maintain a fire break on his or her side of the boundary between his or her land and the adjoining land". Therefore, it is the responsibility of the landowner.
- c) Have available such equipment, protective clothing and trained personnel required to extinguish such fire as may occur as prescribed in the FPA regulations
- d) Have in place a properly equipped and trained fire crew to assist in the suppression or containment of wildfires and to maintain fire mitigation measures.
- e) Ensure that staff are trained and capable of fighting fires.
- f) Identify areas of high fire risk/hazards.
- g) Ensure sufficient firebreaks around perimeter of property.
- h) Maintain firebreaks area needs to be cleared and checked.

SECTION D: CLEARING AND CULTIVATION PHASE

Maintenance of Clearing and cultivation sites

Conscientious maintenance of the Clearing and cultivation sites can ensure that time and costs associated with environmental management and rehabilitation are reduced.

With regards to Ablutions
Camp/sites Waste Disposal,
Provision of Water and
Provision of Food preparation
and eating areas - mitigation
measures as detailed in the
section to the right will only
be applicable should the
workforce of the appointed
contractors stay overnight.
This aspect will, therefore,
have to be confirmed first, on
sites prior to commencement
of any activities.

1. Maintenance of Access

- a) Farm management should ensure that access roads are maintained in good condition by attending to potholes, corrugations and stormwater damage as soon as these develop.
- b) If necessary, staff must be employed to clean surfaced roads adjacent to clearing and cultivation sites where materials have been spilt.

2. Surfaces

- a) The Farm management must monitor and manage drainage of the camp sites to avoid standing water and soil erosion.
- b) The clearing and cultivation sites must be fenced off and demarcation of material lay down areas must precede all activities on sites.
- c) Run-off from the camp sites must not discharge into neighbouring properties or adjacent wetland/riparian belt.

3. Ablutions

- a) An adequate number of portable/ chemical toilets shall be supplied
 - (1 toilet per 15 users is the norm). The use of septic tanks, soak ways or pit latrines is strictly prohibited.
- b) Do not locate any sites toilet, sanitary convenience, within a horizontal distance of 100m of the identified wetland or riparian zone.
- c) The Farm management is to ensure that open areas or the surrounding bush are not being used as a toilet facility.
- d) Regular inspections shall be carried out to ensure toilets are kept in a hygienic state.
- e) Chemical toilets are to be cleaned regularly and effluent disposed of off-sites at an approved municipal sewage system.

	a designated area. Topsoil is to be handled twice only – once	
	to strip and stockpile, and once to replace and level.	
	b) Should there be a need to stockpile soil; those stockpiles must Farm	management As required
	be covered in excessively windy conditions	
	c) No stockpiles or clearing and cultivation materials may be Farm	management Once-off, monitor
	stored or placed within any drainage line (including the	regularly
	wetland) on sites or in close proximity to stormwater drains.	
	d) Position topsoil stockpiles on the higher side of a disturbed Farm	management
	area.	Once-off, monitor
		management regularly
	place that it will not cause the damming up of water, erosion gullies, or wash away itself.	
	f) Do not stockpile topsoil in heaps exceeding 2m in height. Farm	management Once-off, monitor
	g) Protect topsoil stockpiles from erosion.	management regularly
	h) Fencing may not cause erosion and may not impede the flow Farm	management / Continuous
	of any watercourse or natural drainage. Fencing must be ECO	
	monitored throughout the clearing and cultivation phase, and	
	any signs of erosion resulting from it must be remedied	
	immediately.	Continuous
		management
	emerge on topsoil stockpiles	Continuous
		management
	(excavated subsoil), rubble or building material, or subjected to	
	compaction or contamination by vehicles or machinery. This	
	will render the topsoil unsuitable for use during rehabilitation.	Continuous
	,	management
	of any topsoil rendered unsuitable for use during rehabilitation,	
	for reasons due to his negligence or mismanagement on sites.	
	2. Exposed surfaces	Continuous
	a) The time that stripped areas are exposed shall be minimised Farm	

	wherever possible.		Monitor regularly
b	b) Top soiling and revegetation shall commence immediately	Farm management	
	after the completion of an activity and at an agreed distance		
	behind any particular work front.		Monitor regularly
c	c) Stormwater control (See 5) and wind screening should be	Farm management	
	undertaken to prevent soil loss from the sites.	•	As each activity is
d	Side tipping of spoil and excavated materials shall not be	Farm management	completed
	permitted – all spoil material shall be disposed of as directed		
	by the farm management.		Continuous
	e) Soils that become compacted through the activities of the	Earm management	Continuous
l e	·	railli illanayemeni	
	development must be loosened to an appropriate depth to		
	allow seed germination.		Continuous
f)	Structures to prevent erosion must be built in areas that are	Farm management	
	prone to erosion (especially steep roads)		
3.	Surface water management		As required
(a)) No water may be abstracted from any surface water body	Project manager	
	without necessary permission from DWAF for the purpose of	,	
	clearing and cultivation unless permitted in terms of the		Where identified
	Contract.	Farm management	
(b)		T dilli illanagomoni	
(5)	accounted for and areas of waste are identified (i.e. water		Drior to clearing and
		F	Prior to clearing and
	used for surface wetting, for potable supply etc.).	Farm management	cultivation starting
(c)			Monitor daily
	as soon as these are identified.	Farm management	Whenever identified
(d)) Where possible, recycle water on the clearing and cultivation	Farm management	
	sites.		Whenever identified
e)) Avoid over-wetting, saturation and unnecessary runoff during	Farm management	Monitor daily
	dust control activities and irrigation.		
f)	Ensure that water abstraction points, if permitted, (i.e. from		
,	rivers, dams, etc.) do not degrade or erode as a result of		
	leaking pipes, spills, muddy conditions or wash-aways.		
	Rectify problems as soon as they arise.		
	recently problems de soon de they drive.		

e) <u>Stormwater</u>	1. General Principles		
Clearing and cultivation	a) Do not drain, fill or alter in any way, any wetland .	Project manager	Monitor weekly
activities	b) Do not allow surface water or stormwater to be concentrated,	Farm management	Monitor daily
frequently result	or to flow down, cut or fill slopes without erosion protection		
in diversions, of	measures being in place.		
natural water flow	c) Earth, stone and rubble is to be properly disposed of so as not	Farm management	Continuous
resulting in	to obstruct natural water pathways over the sites. i.e.: these		
concentration of	materials must not be placed in stormwater channels, drainage		
flow and an	lines or the wetland.		
increase in the	d) Line overflow and scour channels with stone pitching along	Farm management	Continuous
erosive potential	their length and at their points of discharge to prevent soil		
of the water.	erosion. The point of discharge must be at a point where there		
Measures in this	is dense natural grass cover.		
section is aimed	e) Ensure that channels do not discharge straight down the	Farm management	When the need arises
at reducing the	contours. These must be aligned at such an angle to the		
erosive potential	contours that they have the least possible gradient.		
of stormwater.	f) Locate any point of overland discharge at least 50m away from	Farm management	Whenever the need arises
	the wetland or drainage line. No surface stormwater generated		
	as a result of the development may be directed directly into		
	any watercourse.		
	g) Surface water rich in sediments and other pollutants must be	Farm management	Continuous.
	prevented from entering any watercourse, and all mechanisms		Prior to clearing and
	for dissipating water energy must be implemented at the		cultivation
	inception of the clearing and cultivation phase.		

f) Water Quality (Surface and groundwater)

Water quality is affected by the incorrect handling of substances and materials. Soil erosion and sediment is also detrimental to water quality. Mismanagement of polluted run-off from vehicle and plant washing and wind dispersal of dry materials into rivers and watercourses are detrimental to water quality.

1. General Principles

- a) Mixing / decanting of all chemicals and hazardous substances must take place either on a tray or on an impermeable surface.
 Waste from these should then be disposed of to a suitable waste site.
- b) The storage and handling of fuel, lubricants and other chemicals must be in especially demarcated impervious and bunded areas
- c) Every effort should be made to ensure that any chemicals or hazardous substances do not contaminate the soil or groundwater on sites. It is the holder of the RoD's responsibility to rectify any source of pollution from the development and to take appropriate measures to prevent any pollution of surface as well as groundwater.
- d) Care must be taken to ensure that run-off from vehicle or plant washing does not enter the ground water.
- e) Wash water must pass through a French drain system before entering the environment.
- f) Ensure that no stormwater is allowed to enter any drainage installation for the reception, conveyance, storage and / or treatment of sewage.
- g) Ensure that water passing through vehicle wash bays and workshops pass through oil baffles / oil traps / oils separators before passing into conservancy tanks.
- h) Treat all oil sludge collected in the said traps, including sump liners, as hazardous waste
- i) Take special care during rainy periods to prevent the contents of sumps and drip trays from overflowing.
- j) If water will be sourced from the on-sites boreholes, the water needs to be properly treated prior to human consumption. Untreated water can be used for all other activities such as washing of equipment, dust suppression, concrete mixing, compacting etc.
- k) Deflect any unpolluted water / runoff away from any dirty area

Farm management Regular Monitoring.

Affected Parties	number on which they may contact the Farm management.		
(I&AP's) – especially the	d) Appropriate notification signs must be erected to warn the	Farm management	Prior to clearing and
relevant neighbours and	public of the dangers of the clearing and cultivation sites.		cultivation
downstream users is important	e) The conduct of the clearing and cultivation staff when dealing	Farm management	
for the	with the public or other stakeholders shall be in a manner that		Continuous
duration of the	is polite and courteous at all times.		
contract.	f) Disruption of access for local tenants of adjacent businesses	Farm management	
	must be minimised and must have the Engineer's/Project		Continuous
	Manager's permission		
	g) The Farm management is to inform neighbours in writing of	Farm management	
	disruptive activities at least 24 hours beforehand. This can take		At least 24 hours prior to
	place by away approved of by the I&AP's (especially the		the activity taking place
	adjacent homes) and the Farm management.	,	
	h) Any complaints received from the public during the clearing	Farm management	
	and cultivation period must be attended to as soon as possible		As the need arises
	and addressed to the satisfaction of all concerned.	F	
	i) Farm management must take measures to discourage	Farm management	Continuous
	labourers from loitering.		Continuous
		1	1

I)	Noise Pollution	a) Unless otherwise specified by the Project Manager, normal	Farm management/	Continuous
		work hours will apply (i.e. from 07h00 to 17h00, Mondays to	Project Manager	
		Saturdays).		
		b) No loud music is permitted on sites.	Farm management	Continuous
		c) Noise from labourers to be controlled	Farm management	As necessary
		d) Noise suppression should be applied to all clearing and cultivation equipment	Farm management	As necessary
		e) If noise levels at the boundaries of the sites exceed 7dB above ambient levels, then the local health authorities are to	Farm management	As necessary
		be informed.		
		 f) Notify adjacent landowners of after-hours clearing and cultivation work and of any other activity that could cause a 	Farm management	As necessary
		nuisance.	Farm management	As necessary
		g) Respond to community complaints with regard to noise generation, taking reasonable action to eliminate and/or		
		minimise the impact.	Farm management/	As necessary
		h) Where complaints cannot be addressed to the satisfaction of all parties, then the Farm management will, upon instruction by	Project manager	-
		the Project Manager, provide an independent and registered		
		Noise Monitor to undertake a survey of the noise output levels.		
		Recommendations to reduce noise to legislated levels must be		
		implemented.		

m)	<u>Visual Impacts</u>	a)	In terms of all infrastructure, it is recommended the access	Farm management	Bi-weekly or as necessary
			road and all structures be planned so that the unnecessary		
			clearing of vegetation is avoided. This implies making use of		
			already disturbed sites rather than pristine areas wherever		
			possible and avoiding large tree specimens and dense		
			established vegetation areas.		
		b)	Mitigation of visual impacts associated with the clearing,	Farm management	Continuous
			albeit temporary, entails proper planning, management and		
			rehabilitation. In addition, it is vital that vegetation is not		
			unnecessarily cleared or removed.		
		c)	The fields must be maintained in a neat and visually	Farm management	As necessary
			acceptable state throughout the operational life.		

d)	Archaeological Artefacts	a)	Clearing and cultivation personnel must be sensitised to the	Farm management/	As necessary
			requirements of the South African Heritage Resources Act	ECO	
			(SAHRA).		
		b)	Should any material of cultural or archaeological significance		Prior to clearing and
			be encountered during clearing and cultivation, all activities	Farm management/	cultivation
			must cease immediately and SAHRA must be informed	ECO	
			accordingly.		
		c)	Artefacts can only be moved once a permit is obtained from		As necessary
			SAHRA.	Specialist	
		d)	Should any activity be planned for the historical buildings on-		
			sites (those older than 60 years), the relevant permits and		As necessary
			authorisation needs to be applied for according to SAHRA.	Farm management/	
				ECO	

e)	Sites	Clean-up	and	a) All structures are to be removed from sites.	Farm management	Project completion
	<u>rehabilita</u>	ation				Project completion
				b) The area that previously housed the clearing and cultivation sites is to be checked for spills of substances such as oil, paint etc. and these should be cleaned up.	Farm management	
				c) All hardened surfaces within the clearing and cultivation sites area should be ripped, all imported materials removed, and the	Farm management	Project completion
				area shall be top soiled and regressedd) The Farm management must arrange the cancellation of all temporary services.	Farm management	Project completion
f)	<u>Traffic</u>			a) All heavy vehicles travelling to and from the sites will follow dedicated heavy vehicle routes to avoid roads that are not suited to these vehicles.	Farm management	Daily
				b) Clear traffic signs and signals will be installed on-sites to provide for safe traffic movement.	Farm management	Daily
				c) An on-sites speed limit will be enforced.	Farm management	Daily

1. Performance evaluation and	a) Compile a checklist applicable to the sites and the needed	Land owner	Annually
<u>record keeping</u>	permits from the aspect register and the legal		
	requirements specified and ensure that it is completed		
To provide guidance during self-			
performance evaluations of the	, , ,		
operation	b) During this evaluation, specific attention should be given	Land owner	Annually
	to the effectiveness of the EMPR's and other proposed		
	mitigation measures.		
	c) Ensure that all information obtained from changed	Land owner	When necessary
	process etc. is relayed to all the applicable documents		
2. <u>Eradication of alien floral</u>	a) The use of alien invasive plants for landscaping is	Land owner	Once-off, regular
<u>species</u>	prohibited, and a long-term management plan for the		monitoring
	eradication and control of existing alien invasive plants		
	should be implemented.	Land owner	
	b) It is recommended that after the alien plant species are		Once-off, regular
	removed, the natural grass or indigenous vegetation from		monitoring
	the area be allowed to cover the bare areas where the		
. Evanion	alien vegetation used to be. a) The stormwater system, especially the discharge points,	Land owner	Continuous, bi-annual
3. <u>Erosion</u>	must be inspected and damaged areas must be repaired	Land owner	monitoring
	if required		monitoring
	b) Litter blocking the stormwater system must be removed.	Land owner	Bi-weekly
	c) Regular maintenance of the stormwater system must be	Land owner	Bi-weekly, especially
	undertaken. This should include removal of blockages,	Land Owner	during rainy seasons
	and monitoring of stability of stormwater structures to		daming ramy coucons
	prevent any signs of erosion.		
	p		

4.	Water quality	a) Any damages to the sewage system must be repaired	Land owner	Monitor regularly	
		immediately	Land owner		
		b) The stormwater system, especially the discharge points,	Land owner/ Specialist	Continuous, b	oi-annual
		must be inspected and damaged areas must be repaired		monitoring	
		if required.			
		c) Monitoring of the quality of the water should be done		Quarterly	
		quarterly and sent to DWAF.	Land owner/ Specialist		
5.	Ecological Monitoring	a) Regular removal of alien species	Land owner / Specialist	Continuous, k	oi-annual
				monitoring	
				Continuous	
		b) Removal of any litter	Land owner		
		c) Monitoring of stormwater entering the system [It is	Specialist	Annually	
		recommended that the stormwater management systems	Land owner		
		be designed in such a way that the natural flow regime	Specialist		
		(velocity of the water) of the wetlands are not exceeded			
		by 50% in the event of 1:10 year flood to prevent the			
		possibility of erosion in the wetland].			
		d) Farm management are prohibited from harvesting wood	Land owner/lodge staff	Continuous	
		or plants from the surrounding plant communities.	_		
		e) Farm management should be permitted to use plants	Land owner/lodge staff	Continuous	
		rescued during clearing and cultivation for landscaping			
		their gardens.			
		f) Activities in the "natural bush" and drainage areas must	Land owner/lodge staff	Continuous	
		be strictly managed, no quad bikes, motorcycles and off-			
		road vehicles may be permitted in these areas.	Land owner/lodge staff	Continuous	
		g) Appropriate conservation measures must be developed			
		and implemented in conjunction with the MTPA in the			
		event of recording any threatened/near threatened			
		species on the sites.			

6. Pesticide Usage	General Mitigation:	Land owner/lodge staff	Once-off, monitor
	a) Chemical control of pests on MAWECRO may not take		continuously
	the form of pesticides that pose unmanageable risk such	Land owner/lodge staff	Once-off, continuous
	as:	Land owner/lodge staff	Monitor continuously
	i. Those containing Endocrine Disrupting Properties (EDP),		
	ii. Those containing Persistent Organic Pollutants (POPs),	Land owner/lodge staff	As required
	iii. Those containing carcinogenic and immunotoxic potential,		
	iv. Those containing formulations classified by WHO as Extremely Hazardous (class 1a) and Highly Hazardous (class 1b), as well as		
	v. Pesticides associated with frequent and severe poisoning incidents.		
	b) To maintain healthy populations of natural enemies and		
	pollinators, use pesticides sparingly and in accordance		
	with the label and local regulations. Also consider these		
	general guidelines for pesticide applications:		
	i. Choose selective pesticides		
	ii. Identify the pest and use resources available to		
	determine which pesticides will specifically control		
	that pest. Avoid broad-spectrum insecticides such		
	as organophosphates, carbonates, and		
	pyrethroids, which indiscriminately kill everything.		
	Also avoid broad-spectrum herbicides, which		
	reduce floral plants that attract pollinators.		
	iii. Choose nonpersistent pesticides		
	iv. Some pesticides leave residues that kill natural		
	enemies and pollinators long after the initial		
	application (residual toxicity); in addition to		
	immediately killing them (contact toxicity).		
	v. Choose less harmful formulations		
	vi. Generally, dusts, powders, and microencapsulated		

pesticides are the most harmful to honey bees, and aerial spraying is the most hazardous method of application. Liquid solutions and granules are the least detrimental to pollinators.

vii. Spot-treat

Targeting your application to specific areas where the pest is a problem will reduce the harm to natural enemies and pollinators.

viii. Time applications

To protect pollinators and other fauna, avoid spraying when flowers are in bloom. Apply pesticides during the evening or early morning when pollinators are less active. Do not apply when temperatures will be especially low or when dew is expected. Risk of pesticide toxicity is prolonged under these conditions, since residues remain on plants longer.

- c) Consider water management practices that reduce pesticide movement off-sites
- d) Consult relevant publications.
- e) Consider practices that reduce air quality problems:
 - i. When possible, reduce volatile organic compound (VOC) emissions by decreasing the amount of pesticide applied, choosing low-emission management methods, and avoiding emulsifiable concentrate (EC) formulations.
- f) Protection of water quality:
 - i. Include instituting buffer zones, restricting aerial spraying in a certain proximity to surface water bodies.
- g) Food Safety:
 - i. Insure that pesticides are properly labelled, and the producers apply those pesticides in accordance with the label. To ensure compliance with relevant

legislation.

- h) Worker Protection:
 - i. The Occupational Health and Safety Act (OHSA).
 1993 (Act No. 85 of 1993) regulates health and
 safety at the workplace for all workers. This Act
 places the onus on employers to maintain a safe
 workplace. The regulation makes provision for
 various mandatory safety measures to protect the
 health of workers handling hazardous chemicals,
 such as risk assessment, safety training, safe
 practices and medical, biological and
 environmental monitoring of all workplaces.
- i) Pesticide disposal and container management
 - i. South Africa has enacted several laws in an attempt to ensure that toxic wastes are disposed of without becoming a danger to people or the environment. This legislation includes the Hazardous Substance Act, 1973 (Act No. 15 of 1973), the Environmental Conservation Act. 1989 (Act 73 of 1989), the Atmospheric Pollution Prevention Act, 1965 (Act No. 45 of 1965), and the National Environmental Management Act, 1998 (Act 107 of 1998.

Specific Mitigation:

- a) Before an application:
 - i. Ensure that spray equipment is properly calibrated to deliver the desired pesticide amount for optimal coverage.
 - i. Use appropriate spray nozzles and pressure to minimize off-sites movement of pesticides.
 - ii. Avoid spraying during these conditions:
 - iii. Wind speed over 8 km/h
 - iv. Temperature inversions
 - v. Just prior to rain or irrigation (unless it is specifically

|--|

7. <u>Visual</u> a)	In terms of all infrastructure, it is recommended the	Land owner/lodge staff	Weekly
	access road and all structures be planned so that the		
	unnecessary clearing of vegetation is avoided. This		
	implies making use of already disturbed sites rather than		
	pristine areas wherever possible and avoiding large tree		
	specimens and dense established vegetation areas.		
(b)	Mitigation of visual impacts associated with the clearing,		
	albeit temporary, entails proper planning, management		
	and rehabilitation. In addition, it is vital that vegetation is		
	not unnecessarily cleared or removed.		
(c)	The fields must be maintained in a neat and visually		
	acceptable state throughout the operational life.

Annexure D: Declaration by EAP.

10.2 The Environmental Assessment Practitioner (EAP)

I, as the appointed environmental assessment practitioner ("EAP") hereby declare/affirm the correctness of the information provided or to be provided as part of the application, and that I:
• in terms of the general requirement to be independent (tick which is applicable):
other than fair remuneration for work performed/to be performed in terms of this application, have no business, financial, personal or other interest in the activity or application and that there are no circumstances that may compromise my objectivity; or
am not independent, but another EAP that is independent and meets the general requirements set out in Regulation 13 has been appointed to review my work (Note: a declaration by the review EAP must be submitted);
 have expertise in conducting environmental impact assessments, including knowledge of the Act, regulations and any guidelines that have relevance to the proposed activity; will ensure compliance with the EIA Regulations 2014;
 will perform the work relating to the application in an objective manner, even if this results in views and findings that are not favourable to the application;
 will take into account, to the extent possible, the matters listed in regulation 18 of the regulations when preparing the application and any report, plan or document relating to the application;
 will disclose to the proponent or applicant, registered interested and affected parties and the competent authority all material information in my possession that reasonably has or may have the potential of influencing any decision to be taken with respect to the application by the competent authority or the objectivity of any report, plan or document to be prepared by myself for submission to the competent authority (unless access to that information is protected by law, in which case I will indicate that such protected information exists and is only provided to the competent authority);
 will ensure that information containing all relevant facts in respect of the application is distributed or made available to interested and affected parties and the public and that participation by interested and affected parties is facilitated in such a manner that all interested and affected parties will be provided with a reasonable opportunity to participate and to provide comments on documents that are produced to support the application; declare that all the particulars furnished by me in this form are true and correct;
am aware that it is an offence in terms of Regulation 48 to provide incorrect or misleading information and that a person convicted of such an offence is liable to the penalties as contemplated in section 49B(2) of the National Environmental Management Act, 1998 (Act 107 of 1998).
