# EXECUTIVE SUMMARY

**City of Matlosana Local Municipality** has appointed **AB Enviro Consult CC**, an independent environmental consultancy, to undertake an Environmental Impact Assessment process for the proposed closing of eleven (11) Park Erven, located on Erf 1251 Flamwood Ext 7; Erf 306 Flamwood Proper; Erf 302 Flamwood Proper; Erf 564 Flimieda; Erf 1253 La Hoff; Remainder of Erf 103 Wilkoppies; Erf Re 412 Freemanville; Erf 216 Songloed; 217 Songloed; Erf 938 Boetrand and Erf 943 Boetrand, City of Matlosana, North West Province.

Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in these erven becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies (located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained. (although it be mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Park and a Tennis Club.

The following Table provides a summary of the Proposed development:

Number	Erf	Size	Residential 1 erven	Residential 2 erven	Municipal	Other
1	Erf 1251 Flamwood Ext 7	0.3999 ha	6			
2	Erf 306 Flamwood Proper	0.6879 ha	7		2	
3	Erf 302 Flamwood Proper	1.0672 ha	12			
4	Erf 564 Flimieda	0.5798 ha	8		1	
5	Erf 1253 La Hoff	1.1420 ha	15		1	
6	Remainder of Erf 103 Wilkoppies	0.4368 ha				1 Business 1 Special 1 Recreational
7	Erf Re 412 Freemanville	0.5958 ha		1		
8 and 9	Erf 216 and 217 Songloed	0.9142 ha (216) 0.6397 ha (217) Total 1,5539 ha		1	1	
10	Erf 938 Boetrand	0.3769 ha	5			1 Public Open Space
11	Erf 943 Boetrand	0.2124 ha	4			
	<b>Total</b>	<b>7,0526 ha</b>	<b>57</b>	<b>2</b>	<b>5</b>	<b>4</b>

The activity is listed in terms of the Regulations (in force since 4 December 2014) in terms of Section 24(M) and 44 made under section 24(5) of the National Environmental Management Act (NEMA) 1998 (Act 107 of 1998) as amended and published in Government Notice No. R 326 of 2017. The proposed development triggers the following regulations and listed activities:

Indicate the number and date of the relevant notice:	Activity No (s) and Activity Description (in terms of the relevant notice)	Describe each listed activity as per project description	Anticipated years to complete construction (From date of commencement)
GN.R. 324, 7 April 2017	12 (h)(vi)	<p><i>"The clearance of an area of 3 315 sq.m of indigenous vegetation in order to establish 1 Business 1 and 1 Special erven on the Remainder of Erf 103 Wilkoppies</i></p> <p><i>h) North West</i></p> <p><i>vi) within 100 meters from the edge of a tributary of the Schoonspruit.</i></p>	10 Years
GN.R. 324, 7 April 2017	15 (e)(i)	<p><i>"The transformation of 7,0526 ha of land that was zoned open space in order to establish 57 Residential 1 erven, 2 Residential 2 erven, 5 Municipal erven and 4 other erven, located on:</i></p> <ul style="list-style-type: none"> <li><i>➤ Erf 1251 Flamwood Ext 7</i></li> <li><i>➤ Erf 306 Flamwood Proper</i></li> <li><i>➤ Erf 302 Flamwood Proper</i></li> <li><i>➤ Erf 564 Flimieda</i></li> <li><i>➤ Erf 1253 La Hoff</i></li> <li><i>➤ Remainder of Erf 103 Wilkoppies</i></li> <li><i>➤ Erf Re 412 Freemanville</i></li> <li><i>➤ Erf 216 Songloed</i></li> <li><i>➤ 217 Songloed</i></li> <li><i>➤ Erf 938 Boetrand</i></li> <li><i>➤ Erf 943 Boetrand</i></li> </ul> <p><i>e) North West</i></p> <p><i>i) Within the urban area of the City of Matlosana</i></p>	10 Years

The detailed environmental assessment for the proposed development, has not found any environmental impacts that *cannot* be mitigated to acceptable and manageable levels.

In the National Framework for Sustainable Development (NFSD) it is stated that *"the achievement of sustainable development is not a once-off occurrence and its objectives cannot be achieved by a single action or decision. It is an ongoing process that requires a particular set of values and attitudes in which economic, social and environmental assets that society has at its disposal, are managed in a manner that sustains human well-being without compromising the ability of future generations to meet their own need.* The NFSD further continues to emphasize that South Africa's current development path in certain

instances reflects signs of being unsustainable in the long-term. It highlights that a large percentage of growth in economic activity (measured in terms of its contribution to the GDP) is achieved by *"consuming' natural resources and degrading our habitat at accelerating rates with the inevitable consequence that future economic growth and development objectives will be prejudiced."*

Consistent with national priorities, environmental authorities must support *"increased economic growth and promote social inclusion"*, whilst ensuring that such growth is *"ecologically sustainable"*. In the National Spatial Development Perspective (NSDP) it is highlighted that, to achieve the goal of stimulating sustainable economic activities and to create long-term employment opportunities, it is required that spending on economic infrastructure is focused in priority areas with potential for economic development, with development to serve the broader societies' needs equitably.

The local municipality intends to promote a more compact city in order to prevent the expansive provision of social and engineering services, as well as to prevent the economic decline of the traditional city centre. The Spatial Development Framework (SDF) addresses the scale of urban growth through planned extensions, infill and redevelopment strategies. It also addresses measures to promote compact and connected growth opportunities, such as the identification of revitalisation zones, densification and mixed land use zones.

The planning practices of the past has resulted in sprawling urban areas that are un-economical. Today, planning policies are transformed to mainly encourage infill development on vacant land within the urban environment, in order to combat urban sprawl. The proposed development falls in line with these principals, as it is infill development within the urban area.

During the construction phase, temporary employment will be created. The increased employment in the area during the construction phase will also result in increased expenditure, which, in addition, will mean that more than just the proposed jobs required for the construction on the site will be created due to economic spin-offs that will result. Due to the nature of the proposed development it will lead to an increase in employment opportunities in the operational phase and will contribute to the broadening of the income base and alleviation of poverty within the Local Municipality.

Alternatives were considered, and the following three even were also included into the initial assessment.

- Erf 410 Freemanville
- Remaining extent of Erf 96 Roosheuvel
- Erf 17 299 Jouberton Ext 16

After further investigation it was found that the sensitivity of these 3 sites were too high. Erf 410 Freemanville is located at a sensitive koppie, Remaining Extent of Erf 96 Roosheuvel is too steep for development purposes while Erf 17 299 Jouberton Ext 16 is located at an area that is saturated with water.

An Alternative Layout Plan that was considered for the Remainder of Erf 103 Wilkoppies, the Wetland Specialist has found that the site is influenced by a wetland area and after delineation of the wetland areas, most of the site was deemed undevelopable. The site is also an active, functional Park, and as such serves the intended purpose.

The only other alternative that exists for the proposed development is the "no-go" option which will imply that the status quo will prevail. Should this option be implemented the areas will remain a health and safety risk for the inhabitants of the area. Therefore this option was discarded. It is therefore proposed that Alternative 1 be the preferred alternative.

Specialist studies were conducted and a full Public Participation Process is being followed. This information was used to generate a sensitivity map that was used to assess the sustainability of the design and layout plans for the proposed development.

The **Heritage Impact Assessment** revealed that it is evident that there is a low likelihood of any significant cultural heritage (archaeological and/or historical) sites or features being present in the areas. If any did exist here in the past it would have been extensively disturbed or destroyed.

The **Fauna and Flora Habitat** study conducted addressed these ecological sensitivities as follows.

#### *Animal species theme sensitivity*

Relative animal species theme sensitivity is medium. The possible presence of *Hydriectus maculicollis* (Spotted-necked Otter) that should be investigated is indicated by the screening tool. During the surveys this status quo has been confirmed or could be low instead of medium. The watercourse and artificial dam at Remainder of Erf 103 Wilkoppies, largely surrounded by dense residential areas, are not ideal habitats for *Hydriectus maculicollis* (Spotted-necked Otter), which favours more open permanent and quiet waters. No distinct possibility that the site could be used as specific habitat or foraging area by *Hydriectus maculicollis* could be observed.

#### *Aquatic biodiversity theme sensitivity*

Relative aquatic biodiversity theme sensitivity at the site is low and for parts of the study area very high owing to the presence of an aquatic Critical Biodiversity Area. The sites are not part of a Freshwater Ecosystem Priority Area. There is an active channel and riparian zone of a non-perennial river at Remainder of Erf 103 Wilkoppies. This non-perennial river, its riparian zone and its buffer zone of 32 m are excluded from the proposed developments. There is no distinct impact that the proposed development will have on the river of which the outer edge of the riparian zone.

#### *Plant species theme sensitivity*

Relative plant species theme sensitivity is low and medium, the latter owing to the possible occurrence of a sensitive species which is not threatened but which could be prone to harvesting. Possible sensitive plant species of which the likely presence or absence have been investigated are listed in Tables 4.2 – 4.9 and include plant species on a local and provincial scale which could be prone to harvesting. No Threatened or Near Threatened plant species or any of the plant sensitive species that are not threatened but which are prone to harvesting, appear to be present at the site with the exception of a few individuals of the Protected tree species *Boscia albitrunca* (Shepherd's Tree, Motlôpi, Witgatboom) at Erf 410 Freemanville. If the development is approved and the removal/ destruction of these *Boscia albitrunca* trees cannot be avoided, a permit should be applied for.

#### *Terrestrial biodiversity theme sensitivity*

Relative terrestrial biodiversity at the site is very high. This high sensitivity that is ascribed to the site area, is because of the presence of Critical Biodiversity Area 2, the presence of an Endangered ecosystem, the Vaal-Vet Sandy Grassland that is mapped for the site and the possibility of including the site in a Protected Area Expansion strategy. During surveys at the site, it was found that the original vegetation type has been transformed or modified at the sites. The sites are also isolated. The scope for the sites to distinctly contribute to the conservation of Vaal-Vet Sandy Grassland, is small.

A full Public Participation Process is being conducted and any objections or comments that will be received in relation to the proposed development will be incorporated into the Final BAR.

# 1. INTRODUCTION

**City of Matlosana Local Municipality** has appointed **AB Enviro Consult CC**, an independent environmental consultancy, to undertake an Environmental Impact Assessment process for the proposed closing of eleven (11) Park Erven, located on Erf 1251 Flamwood Ext 7; Erf 306 Flamwood Proper; Erf 302 Flamwood Proper; Erf 564 Flimieda; Erf 1253 La Hoff; Remainder of Erf 103 Wilkoppies; Erf Re 412 Freemanville; Erf 216 Songloed; 217 Songloed; Erf 938 Boetrand and Erf 943 Boetrand, City of Matlosana, North West Province.

Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in it becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies (located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained, (albeit privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Park and a Tennis Club.

## 1.1 THE BASIC ASSESSMENT PROCESS

The purpose of this document is to adhere to the requirements for compilation of Basic Assessment Reports as amended and published in Government Notice R. 326 of 7 April 2017, Appendix 1, and the National Environmental Management Act (Act 107 of 1998) (NEMA).

## 1.2 DESCRIPTION OF THE PROCESS FOLLOWED

In order to assess a proposed development it is important to take into consideration the principles of NEMA. These principles are outlined in Chapter 1 and read as follows:

- 1) *“The principles set out in this section apply throughout the Republic to the actions of all organs of state that may significantly affect the environment and—*
  - a. *shall apply alongside all other appropriate and relevant considerations, including the State’s responsibility to respect, protect, promote and fulfil the social and economic rights in Chapter 2 of the Constitution and in particular the basic needs of categories of persons disadvantaged by unfair discrimination;*
  - b. *serve as the general framework within which environmental management and implementation plans must be formulated;*
  - c. *serve as guidelines by reference to which any organ of state must exercise any function when taking any decision in terms of this Act or any statutory provision concerning the protection of the environment;*
  - d. *serve as principles by reference to which a conciliator appointed under this Act must make recommendations; and*
  - e. *guide the interpretation administration and implementation of this Act, and any other law concerned with the protection or management of the environment.*

- 2) *Environmental management must place people and their needs at the forefront of its concern, and serve their physical, psychological, developmental, cultural and social interests equitably.*
- 3) *Development must be socially, environmentally and economically sustainable.*
- 4) (a) *Sustainable development requires the consideration of all relevant factors including the following:*
  - (i) *That the disturbance of ecosystems and loss of biological diversity are avoided, or, where they cannot be altogether avoided, are minimised and remedied:*
  - (ii) *that pollution and degradation of the environment are avoided, or, where they cannot be altogether avoided, are minimised and remedied;*
  - (iii) *that the disturbance of landscapes and sites that constitute the nation's cultural heritage is avoided, or where it cannot be altogether avoided, is minimised and remedied;*
  - (iv) *that waste is avoided. or where it cannot be altogether avoided, minimised and re-used or recycled where possible and otherwise disposed of in a responsible manner;*
  - (v) *that the use and exploitation of non-renewable natural resources is responsible and equitable, and takes into account the consequences of the depletion of the resource;*
  - (vi) *that the development use and exploitation of renewable resources and the ecosystems of which they are part do not exceed the level beyond which their integrity is jeopardised;*
  - (vii) *that a risk-averse and cautious approach is applied, which takes into account the limits of current knowledge about the consequences of decisions and actions; and*
  - (viii) *that negative impacts on the environment and on people's environmental rights be anticipated and prevented, and where they cannot be altogether prevented, are minimised and remedied.*
- (b) *Environmental management must be integrated, acknowledging that all elements of the environment are linked and interrelated, and it must take into account the effects of decisions on all aspects of the environment and all people in the environment by pursuing the selection of the best practicable environmental option.*
- (c) *Environmental justice must be pursued so that adverse environmental impacts shall not be distributed in such a manner as to unfairly discriminate against any person, particularly vulnerable and disadvantaged persons.*
- (d) *Equitable access to environmental resources, benefits and services to meet basic human needs and ensure human well-being must be pursued and special measures may be taken to ensure access thereto by categories of persons disadvantaged by unfair discrimination.*
- (e) *Responsibility for the environmental health and safety consequences of a policy, programme, project, product, process, service or activity exists throughout its life cycle.*
- (f) *The participation of all interested and affected parties in environmental governance must be promoted, and all people must have the opportunity to develop the understanding, skills and capacity necessary for achieving equitable and effective participation and participation by vulnerable and disadvantaged persons must be ensured.*

- (g) *Decisions must take into account the interests, needs and values of all interested and affected parties, and this includes recognizing all forms of knowledge, including traditional and ordinary knowledge.*
- (h) *Community wellbeing and empowerment must be promoted through environmental education, the raising of environmental awareness, the sharing of knowledge and experience and other appropriate means.*
- (i) *The social, economic and environmental impacts of activities, including disadvantages and benefits must be considered, assessed and evaluated and decisions must be appropriate in the light of such consideration and assessment.*
- (j) *The right of workers to refuse work that is harmful to human health or the environment and to be informed of dangers must be respected and protected.*
- (k) *Decisions must be taken in an open and transparent manner, and access to information must be provided in accordance with the law.*
- (l) *There must be intergovernmental co-ordination and harmonisation of policies, legislation and actions relating to the environment.*
- (m) *Actual or potential conflicts of interest between organs of state should be resolved through conflict resolution procedures.*
- (n) *Global and international responsibilities relating to the environment must be discharged in the national interest.*
- (o) *The environment is held in public trust for the people, the beneficial use of environmental resources must serve the public interest and the environment must be protected as the people's common heritage.*
- (p) *The costs of remedying pollution, environmental degradation consequent adverse health effects and of preventing, controlling or minimizing further pollution, environmental damage or adverse health effects must be paid for by those responsible for harming the environment.*
- (q) *The vital role of women and youth in environmental management and development must be recognised and their full participation therein must be promoted.*
- (r) *Sensitive, vulnerable, highly dynamic or stressed ecosystems, such as coastal shores, estuaries, wetlands and similar systems require specific attention in management and planning procedures, especially where they are subject to significant human resource usage and development pressure."*

The above mentioned principals and the applicable legislation, Policies and Guidelines as described in Paragraph 5 of this Report were taken into account in the assessment of the Environmental Impacts for the proposed development. The process followed can be described as follows:

- 1) The EAP was contracted by the City of Matlosana as Independent Environmental Assessment Practitioner.
- 2) A Town and Regional Planner designed the proposed development in such a way that the layout of the proposed development satisfies the needs of future occupiers of the site.
- 3) A SAHRA Specialist has been appointed to determine the possible impact of the development on Archaeological and Cultural features.
- 4) An Ecological specialist has been appointed to determine the impact of the proposed development on the Fauna and Flora of the area.

- 5) An Environmental Screening Process was conducted by the EAP to ensure that all the relevant Environmental Legislation is taken into consideration.
- 6) Desk top studies were conducted and alternatives assessed.
- 7) Site inspections were carried out to verify the outcomes of the desktop studies, and the preferred alternative defined.
- 8) A full Public Participation Process is being followed to obtain inputs from interested and affected parties.
- 9) All the information obtained from the above mentioned processes is being used to assess the Environmental Impact that the proposed development may have on the Environment and vice versa.
- 10) The inputs from Specialists, interested and affected parties, together with the knowledge of the EAP is being used to determine measures to avoid, mitigate and manage potential impacts. These measures are described in the Environmental Management Programme.

### 1.3 ASSESSMENT PHASE

The assessment phase included the necessary investigations to assess the suitability of the identified site and its surrounding environment, for the development proposal. The assessment phase described the “status quo” of the bio-physical, social, economic and cultural environment, and identifies the anticipated environmental aspects associated with the proposed development. The assessment phase included the identification of *key interest groups*, (both government and non-government), and strived to establish efficient and effective communication. Identifying and informing Interested and affected parties of the proposed development may have an impact on the focus of the EIA. (S. Cliff, 2015).

This phase also determines the *significance of the impact* of the proposed activity on the surrounding Environment. During this phase, a Basic assessment Report (BAR) is compiled, and, following public review, is submitted to the approving authority – the DEDECT.

*The purpose of the Basic Assessment Report is to document the outcome of the Assessment Phase of the project.* The report fulfilled the requirements of the EIA Regulations (2014) for the documentation of the Basic Assessment Process. The Report was compiled in accordance with Section 21(3) of NEMA’s 2014 EIA Regulation (GN R. 982) as amended and published in Government Notice R. 326 of 7 April 2017.

The Basic Assessment Report will be submitted to DEDECT

#### 1.3.1 Objective of the basic assessment process

The objective of the basic assessment process is to, through a consultative process-

- (a) determine the policy and legislative context within which the proposed activity is located and how the activity complies with and responds to the policy and legislative context;
- (b) identify the alternatives considered, including the activity, location, and technology alternatives;
- (c) describe the need and desirability of the proposed alternatives;
- (d) through the undertaking of an impact and risk assessment process, inclusive of cumulative impacts which focused on determining the geographical, physical, biological, social, economic, heritage, and cultural sensitivity of the sites and locations within sites and the risk of impact of the proposed activity and technology alternatives on these aspects to determine–
  - (i) the nature, significance, consequence, extent, duration, and probability of the impacts occurring to; and
  - (ii) the degree to which these impacts–

- (aa) can be reversed;
- (bb) may cause irreplaceable loss of resources; and (cc) can be avoided, managed or mitigated;
- (cc) can be avoided, managed or mitigated; and
- (e) through a ranking of the site sensitivities and possible impacts the activity and technology alternatives will impose on the sites and location identified through the life of the activity to–
  - (i) identify and motivate a preferred site, activity and technology alternative;
  - (ii) identify suitable measures to avoid, manage or mitigate identified impacts; and
  - (iii) identify residual risks that need to be managed and monitored.

### 1.3.2 Scope of assessment and content of basic assessment reports

The BAR assesses those identified potential environmental impacts and benefits (direct, indirect and cumulative impacts) associated with the project design, construction, and operation phases, and recommends appropriate mitigation measures for potentially significant environmental impacts. The Environmental impacts are assessed both before and after mitigation to determine:

- The significance of the impact despite mitigation; and
- The effectiveness of the proposed mitigation measures.

The BAR addresses potential environmental impacts and benefits associated with all phases of the project, including design, construction and operation, and aims to provide the environmental authorities with sufficient information to make an informed decision regarding the proposed project.

Table 1 below provides a summary of the legislative requirements in terms of a Basic Assessment Report as stipulated in Section 23 of the 2014 EIA Regulation (GN R. 982) as amended. Cross-references are provided in terms of the relevant section within this BA Report where the NEMA and BA Report requirements have been addressed.

**Table 1: Basic Assessment Report content as per Section 23 of NEMA's 2014 EIA Regulation (GN R. 982) as amended Appendix 1.**

3. (1) A basic assessment report must contain the information that is necessary for the competent authority to consider and come to a decision on the application, and must include:

Section of the EIA Regulations, 2014	Description of EIA Regulations Requirements for Basic Assessment Reports	Location in this report
Appendix 1, section 3 (a)	Details of the EAP who prepared the report; and the expertise of the EAP;	Paragraph 2
Appendix 1, section 3 (b)	The location of the development footprint of the activity on the approved site as contemplated in the accepted scoping report, including – <ul style="list-style-type: none"> <li>(i) The 21 digit Surveyor General code of each cadastral land parcel;</li> <li>(ii) Where available, the physical address and farm name;</li> <li>(iii) Where the required information in items (i) and (ii) is not available, coordinates of the boundary of the property or properties</li> </ul>	Paragraph 4 Paragraph 4 Paragraph 4
Appendix 1, section 3 (c)	A plan which locates the proposed activity or activities applied for, at an appropriate scale, or, if it is – <ul style="list-style-type: none"> <li>(i) A linear activity, a description and coordinates of the corridor in which the proposed activity or activities is to be undertaken; or</li> <li>(ii) On land where the property has not been defined, the coordinates within which the activity is to be undertaken;</li> </ul>	Appendix A1 and Appendix A2 Paragraph 4
Appendix 1, section 3 (d)	A description of the scope of the proposed activity, including – <ul style="list-style-type: none"> <li>(i) all listed and specified activities triggered and being applied for; and</li> </ul>	Paragraph 3

Section of the EIA Regulations, 2014	Description of EIA Regulations Requirements for Basic Assessment Reports	Location in this report
	(ii) a description of the activities to be undertaken including associated structures and infrastructure;	Paragraph 3
Appendix 1, section 3 (e)	<p>A description of the policy and legislative context within which the development is proposed including</p> <p>(i) an identification of all legislation, policies, plans, guidelines, spatial tools, municipal development planning frameworks, and instruments that are applicable to this activity and have been considered in the preparation of the report; and</p> <p>(ii) how the proposed activity complies with and responds to the legislation and policy context, plans, guidelines, tools frameworks, and instruments explanation of how the proposed development complies with and responds to the legislation and policy context</p>	<p>Paragraph 5.1</p> <p>Paragraph 5.2</p> <p>Paragraph 5.2</p>
Appendix 1, section 3 (f)	A motivation for the need and desirability for the proposed development including the need and desirability of the activity in the context of the preferred location.	Paragraph 6
Appendix 1, section 3 (g)	a motivation for the preferred site, activity and technology alternative	Paragraph 4
Appendix 1, section 3 (h)	<p>A full description of the process followed to reach the proposed preferred alternative within the site, including-</p> <p>(i) Details of all alternatives considered;</p> <p>(ii) Details of the public participation process undertaken in terms of regulation 41 of the Regulations, including copies of the supporting documents and inputs;</p> <p>(iii) A summary of the issues raised by interested and affected parties, and an indication of the manner in which the issues were incorporated, or the reasons for not including them;</p> <p>(iv) The environmental attributes associated with the alternatives focusing on the geographical, physical, biological, social, economic, heritage and cultural aspects;</p> <p>(v) The impacts and risks identified for each alternative, including the nature, significance, consequence, extent, duration, and probability of the impacts, including the degree to which the impacts-</p> <p>(aa) can be reversed;</p> <p>(bb) may cause irreplaceable loss of resources; and</p> <p>(cc) can be avoided, managed, or mitigated.</p> <p>(vi) The methodology used in deterring and ranking the nature, significance, consequences, extent, duration and probability of potential environmental impacts and risks associated with the alternatives;</p> <p>(vii) Positive and negative impacts that the proposed activity and alternatives will have on the environment and on the community that may be affected focusing on the geographic, physical, biological, social, economic, heritage and cultural aspects;</p> <p>(viii) The possible mitigation measures that could be applied and level of residual risk;</p> <p>(ix) the outcome of the site selection matrix</p> <p>(x) If no alternatives, including alternative footprints for the activity were investigated, the motivation for not considering such and;</p> <p>(xi) a concluding statement indicating the preferred alternatives, including preferred location of the activity.</p>	<p>Paragraph 8</p> <p>Paragraph 10</p> <p>Paragraph 10</p> <p>Paragraph 8</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Paragraph 9</p> <p>Not Applicable</p> <p>Paragraph 12</p>
Appendix 1, section 3 (i)	A full description of the process undertaken to identify, assess and rank the impacts the activity will impose on the preferred location through the life of the activity, including-	Paragraph 9

Section of the EIA Regulations, 2014	Description of EIA Regulations Requirements for Basic Assessment Reports	Location in this report
	(i) a description of all environmental issues and risks that were identified during the environmental impact assessment process; and  (ii) an assessment of the significance of each issue and risk and an indication of the extent to which the issue and risk could be avoided or addressed by the adoption of mitigation measures;	Paragraph 8  Paragraph 9
Appendix 1, section 3 (j)	An assessment of each identified potentially significant impact and risk, including- (i) cumulative impacts;  (ii) the nature, significance and consequences of the impact and risk;  (iii) the extent and duration of the impact and risk;  (iv) the probability of the impact and risk occurring;  (v) the degree to which the impact and risk can be reversed;  (vi) the degree to which the impact and risk may cause irreplaceable loss of resources; and  (vii) the degree to which the impact and risk can be mitigated;	Paragraph 9  Paragraph 9  Paragraph 9  Paragraph 9  Paragraph 9  Paragraph 9
Appendix 1, section 3 (k)	Where applicable, a summary of the findings and recommendations of any specialist report complying with Appendix 6 to these Regulations and an indication as to how these findings and recommendations have been included in the final assessment report;	Paragraph 11
Appendix 1, section 3 (l)	An environmental impact statement which contains- (i) a summary of the key findings of the environmental impact assessment;  (ii) a map at an appropriate scale which superimposes the proposed activity and its associated structures and infrastructure on the environmental sensitivities of the preferred site indicating any areas that should be avoided, including buffers; and  (iii) a summary of the positive and negative impacts and risks of the proposed activity and identified alternatives;	Paragraph 12.2 and 12.2 Figure 2  Paragraph 12
Appendix 1, section 3 (m)	Based on the assessment, and where applicable, recommendations from specialist reports, the recording of proposed impact management outcomes for the development for inclusion in the EMPr	Paragraph 11 and 12
Appendix 1, section 3 (n)	Any aspects which were conditional to the findings of the assessment either by the EAP or specialist which are to be included as conditions of authorisation	Paragraph 3.1.2.1
Appendix 1, section 3 (o)	A description of any assumptions, uncertainties and gaps in knowledge which relate to the assessment and mitigation measures proposed	Paragraph 1.4.3
Appendix 1, section 3 (p)	A reasoned opinion as to whether the proposed activity should or should not be authorised, and if the opinion is that it should be authorised, any conditions that should be made in respect of that authorisation	Paragraph 12.4
Appendix 1, section 3 (q)	Where the proposed activity does not include operational aspects, the period for which the environmental authorisation is required and the date on which the activity will be concluded and the post construction monitoring requirements finalised	Not Applicable
Appendix 1, section 3 (r)	An undertaking under oath or affirmation by the EAP in relation to- (i) The correctness of the information provided in the report;  (ii) The inclusion of the comments and inputs from stakeholders and interested and affected parties; and  (iii) the inclusion of inputs and recommendations from the specialist reports where relevant; and  (iv) Any information provided by the EAP to interested and affected parties and any responses by the EAP to comments or inputs made by interested and affected parties.	Paragraph 13  Paragraph 13  Paragraph 13  Paragraph 13
Appendix 1, section 3 (s)	Where applicable, details of any financial provision for the rehabilitation, closure, and ongoing post decommissioning management of negative environmental impacts.	Not Applicable

Section of the EIA Regulations, 2014	Description of EIA Regulations Requirements for Basic Assessment Reports	Location in this report
Appendix 1, section 3 (t)	Any specific information that may be required by the competent authority.	Not Applicable
Appendix 1, section 3 (u)	Any other matters required in terms of section 24(4)(a) and (b) of the Act	Not Applicable

### 1.3.3 Assumptions, uncertainties, limitations and gaps in knowledge:

This report is based on current available information and, as a result, the following limitations and assumptions are implicit –

The report is based on the *project description* provided by the Applicant as a result of reports that was compiled by the following Specialists:

- A Town planner has been appointed to determine the availability of services and the layout of the development
- A SAHRA Specialist has been appointed to determine the possible impact of the development on Archaeological and Cultural features.
- An Ecological specialist has been appointed to determine the impact of the proposed development on the Fauna and Flora of the area.
- An Environmental Screening Process was conducted by the EAP to ensure that all the relevant Environmental Legislation is taken into consideration.
- Desktop studies were conducted and alternatives assessed.

Descriptions of the biophysical and social environments are based on specialist fieldwork, investigations, and the Public Participation Process.

## 2. DETAILS AND EXPERTISE OF THE ENVIRONMENTAL ASSESSMENT PRACTITIONER

AB Enviro Consult (CC) is a registered consultancy, owned and operated as an independent unit by the registered owner and consultant: **Prof. A.B. de Villiers. Mr J.P. De Villiers** joined the consultancy during 2004 and **Mrs J.E. du Plooy** is a consultant since 2001.

Over a period of 27 years (1996-2023) this consultancy has successfully applied for, and obtained positive ROD's and EA's for more than 380 projects. Environmental Control Officer's duties are also performed on various projects.

### ACADEMIC AND PROFESSIONAL QUALIFICATIONS OF PROF DE VILLIERS

Post-Matric Qualifications

YEAR	Qualification	Institution	Field of Study
1968	B.Sc.	PU FOR CHE	Geography, Geology
1970	HONNS. B.Sc.	PU FOR CHE	Soil Science
1974	M.Sc.	PU FOR CHE	Geography
1981	Ph.D.	UOFS	Geography

### CV: Mr JP de Villiers

JP de Villiers holds a M.Sc. in Geography from the North West University's Department of Geography and Environmental Management. He started as a junior EAP in 2004 with AB Enviro Consult and was promoted in 2007 to senior EAP. During 2011 he was appointed as the Manager of the North West University, EIA Pro-Bono Office. This office is an initiative of, and funded by, the DEA. (This was a three year contract between DEA and NWU that was extended by one year) As Manager of this office, Mr. de Villiers had the following responsibilities:

- Conduct Environmental Impact Assessments for municipalities on a pro-bono basis.
- Provide environmental management training to North West Municipalities.
- Provide environmental assistance to North West Municipalities.
- Undertake research related to Environmental Impact Management within the North West Municipal Context.
- Marketing for stakeholder 'pro-bono' expert donations.
- Marketing for corporate 'pro-bono' funding.

As EAP, Mr. de Villiers has been directly involved in obtaining **309 Environmental Authorizations** and has performed the duties of **Environmental Control Officer (ECO) for 42 developments**. His responsibilities as Senior EAP includes the following:

### **Duties pertaining to Basic Assessments, EIA and Scoping and Section 24 G Applications:**

- Marketing and communication with clients
- Communication with authorities, source and analyse relevant baseline information and undertake site inspections
- Compile Environmental Application Form for the project and submit to the authorities
- Compile an *information requirements list* that is distributed to the project team. The Information required would assist with completion of the Report.
- Identify key interested and affected parties (I&APs)
- Compilation of terms of reference for specialist studies
- Commission specialist studies

- Compile and publish media notices in relevant newspapers
- Compile and place poster/s along the boundary of the site
- Hold a public meeting / Open House / focus meeting with I&APs
- Receive and address comments from public
- Undertake assessment phase by assessing and evaluating potential impacts identified.
- Review and manage specialist studies.
- Compile and distribute Draft Reports (Including Environmental Management Programmes)
- Should the Reports require substantial changes, these changes are incorporated into the final reports and distributed
- Address comments received on the final Report, finalise Report and submit to authorities
- Once the decision is issued, all I&Ps are formally informed of the decision

#### **Duties pertaining to Environmental Control Officer**

- Preparation (Compilation) and submission of Environmental Control Document.
- Training of and leasing with the Engineers Representative.
- Communicate with the Contractor.
- A monthly visit to the site during the construction period. Should any Environmental incident occur, an immediate site visit is undertaken.
- Monitoring and auditing according to the approved EMP and EA.
- Compilation of a written audit report for each site visits during the construction phase
- Liaising with the Compliance section of the Competent Authority

#### **ACADEMIC AND PROFESSIONAL QUALIFICATIONS MRS J.E. DU PLOOY**

### 3. DESCRIPTION OF THE ACTIVITY

The City of Matlosana Local Municipality intends to close 11 of their Public Parks by Rezoning and subdivision. These Park Erven are located on Erf 1251 Flamwood Ext 7; Erf 306 Flamwood Proper; Erf 302 Flamwood Proper; Erf 564 Flimieda; Erf 1253 La Hoff; Remainder of Erf 103 Wilkoppies; Erf Re 412 Freemanville; Erf 216 Songloed; 217 Songloed, Erf 938 Boetrand and Erf 943 Boetrand, City of Matlosana, North West Province. Please see Figure 1 for a Locality Map. The intention is to purpose erven that are more or less the same size as the ones currently available in the area. Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Parks have become derelict, unused and for most parts un-maintained, resulting in it becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies (located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained, (albeit mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Park and a Tennis Club.

The following Table provides a summary of the Proposed development:

Number	Erf	Size	Residential 1 erven	Residential 2 erven	Municipal	Other
1	Erf 1251 Flamwood Ext 7	0.3999 ha	6			
2	Erf 306 Flamwood Proper	0.6879 ha	7		2	
3	Erf 302 Flamwood Proper	1.0672 ha	12			
4	Erf 564 Flimieda	0.5798 ha	8		1	
5	Erf 1253 La Hoff	1.1420 ha	15		1	
6	Remainder of Erf 103 Wilkoppies	0.4368 ha				1 Business 1 Special 1 Recreational
7	Erf Re 412 Freemanville	0.5958 ha		1		
8 and 9	Erf 216 and 217 Songloed	0.9142 ha (Erf 216)  0.6397 ha (Erf 217)  Total 1,5539 ha		1	1	
10	Erf 938 Boetrand	0.3769 ha	5			1 Public Open Space
11	Erf 943 Boetrand	0.2124 ha	4			
	<b>Total</b>	<b>7,0526 ha</b>	<b>57</b>	<b>2</b>	<b>5</b>	<b>4</b>

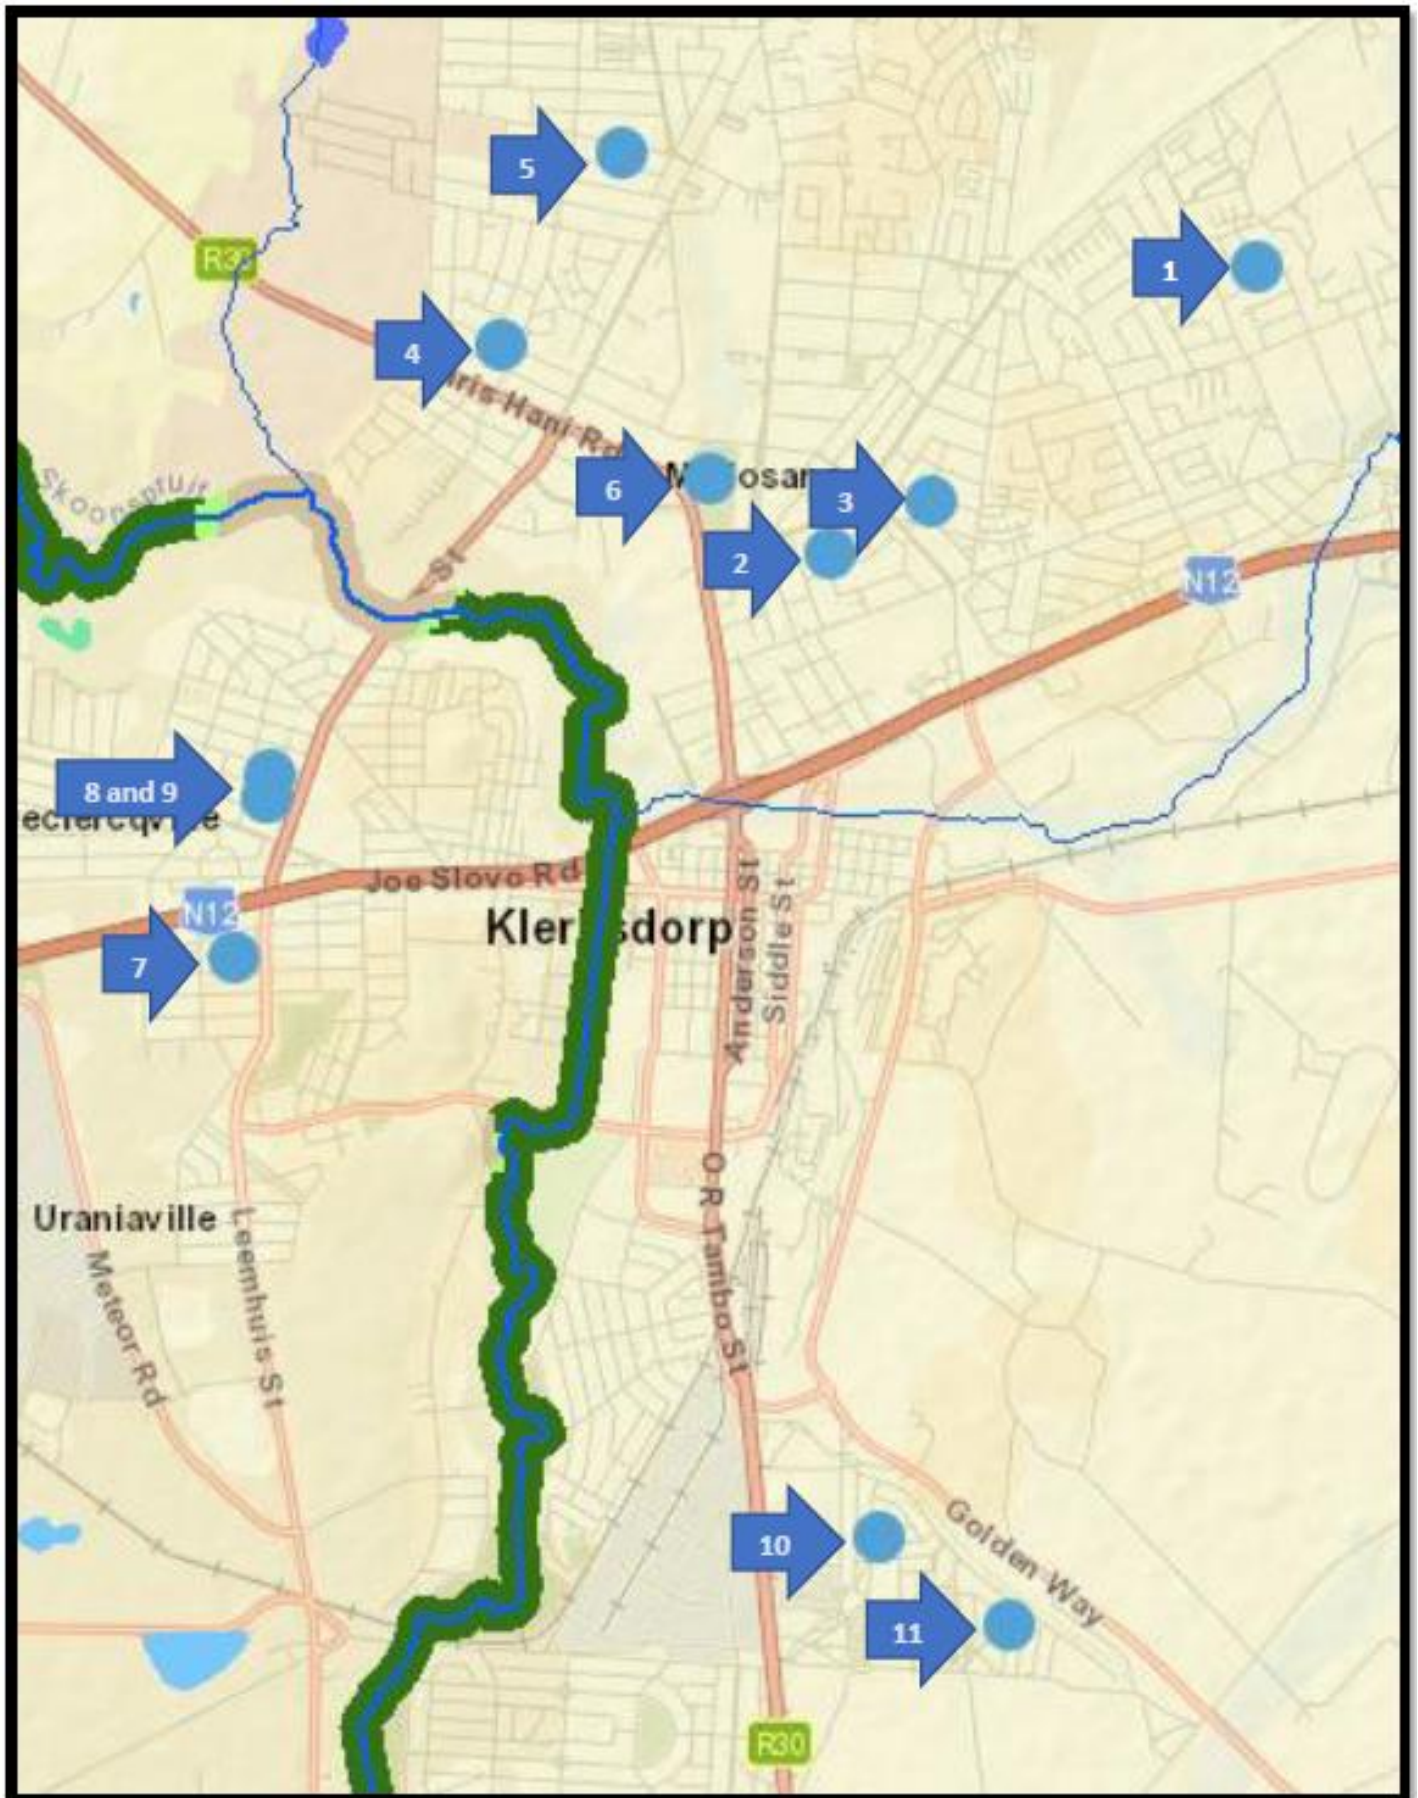

Figure 1: Locality Map

The following Paragraphs describes each individual proposed rezoning and subdivision.

### 1. Erf 1251 Flamwood Ext 7

This erf is 0.3999 ha in extent and it is proposed to be subdivided into 6 Residential 1 erven. The erf sizes will vary between 518 m<sup>2</sup> and 835 m<sup>2</sup>. See Figure 2 for a copy of the proposed layout plan.

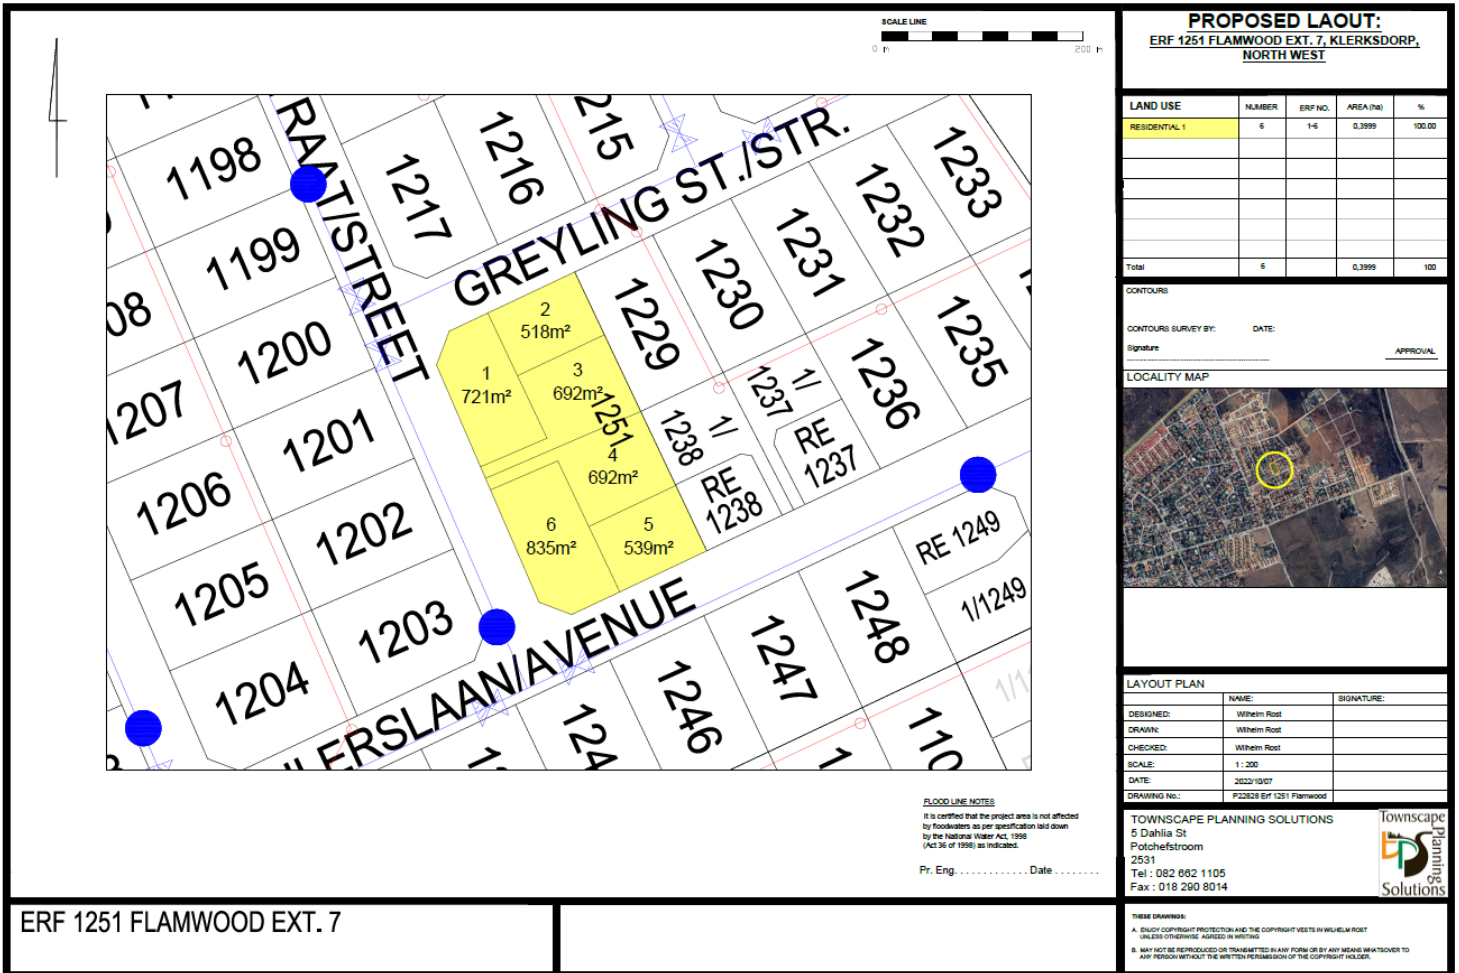

Figure 2: Proposed layout plan Erf 1251 Flamwood Ext 7

## 2. Erf 306 Flamwood Proper

This erf is 0.6879 ha in extent and it is proposed to be subdivided into 7 Residential 1 erven and 2 Municipal Erven. The Residential erf sizes will vary between 670 m<sup>2</sup> and 1163 m<sup>2</sup>. See Figure 3 for a copy of the proposed layout plan.

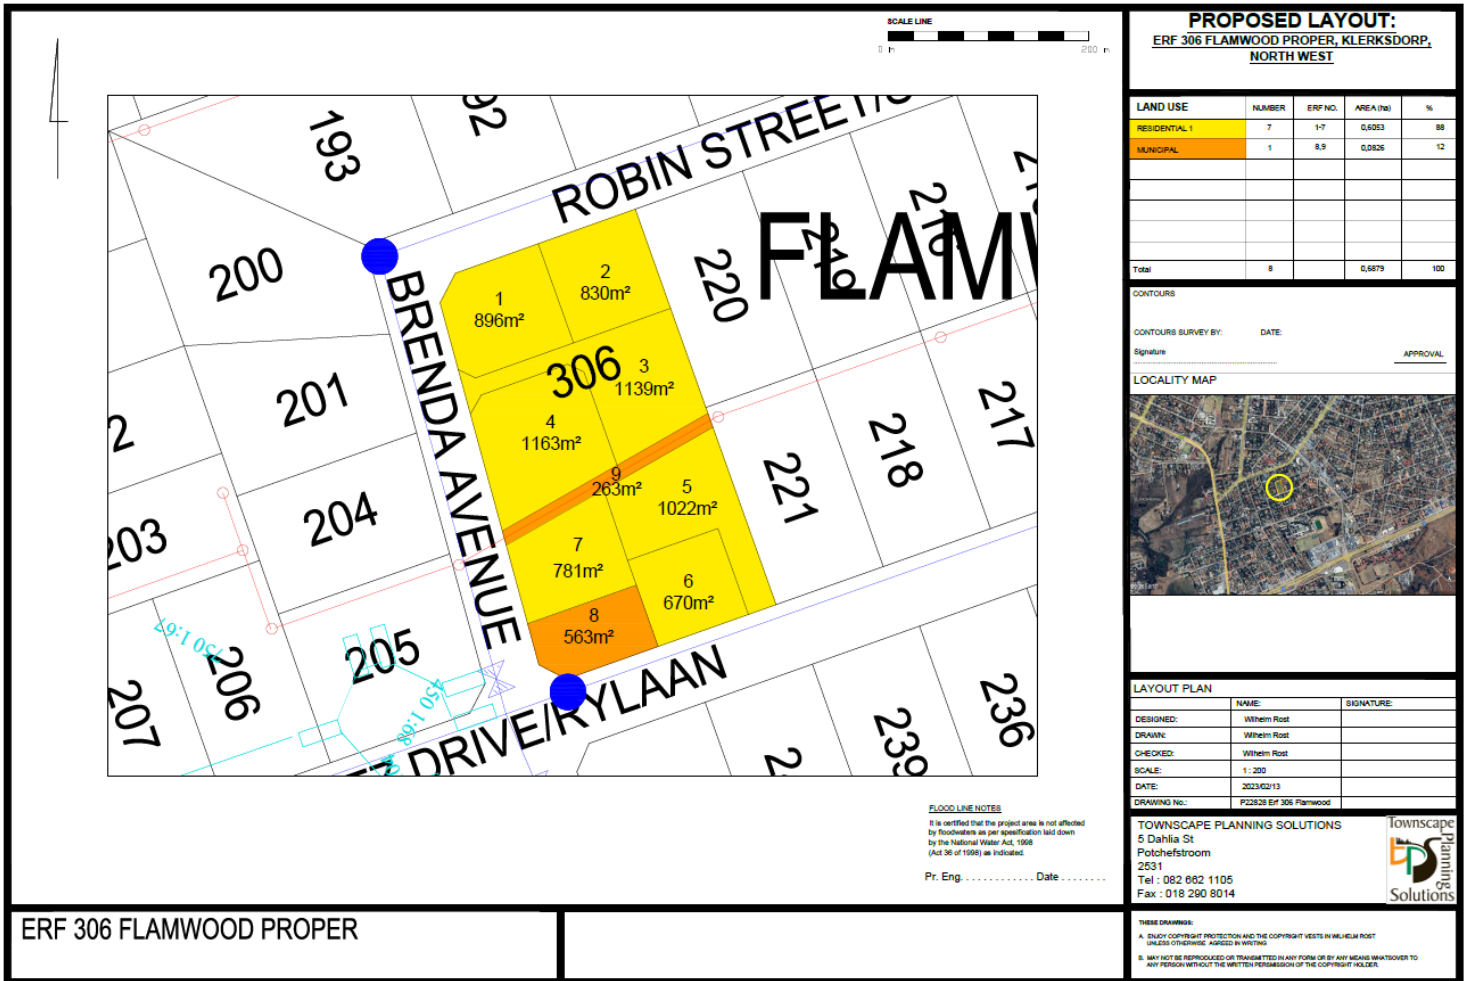

Figure 3: Proposed layout plan Erf 306 Flamwood Proper

### 3. Erf 302 Flamwood Proper

This erf is 1.0672 ha in extent and it is proposed to be subdivided into 12 Residential 1 erven. The Residential erf sizes will vary between 714 m<sup>2</sup> and 1245 m<sup>2</sup>. See Figure 4 for a copy of the proposed layout plan

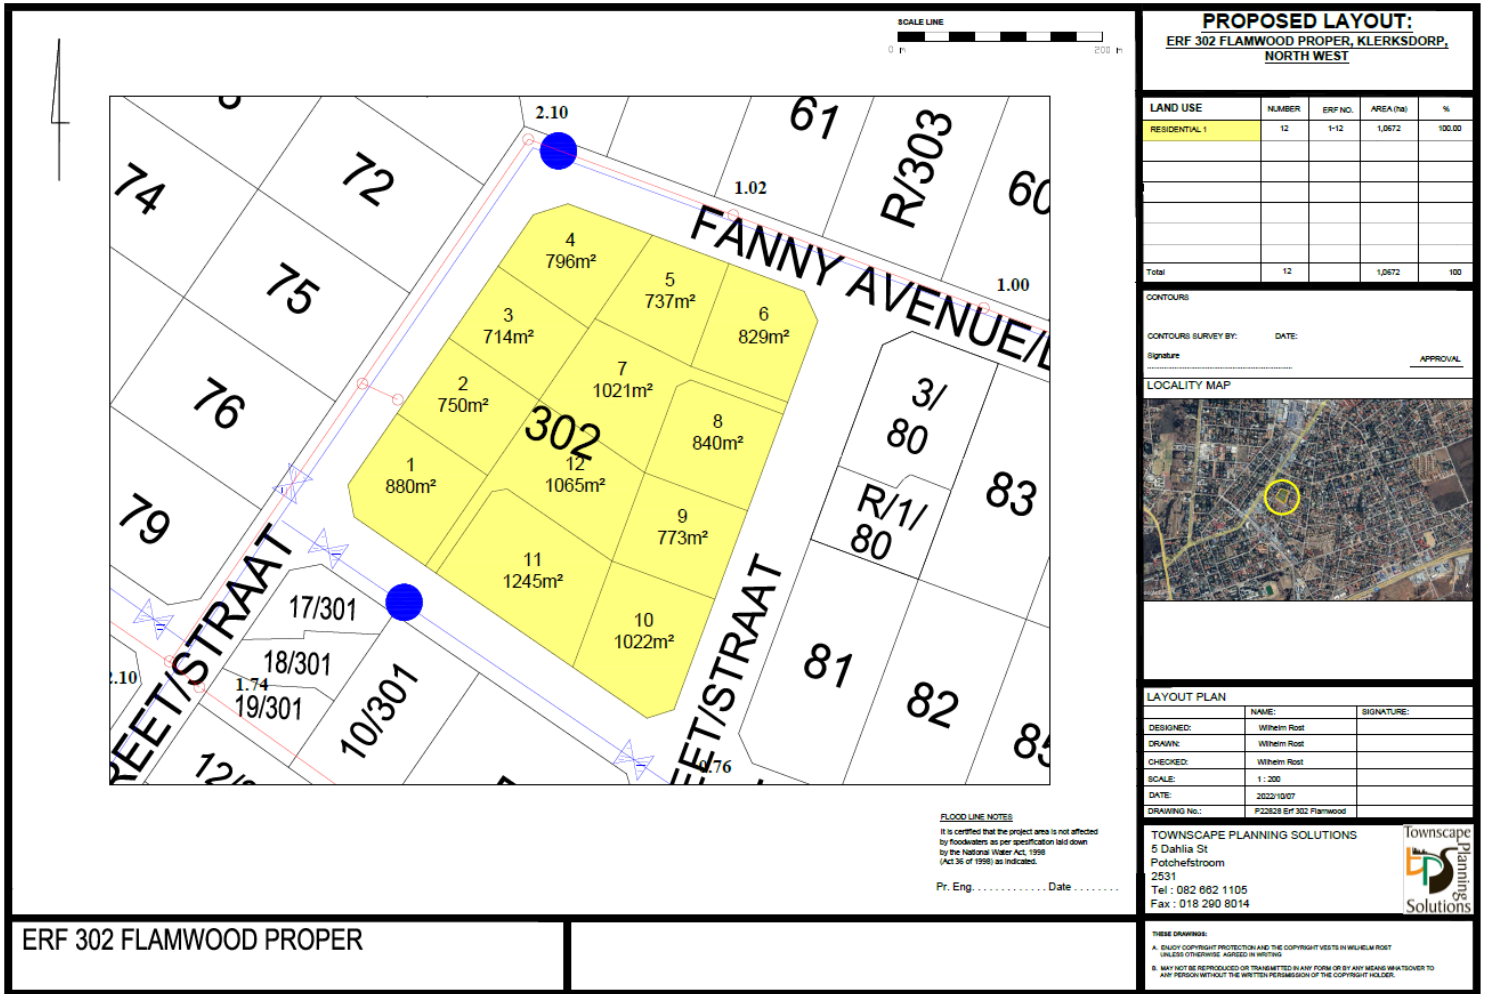

Figure 4: Proposed layout plan Erf 302 Flamwood Proper

## 4. Erf 564 Flimieda

This erf is 0.5798 ha in extent and it is proposed to be subdivided into 8 Residential 1 erven and 1 Municipal erf to accommodate service infrastructure. The Residential erf sizes will vary between 582 m<sup>2</sup> and 903 m<sup>2</sup>. See Figure 5 for a copy of the proposed layout plan

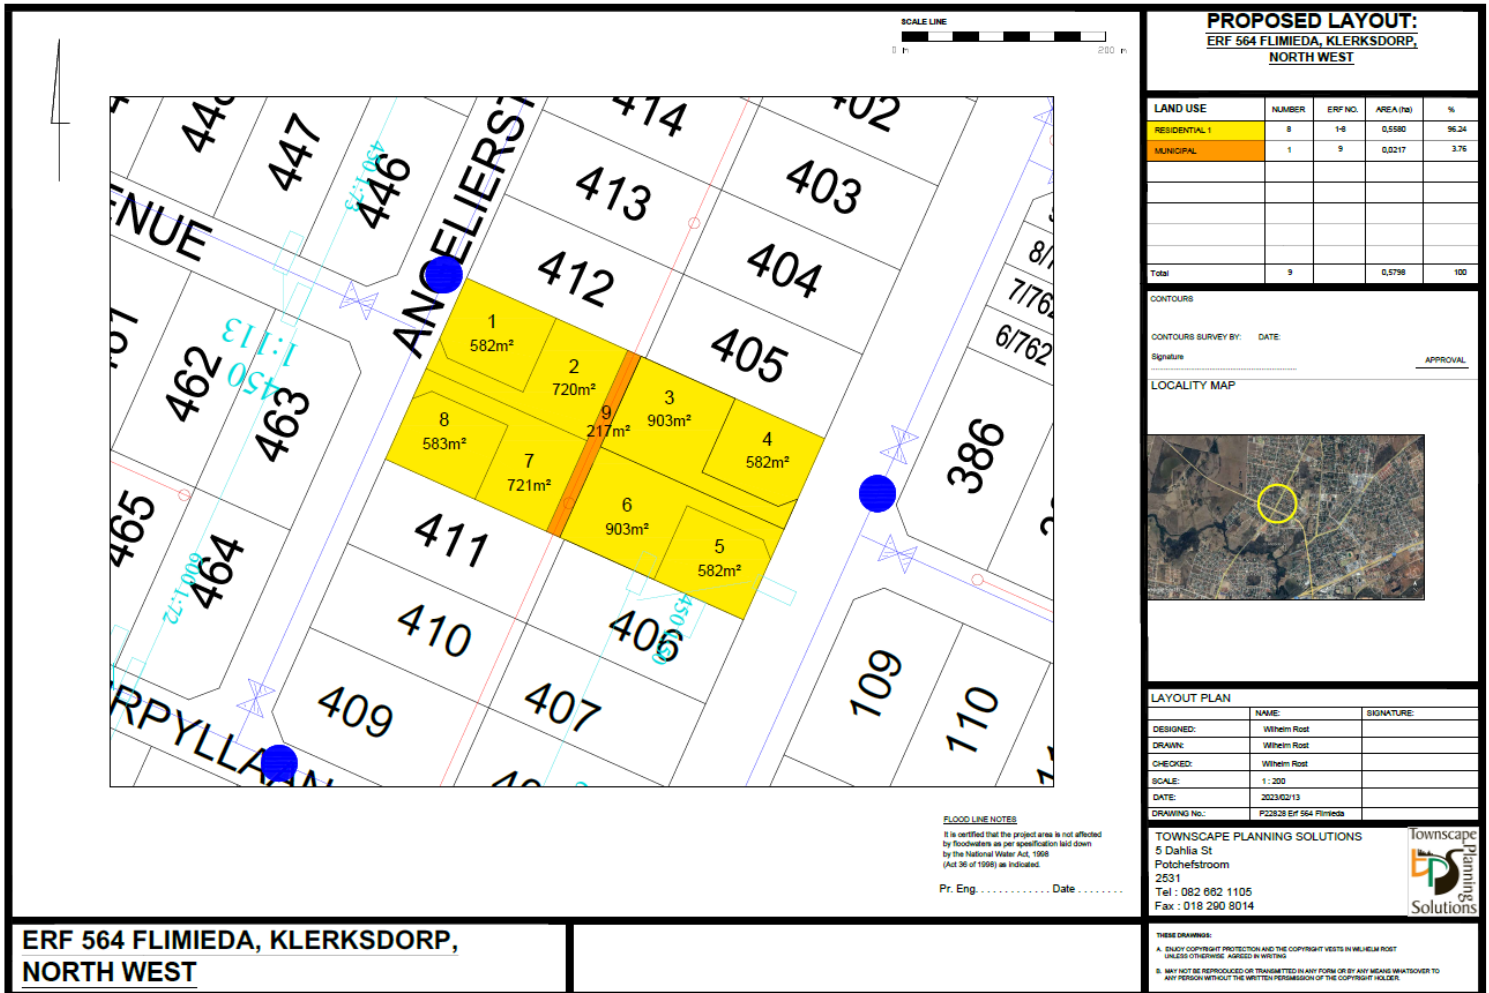

Figure 5: Proposed layout plan Erf 564 Flimieda

## 5. Erf 1253 La Hoff

This erf is 1.1420 ha in extent and it is proposed to be subdivided into 15 Residential 1 erven and 1 Municipal erf to accommodate service infrastructure. The Residential erf sizes will vary between 599 m<sup>2</sup> and 879 m<sup>2</sup> See Figure 6 for a copy of the proposed layout plan

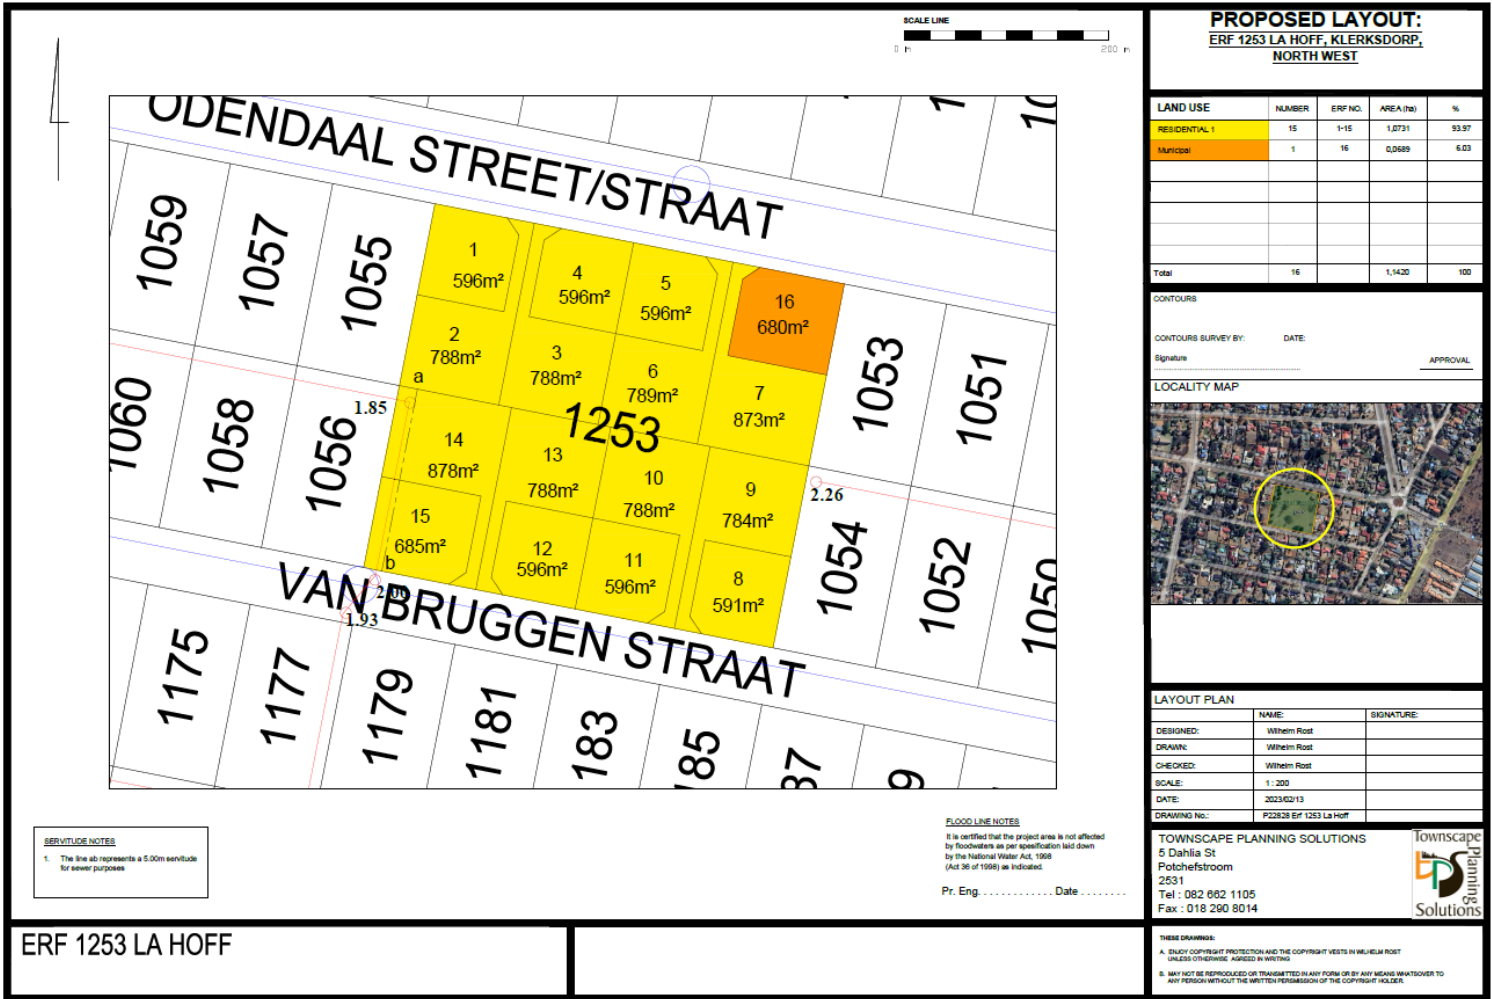

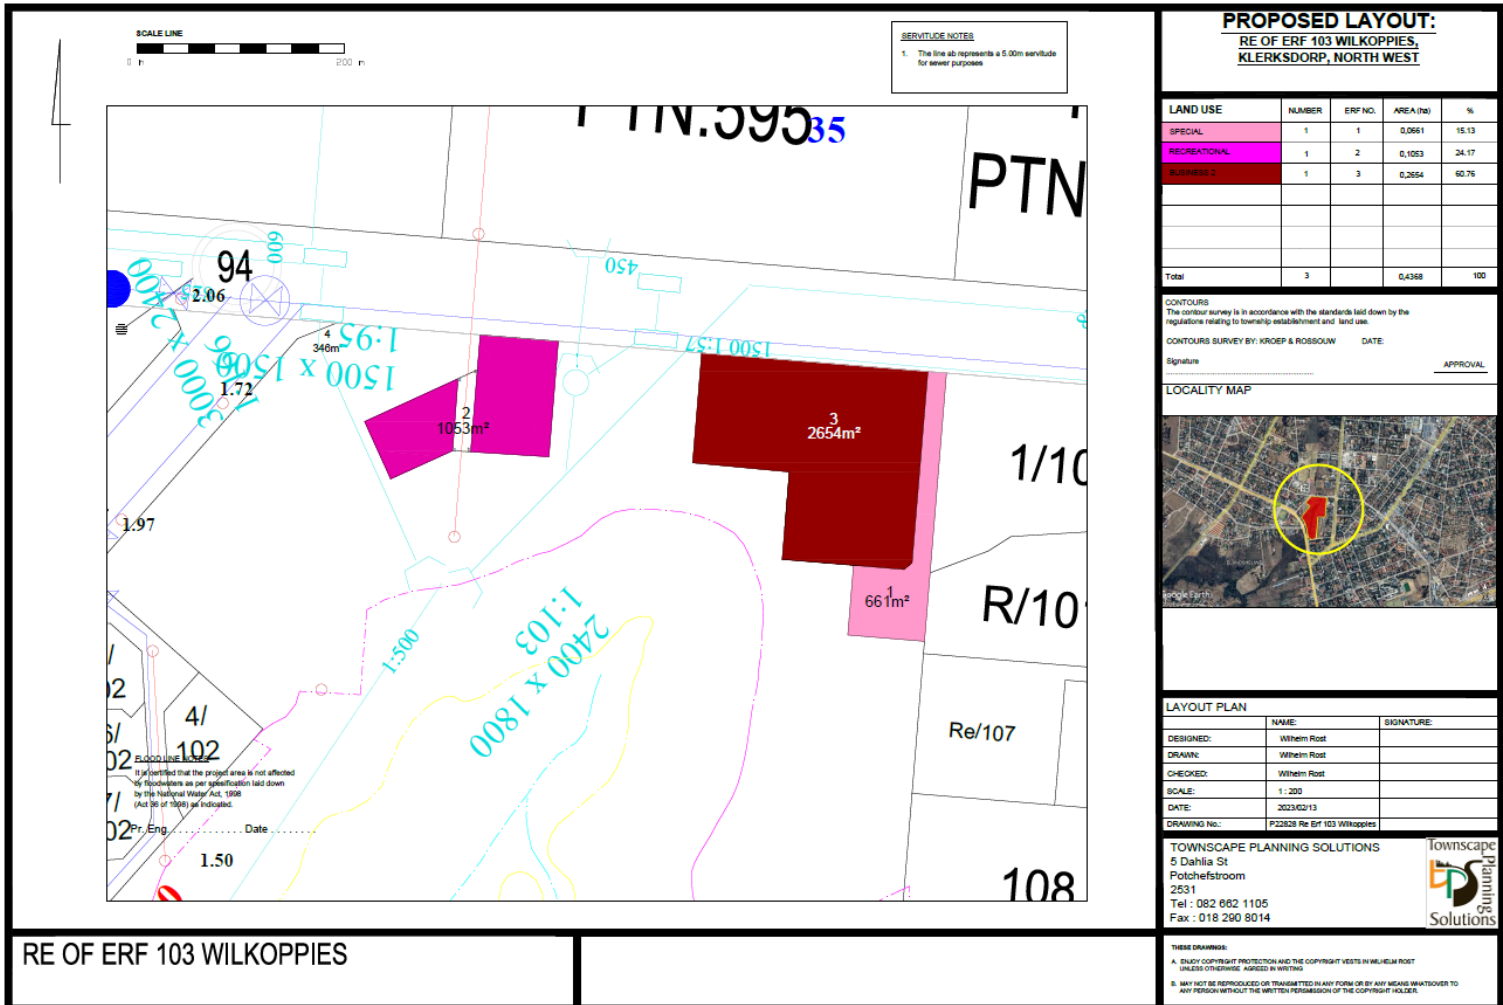

Figure 6: Proposed layout plan Erf 1253 La Hoff

## 6. Remainder of Erf 103 Wilkoppies

This erf is 7,4430 ha in extent. This erf is influenced by a water course and after assessment, it is proposed that only 0.4368 ha of the site will be rezoned into 1 Business erf (2 654 m<sup>2</sup>), 1 Recreational erf (1 053m<sup>2</sup>) and 1 Special erf (661m<sup>2</sup>). See Figure 7 for a copy of the proposed layout plan.

**Figure 7: Proposed layout plan Erf 103 Wilkoppies**

## 7. Erf Re 412 Freemanville

This erf is 0.5958 ha in extent and it is proposed to be rezoned into 1 Residential 2 erf. See Figure 8 for a copy of the proposed layout plan

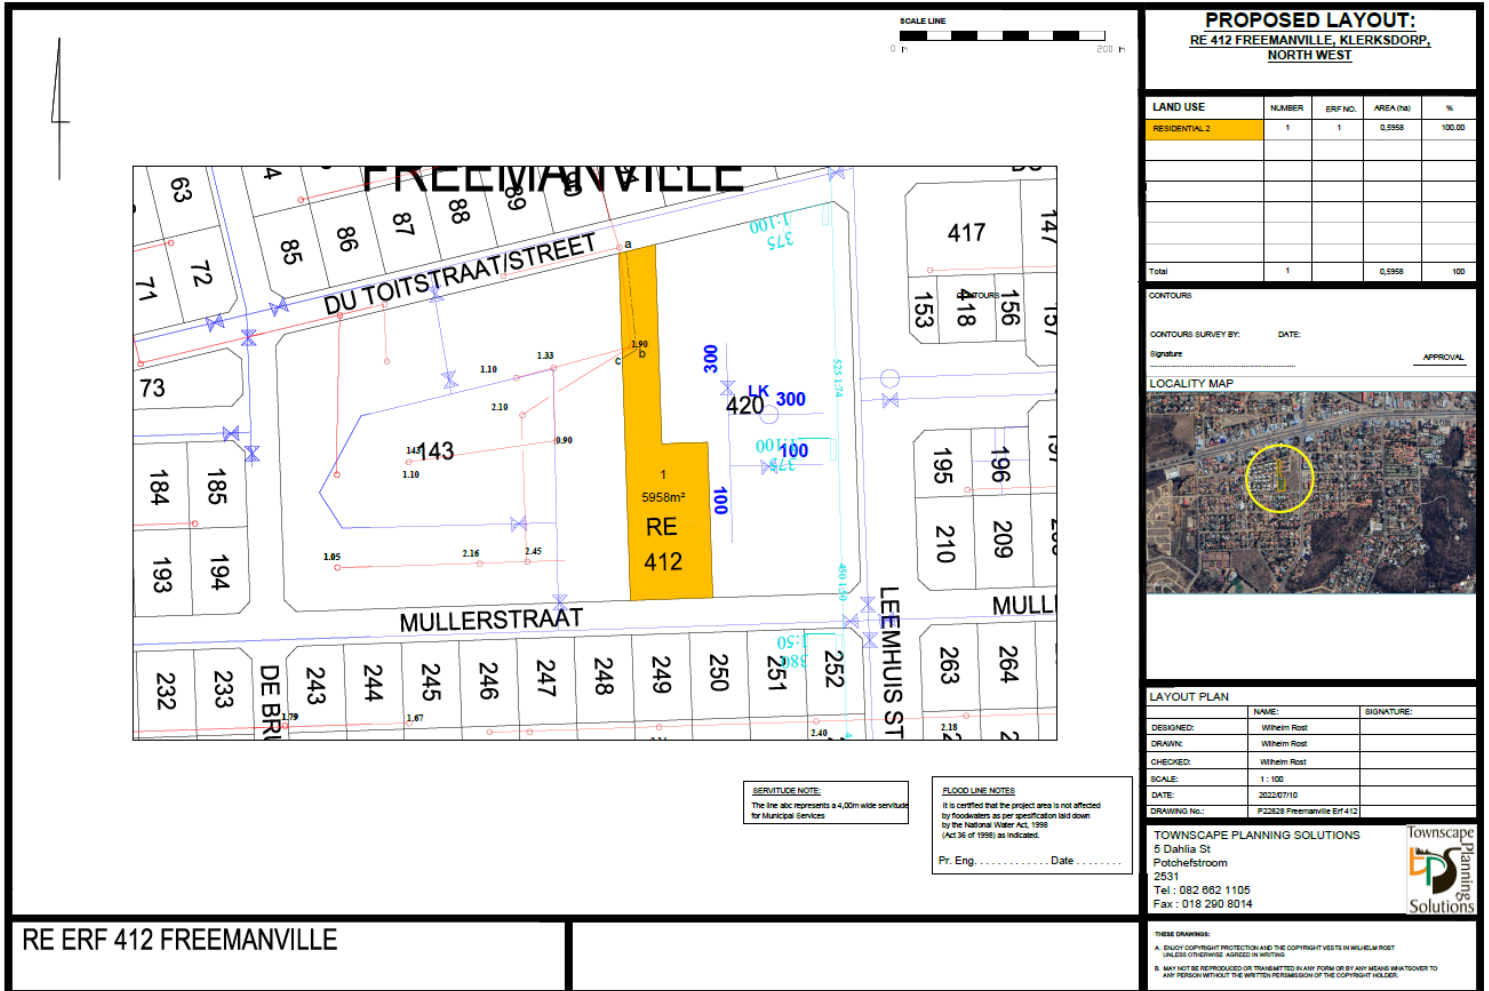

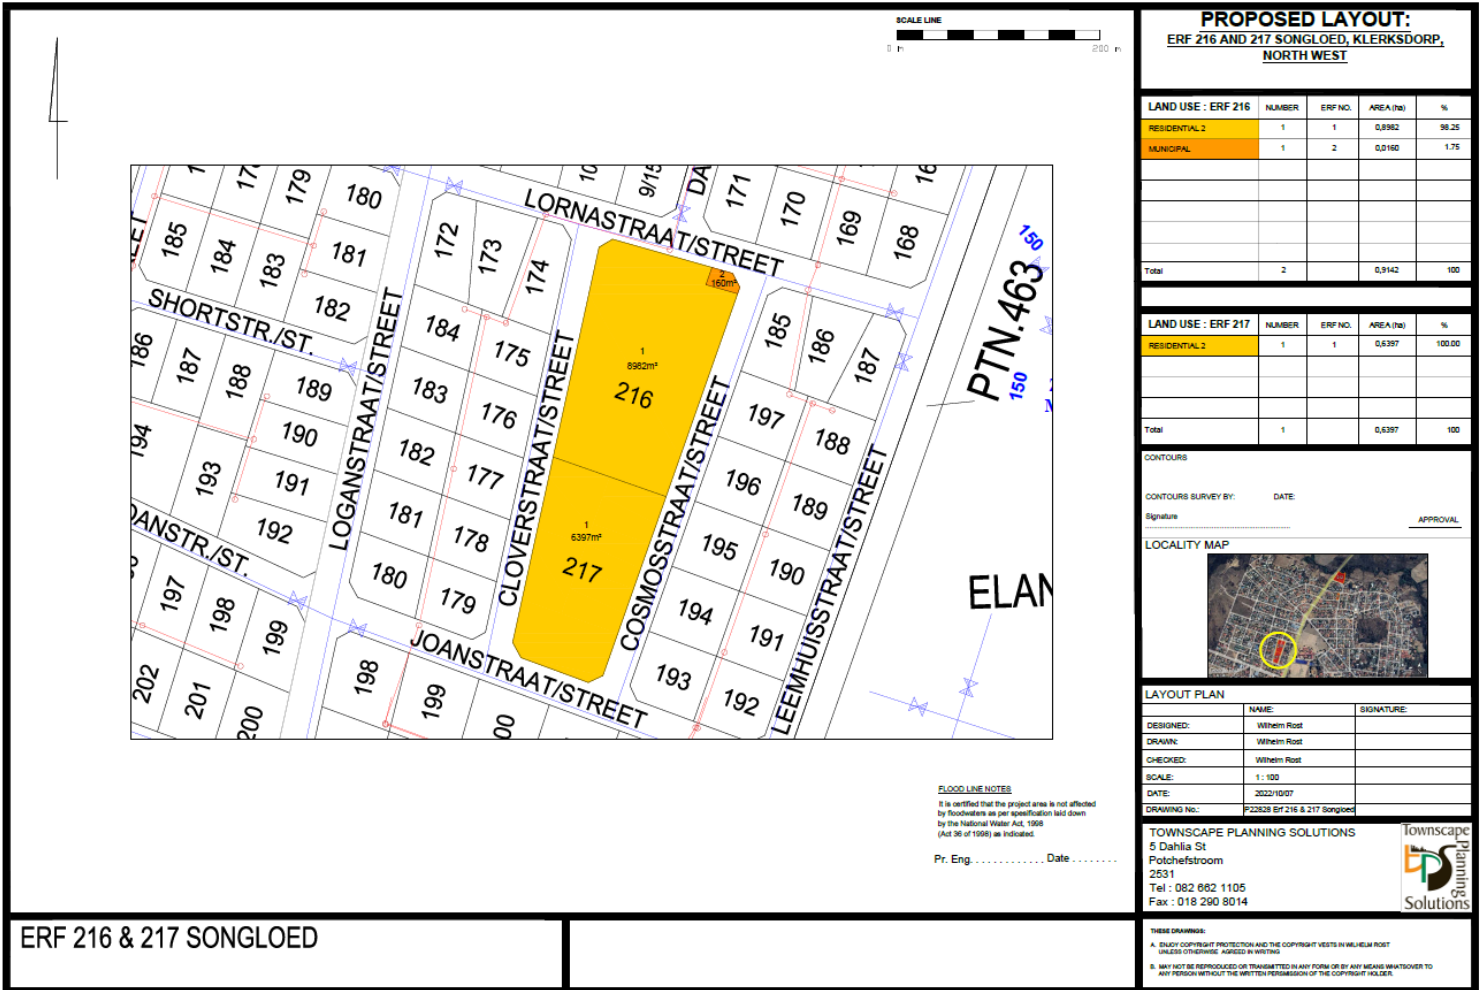

Figure 8: Proposed layout plan Remainder of Erf 412 Freemanville

## 8 and 9. Erf 216 and 217 Songloed

These two erven are located adjacent to each other. Erf 216 is 0.9142 ha in extent and it is proposed to be subdivided into 1 Residential 2 erf and 1 Municipal erf to accommodate service infrastructure. Erf 217 is 0.6397 ha in extent and it is proposed to be subdivided into 1 Residential 2 erf. See Figure 9 for a copy of the proposed layout plan

**Figure 9: Proposed layout plan Erf 216 and erf 217 Songloed**

## 10. Erf 938 Boetrand

This erf is 0.3769 ha in extent and it is proposed to be subdivided into 5 Residential 1 erven and 1 Public Open Space erf. The Residential erf sizes will vary between 416 m<sup>2</sup> and 727 m<sup>2</sup> See Figure 10 for a copy of the proposed layout plan

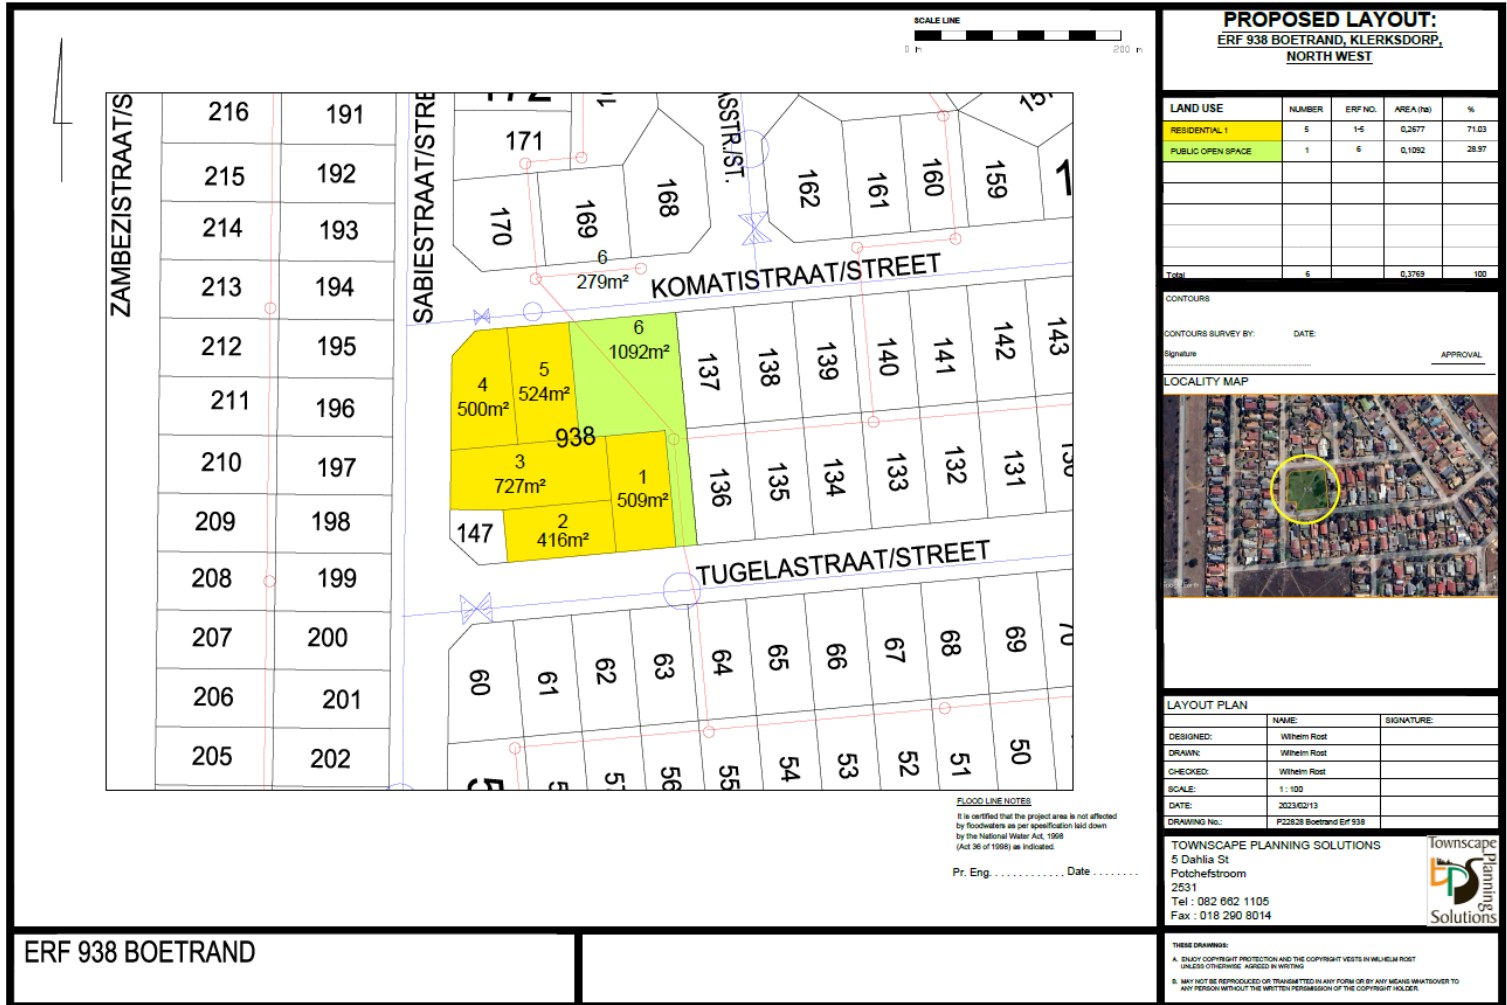

Figure 10: Proposed layout plan Erf 938 Boetrand

## 11. Erf 943 Boetrand

This erf is 0.2124 ha in extent and it is proposed to be subdivided into 4 Residential 1 erven. The Residential erf sizes will vary between 481 m<sup>2</sup> and 570 m<sup>2</sup> See Figure 11 for a copy of the proposed layout plan

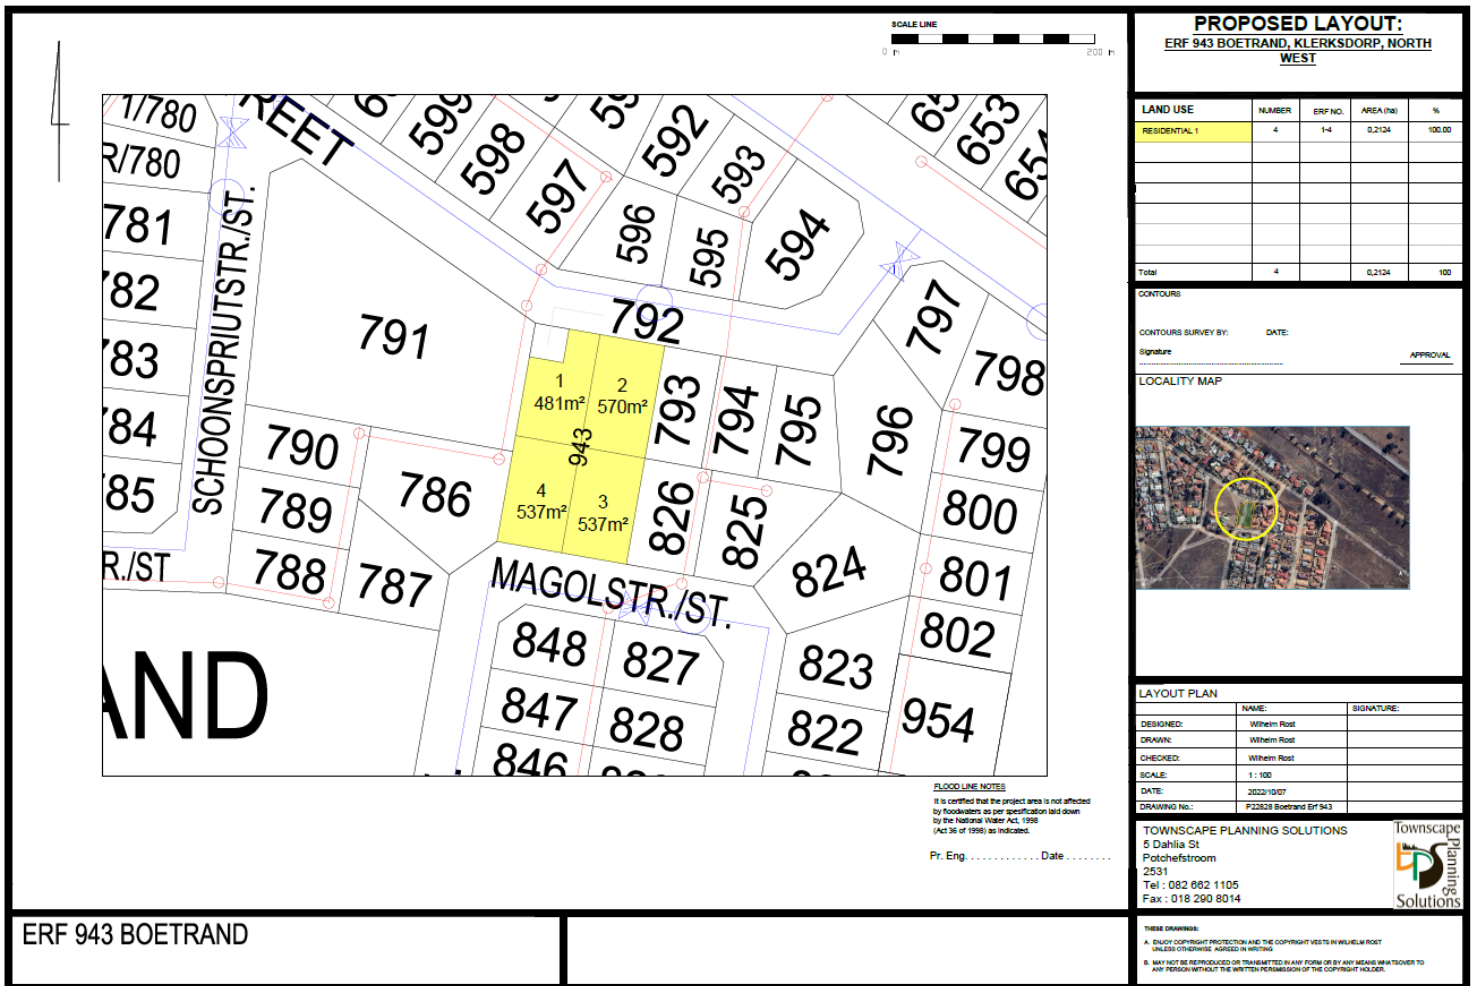

Figure 11: Proposed layout plan Erf 943 Boetrand

Services will connect to Municipal infrastructure that is available in the area.

## 4. DESCRIPTION OF THE PROPERTIES

The 2015 North West Biodiversity Plan as displayed on the SANBI website indicates that none of the development sites falls within a Critical Biodiversity Area (CBA). Please see Figure 12 for a Map of the Proposed developments in relation to the CBA's. Park Erf 7 is located in a Terrestrial Ecological Support Area (ESA 1) and sections of Perk erf 6 is located in an Aquatic ESA 1 and an Aquatic ESA 2.

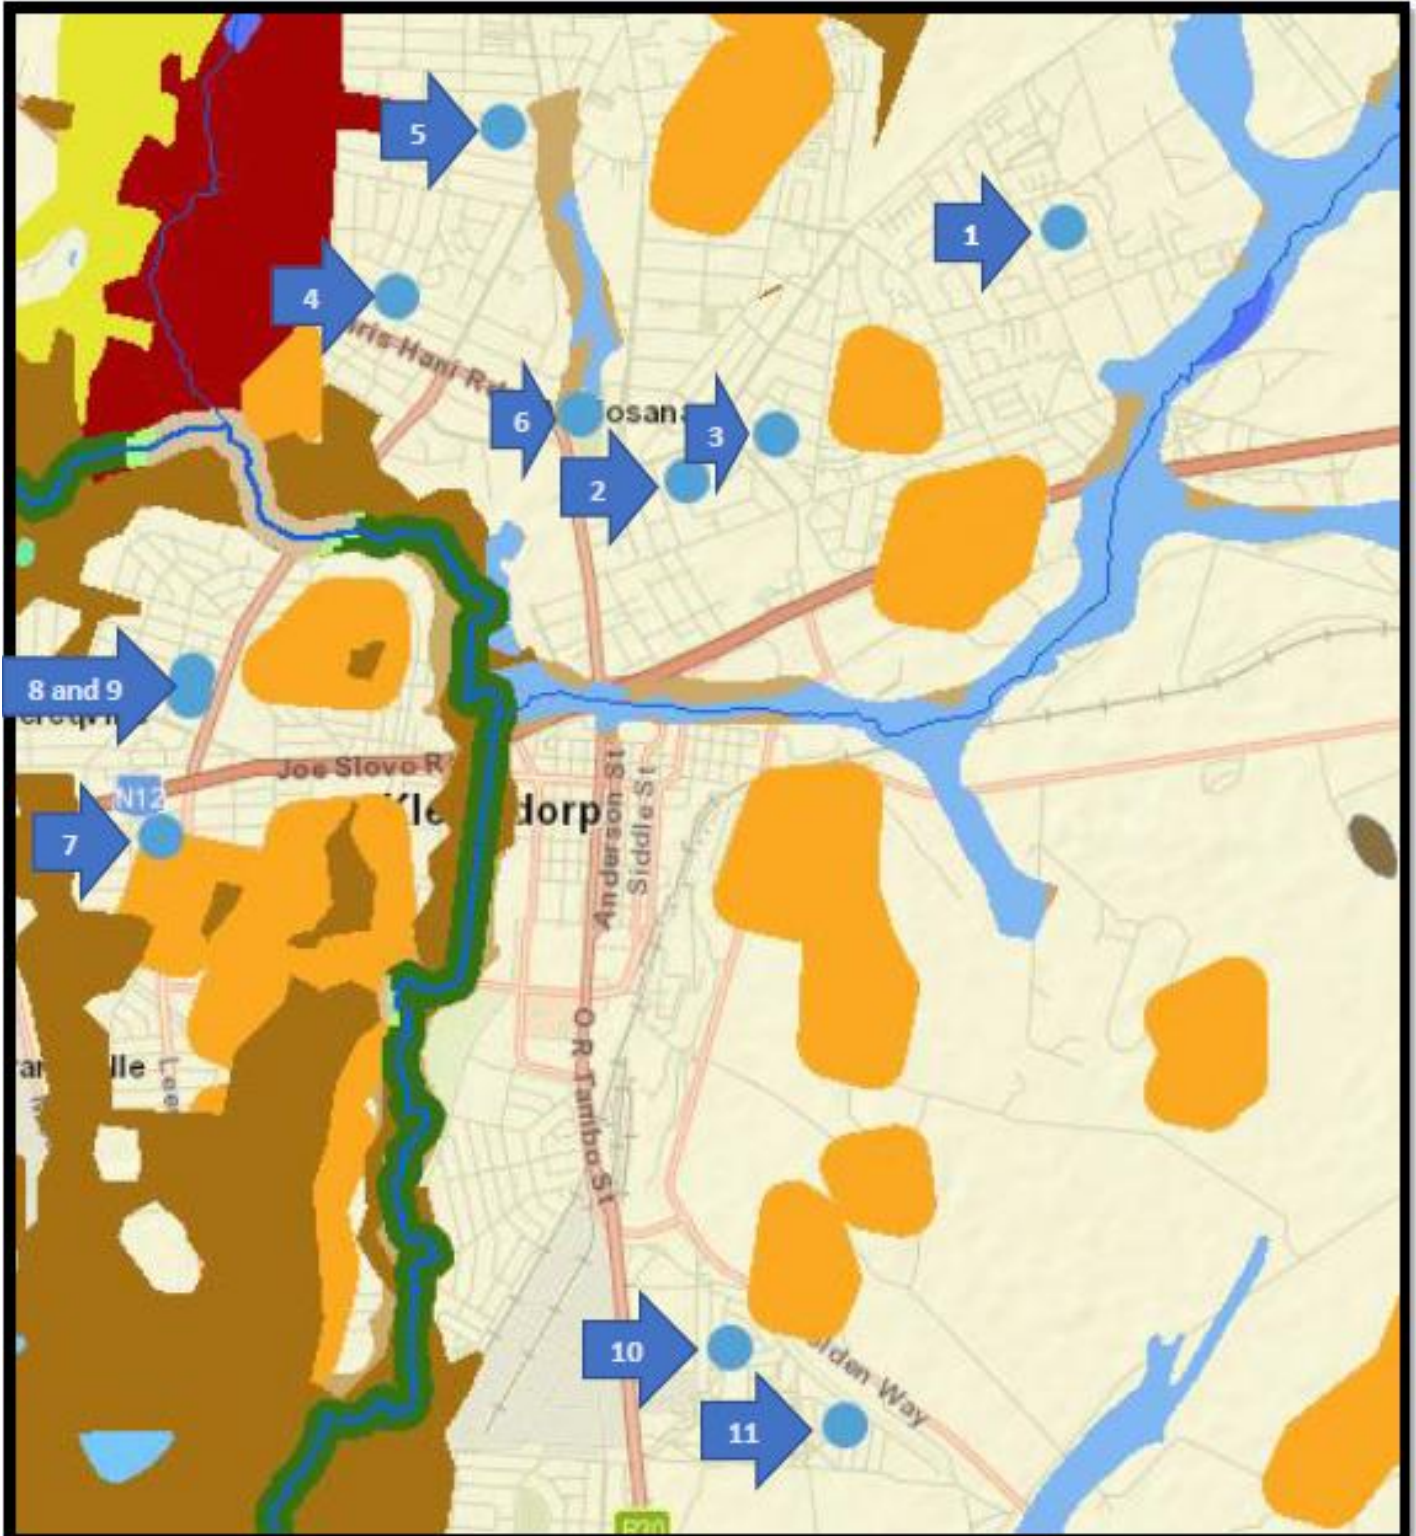

Figure 12: 2015 North West Biodiversity Plan as displayed on the SANBI website

In this section, the various Park erven will be described individually.

## 1. Erf 1251 Flamwood Ext 7

This erf is 0.3999 ha in extent and it is proposed to be subdivided into 6 Residential 1 erven. The erf sizes will vary between 518 m<sup>2</sup> and 835 m<sup>2</sup>. The site is located on the corners of Greyling Street, Goosen Street and Ehlers Avenue, Flamwood. See Figure 13a and for a locality Maps. There are no infrastructure on the site and the site lies vacant. Certain sections of the Park is being maintained by the community. See Photographs 1 and 2. The Ecological sensitivity of the site was found to be low. See Figure 14 for a sensitivity Map. The site is located on a Flat area (very gentle slopes). No rocky ridges, wetlands or riparian areas are present at the site. The vegetation at the site consists of extensively disturbed grassland where particularly dense covers of the alien invasive weed *Lactuca serriola* were visible at the time of the surveys. Few trees are present at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small.

**Photograph 1: The site is vacant without any infrastructure**

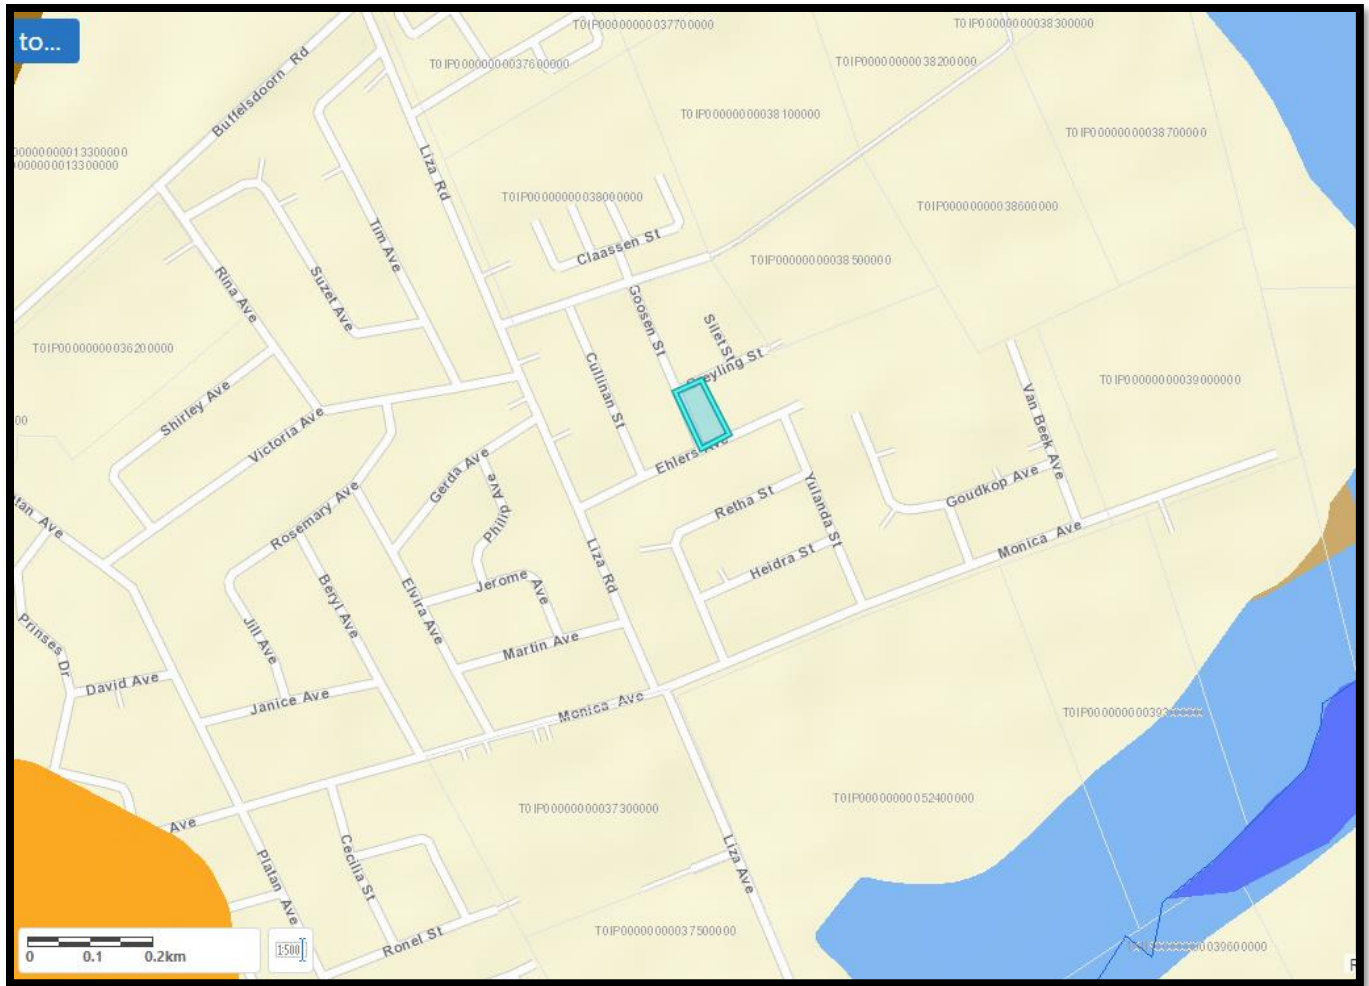

**Photograph 2: Certain sections of the Park is being maintained by the community**

**Figure 13 a: Locality Map Erf 1251 Flamwood Ext 7:  
Survey General 21-Digit number: T0IP0014000012510000**

**Figure 13 b: Locality Map Erf 1251 Flamwood Ext 7 in relation to sensitive areas according to the 2015 North West Biodiversity Plan as displayed on the SANBI website.**

**Site Co-ordinates**

	Latitude (S):			Longitude (E):		
<b>Alternative S1 (preferred or only site alternative)</b>	26°	50'	9,78"	26°	41'	35.68"

**2. Erf 306 Flamwood Proper**

This erf is 0.6879 ha in extent and it is proposed to be subdivided into 7 Residential 1 erven and 2 Municipal Erven. The Residential erf sizes will vary between 670 m<sup>2</sup> and 1163 m<sup>2</sup>. The site is located on the corners of Robin Street, Horwitz Drive and Brenda Avenue, Flamwood. See Figure 15a and b for locality Maps. There are some dilapidated playground apparatus remaining as well as a shed that was used by the Municipality to store their equipment and a Telkom Sub-Station. The remainder of the site lies vacant with signs of illegal dumping and solid waste pollution. See Photographs 3, 4 and 5. The Ecological sensitivity of the site was found to be low. See Figure 16 for a sensitivity Map. The Topography can be described as gentle slopes on a relatively flat area. No rocky ridges, wetlands or riparian areas are present on or near the site. Vegetation is not natural and can be described as a modified urban grassland which is approaching lawn-type of vegetation; it appears as a neglected urban lawn. A mixture of planted exotic and indigenous trees are present of which some perhaps germinated naturally. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the

alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The scope for the site to be a corridor of particular conservation importance is small

**Photograph 3: There are some dilapidated playground apparatus left on site. (Note the shed that was used by the Municipality to store their equipment in the background)**

**Photograph 4: Telkom Sub-Station**

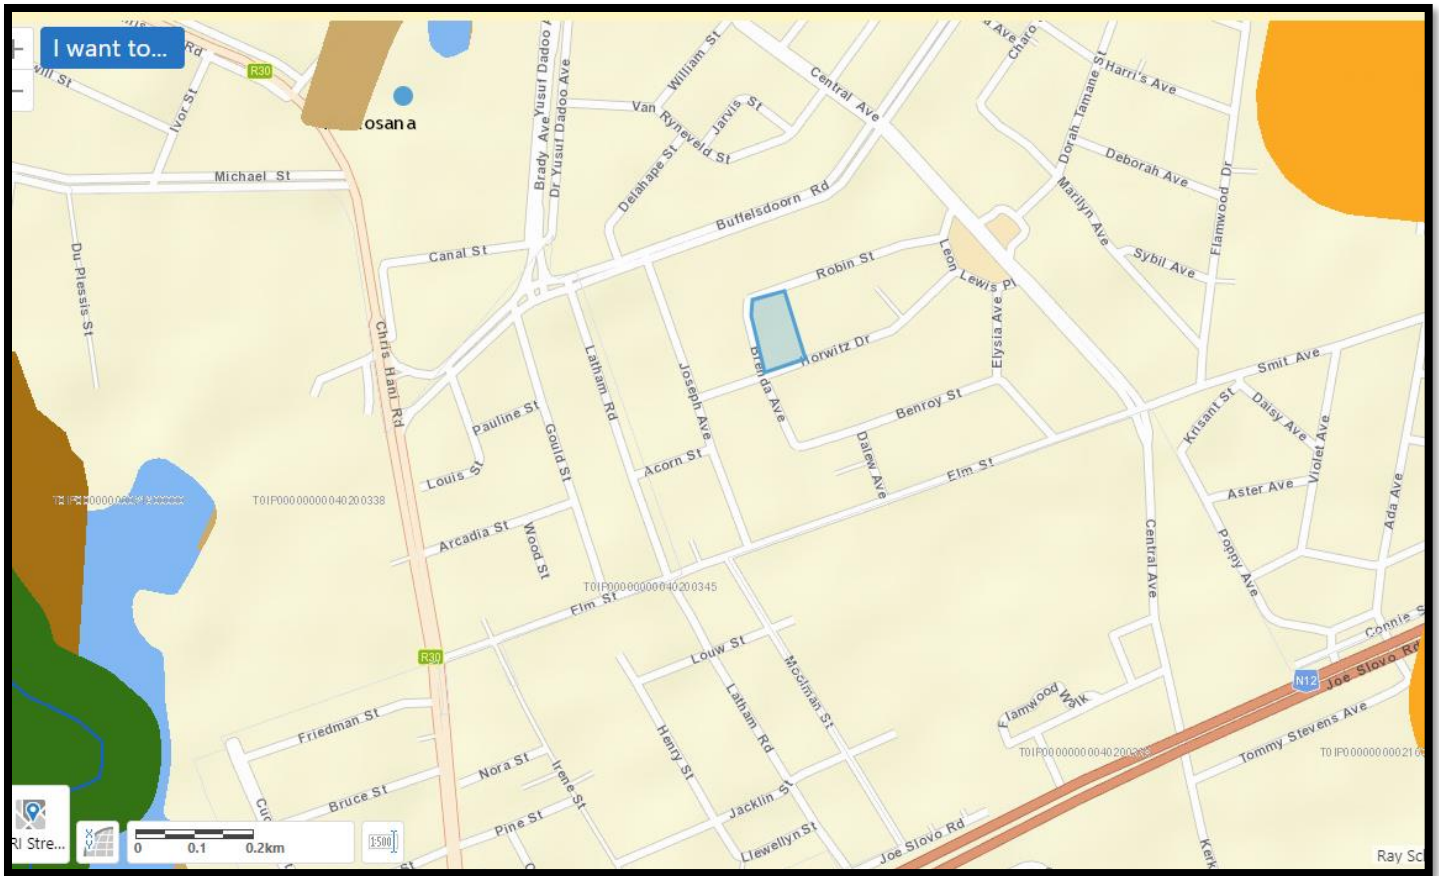

Photograph 5: The remainder of the site lies vacant with signs of illegal dumping and solid waste pollution

**Site Co-ordinates**

	Latitude (S):			Longitude (E):		
<b>Alternative S1 (preferred or only site alternative)</b>	26°	50'	58,48"	26°	40'	14.19"

**3. Erf 302 Flamwood Proper**

This erf is 1.0672 ha in extent and it is proposed to be subdivided into 12 Residential 1 erven. The Residential erf sizes will vary between 714 m<sup>2</sup> and 1245 m<sup>2</sup>. The site is located on the corners of Dorah Tamane Street, Fanny Avenue and Harris Avenue, Flamwood. See Figure 17 a and b for locality Maps. There used to be a Tennis court and club house on the site, but has recently been demolished and removed from site by the community as the infrastructure was in a bad state of disrepair and it was posing a safety risk; as homeless people and criminals were occupying the club house. The remainder of the site lies vacant with signs of illegal dumping and solid waste pollution. See Photographs 6 and 7. The Ecological sensitivity of the site was found to be low. See Figure 18 for a sensitivity Map. The topography consists of gentle slopes on a flat area. No rocky ridges or riparian areas are present on or near the site. Vegetation is not natural and can be described as an urban lawn area with some indigenous grasses and forbs. A mixture of planted exotic and indigenous trees are present of which some perhaps germinated naturally. A conspicuous high infestation of alien invasive weeds is present. There are some bare

areas at the site where a Tennis court and club house have been removed. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small.

**Photograph 6: There used to be a Tennis court and club house on the site, but has recently been demolished and removed**

<b>Alternative S1 (preferred or only site alternative)</b>	26°	50'	49,41"	26°	40'	33.51"

**4. Erf 564 Flimieda**

This erf is 0.5798 ha in extent and it is proposed to be subdivided into 8 Residential 1 erven and 1 Municipal erf to accommodate service infrastructure. The Residential erf sizes will vary between 582 m<sup>2</sup> and 903 m<sup>2</sup>. The site is located between Angelier Street and Lautz Avenue, Flimieda. See Figure 19 a and b for locality Maps. There is still one dilapidated playground apparatus left on site. The remainder of the site lies vacant with signs of solid waste pollution. See Photographs 8 and 9. The Ecological sensitivity of the site was found to be low. See Figure 20 for a sensitivity Map. The site is located on gentle slopes and can be described as a relatively flat area. No rocky ridges, wetlands or riparian areas are present on or near the site. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present including alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present.

Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The scope for the site to be a corridor of particular conservation importance is small.

**Photograph 6: There is still one dilapidated playground apparatus left on site. Also note littering.**

**Photograph 7: The remainder of the site lies vacant with signs of solid waste pollution**

**5. Erf 1253 La Hoff**

This erf is 1.1420 ha in extent and it is proposed to be subdivided into 15 Residential 1 erven and 1 Municipal erf to accommodate service infrastructure. The Residential erf sizes will vary between 599 m<sup>2</sup> and 879 m<sup>2</sup>. The site is located between Odendaal Street and Van Bruggen Street, La Hoff. See Figure 21 a and b for locality Maps. There are some dilapidated playground apparatus left on site. There is also a shed that was used by the Municipality to store their equipment and an Electrical Sub-Station on site. The remainder of the site lies vacant with signs of illegal dumping and solid waste pollution. See Photographs 8, 9 and 10. The Ecological sensitivity of the site was found to be low. See Figure 22 for a sensitivity Map. The Topography consists of gentle slopes on a flat area. No rocky ridges, wetlands or riparian areas are present on or near the site. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is

noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small

**Photograph 8: There are some dilapidated playground apparatus left on site. (Note the shed that was used by the Municipality to store their equipment in the background)**

**Photograph 9: There is also a shed that was used by the Municipality to store their equipment and an Electrical Sub-Station on site. Note the solid waste pollution and the graffiti.**

	Latitude (S):			Longitude (E):		
Alternative S1 (preferred or only site alternative)	26°	49'	50,27"	26°	39'	34.50"

### 6. Remaining Extent of Erf 103 Wilkoppies

This erf is 7,4430 ha in extent. This erf is influenced by a water course and after assessment, it is proposed that only 0.4368 ha of the site will be rezoned into 1 Business erf (2 654 m<sup>2</sup>), 1 Recreational erf (1 053m<sup>2</sup>) and 1 Special erf (661m<sup>2</sup>). The site is located opposite Wesvalia High School, and adjacent to the R30, Voss Street and Readman Street, Wilkoppies. See Figure 23a and b for locality Maps. It was decided to refurbish and relocate all remaining playground apparatus to this central park, as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained, (albeit mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Park and a Tennis Club. See Photographs 11, 12 and 13. Riparian zone at the site is fairly extensive because of the local topography which included depressions along a number of small streambeds that feed into main stream. The riparian area at the main stream contains a conspicuous, significant cover of the indigenous *Vachellia karroo* (Sweet Thorn) and other indigenous plant species. Vegetation at the riparian zone contains a visibly dense cover of the indigenous *Vachellia karroo* (Sweet Thorn). Other indigenous trees species at the site include *Ziziphus mucronata*. Exotic tree species such as *Melia azedarach*, *Morus alba* and *Gleditsia triacanthos* are found at the riparian zone. At more open wet areas along the riparian zone alien invasive

herbaceous species such as *Rumex crispus* and *Cirsium vulgare* are present as well as indigenous herbaceous species such *Persicaria species* and *Rumex lanceolata*. There is a small artificial dam that contains some sedges. The active channels, riparian zones and buffer zones are corridors of particular conservation concern in the larger area. No Threatened or Near Threatened animal- or plant species are anticipated to be present at the site. The scope for the site to be conserved as a corridor of specific conservation importance is large. The site therefore contains an extensive area of high sensitivity associated with the riparian zones and at the terrestrial zones, medium and low ecological sensitivity. See Figure 24 for a sensitivity Map.

**Photograph 11: This erf is influenced by a water course**

**Photograph 12: The Park is relatively well maintained.**

**7. Remaining Extent of Erf 412 Freemanville**

This erf is 0.5958 ha in extent and it is proposed to be subdivided into 1 Residential 2 erf. The site is located between du Toit Street and Muller Street, Freemanville. See Figure 25a and b for locality Maps. There are no infrastructure on the site other

than a palisade fence that has been erected by the adjacent land owners to keep unwanted elements from entering the area adjacent to their residences. This section of the Park is also maintained by the community. For the rest, the site lies vacant and solid waste pollution and burning of waste has been noted. See Photographs 14 and 15. The Ecological sensitivity of the site was found to be low. See Figure 26 for a sensitivity Map. The site is located on a flat area (very gentle slopes). No rocky ridges, wetlands or riparian areas are present at or near the site. The vegetation at the site consists of extensively disturbed grassland where a high frequency of alien invasive weeds is conspicuous. Few trees are present at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small

**Photograph 14: There is no infrastructure on the site other than a palisade fence that has been erected by the adjacent land owners to keep unwanted elements from entering the area adjacent to their residences. This section of the Park is also maintained by the community.**

**8 and 9. Erf 216 and 217 Songloed**

These are two adjoining erven. Erf 216 is 0.9142 ha in extent and it is proposed to be subdivided into 1 Residential 2 erf and 1 Municipal erf to accommodate service infrastructure. Erf 217 is 0.6397 ha in extent and it is proposed to be subdivided into 1 Residential 2 erf. The sites are located between Lorna Street, Cosmos Street, Clover Street and Joan Street, Songloed. See Figure 27a and b for locality Maps. There is one dilapidated playground apparatus left on site. It seems that the site has been used by the community for some sort of activity, as on one of the days of the site inspections distances were spraypainted on the grass. There is also a shed that was used by the Municipality to store their equipment on site. The remainder of the site lies vacant with signs of solid waste pollution. See Photographs 16, 17 and 18. The Ecological sensitivity of the site was found to be low. See Figure 28a and b for sensitivity Maps. Topography consists of gentle slopes and can be described as a flat area. No rocky ridges wetlands or riparian areas are present on or near the site. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small

## 10. Erf 938 Boetrand

This erf is 0.3769 ha in extent and it is proposed to be subdivided into 5 Residential 1 erven and 1 Public Open Space erf. The Residential erf sizes will vary between 416 m<sup>2</sup> and 727 m<sup>2</sup>. The site is located between Komatie Street, Tugela Street and Sabie Street, Boetrand. See Figure 29a and b for locality Maps. There is no infrastructure on the site. The site lies vacant and solid waste pollution and illegal dumping has been noted. See Photographs 19. The Ecological sensitivity of the site was found to be low. See Figure 30 for a sensitivity Map. The topography of the site can be described as gentle slopes on a flat area. No rocky ridges, wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland. A conspicuous high infestation of alien invasive weeds is present. The area appears neglected. Some pioneer indigenous forbs that often occur in densities at disturbed areas, such as *Bulbine narcissifolia* and dwarf-shrubs such as *Ziziphus zeyheriana* are found at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is relatively small and isolated in an urban area. The scope for the site to be a corridor of particular conservation importance is small.

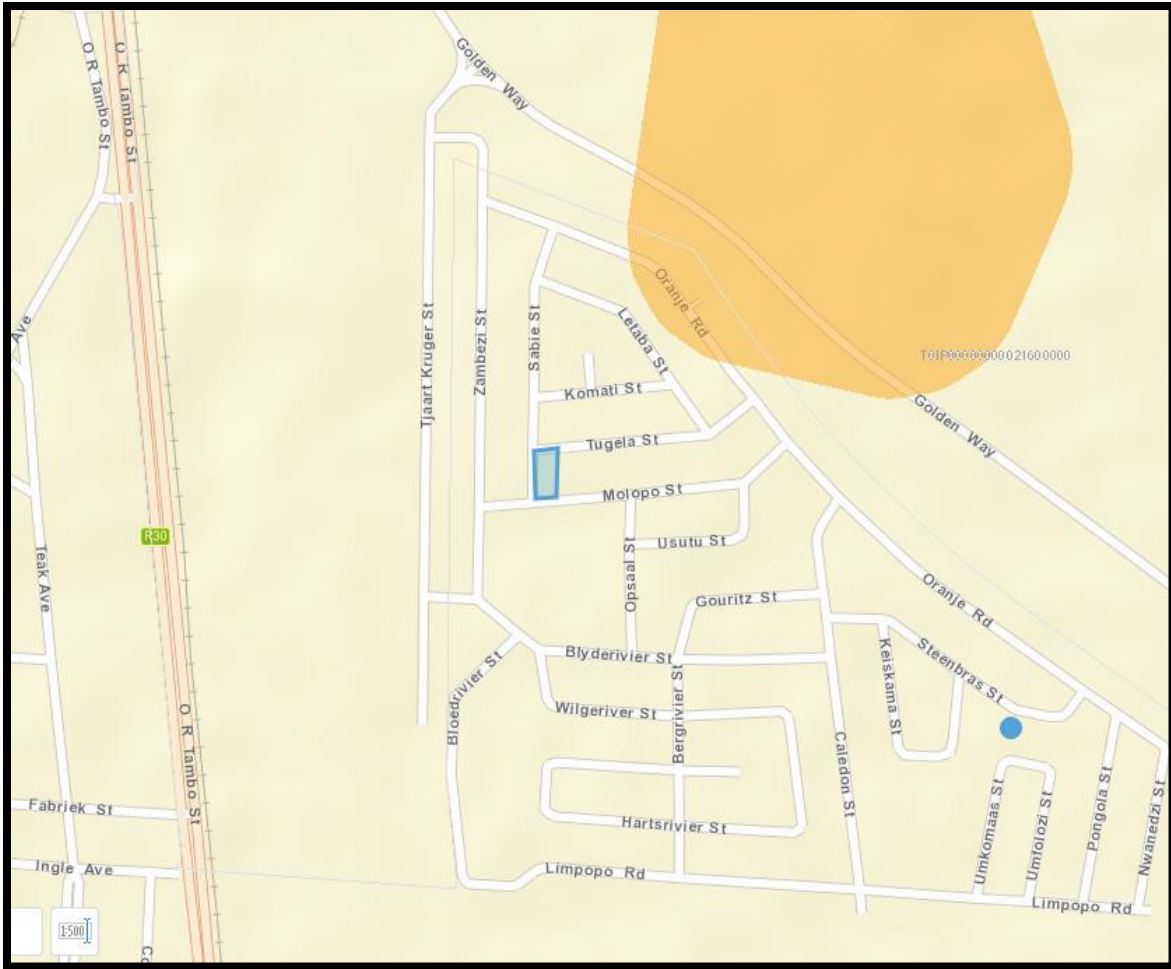

**Photograph 19: The site lies vacant and solid waste pollution and illegal dumping has been noted.**

**11. Erf 943 Boetrand**

This erf is 0.2124 ha in extent and it is proposed to be subdivided into 4 Residential 1 erven. The Residential erf sizes will vary between 481 m<sup>2</sup> and 570 m<sup>2</sup>. The site is located between Steenbras Street and Magol Street, Boetrand. See Figure 31a and b for locality Maps. There is no infrastructure on the site. The site lies vacant and solid waste pollution and illegal dumping has been noted. See Photographs 20. The Ecological sensitivity of the site was found to be low. See Figure 32 for a sensitivity Map. The topography is gentle slopes on a flat area. No rocky ridges, wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland. A conspicuous high infestation of alien invasive weeds is present. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is relatively small and isolated in an urban area. The scope for the site to be a corridor of particular conservation importance is small

## 5. LEGAL AND OTHER REQUIREMENTS

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
National Environmental Management Act No. 107 of 1998 as amended.	NEMA is the guiding legislation that has been considered during the Environmental Impact Assessment process and the compilation of this Scoping Report.	NW:DEDECT	27 November 1998
The Bill of Rights, Constitution of South Africa, Section 27 (1)(b)	<p>The Constitution of the Republic of South Africa is the legal source of all law, including environmental law, in South Africa. The Bill of Rights is fundamental to the Constitution of South Africa and in, section 24 of the Act, it is stated that:</p> <p>Everyone has the right (a) to an environment that is not harmful to their health or well-being; and (b) to have the environment protected, for the benefit of present and future generations through reasonable legislative and other measures that (i) prevent pollution and ecological degradation; (ii) promote conservation; and (iii) secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development.</p> <p>Given that environmental management is founded partly on the principles of public participation, Section 195 of the Constitution is of primary relevance:</p> <p>(1) Public administration must be governed by the democratic values and principles enshrined in the constitution, including the following principles: (a) (b) (c) (d) (e) Peoples needs must be responded to, and the public must be encouraged to participate in policymaking. (f) Public administration must be accountable. (g) Transparency must be fostered by providing the public with timely, accessible and accurate information (Government Gazette, 1996).</p>	National Government	1994
New Regulations 2014 in terms of NEMA	Legislation consulted during the environmental impact assessment process to determine whether any listed activities would be triggered. The Regulations were also consulted to determine inter alia the requirements regarding the contents of Scoping reports and the public participation process that should be followed.	NW: DEDECT	7 April 2017
National Water Act (36 OF 1998)	National Water Act (NWA), 1998 (Act 36 of 1998) is the primary statute providing the legal basis for water management in South Africa and has to ensure ecological integrity, economic growth and social equity when managing and using water.	Department of water and sanitation	1998

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
	<p>The major objectives of the National Water Act are to:</p> <ul style="list-style-type: none"> <li>•Aid in providing basic human needs;</li> <li>•Meet the growing demand of water in a sustainable manner;</li> <li>•Ensure equal access to water and use of water resources;</li> <li>•Protect the quality of water of natural resources;</li> <li>•Ensure integrated management of water resources;</li> <li>•Foster social and economic development; and</li> <li>•Conserve aquatic and related ecosystems.</li> </ul> <p>Section 19 of the National Water Act states that the person responsible for land upon which any activity is or was performed which causes, has caused or is likely to cause, pollution of a water resource, must take all reasonable measures to prevent any such pollution from occurring, continuing or recurring.</p>		
<p>National Environmental Management: Biodiversity Act (NEMBA) (ACT NO. 10 OF 2004)</p>	<p>The National Environmental Management Biodiversity Act, 2004 (Act No. 10 of 2004), provides for the management and conservation of South Africa's biodiversity within the framework of the National Environmental Management Act, 1998; the protection of species and ecosystems that warrant national protection; the sustainable use of indigenous biological resources; the fair and equitable sharing of benefits arising from bio-prospecting involving indigenous biological resources; the establishment and functions of a South African National Biodiversity Institute; and for matters connected therewith.</p> <p>In terms of Chapter 4 of the Above Act:</p> <p>52. (1) (a) The Minister may, by notice in the Gazette, publish a national list of ecosystems that are threatened and in need of protection.</p> <p>(b) An MEC for environmental affairs in a province may, by notice in the Gazette, publish a provincial list of ecosystems in the province that are threatened and in need of protection.</p> <p>(2) The following categories of ecosystems may be listed in terms of subsection:</p> <p>(a) critically endangered ecosystems, being ecosystems that have undergone severe degradation of ecological structure, function or composition as a result of human intervention and are subject to an extremely high risk of irreversible transformation;</p>	<p>NW: DEDECT</p>	<p>2004</p>

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
	<p>(b) endangered ecosystems, being ecosystems that have undergone degradation of ecological structure, function or composition as a result of human intervention, although they are not critically endangered ecosystems;</p> <p>(c) vulnerable ecosystems, being ecosystems that have a high risk of undergoing significant degradation of ecological structure, function or composition as a result of human intervention, although they are not critically endangered ecosystems or endangered ecosystems; and</p> <p>(d) protected ecosystems, being ecosystems that are of high conservation value or of high national or provincial importance, although they are not listed in terms of paragraphs (a), (b) or (c).</p> <p>(3) A list referred to in subsection (1) must describe in sufficient detail the location of each ecosystem on the list.</p> <p>53 (1) The Minister may, by notice in the Gazette, identify any process or activity in a listed ecosystem as a threatening process.</p> <p>(2) A threatening process, identified in terms of subsection (1) must be regarded as a specified activity contemplated in section 24(2)(b) of the National Environmental Management Act (1998) and a listed ecosystem must be regarded as an area identified for the purpose of that section.</p>		
National Environmental Management: Protected Areas Act (ACT NO. 57 OF 2003)	<p>This Act aims to provide for a national system of protected areas in South Africa as part of a strategy to manage and conserve its biodiversity. The Protected Areas Act tries to ensure the protection of the entire range of biodiversity, referring to natural landscapes and seascapes. The Act makes express reference to the need to move towards Community Based natural Resource Management (CBNRM) as its objectives include promoting the participation of local communities in the management of protected areas. The purpose of the Act is:</p> <ul style="list-style-type: none"> <li>•To protect ecologically viable areas representative of South Africa's biological diversity and its natural landscapes and seascapes and their ecological integrity.</li> <li>•To conserve biodiversity in those areas;</li> <li>•To protect South Africa's rare species;</li> <li>•To protect vulnerable or ecologically sensitive areas;</li> <li>•To assist in ensuring the sustained supply of environmental goods and services;</li> <li>•To provide for the sustainable use of natural and biological resources;</li> </ul>	National Department of Environmental Affairs	2003

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
	<ul style="list-style-type: none"> <li>•To create or augment destinations for nature-based tourism;</li> <li>•To manage the interrelationship between natural environmental biodiversity, human settlement and economic development;</li> <li>•To contribute to human, social, cultural, spiritual and economic development;</li> <li>•To rehabilitate and restore degraded ecosystems and promote the recovery of endangered and vulnerable species.</li> </ul> <p>This Act further stipulates various criteria which must be met before an area can be declared as a special nature reserve, national park, nature reserve and protected environment. It also prescribes a range of procedures, including consultation and public participation procedures which must be followed before any of the kinds of protected areas are declared.</p>		
National Heritage Resources Act, Act No. 25 of 1999	Legislation consulted during the impact assessment process, to determine the legal requirements relating to the management of heritage resources that are present in and around the site.	SAHRA	1999
National Environmental Management: Waste Act, Act No. 59 of 2008, DEDECT together with the List of Waste Activities that Have, or are Likely to Have, a Detrimental Effect on the Environment, GN No. 921 of 29 November 2013	Legislation consulted to determine whether a waste licence will have to be obtained for the development.	NW:DEDECT Waste Section	2008
<i>National Environmental Management: Air Quality Act (Act 39 of 2004)</i>	To protect the environment by providing reasonable measures for the prevention of pollution and ecological degradation and for securing ecologically sustainable development while promoting justifiable economic and social Development. Construction activities may cause some air pollution.	Department of Environmental Affairs: Directorate Air quality management	2004
<i>The Conservation of Agricultural Resources Act (Act 43 of 1983)</i>	This Act regulates the flow pattern of runoff water, control of weeds and invader plants.	NW: Department of Agriculture	1983
<i>National Veldt and Forest Fire Act (Act 101 of 1998)</i>	Chapter 4 places a duty on owners to prepare and maintain firebreaks.	Department of Agriculture, Forestry and Fisheries	1998
<i>National Forests Act, Act 84 of 1998 (NFA) DEDECT with GN1602 of December 2016.</i>	During the construction phase of the development certain protected trees may be affected. Licences will have to be obtained from the Minister before the affected trees may be cut, disturbed, damaged or destroyed. GN1602 of December 2016 contains the list of protected trees.	Department of Agriculture, Forestry and Fisheries	1998
<i>Occupational Health and Safety Act (Act 85 of 1993)</i>	To provide for the health and safety of persons at work and for the health and safety of persons in connection with the use of plant and machinery and the protection of persons other than persons at work against hazards to health.	Department of Employment and labour	1993

**5.2 (i) an identification of all legislation, policies, plans, guidelines, spatial tools, municipal development planning frameworks, and instruments that are applicable to this activity and have been considered in the preparation of the report; and**

**(ii) how the proposed activity complies with and responds to the legislation and policy context, plans, guidelines, tools frameworks, and instruments explanation of how the proposed development complies with and responds to the legislation and policy context**

### **5.2.1 Existing Land use Rights:**

The current zoning of all 11 of the sites are Public Open Space.

### **5.2.2 Provincial Spatial Development Framework (PSDF)**

In terms of the Provincial Growth and Development Strategy (PGDS) the following key programmes of the Economic enhancement initiative were identified:

- The provincial economy needs to become more productive, more competitive and more diversified.
- Promote labour absorbing activities through Small Enterprises to support and promote private stimulation of rural economies.
- To promote skills development and training in economic practices to enhance economic growth.

### **5.2.3 Urban Edge/ Edge of built environment**

The sites are located within the urban edge of the City of Matlosana Local Municipality

### **5.2.4 Spatial Development Framework (SDF) of the Local Municipality.**

The Integrated Development Plan consists mainly of broad strategies and projects guiding and integrating capital investment, focussed development in the areas of inter alia planning, environmental programmes, economic development, transport, waste management, and services, etc. The purpose of an Integrated Development Plan is to increase the municipal performance in terms of the pre-determined vision.

### **5.2.5 Spatial Planning and Land Use Management Act, Act 16 of 2013, (SPLUMA).**

The Spatial Planning and Land Use Management Act, Act 16 of 2013, (SPLUMA) came into operation on the 1<sup>st</sup> of July 2015 and has changed the Planning profession to such an extent that Planning can no longer be used as a tool to separate people and communities. The objectives are:

- *provide for a uniform, effective and comprehensive system of spatial planning and land use management for the Republic;*
- *ensure that the system of spatial planning and land use management **promotes social and economic inclusion;***
- *provide for **development principles and norms and standards;***
- *provide for the **sustainable and efficient use of land;***
- *provide for cooperative government and intergovernmental relations amongst the national, provincial and local spheres of government; and*
- *Redress the imbalances of the past and to ensure that there is equity in the application of spatial development planning and land use management systems.*

### **SPLUMA's desired outcomes:**

- Coherent regulatory framework;

- Constitutional synergy (clear delineation, distribution & allocation of powers among spheres);
- Predictable and transparent regulatory system; and
- Clear, rational and efficient inter-linkages of sectoral and intersphere planning tools and policies.

**The following guidelines are given for Land Use Management:**

- Land resources are used for a variety of purposes which interact and may compete with one another; therefore, it is desirable to plan and manage all uses in an integrated manner.
- Land use management examines all uses of land in an integrated manner, it makes it possible to minimize conflicts, to make the most efficient trade-offs and to link social and economic development with environmental protection and enhancement, thus helping to achieve the objectives of sustainable development.
- The essence of the integrated approach finds expression in the coordination of the sectoral planning and management activities concerned with the various aspects of land use and land resources.
- Integration should consider all environmental, social and economic factors.
- Integrated consideration facilitates appropriate choices and trade-offs, thus maximizing sustainable productivity and use. The broad objective is to facilitate allocation of land to the uses that provide the greatest sustainable benefits and to promote the transition to a sustainable and integrated management of land resources.

**Provincial Priority 4 states the following:**

- Address the apartheid geography and create the conditions for more humane – and environmentally sustainable – living and working environments.
- It is important to address the entrenched spatial patterns that exacerbate social inequality and economic inefficiency, cognisant of the unique needs and potentials of different rural and urban areas in line with emerging development corridors.
- Active citizenship in spatial development should be supported through properly funded interventions that encompass citizen-led neighbourhood vision and planning processes; and the introduction of social compacts.
- Settlement planning should ensure the creation of spaces that are liveable, equitable, sustainable, resilient and efficient, and that support economic opportunities and social cohesion.

The proposed development complies with the principles as set out above in the sense that the proposed development will contribute to economic growth in the area

The study is conducted in such a way as to comply with the instructions regarding such studies and reports (as contained within the above-mentioned documents).

**5.2.6 Integrated Environmental Management as set out in Section 23 of NEMA as amended.**

The IEM guidelines encourage a pro-active approach to sourcing, collating and presenting information in a manner that can be interpreted at all levels. The basic principles underpinning IEM are that there be: informed decision-making;

- accountability for information on which decisions are taken;
- accountability for decisions taken;
- a broad meaning given to the term environment (i.e. one that includes physical, biological, social, economic, cultural, historical and political components);
- an open, participatory approach in the planning of proposals;
- consultation with interested and affected parties;
- due consideration of alternative options;
- an attempt to mitigate negative impacts and enhance positive aspects of proposals;

- an attempt to ensure that the ‘social costs’ of development proposals (those borne by society, rather than the developers) be outweighed by the ‘social benefits’ (benefits to society as a results of the actions of the developers);
- democratic regard for individual rights and obligations;
- compliance with these principles during all stages of the planning, implementation and decommissioning of the proposals (i.e. from ‘cradle to grave’); and
- the opportunity for public and specialist input in the decision-making process.

The general objectives of Integrated Environmental Management have been taken into account in this Basic Assessment report by means of identifying, predicting and evaluating the actual and potential impacts on the environment, socio-economic conditions and cultural considerations and cultural heritage component. The risks, consequences, alternatives as well as options for mitigation of activities have also been considered with a view to minimise negative impacts, enhance benefits and promote compliance within the principles of environmental management.

Additionally the Basic Assessment process will be undertaken to ensure I&APs have been afforded the opportunity to comment on the proposed activity and that their comments/inputs/concerns will be taken into consideration during the assessment process.

### 5.2.7 The principles of environmental management as set out in Section 2 of NEMA

The principles of NEMA have been considered in this assessment through compliance with the requirements of the relevant legislation in undertaking the assessment of potential impacts, as well as through the implementation of the principle of sustainable development.

This process will be undertaken in a transparent manner and all efforts will be made to involve interested and affected parties, stakeholders and relevant Organs of State such that an informed decision can be made by the Regulating Authority.

**The following aspects have been dealt with:**

#### SCHEDULE

Actions	Timeframe
1 Communication with authorities and source and analyse relevant baseline information and undertake site inspections	3 days
2 Compile Environmental Application Form for the project	2 days
3 Compile an <i>information requirements list</i> to be distributed to the project team. The Information required would assist with completion of the BAR.	2 days
4 Identify key interested and affected parties (I&APs)	1 day
5 Compilation of terms of reference for specialist studies	2 days
6 Commission specialist studies	1 day
7 Compile draft BAR and make available to the public for a 30 day commenting period and submit the application form to the competent authority.  <b>NB: According to the new Regulations a BAR must be submitted 90 days after the application has been submitted. The implication is that all information must be available within 80 days after submitting the Application.</b>	3 days for compilation and 30 days for commenting period (The competent authority has 90 days to request additional information or to refuse the application, from the date of submission)
8 Prepare an Information Sheet (summary of the draft BAR) and distribute to I&APs	1 day
9 Compile and publish media notices (for the BAR) in relevant newspapers	7 – 10 days depending on the day the newspaper is published
10 Compile and place poster/s along the boundary of the site	1 day
11 Hold a public meeting / Open House / focus meeting with I&APs	1 day
12 Receive and address first round of comments from public	3 days
13 Should the draft BAR require substantial changes, these changes will be incorporated into the draft BAR and distributed	Included above (allow an additional 50 days to include #14 below)

14 Allow the identified public to provide comment within a 30 day period on above report.	3 days for compilation and 30 days for commenting period (Competent authority has an additional 50 days)
15 Address comments received on the draft BAR, Finalise BAR and update comments and response table; finalise Basic Assessment Report and submit to authorities	5 days
16 Submit final BAR to authorities for a final decision	1 day, The department has 107 days from the date of receipt to review and come to a final decision.
17 Once the decision is issued, all I&Ps must be formally informed of the decision	20 days
<b>TOTAL AMOUNT OF DAYS:</b>	<b>197 days</b>

## 6. NEED AND DESIRABILITY

Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in these erven becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies (located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained (albeit mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Bark and a Tennis Club.

In the National Framework for Sustainable Development (NFSD) it is stated that *“the achievement of sustainable development is not a once-off occurrence and its objectives cannot be achieved by a single action or decision. It is an ongoing process that requires a particular set of values and attitudes in which economic, social and environmental assets that society has at its disposal, are managed in a manner that sustains human well-being without compromising the ability of future generations to meet their own need.* The NFSD further continues to emphasize that South Africa's current development path in certain instances reflects signs of being unsustainable in the long-term. It highlights that a large percentage of growth in economic activity (measured in terms of its contribution to the GDP) is achieved by *“consuming’ natural resources and degrading our habitat at accelerating rates with the inevitable consequence that future economic growth and development objectives will be prejudiced.”*

Consistent with national priorities, environmental authorities must support *“increased economic growth and promote social inclusion”*, whilst ensuring that such growth is *“ecologically sustainable”*. In the National Spatial Development Perspective (NSDP) it is highlighted that, to achieve the goal of stimulating sustainable economic activities and to create long-term employment opportunities, it is required that spending on economic infrastructure is focused in priority areas with potential for economic development, with development to serve the broader societies' needs equitably.

The local municipality intends to promote a more compact city in order to prevent the expansive provision of social and engineering services, as well as to prevent the economic decline of the traditional city centre. The Spatial Development Framework (SDF) addresses the scale or urban growth through planned extensions, infill and redevelopment strategies. It

also addresses measures to promote compact and connected growth opportunities, such as the identification of revitalisation zones, densification and mixed land use zones.

The planning practices of the past has resulted in sprawling urban areas that are un-economical. Today, planning policies are transformed to mainly encourage infill development on vacant land within the urban environment, in order to combat urban sprawl. The proposed development falls in line with these principals, as it is infill development within the urban area.

During the construction phase, temporary employment will be created. The increased employment in the area during the construction phase will also result in increased expenditure, which, in addition, will mean that more than just the proposed jobs required for the construction on the site will be created due to economic spin-offs that will result. Due to the nature of the proposed development it will lead to an increase in employment opportunities in the operational phase and will contribute to the broadening of the income base and alleviation of poverty within the Local Municipality.

## **7. ALTERNATIVES**

One of the objectives of the Basic Assessment process is to investigate alternatives to the proposed project. The IEM procedure stipulates that the environmental investigation needs to consider feasible alternatives for any proposed development. Therefore, a number of possible proposals or alternatives for accomplishing the same objectives should be identified and investigated. In order to ensure that the proposed development enables sustainable development, feasible alternatives must be explored (S. Cliff, 2015).

The identification, description, evaluation and comparison of alternatives are important for ensuring a sound environmental scoping process. Alternatives should be considered as a norm within the Environmental Process (S. Cliff, 2015).

The alternatives considered for the proposed development includes alternative development sites (including the No-go option). The various alternatives that will be assessed is in terms of environmental, social and technical feasibility.

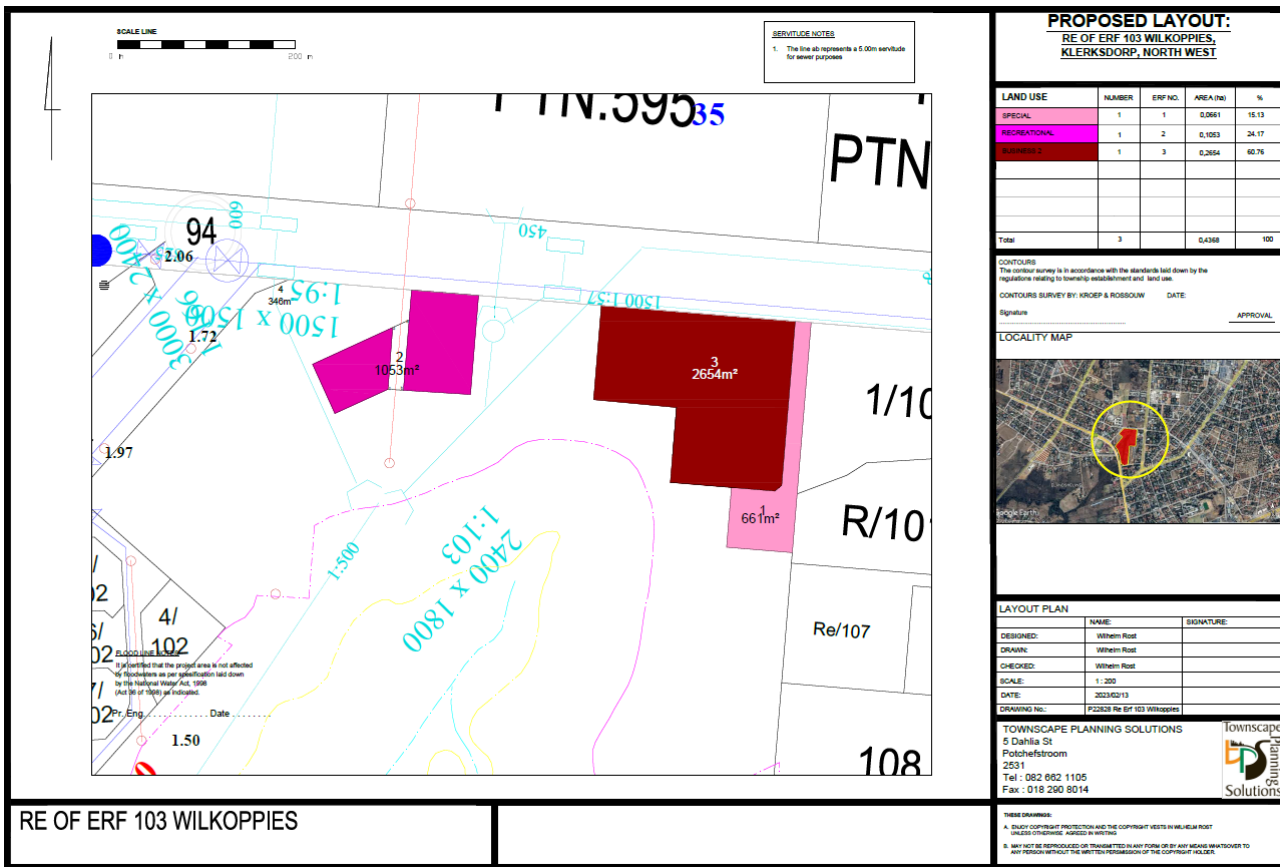

### **7.1 Alternative development sites and Alternative Layout Plan**

#### **7.1.1 “Closing of eleven (11)” Park Erven (Alternative 1 – Preferred alternative)**

The following Park Erven have been identified as erven that will be Rezoned and subdivided:

- Erf 1251 Flamwood Ext 7
- Erf 306 Flamwood Proper
- Erf 302 Flamwood Proper
- Erf 564 Flimieda
- Erf 1253 La Hoff
- Remainder of Erf 103 Wilkoppies
- Erf Re 412 Freemanville
- Erf 216 Songloed
- 217 Songloed
- Erf 938 Boetrand
- Erf 943 Boetrand

An alternative Layout Plan has also been developed for Remainder of Erf 103 Wilkoppies. The preferred alternative is for the Establishment of 1 Business erf, 1 Special erf and 1 Recreational erf. Please see preferred layout plan below.

### 7.1.2 “Closing of fourteen (14)” Park Erven (Alternative 2)

- Erf 1251 Flamwood Ext 7
- Erf 306 Flamwood Proper
- Erf 302 Flamwood Proper
- Erf 564 Flimieda
- Erf 1253 La Hoff
- Remainder of Erf 103 Wilkoppies
- Erf Re 412 Freemanville
- Erf 216 Songloed
- 217 Songloed
- Erf 938 Boetrand
- Erf 943 Boetrand
- **Erf 410 Freemanville**
- **Remaining extent of Erf 96 Roosheuvel**
- **Erf 17 299 Jouberton Ext 16**

The last 3 erven were considered to be rezoned and subdivided, but after further investigation it was found that the sensitivity of these 3 sites were too high. Erf 410 Freemanville is located at a sensitive koppie, Remaining Extent of Erf 96 Roosheuvel is too steep for development purposes while Erf 17 299 Jouberton Ext 16 is located at an area that is saturated with water.

In terms of the Alternative Layout Plan that was considered for the Remainder of Erf 103 Wilkoppies, the Wetland Specialist has found that the site is influenced by a wetland area and after delineation of the wetland areas, most of the site was deemed undevelopable. The site is also an active, functional Park, and as such serves the intended purpose.

### 7.1.3 No-go Alternative

The only other alternative that exists for the proposed development is the “no-go” option which will imply that the status quo will prevail. Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in these erven becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

Should this option be implemented, the status quo will remain, and the areas will remain a health and safety risk for the inhabitants of the area. Therefore this option was discarded.

## 8. DESCRIPTION OF THE ENVIRONMENT THAT MAY BE AFFECTED BY THE PROJECT

### 8.1 BIO-PHYSICAL ASPECTS

#### 8.1.1 TOPOGRAPHY

The Topography of all 11 of the sites can be described as gentle slopes on a relatively flat area. No rocky ridges are present on or near any of the sites. The Layout plans address issues regarding storm water. As the proposed developments will be in close proximity to residential areas, safety of children and people need to be taken into consideration.

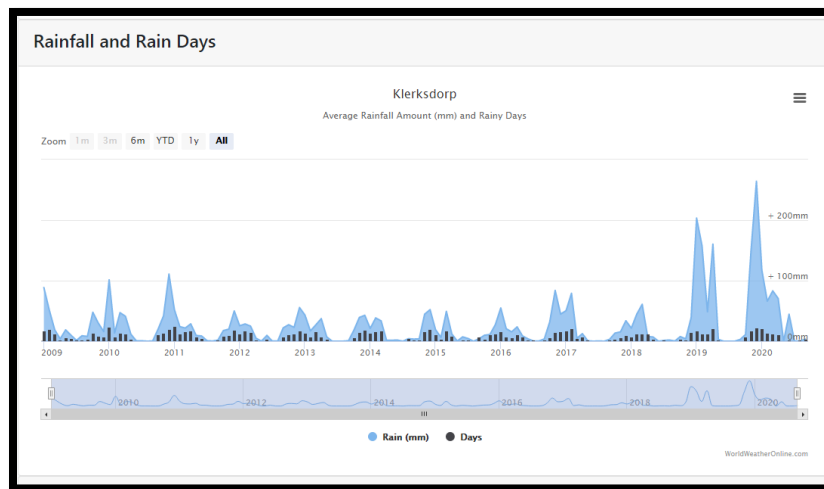

#### 8.1.2 CLIMATE

The climate of the area is typical of the South African interior. In the discussion of this variable, certain aspects of rainfall, temperature and wind that can influence the project will be highlighted.

It must be noted that the climatic data are recorded in the Department of Environmental Affairs (1988) climatic data records. Data for Klerksdorp weather station (0436/292 ) is available. This records were only taken between 1903-1952.

##### 8.1.2.1. Rainfall

The average annual rainfall for the area is 625mm per annum. The highest annual rainfall recorded during the period for which the record is available is 980 mm (1976), while a yearly low of 365mm was recorded in 1903. Of note is the maximum-recorded daily rainfall of 140mm that was recorded during December 1943. Of importance is the fact that monthly minima of zero rainfall have been recorded for 6 months of the year. More recent data (last 10 years' average rainfall) is indicated below for Klerksdorp:

Source: [www.worldweatheronline.com/klersdorp-weather-averages/north-west/za.aspx](http://www.worldweatheronline.com/klersdorp-weather-averages/north-west/za.aspx)  
(Visited: 14/10/2020)

The variability of rainfall as well as the high intensity events will definitely influence the project. On average however, the impact of rainfall can be considered as positive, as sufficient water is generally available for sustaining vegetation. Extreme dry conditions during dry spells will negatively affect the project due to the secondary effects on vegetation as well as the possibility of fire hazards. Extreme maximum events can also have a negative effect on the project during all its phases.

The overall impact can therefore be considered to be “variable” during the construction and operational phases (local in extent and long term in duration). The likelihood that these impacts may occur is probable, medium in intensity and significance. Steps to mitigate negative effects will be described in various sections of the Management Plan.

Due to the scale of the operation, the rainfall of the area cannot be affected by the project and is therefore “Not Applicable”.

### 8.1.2.2. Temperature

The average daily maximum temperature for the winter months for the area is approximately 20° C. The average daily minimum for that time of the year is in the order of 2,0° C.

During the summer months, the average daily maximum is in the order of 28° C and the daily average minimum approximately 14°C. The highest daily maximum recorded was 39,2°C while the lowest recorded temperature was -10,2°C.

Source: [www.worldweatheronline.com/klerksdorp-weather-averages/north-west/za.aspx](http://www.worldweatheronline.com/klerksdorp-weather-averages/north-west/za.aspx)  
(Visited: 14/10/2020)

In combination with a dry spell, such hot temperatures may be favourable for the spreading of veldfires.

The general impact of this variable on the project can be considered as positive during the construction and operational phases. The impacts can however be considered as having low intensity impacts of low significance. The extent is local and short term in duration.

Due to the scale of the project, it is clear that it will have no impact on the environment”.

### 8.1.2.3. Wind

The average wind direction for the area during the summer months is from the north-to-north easterly quadrant, while during the early spring the direction is more north westerly. Southerly winds generally occur during the winter, but are not frequent. Normally very little wind is experienced during the winter due to the presence of the high-pressure cell situated over the country during that time of the year.

The wind speeds are normally fairly low, but high wind speeds may occur during early spring and during of thundershowers.

Wind can be considered as having a low intensity, and a low significance negative impact on the construction and operational phases of the project. The probability is probable and the impacts are local but short in duration. The project can have no influence on the wind and is therefore “not applicable”.

## Climate Change

Climate change is a natural phenomenon that takes place over geological time. However, over the past few decades the rate of climate change has been more rapid and the magnitude of global warming has increased dramatically (Warburton, M.L and Schulze, R 2006; Warburton, M.L 2012). This change has been attributed to increased anthropogenic greenhouse gas emissions (Koske, J and Ochieng, M.A 2013). For example, the burning of coal to generate electricity, the burning of petrol incars, some chemical processes in industries, and many farming activities all contribute to the increased concentration of greenhouse gasses in the atmosphere.

Climate change is not just an increase in average global temperatures but changes in regional climate characteristics such as rainfall, relative humidity and severe weather extremes (Davis, C.L 2011). Climate change can manifest as a shock or a stress (Ziervogel, G and Calder, R 2003). Shocks are defined as discrete, extreme events (rapid onset) such as floods, while gradual change (slow onset) such as long-term climate variability is classified as a stress (Ziervogel, G and Calder, R 2003).

The negative impacts of climate change “are already felt in many areas, including in relation to, inter alia, agriculture, and food security; biodiversity and ecosystems; water resources; human health; human settlements and migration patterns; and energy, transport and industry” (United Nations WomenWatch 2009, 1).

Measures should be implemented to reduce or eliminate carbon emissions or enhance greenhouse gas sinks (mitigation) (Böckmann, M 2015). However, due to lag times in the climate and biophysical systems, the positive impacts of past and current mitigation will only be noticeable in the next 25 years (Jiri, O 2016). In the meanwhile, adaptation is regarded as inevitable and a necessary response to the changes that are projected to take place.

A summary of the key vulnerability indicators is provided in the table below.

No	Sector	Indicator Title	Exposure Answer	Sensitivity Answer	Adaptive Capacity Answer
7	Agriculture	Change in other crop production areas (e.g. vegetables, nuts, etc.)	Yes	High	Low
10	Agriculture	Increased risks to livestock	Yes	High	Low
12	Biodiversity and Environment	Loss of High Priority Biomes	Yes	High	Low
15	Biodiversity and Environment	Loss of Priority Wetlands and River ecosystems	Yes	High	Low
25	Human Health	Increased malnutrition and hunger as a result of food insecurity	Yes	High	Low
32	Human Settlements, Infrastructure and Disaster Management	Increased migration to urban and peri-urban areas	Yes	High	Low
33	Human Settlements, Infrastructure and Disaster Management	Increased risk of wildfires	Yes	High	Low
37	Water	Less water available for irrigation and drinking	Yes	High	Low
38	Water	Increased impacts of flooding from litter blocking storm water and sewer systems	Yes	High	Low

### Key Vulnerability indicators

Based on the key indicators identified in the table above, the following objectives and projects are prioritised as a response to each of the indicators.

### Agriculture

The agricultural sector will be adversely affected by climate change. Increased temperatures, drought, and the increase in frequency and severity of storm events will impact on the crops that can be grown and potentially result in a loss of livestock.

### Biodiversity and Environment

Climate change predictions include the shifting of biomes across South Africa. It is projected that, with the changes in climate under a high-risk scenario, the Savanna biome will replace large areas of the Grassland biome. Terrestrial, wetland, and river ecosystems and their associated species will be negatively impacted. Furthermore, development and changes in land use will impact negatively on the environment.

Biodiversity is crucial to ecosystem health, and healthy ecosystems are central to human well-being. Healthy ecosystems interlinked with working landscapes and other open spaces form the ecological infrastructure of the country and are the foundation for clean air and water, fertile soil and food. All South Africans depend on healthy ecosystems for economic and livelihood activities, including agriculture, tourism and a number of income generating and subsistence level activities. These natural ecosystems are under pressure from land use change and related processes causing degradation, as well as invasive alien species. Accelerated climate change (resulting in increasing temperature, rising atmospheric CO<sub>2</sub> and changing rainfall patterns) is exacerbating these existing pressures.

Well-functioning ecosystems provide natural solutions that build resilience and help society adapt to the adverse impacts of climate change. This includes, for example, buffering communities from extreme weather events such as floods and droughts, reducing erosion and trapping sediment, increasing natural resources for diversifying local livelihoods, providing food and fibre, and providing habitats for animals and plants which provide safety nets for communities during times of hardship. Sustainably managed and/or restored ecosystems help in adapting to climate change at local or landscape level.

### Objectives

The following objectives have been identified

- Manage Loss of High Priority Biomes
- Manage Loss of Priority Wetlands and River ecosystems

### Human Health

Climate change impacts affect the social and environmental determinants of health and will therefore affect human health in several ways. Projected temperature increases due to climate change will negatively affect the young and elderly population of the district. People working in the informal sector usually work outdoors and are therefore exposed to all weather elements and are particularly vulnerable to temperature increases.

South Africa faces complex and pressing public health challenges exacerbated by adverse socio-economic conditions including dense informal settlements which constrain effective service delivery. These health challenges include a disease complex with the highest global prevalence of Human Immunodeficiency Virus (HIV) and tuberculosis (TB), complicated by water-borne and chronic respiratory disease.

Under-nutrition and socio-economic stress are important contributors to poor human resilience and contribute to conditions that facilitate the emergence and propagation of disease. Malnutrition and disease interact strongly, and there is a key relationship between environmental quality, food security, and the disease burden of communities. Adaptation to the potential effects of climate change on human health is viewed in this context. However, significant knowledge and information gaps are preventing well supported quantitative projections of human health impacts in South Africa.

### Objectives

The following objectives have been identified.

- Manage increased malnutrition and hunger as a result of food insecurity

#### Disaster Management, Infrastructure and Human Settlements

Climate change impacts will affect Disaster Management, Infrastructure and Human Settlements in several ways. Increases in the severity of storm events and increase in flooding will damage infrastructure which may result in a loss of industrial productivity and service delivery disruptions. The impacts of storm events will particularly affect communities located in informal settlements, on flood plains and where there is poor drainage infrastructure. In addition, communities in rural areas that depend on subsistence farming may be unable to grow crops that they have grown in the past due to the changing climate. It is predicted that there will therefore be an increase in rates of rural-urban migration. Rural communities may also become more physically isolated due to extreme events impacting on key infrastructure.

South Africa is a diverse country, not just in terms of populations and biodiversity, but also in terms of its human settlements. These settlements face severe challenges, even before climate change is taken into account. The implications of the compounding impacts of climate change will be profound, and human settlements therefore represent a crucial part of national adaptation strategies. The overarching strategic framework for the development of human settlements is described in the National Development Plan (NDP) and, more specifically in relation to the implications for climate change, in the National Climate Change Response White Paper (NCCRWP).

However, to develop appropriate adaptation responses a more nuanced understanding of the challenges and options for human settlements is required, building on the insights of the NCCRWP. This understanding needs to take into account the unusually diverse urban forms of human settlement in the South African context, and the importance of ecological infrastructure in supporting service delivery and building resilient communities.

#### Objectives

The following objectives have been identified

- Manage potential increase migration to urban and peri-urban areas.

Manage potential increased risk of wildfires

#### Water

Water resources are the primary medium through which climate change impacts will be felt by South Africans (Schulze et al., 2014). Climate change will affect water accessibility, quantity, and quality (Parikh, J 2007). Drought, reduced runoff, increased evaporation, and an increase in flood events will impact on both water quality and quantity.

South Africa's climate is generally arid to semi-arid, with less than 9% of annual rainfall ending up in rivers, and only about 5% recharges groundwater in aquifers. In addition, rainfall and river flow are unpredictable in time and unevenly distributed in space, with only 12% of the land area generating 50% of stream flows. Decadal rainfall variability also results in extended dry and wet periods across the country. The main users of surface water resources are agricultural irrigation, domestic, industrial, mining and power generation, while plantation forestry intercepts and reduces runoff before it reaches the rivers and groundwater.

Surface water resources were already over-allocated by the year 2000 in five of nineteen water management areas historically used for water planning and management purposes. The potential demand for water is expected to increase with economic growth, increased urbanisation, higher standards of living, and population growth. Because of the critical importance of water in the South African economy the country has a sophisticated water resources planning capacity, founded on a good understanding of the country's variable rainfall. This planning capacity will be a key capability for adaptation planning under ongoing and future climate change.

#### Objectives

The following objectives have been identified

- Manage the quantity of water available for irrigation and drinking
- Manage the increased impacts of floods due to litter blocking the sewer system

#### Cross-Cutting

The projected impacts of climate change could ultimately negatively impact the economy. Since the Agricultural sector is an important contributor to the economy and the projected impacts of climate change on agriculture could negatively impact on the economy.

The projected impacts of climate change could ultimately negatively impact the economy of district. Since the Agricultural sector is an important contributor to the district economy and the projected impacts of climate change on agriculture could negatively impact on the district economy as a whole. It should also be noted that the project impacts of climate change could also negatively impact on the finances of the municipality. For instance, water shortages will require the implementation of demand management measures by the district resulting in lower water sales.

Climate change is a relatively new field in South Africa and research on economic impact of climate change is required for the field to get the attention that is needed.

#### Objectives

The following objectives have been identified

Generate knowledge and disseminate information on climate change

### **8.1.3 SURFACE DRAINAGE, WETLANDS AND RIPARIAN ZONES**

Wetlands such as floodplain wetlands, channelled valley-bottom wetlands, un-channelled valley-bottom wetlands, depressions, seeps and wetland flats appear to be absent at 10 of the sites. Remainder of erf 103 of Wilkoppies is affected by a non-perennial tributary of the Schoonspruit.

Riparian zone at the site is fairly extensive because of the local topography which included depressions along a number of small streambeds that feed into main stream. Please see Figure 33 for a copy of the delineation of these zones. The riparian area at the main stream contains a conspicuous, significant cover of the indigenous *Vachellia karroo* (Sweet Thorn) and other indigenous plant species. Vegetation at the riparian zone at the contains a visibly dense cover of the indigenous *Vachellia karroo* (Sweet Thorn). Other indigenous trees species at the include *Ziziphus mucronata*. Exotic tree species such as *Melia azedarach*, *Morus alba* and *Gleditsia triacanthos* are found at the riparian zone. At more open wet areas along the riparian zone alien invasive herbaceous species such as *Rumex crispus* and *Cirsium vulgare* are present as well as indigenous herbaceous species such *Persicaria species* and *Rumex lanceolata*. There is a small artificial dam that contains some sedges. The active channels, riparian zones and buffer zones are corridors of particular conservation concern in the larger area. No Threatened or Near Threatened animal- or plant species are anticipated to be present at the site. The scope for the site to conserve a corridor of specific conservation importance is large. The site therefore contains an extensive area of high sensitivity associated with the riparian zones and at the terrestrial zones, medium and low ecological sensitivity.

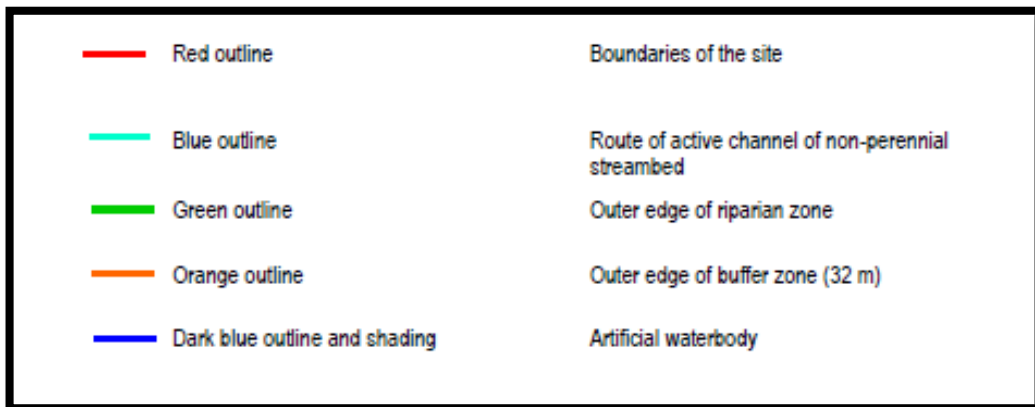

Figure 33: Active channels, riparian zones and buffer zones at the Remainder of Erf 103, Wilkoppies.

#### 8.1.4 FLORA AND FAUNA

Grassland at the sites is represented by the Vaal-Vet Sandy Grassland (Gh 10) vegetation type (Mucina & Rutherford, 2006).

##### Gh 10 Vaal-Vet Sandy Grassland

Distribution: In South Africa the Vaal-Vet Sandy Grassland is present in the North-West Province and Free State Province. Vaal-Vet Sandy Grassland ranges from south of Lichtenburg and Ventersdorp to Klerksdorp, Leeudoringstad, Bothaville and to the Brandfort areas north of Bloemfontein. Altitude ranges from 1 220 – 1560 m for the entire vegetation type (Mucina & Rutherford 2006).

Vegetation and landscape features: Plains-dominated landscape with some scattered, slightly undulating plains and hills. Mainly low-tussock grasslands with an abundant karroid element are present. Dominance of *Themeda triandra* is an important feature of this vegetation unit. Locally low cover of *Themeda triandra* and the associated increase in *Elionurus muticus*, *Cymbopogon pospischillii* and *Aristida congesta* is attributed to heavy grazing and/or erratic rainfall. Geology and soils: Aeolian and colluvial sand overlying sandstone, mudstone, and shale of the Karoo Supergroup (mostly the Ecca group) as well as older Ventersdorp Supergroup and basement gneiss in the north (Mucina & Rutherford 2006).

Climate: Warm-temperate, summer-rainfall climate, with overall mean annual precipitation of 530 mm. High summer temperatures. Severe frost (37 days per year on average) occurs in winter (Mucina & Rutherford 2006).

Important taxa of the Vaal-Vet Sandy Grassland listed by Mucina & Rutherford (2006): Graminoids: *Antheophora pubescens*, *Aristida congesta*, *Chloris virgata*, *Cymbopogon caesius*, *Cynodon dactylon*, *Digitaria argyrograpta*, *Elionurus muticus*, *Eragrostis chloromelas*, *Eragrostis lehmanniana*, *Eragrostis plana*, *Eragrostis trichophora*, *Heteropogon contortus*, *Panicum gilvum*, *Setaria sphacelata*, *Themeda triandra*, *Tragus berteronianus*, *Brachiaria serrata*, *Cymbopogon pospischillii*, *Digitaria eriantha*, *Eragrostis curvula*, *Eragrostis obtusa*, *Eragrostis superba*, *Panicum coloratum*, *Pogonarthria squarrosa*, *Trichoneura grandiglumis*, *Triraphis andropogonoides*. Herbs: *Stachys spathulata*, *Barleria macrostegia*, *Berkheya onopordifolia* var. *onopordifolia*, *Chamaesyce inaequilatera*, *Geigeria aspera* var. *aspera*, *Helichrysum caespitium*, *Hermannia depressa*, *Hibiscus pusillus*, *Monsonia burkeana*, *Rhynchosia adenodes*, *Selago densiflora*, *Vernonia oligocephala*. Geophytic Herbs: *Bulbine narcissifolia*, *Ledebouria marginata*. Succulent Herb: *Tripteris aghillana* var. *integrifolia*. Low shrubs: *Felicia muricata*, *Pentzia globosa*, *Anthospermum rigidum* subsp. *pumilum*, *Helichrysum dregeanum*, *Helichrysum paronychioides*, *Ziziphus zeyheriana*.

**Note:** Not all of the above listed plant species for the vegetation types occur at the site in the study area.

Vegetation at the terrestrial zones of the sites ranges from the more natural vegetation that is present at the rocky ridge at Erf 410 Freemanville, to extensively disturbed grassland to urban lawn vegetation where grassland, the latter where the grassland has been extensively modified. Vegetation most of the sites is not natural and can be described as an urban lawn area, with some indigenous plant species and with a conspicuous high frequency of alien invasive weed species. Vegetation at the rocky ridge of Erf 410 Freemanville consists of a diversity of indigenous forbs, shrubs and trees. Indigenous trees at the rocky ridge include *Euclea undulata*, *Boscia albitrunca*, *Vachellia robusta* and *Ehretia rigida*. Vegetation at the riparian zone at the Remainder of Erf 103 Wilkoppies contains a visibly dense cover of the indigenous *Vachellia karroo* (Sweet Thorn). Other indigenous trees species at the include *Ziziphus mucronata*. Exotic tree species such as *Melia azedarach*, *Morus alba* and *Gleditsia triacanthos* are found at the riparian zone. At more open wet areas along the riparian zone alien invasive herbaceous species such as *Rumex crispus* and *Cirsium vulgare* are present as well as indigenous herbaceous species such *Persicaria species* and *Rumex lanceolata*.

Rocky ridges are absent at the sites, apart from Erf 410 Freemanville where a low rocky ridge is present. An active channel and riparian zone of a non-perennial river and a small artificial dam is present at the Remainder of Erf 103 Wilkoppies. Wetlands and riparian areas are absent at the other sites.

No Threatened or Near Threatened plant or animal species appear to be resident at the sites. No other plant species of particular conservation concern appears to be present at the site with the exception of Erf 410 Freemanville where a few individuals of the Protected tree species *Boscia albitrunca* (Shepherd's Tree), is present. Protected Tree species are listed under the National Forests Act No. 84 of 1998. In terms of a part of section 15(1) of Act No. 84 of 1998, no person may cut, disturb, damage or destroy any protected tree or possess, collect, remove, transport, export,

purchase, sell, donate or in any other manner acquire or dispose of any protected tree, except under a license granted by the Minister. A permit will be needed to remove any of these individual *Boscia albitrunca* trees, in cases where removal of individual trees cannot be avoided.

An Endangered ecosystem, the Vaal-Vet Sandy Grassland vegetation type, is mapped for the site. During surveys at the site, it was found that the original vegetation type has been modified or transformed or exists as degraded grassland at the remaining patches. A high degree of isolation is also present at all the sites, with many negative urban ecological edge effects visible. The scope for the sites to distinctly contribute to the conservation of Vaal-Vet Sandy Grassland, is small.

The non-perennial river, the associated riparian zone and buffer zone at Remainder of Erf 103 Wilkoppies is a corridor of particular conservation importance. The rocky ridge at Erf 410 Freemanville is part of a stepping stone corridor system of particular conservation importance in the larger area. There is little scope for the remainder of the sites to be part of a corridor of particular conservation importance.

Summaries of the sites at the study area:

*Erf 1251 Flamwood.* Flat area (very gentle slopes). No rocky ridges are present at Erf 1251 Flamwood. No wetlands or riparian areas are present at the site. The vegetation at the site consists of extensively disturbed grassland where particularly dense covers of the alien invasive weed *Lactuca serriola* were visible at the time of the surveys. Few trees are present at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 1251 Flamwood is low.

*Erf 306 Flamwood.* Gentle slopes, relatively flat area. No rocky ridges are present at Erf 306 Flamwood. No wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland which is approaching lawn-type of vegetation; it appears as a neglected urban lawn. A mixture of planted exotic and indigenous trees are present of which some perhaps germinated naturally. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 306 Flamwood is low.

*Erf 302 Flamwood.* The topography of Erf 302 Flamwood consists of gentle slopes; it is a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn area with some indigenous grasses and forbs. A mixture of planted exotic and indigenous trees are present of which some perhaps germinated naturally. A conspicuous high infestation of alien invasive weeds is present. There are some bare areas at the site where buildings have been removed. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 302 Flamwood is low.

*Erf 564 Flimieda.* Gentle slopes, relatively flat area. No rocky ridges are present at Erf 564 Flimieda. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 564 Flimieda is low.

*Erf 1253 La Hoff.* Topography at Erf 1253 La Hoff consists of gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien

invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 1253 La Hoff is low.

*Remainder of Erf 103 Wilkoppies.* Riparian zone at the site is fairly extensive because of the local topography which included depressions along a number of small streambeds that feed into main stream. The riparian area at the main stream contains a conspicuous, significant cover of the indigenous *Vachellia karroo* (Sweet Thorn) and other indigenous plant species. Vegetation at the riparian zone at the Remainder of Erf 103 Wilkoppies contains a visibly dense cover of the indigenous *Vachellia karroo* (Sweet Thorn). Other indigenous trees species at the include *Ziziphus mucronata*. Exotic tree species such as *Melia azedarach*, *Morus alba* and *Gleditsia triacanthos* are found at the riparian zone. At more open wet areas along the riparian zone alien invasive herbaceous species such as *Rumex crispus* and *Cirsium vulgare* are present as well as indigenous herbaceous species such *Persicaria species* and *Rumex lanceolata*. There is a small artificial dam that contains some sedges. The active channels, riparian zones and buffer zones are corridors of particular conservation concern in the larger area. No Threatened or Near Threatened animal- or plant species are anticipated to be present at the site. The scope for the Remainder of 103 Wilkoppies to conserve a corridor of specific conservation importance is large. The Remainder of Erf 103 Wilkoppies therefore contains an extensive area of high sensitivity associated with the riparian zones and at the terrestrial zones, medium and low ecological sensitivity.

*Erf 412 Freemanville.* Erf 412 Freemanville is a flat area (very gentle slopes). No rocky ridges are present at Erf 412 Freemanville. wetlands or riparian areas are present at the site. The vegetation at the site consists of extensively disturbed grassland where a high frequency of alien invasive weeds is conspicuous. Few trees are present at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 412 Freemanville is low.

*Erf 410 Freemanville.* Erf 410 Freemanville is overall visibly degraded and noticeably impacted by negative urban edge effects. Informal dumping takes place at entrances of the site. Vegetation at the rocky ridge of Erf 410 Freemanville consists of a diversity of indigenous forbs, shrubs and trees. Indigenous trees at the rocky ridge include *Euclea undulata*, *Boscia albitrunca*, *Vachellia robusta* and *Ehretia rigida*. The rocky ridge at the site is part of a stepping stone corridor of particular conservation concern in the larger area. It is unlikely that a buffer zone has any practical application in the case of this rocky ridge. No Threatened or Near Threatened animal- or plant species are anticipated to be present at the site. One tree species which is not threatened and which is a Protected tree, *Boscia albitrunca* (Shepherd's Tree, Motlôpi, Witgatboom) occurs sparingly at the site. Protected Tree species are listed under the National Forests Act No. 84 of 1998. In terms of a part of section 15(1) of Act No. 84 of 1998, no person may cut, disturb, damage or destroy any protected tree or possess, collect, remove, transport, export, purchase, sell, donate or in any other manner acquire or dispose of any protected tree, except under a license granted by the Minister. A permit will be needed to remove any of these individual *Boscia albitrunca* trees, in cases where removal of individual trees cannot be avoided. Erf 410 Freemanville therefore contains an area of high ecological sensitivity at the rocky ridge which is surrounded by a flat area of which the ecological sensitivity is medium.

*Erf 216 Songloed.* Topography at Erf 216 Songloed consists of gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site, with Erf 2017 on which is directly borders, is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 216 Songloed is low.

*Erf 217 Songloed.* Topography at Erf 217 Songloed consists of gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site, with Erf 2016 Songloed with which it directly borders, is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 217 Songloed is low.

*Erf 938 Boetrand.* The topography at Erf 938 is gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland. A conspicuous high infestation of alien invasive weeds is present. The area appears neglected. Some pioneer indigenous forbs that often occur in densities at disturbed areas, such as *Bulbine narcissifolia* and dwarf-shrubs such as *Ziziphus zeyheriana* are found at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is relatively small and isolated in an urban area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 938 Boetrand is low.

*Erf 943 Boetrand.* The topography at Erf 943 is gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland. A conspicuous high infestation of alien invasive weeds is present. Informal dumping of garden waste and rubble is visible at the Erf 943 Boetrand. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is relatively small and isolated in an urban area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 943 Boetrand is low.

Possible ecological sensitivities at the site were indicated by a report generated from the screening tool of DEFFE. These ecological sensitivities that could possibly/ are present at the site, follow.

#### *Animal species theme sensitivity*

Relative animal species theme sensitivity is medium. The possible presence of *Hydriectus maculicollis* (Spotted-necked Otter) that should be investigated is indicated by the screening tool. During the surveys this status quo has been confirmed or could be low instead of medium. The watercourse and artificial dam at Remainder of Erf 103 Wilkoppies, largely surrounded by dense residential areas, are not ideal habitats for *Hydriectus maculicollis* (Spotted-necked Otter), which favours more open permanent and quiet waters. No distinct possibility that the site could be used as specific habitat or foraging area by *Hydriectus maculicollis* could be observed.

#### *Aquatic biodiversity theme sensitivity*

Relative aquatic biodiversity theme sensitivity at the site is low and for parts of the study area very high owing to the presence of an aquatic Critical Biodiversity Area. The sites are not part of a Freshwater Ecosystem Priority Area. There is an active channel and riparian zone of a non-perennial river at Remainder of Erf 103 Wilkoppies. This non-perennial river, its riparian zone and its buffer zone of 32 m are excluded from the proposed developments. There is no distinct impact that the proposed development will have on the river of which the outer edge of the riparian zone.

#### *Plant species theme sensitivity*

Relative plant species theme sensitivity is low and medium, the latter owing to the possible occurrence of a sensitive species which is not threatened but which could be prone to harvesting. Possible sensitive plant species of which the likely presence or absence have been investigated are listed in Tables 4.2 – 4.9 and include plant species on a local and provincial scale which could be prone to harvesting. No Threatened or Near Threatened plant species or any of the plant sensitive species that are not threatened but which are prone to harvesting, appear to be present at the site with the exception of a few individuals of the Protected tree species *Boscia albitrunca* (Shepherd's Tree, Motlôpi, Witgatboom) at Erf 410 Freemanville. If the development is approved and the removal/ destruction of these *Boscia albitrunca* trees cannot be avoided, a permit should be applied for.

### *Terrestrial biodiversity theme sensitivity*

Relative terrestrial biodiversity at the site is very high. This high sensitivity that is ascribed to the site area, is because of the presence of Critical Biodiversity Area 2, the presence of an Endangered ecosystem, the Vaal-Vet Sandy Grassland that is mapped for the site and the possibility of including the site in a Protected Area Expansion strategy. During surveys at the site, it was found that the original vegetation type has been transformed or modified at the sites. The sites are also isolated. The scope for the sites to distinctly contribute to the conservation of Vaal-Vet Sandy Grassland, is small.

Ecological sensitivity at Erf 1251 Flamwood, Erf 306 Flamwood, Erf 302 Flamwood, Erf 564 Flimieda, Erf 1253 La Hoff, Erf 412 Freemanville, Erf 216 Songloed, Erf 217 Songloed, Erf 938 Boetrand and Erf 943 Boetrand, is low. The Remainder of Erf 103 Wilkoppies contains an extensive area of high sensitivity associated with the riparian zones and at the terrestrial zones, medium and low ecological sensitivity. Erf 410 Freemanville contains an area of high ecological sensitivity at the rocky ridge, which is surrounded by a flat area of which the ecological sensitivity is medium.

The non-perennial river, the associated riparian zone and buffer zone, as well as the artificial waterbody and its buffer zone at the Remainder of Erf 103 Wilkoppies as well as the rocky ridge at Erf 410 Freemanville are excluded from developments and demarcated with appropriate material during the construction phase, if the developments are approved.

## **8.2 SOCIO ECONOMIC FACTORS**

### **8.2.1 SOCIAL AMENITIES**

Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in these erven becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies (located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained, (albeit mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Park and a Tennis Club.

In the National Framework for Sustainable Development (NFSD) it is stated that *"the achievement of sustainable development is not a once-off occurrence and its objectives cannot be achieved by a single action or decision. It is an ongoing process that requires a particular set of values and attitudes in which economic, social and environmental assets that society has at its disposal, are managed in a manner that sustains human well-being without compromising the ability of future generations to meet their own need.* The NFSD further continues to emphasize that South Africa's current development path in certain instances reflects signs of being unsustainable in the long-term. It highlights that a large percentage of growth in economic activity (measured in terms of its contribution to the GDP) is achieved by *"consuming' natural resources and degrading our habitat at accelerating rates with the inevitable consequence that future economic growth and development objectives will be prejudiced."*

Consistent with national priorities, environmental authorities must support *"increased economic growth and promote social inclusion"*, whilst ensuring that such growth is *"ecologically sustainable"*. In the National Spatial Development Perspective (NSDP) it is highlighted that, to achieve the goal of stimulating sustainable economic activities and to create long-term employment opportunities, it is required that spending on economic infrastructure is focused in priority areas with potential for economic development, with development to serve the broader societies' needs equitably.

The local municipality intends to promote a more compact city in order to prevent the expansive provision of social and engineering services, as well as to prevent the economic decline of the traditional city centre. The Spatial Development Framework (SDF) addresses the scale of urban growth through planned extensions, infill and redevelopment strategies. It also addresses measures to promote compact and connected growth opportunities, such as the identification of revitalisation zones, densification and mixed land use zones.

The planning practices of the past has resulted in sprawling urban areas that are un-economical. Today, planning policies are transformed to mainly encourage infill development on vacant land within the urban environment, in order to combat urban sprawl. The proposed development falls in line with these principals, as it is infill development within the urban area.

During the construction phase, temporary employment will be created. The increased employment in the area during the construction phase will also result in increased expenditure, which, in addition, will mean that more than just the proposed jobs required for the construction on the site will be created due to economic spin-offs that will result. Due to the nature of the proposed development it will lead to an increase in employment opportunities in the operational phase and will contribute to the broadening of the income base and alleviation of poverty within the Local Municipality.

## **8.2.2. AIR QUALITY**

*"The extent and toxicity of emissions is not necessarily a concise indicator of contributions to ground-level air pollution concentrations or of risks to health and the environment. Such contributions are also a function of the height of emission, temporal variations in the release of pollutants, and the proximity of the source to the people or the environment affected by exposure to the pollutant (such as, for instance, children, or the elderly, or people who are ill, or others who may be particularly sensitive receptors to a specific pollutant above a certain concentration). If an industry is operating close to a school or hospital or centre for the elderly, the potential exposure (in combination with the other contributing factors) is high.*

*Three factors govern the significance of household fuel-burning emissions:*

- (i) the low level of emissions (that is, their height above the ground is generally about 3 m, within people's breathing zone);*
- (ii) the simultaneous occurrence of peak emissions (during the coldest months of winter and in the early mornings and throughout the evenings) and poor atmospheric dispersion (stable atmosphere with low wind speeds, with the possible development of temperature inversions); and*
- (iii) the release of such emissions within high human exposure areas, given that such emissions generally occur in dense, low-income settlements where population density is high (in addition, the pollution is not only outdoors, but frequently indoors as well, due to poor ventilation, so it affects the whole family).*

*The significance of vehicle emissions as contributors to air-pollutant concentrations and health risks is similarly increased by the low level (close to the ground) of the emissions, and their proximity to highly populated areas – on highways, for example, with emissions being particularly high when traffic is congested. Vehicle emissions tend to peak early in the morning and in the evenings, when the potential for atmospheric dispersion is reduced (for example, wind speeds are generally low in the early mornings and evenings, reducing their potential for dispersing pollution).*

*Given the high volumes of pollutants emitted from fuel-burning within the industrial and power-generation sectors, their contribution to ambient concentrations and public health risks is often lower than might be expected. This is because these sources are generally characterized by constant releases, relatively high above ground level, and further away from residential settlements than are household fuel-burning and vehicle emissions.*

*Ranking the significance of different sources of pollution on the basis of the total emissions for which each source is responsible would, for example, place industrial emissions above household fuel-burning. If the aim is to reduce impacts on human health, however, then household fuel-burning would need to be targeted as a top priority (Scorgie et al., 2004d).*

*Historically, air pollution control in South Africa has primarily emphasized the implementation of 'command and control' measures in the industrial sector. The shift from source-based control, to the management of the air that people breathe, emphasizes the importance of targeting a wider range of sources and using more flexible and varied approaches. It means paying greater attention to ambient air quality, as it is more important (and more cost-effective, in many cases) to make sure that the ambient air complies with air quality standards. This approach ensures that human and environmental health is protected and that the cumulative impact of pollution from a number of sources is addressed.*

*Approaches adopted or considered for future implementation have included: regulation (for example, the use of Atmospheric Emission Licences for Listed Activities); market instruments (such as atmospheric user-charges and pollution taxes); the potential for voluntary agreements, education and awareness raising; and emissions trading. International experience shows that adopting a mix of instruments and interventions is more effective than using a single instrument to improve air quality across various types of source. Although direct regulation remains important in controlling industrial sources, there is evidence that specifying emission limits is more effective than specifying the use of particular technologies, so as to give companies flexibility in selecting the method of achieving success that suits them best. This approach is advocated as being more cost-effective and more likely to stimulate technological advances in pollution control methods and production processes.*

*For large point sources (that is, sources of pollution that are concentrated on one site, but that have large, constant volumes of many types of pollution) that are few in number, instruments such as emissions trading have been advocated as an effective way to manage pollutant emissions and reduce the costs of compliance.*

*Implementing an efficient social protection system to alleviate poverty is central to maintaining conditions that facilitate not only economic growth but also environmental sustainability. Many South African households – including those with access to electricity – use coal, wood, and paraffin, due to the relative cost-effectiveness of such fuels for heating (that is, space heating) and cooking purposes.*

*Many low-cost housing developments and informal settlements are located close to industrial and mining operations, as such land is both available and inexpensive. Poorer communities are more likely to suffer from poor service delivery, including inadequate waste removal that sometimes results in refuse being set alight illegally. These examples show that poverty alleviation could help to improve air quality by enabling people to choose practices that are friendlier to the environment.”*

[https://www.environment.gov.za/sites/default/files/docs/stateofair\\_airqualityand\\_sustainable\\_development.pdf](https://www.environment.gov.za/sites/default/files/docs/stateofair_airqualityand_sustainable_development.pdf) Date visited: 17/03/2020.

The proposed development is planned and will eventually be developed with the above mentioned in mind. The alleviation of poverty (Jobs that will be created).

In addition to the above, it should be noted that the project will however create a certain amount of dust during the construction phase. If proper dust suppression measures are implemented this variable will have very little impact (low in intensity and significance during the construction phase).

### **8.2.3 NOISE**

It is a fact that a certain amount of noise will be generated during the construction phase of the project. Noise levels should however rarely exceed the allowable limits. It is unlikely that the project will create any more noise during the operational phase than that already experienced on site.

## 8.2.4 ARCHAEOLOGY AND CULTURAL SITES

Based on the aerial images of the area, site photographs provided by the client and the heritage desktop study, it is therefore deemed unlikely that any significant sites, features or material of cultural heritage (archaeological and/or historical) origin and/or significance will exist in the study areas (the various Erven/City of Matlosana Public Parks). Recent historical activities (mainly urban and related development activities) would have impacted on any if they did exist here in the past and would have disturbed or destroyed these to a large degree. Known archaeological and historical sites, features and material have been identified in the larger geographical area and this needs to be taken into consideration during actions related to any possible future development related to the proposed rezoning and subdivision of the various Erven. It is recommended that a Chance Find Protocol be drafted and implemented for this in order to ensure that if any previously unknown and invisible (subterranean) sites, features or material are uncovered that those could be investigated by a Heritage Specialist, who will then make recommendations on the way forward in terms of required mitigation measures.

It is therefore recommended that Motivation for Exemption from a full Phase I Heritage Impact Assessment as part of the Environmental Authorization Process related to the City of Matlosana Local Municipalities Public Parks in the Northwest Province, be granted to the applicants taking into consideration the recommendations provided above, as well as:

**The subterranean nature of cultural heritage (archaeological and/or historical) resources must always be kept in mind. Should any previously unknown or invisible sites, features or material be uncovered during any development actions then an expert should be contacted to investigate and provide recommendations on the way forward. This could include previously unknown and unmarked graves and/or cemeteries.**

## 8.2.5 AESTHETICS

Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in these erven becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies (located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained. (although it be mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Bark and a Tennis Club.

Any Visual Impacts on the stream should be avoided therefore and the sense of place should be preserved. Visual Intrusion is defined as the level of compatibility or congruence of the project with the particular qualities of the area, or its 'sense of place'. This is related to the idea of context and maintaining the integrity of the landscape or townscape.

**High visual intrusion** – results in a noticeable change or is discordant with the surroundings;

**Moderate visual intrusion** – partially fits into the surroundings, but clearly noticeable;

**Low visual intrusion** – minimal change or blends in well with the surroundings.

The proposed development will not change the scenic resources of the local area as it will blend in with the existing surrounding residential areas. At the Remainder of erf 103 Wilkoppies, the proposed Recreational erf will also blend in with the current, recreational character of the site. The visual intrusion is considered to be low.

## 9. ENVIRONMENTAL IMPACT ASSESSMENT

### 9.1 ASSESSMENT CRITERIA

Impacts were rated using the following methodology:

Nature of the potential impact		Description of the effect, and the affected aspect of the environment
<b>Duration (time scale)</b>	Short term	Up to 5 years
	Medium term	6 – 15 years
	Long term	More than 15 years
<b>Extent (area)</b>	Local	Confined to study area and its immediate surroundings
	Regional	Region (cadastral, catchment, topographic)
	National	Nationally (The country)
	International	Neighboring countries and the rest of the world.
<b>Magnitude (Intensity)</b>	Low	Site-specific and wider natural and/or social functions and processes are negligibly altered. ((A low intensity impact will not affect the natural, cultural, or social functions of the environment).
	Medium	Site-specific and wider natural and/or social functions and processes continue albeit in a modified way. (Medium scale impact will alter the different functions slightly).
	High	Site-specific and wider natural and/or social functions and processes are severely altered. (A High intensity impact will influence these functions to such an extent that it will temporarily or permanently cease to exist).
<b>Probability</b>	Improbable	Possibility of occurrence is very low. (Such an impact will have a very slight possibility to materialise, because of design or experience).
	Possible	There is a possibility that the impact will occur
	Probable	It is most likely that the impact will occur
	Definite	The impact will definitely occur
<b>Significance</b>	Insignificant	Impact is negligible and will not have an influence on the decision regarding the proposed activity (No mitigation is necessary)
	Very Low	Impact is very small and should not have any meaningful influence on the decision regarding the proposed activity (No mitigation is necessary)
	Low	The impact may not have a meaningful influence on the decision regarding the proposed activity (No mitigation is necessary)
	Medium	The impact should influence the decision regarding the proposed activity (The project can only be carried through if certain mitigatory steps are taken)
	High	The impact will influence the decision regarding the proposed activity
	Very High	The proposed activity should only be approved under special circumstances
<b>Reversibility</b>	Low	There is little chance of correcting the adverse impact
	Medium	There is a moderate chance of correcting the adverse impact

Nature of the potential impact		Description of the effect, and the affected aspect of the environment
	High	There is a high chance in correcting the adverse impact
Risk	Low	Assessing a risk involves an analysis of the consequences and likelihood of a hazard being realized. In decision-making, low-consequence / low-probability risks (green) are typically perceived as acceptable and therefore only require monitoring.
	Medium	Other risks (amber) may require structured risk assessment to better understand the features that contribute most to the risk. These features may be candidates for management
	High	High-consequence / high-probability risks (red) are perceived as unacceptable and a strategy is required to manage the risk.

Attributes associated with the alternatives were assessed and is outlined below:

### **Geographical attributes**

The Geographical attributes of an area relates to the characteristics of a particular region, area or place. It influences the determination of site alternatives as it relates to the location of a site in relation to relevant features in the area.

### **Physical attributes**

Physical attributes of an area relates to the processes and patterns in the natural environment. For the purpose of this assessment, the following processes and patterns have been investigated. Geology, soil, topography and landforms, climate and meteorology, surface water and ground water.

### **Biological attributes**

Biological attributes for the purpose of this study includes the distribution of species and ecosystems in geographic space and through geological time. Organisms and biological communities often vary in a regular fashion along geographic gradients of latitude, elevation, isolation and habitat area. The two main branches assessed will be:

Phytogeography is the branch of biogeography that studies the distribution of plants.

Zoogeography is the branch that studies distribution of animals.

### **Social attributes**

Social attributes is closely related to social theory in general and sociology in particular, dealing with the relation of social phenomena and its spatial components.

### **Economic attributes**

Economic attributes includes the location, distribution and spatial organization of economic activities and also takes into account social, cultural, and institutional factors in the spatial economy of the development.

### **Heritage attributes**

The broad generic term Cultural Heritage Resources refers to any physical and spiritual property associated with past and present human use or occupation of the environment, cultural activities and history. The term includes sites, structures, places, natural features and material of paleontological, archaeological, historical, aesthetic, scientific, architectural, religious, symbolic or traditional importance to specific individuals or groups, traditional systems of cultural practice, belief or social interaction.

### **Cultural attributes**

Cultural attributes relates to the specific characteristics such as language, religion, ethnic and racial identity, and cultural history & traditions of people. These attributes influences family life, education, economic and political structures, and, of course, business practices.

It should be noted that the above mentioned attributes do not occur in isolation and it is not uncommon for an identified impact to overlap with two or more of these attributes. Also note, not all risks require comprehensive and detailed assessment. Solid problem formulation should allow decision-makers to evaluate the extent of subsequent analysis required. The level of effort put into assessing each risk should be proportionate to its significance and priority in relation to other risks, as well as its

complexity, by reference to the likely impacts. Consideration should be given to stakeholders' perceptions of the nature of the risk.

ENVIRONMENTAL IMPACT ASSESSMENT (Planning and design phase)					
"Closing of eleven (11)" Park Erven (Alternative 1 – Preferred alternative)					
Environmental Attribute	Potential impacts and risks	Assessment criteria	Assessment rating (With mitigation)	Proposed mitigation	Assessment rating (Without mitigation)
<b>DIRECT IMPACTS:</b>					
Geographical Physical Social Economic	7,0526 ha of land that was zoned open space will be transformed in order to establish 57 Residential 1 erven, 2 Residential 2 erven, 5 Municipal erven and 4 other erven.  The health and safety risks associated with the vacant land will be addressed.	Duration	Long term	Obtain the necessary environmental authorization for the development. Implement the mitigation measures as described in the Environmental Management Programme.  Appoint a Fauna and Flora Habitat Specialist to determine the sensitivity of the sites and to propose mitigation measures where applicable.  Ensure that the development fits in with the residential character of the neighbourhood.	Long term
		Extent	Local		Local
		Magnitude (Intensity)	High		High
		Probability	Definite		Definite
		Significance	Medium		Medium
		Reversibility	Low		Low
		Risk	Low		High
3 315 sq.m of indigenous vegetation will be eradicated within 100 meters from the edge of a tributary of the Schoonspruit in order to establish 1 Business 1 and 1 Special erven on the Remainder of Erf 103 Wilkoppies.		Duration	Long term	Obtain the necessary environmental authorization for the development. Implement the mitigation measures as described in the Environmental Management Programme.  Appoint a Wetland Specialist to determine the riparian zones and buffer zones to propose mitigation measures where applicable.	Long term
		Extent	Local		Local
		Magnitude (Intensity)	Low		High
		Probability	Definite		Definite
		Significance	Low		Medium
		Reversibility	High		Low
		Risk	Low		High
Disturbed surfaces which can lead to erosion and dust pollution. Prepare method statements to this effect.		Duration	Short term	Start the rehabilitation of disturbed surfaces as soon as possible. Spray bare surfaces with water to prevent dust pollution.	Medium term
		Extent	Local		Local
		Magnitude (Intensity)	Low		Medium
		Probability	Definite		Definite
		Significance	Medium		Medium
		Reversibility	High		High
		Risk	Low		Medium
Foreign and invader plant species are likely to invade disturbed areas.		Duration	Short term	Start the extermination of any invasive species as soon as possible and maintain the eradication programme.	Medium term
		Extent	Local		Local
		Magnitude (Intensity)	Low		Low
		Probability	Definite		Definite
		Significance	Medium		Medium
		Reversibility	High		High
		Risk	Low		Medium
Vegetation (which will lead to the destruction of faunal and floral habitats) will be removed during the construction phase.		Duration	Short term	Start with the rehabilitation of vegetation to minimize the negative effects of the removal of plants.  The rule must be to minimize the disturbance of animal life by keeping the footprint as small as possible.  No snares may be set.	Short term
		Extent	Local		Local
		Magnitude (Intensity)	Medium		Medium
		Probability	Definite		Definite
		Significance	Medium		Medium
		Reversibility	High		High
		Risk	Low		Medium
Open trenches poses a danger of collapse on people or on equipment and people-		Duration	Short term	Ensure that the trenches stay open for as short a time as possible.	Short term
		Extent	Local		Local
		Magnitude (Intensity)	Medium		Medium

Dear Sir/Madam

**PROJECT NAME:**

**Environmental Impact Assessment process for the proposed closing of eleven (11) Park Erven, located on Erf 1251 Flamwood Ext 7; Erf 306 Flamwood Proper; Erf 302 Flamwood Proper; Erf 564 Flimieda; Erf 1253 La Hoff; Remainder of Erf 103 Wilkoppies; Erf Re 412 Freemanville; Erf 216 Songloed; 217 Songloed; Erf 938 Boetrand and Erf 943 Boetrand, City of Matlosana, North West Province.**

**AB ENVIRO CONSULT** was appointed by City of Matlosana to submit an application to the Department of Economic Development, Environment, Conservation and Tourism, North West Province for the above mentioned proposed development. Attached please find a notification of the proposed development and a copy of the Basic Assessment report for your comments. You are requested to comment within 30 days of the date of this notice.

In the event of your organisation/department not wishing to comment on this matter, it would be appreciated if we could receive written confirmation thereof to enable us to continue with the finalisation of the application. If no response is however received from your Department/organisation within the said time, it will be assumed that your department/organisation does not wish to comment on this matter and the application will be processed further. Please be advised, in accordance with POPIA and NEMA, personal data is collected and processed by the applicant/EAP and shared with the Competent Authority to enable informed decision-making.

Please do not hesitate to contact us should any further information or clarification be required.

Yours sincerely,

Mr JP de Villiers

## 10.4 ISSUES RAISED BY INTERESTED AND AFFECTED PARTIES

Summary of main issues raised by I&APs	Summary of response from EAP
To follow as part of Final BAR	NA

### 1. 10.5 COMMENTS AND RESPONSE REPORT

I&AP registered:	Comment received:	Response by the EAP:
To follow as part of Final BAR		

# 11. SUMMARY OF THE FINDINGS AND RECOMMENDATIONS OF SPECIALISTS

## 11.1.1 ECOLOGICAL IMPACT ASSESSMENT (See Appendix A for a copy of this report)

### 11.1.1 Objectives of the habitat study

- Surveys to investigate key elements of habitats on the site, relevant to the conservation of fauna and flora.
- Recording of any sightings and/or evidence of existing fauna and flora.
- The selective and careful collecting of voucher specimens of invertebrates where deemed necessary.
- An evaluation of the conservation importance and significance of the site with special emphasis on the current status of threatened species.
- Recording of possible host plants or foodplants of fauna such as butterflies.
- Literature investigation of possible species that might occur on site.
- Integration of the literature investigation and field observations to identify potential ecological impacts that could occur as a result of the development.
- Integration of literature investigation and field observations to make recommendations to reduce or minimise impacts, should the development be approved

### 11.1.2 Methods:

A desktop study comprised not only an initial phase, but also it was used throughout the study to accommodate and integrate all the data that become available during the field observations.

Surveys by R.F. Terblanche during November 2022 were conducted to note key elements of habitats on the site, relevant to the conservation of fauna and flora. The main purpose of the site visits was ultimately to serve as a habitat survey that concentrated on the possible presence or not of threatened species and other species of high conservation priority.

### 11.1.3 Conclusion:

Vegetation at the terrestrial zones of the sites ranges from the more natural vegetation that is present at the rocky ridge at Erf 410 Freemanville, to extensively disturbed grassland to urban lawn vegetation where grassland, the latter where the grassland has been extensively modified. Vegetation most of the sites is not natural and can be described as an urban lawn area, with some indigenous plant species and with a conspicuous high frequency of alien invasive weed species. Vegetation at the rocky ridge of Erf 410 Freemanville consists of a diversity of indigenous forbs, shrubs and trees. Indigenous trees at the rocky ridge include *Euclea undulata*, *Boscia albitrunca*, *Vachellia robusta* and *Ehretia rigida*. Vegetation at the riparian zone at the Remainder of Erf 103 Wilkoppies contains a visibly dense cover of the indigenous *Vachellia karroo* (Sweet Thorn). Other indigenous trees species at the include *Ziziphus mucronata*. Exotic tree species such as *Melia azedarach*, *Morus alba* and *Gleditsia triacanthos* are found at the riparian zone. At more open wet areas along the riparian zone alien invasive herbaceous species such as *Rumex crispus* and *Cirsium vulgare* are present as well as indigenous herbaceous species such *Persicaria* species and *Rumex lanceolata*.

Rocky ridges are absent at the sites, apart from Erf 410 Freemanville where a low rocky ridge is present. An active channel and riparian zone of a non-perennial river and a small artificial dam is present at the Remainder of Erf 103 Wilkoppies. Wetlands and riparian areas are absent at the other sites.

No Threatened or Near Threatened plant or animal species appear to be resident at the sites. No other plant species of particular conservation concern appears to be present at the site with the exception of Erf 410 Freemanville where a few individuals of the Protected tree species *Boscia albitrunca* (Shepherd's Tree), is present. Protected Tree species are listed under the National Forests Act No. 84 of 1998. In terms of a part of section 15(1) of Act No. 84 of 1998, no person may cut, disturb, damage or destroy any protected tree or possess, collect, remove, transport, export, purchase, sell, donate or in any other manner acquire or dispose of any protected tree, except under a license granted by the Minister. A permit will be needed to remove any of these individual *Boscia albitrunca* trees, in cases where removal of individual trees cannot be avoided.

An Endangered ecosystem, the Vaal-Vet Sandy Grassland vegetation type, is mapped for the site. During surveys at the site, it was found that the original vegetation type has been modified or transformed or exists as degraded grassland at the remaining patches. A high degree of isolation is also present at all the sites, with many negative urban ecological edge effects visible. The scope for the sites to distinctly contribute to the conservation of Vaal-Vet Sandy Grassland, is small.

The non-perennial river, the associated riparian zone and buffer zone at Remainder of Erf 103 Wilkoppies is a corridor of particular conservation importance. The rocky ridge at Erf 410 Freemanville is part of a stepping stone corridor system of particular conservation importance in the larger area. There is little scope for the remainder of the sites to be part of a corridor of particular conservation importance.

Summaries of the sites at the study area:

Erf 1251 Flamwood. Flat area (very gentle slopes). No rocky ridges are present at Erf 1251 Flamwood. No wetlands or riparian areas are present at the site. The vegetation at the site consists of extensively disturbed grassland where particularly dense covers of the alien invasive weed *Lactuca serriola* were visible at the time of the surveys. Few trees are present at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 1251 Flamwood is low.

Erf 306 Flamwood. Gentle slopes, relatively flat area. No rocky ridges are present at Erf 306 Flamwood. No wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland which is approaching lawn-type of vegetation; it appears as a neglected urban lawn. A mixture of planted exotic and indigenous trees are present of which some perhaps germinated naturally. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 306 Flamwood is low.

Erf 302 Flamwood. The topography of Erf 302 Flamwood consists of gentle slopes; it is a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn area with some indigenous grasses and forbs. A mixture of planted exotic and indigenous trees are present of which some perhaps germinated naturally. A conspicuous high infestation of alien invasive weeds is present. There are some bare areas at the site where buildings have been removed. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 302 Flamwood is low.

Erf 564 Flimieda. Gentle slopes, relatively flat area. No rocky ridges are present at Erf 564 Flimieda. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 564 Flimieda is low.

Erf 1253 La Hoff. Topography at Erf 1253 La Hoff consists of gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 1253 La Hoff is low.

Remainder of Erf 103 Wilkoppies. Riparian zone at the site is fairly extensive because of the local topography which included depressions along a number of small streambeds that feed into main stream. The riparian area at the main

stream contains a conspicuous, significant cover of the indigenous *Vachellia karroo* (Sweet Thorn) and other indigenous plant species. Vegetation at the riparian zone at the Remainder of Erf 103 Wilkoppies contains a visibly dense cover of the indigenous *Vachellia karroo* (Sweet Thorn). Other indigenous trees species at the include *Ziziphus mucronata*. Exotic tree species such as *Melia azedarach*, *Morus alba* and *Gleditsia triacanthos* are found at the riparian zone. At more open wet areas along the riparian zone alien invasive herbaceous species such as *Rumex crispus* and *Cirsium vulgare* are present as well as indigenous herbaceous species such *Persicaria* species and *Rumex lanceolata*. There is a small artificial dam that contains some sedges. The active channels, riparian zones and buffer zones are corridors of particular conservation concern in the larger area. No Threatened or Near Threatened animal- or plant species are anticipated to be present at the site. The scope for the Remainder of 103 Wilkoppies to conserve a corridor of specific conservation importance is large. The Remainder of Erf 103 Wilkoppies therefore contains an extensive area of high sensitivity associated with the riparian zones and at the terrestrial zones, medium and low ecological sensitivity.

Erf 412 Freemanville. Erf 412 Freemanville is a flat area (very gentle slopes). No rocky ridges are present at Erf 412 Freemanville. wetlands or riparian areas are present at the site. The vegetation at the site consists of extensively disturbed grassland where a high frequency of alien invasive weeds is conspicuous. Few trees are present at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 412 Freemanville is low.

Erf 410 Freemanville. Erf 410 Freemanville is overall visibly degraded and noticeably impacted by negative urban edge effects. Informal dumping takes place at entrances of the site. Vegetation at the rocky ridge of Erf 410 Freemanville consists of a diversity of indigenous forbs, shrubs and trees. Indigenous trees at the rocky ridge include *Euclea undulata*, *Boscia albitrunca*, *Vachellia robusta* and *Ehretia rigida*. The rocky ridge at the site is part of a stepping stone corridor of particular conservation concern in the larger area. It is unlikely that a buffer zone has any practical application in the case of this rocky ridge. No Threatened or Near Threatened animal- or plant species are anticipated to be present at the site. One tree species which is not threatened and which is a Protected tree, *Boscia albitrunca* (Shepherd's Tree, Motlôpi, Witgatboom) occurs sparingly at the site. Protected Tree species are listed under the National Forests Act No. 84 of 1998. In terms of a part of section 15(1) of Act No. 84 of 1998, no person may cut, disturb, damage or destroy any protected tree or possess, collect, remove, transport, export, purchase, sell, donate or in any other manner acquire or dispose of any protected tree, except under a license granted by the Minister. A permit will be needed to remove any of these individual *Boscia albitrunca* trees, in cases where removal of individual trees cannot be avoided. Erf 410 Freemanville therefore contains an area of high ecological sensitivity at the rocky ridge which is surrounded by a flat area of which the ecological sensitivity is medium.

Erf 216 Songloed. Topography at Erf 216 Songloed consists of gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site, with Erf 2017 on which is directly borders, is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 216 Songloed is low.

Erf 217 Songloed. Topography at Erf 217 Songloed consists of gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as an urban lawn grassland. Planted trees are present at the site which include alien invasive trees as well as a few indigenous tree species. A conspicuous high infestation of alien invasive weeds is present. Obvious high frequencies of weeds such as the alien invasive *Plantago lanceolata* is noticeable. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site, with Erf 2016 Songloed with which it directly borders, is isolated in a residential area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 217 Songloed is low.

Erf 938 Boetrand. The topography at Erf 938 is gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland. A conspicuous

high infestation of alien invasive weeds is present. The area appears neglected. Some pioneer indigenous forbs that often occur in densities at disturbed areas, such as *Bulbine narcissifolia* and dwarf-shrubs such as *Ziziphus zeyheriana* are found at the site. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is relatively small and isolated in an urban area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 938 Boetrand is low.

Erf 943 Boetrand. The topography at Erf 943 is gentle slopes; a flat area. No rocky ridges are present. No wetlands or riparian areas are present. Vegetation is not natural and can be described as a modified urban grassland. A conspicuous high infestation of alien invasive weeds is present. Informal dumping of garden waste and rubble is visible at the Erf 943 Boetrand. No Threatened- or Near Threatened animal or plant species appear to be resident at the site. The site is relatively small and isolated in an urban area. The scope for the site to be a corridor of particular conservation importance is small. Ecological sensitivity at Erf 943 Boetrand is low.

Possible ecological sensitivities at the site were indicated by a report generated from the screening tool of DEFFE. These ecological sensitivities that could possibly/ are present at the site, follow.

#### Animal species theme sensitivity

Relative animal species theme sensitivity is medium. The possible presence of *Hydriectus maculicollis* (Spotted-necked Otter) that should be investigated is indicated by the screening tool. During the surveys this status quo has been confirmed or could be low instead of medium. The watercourse and artificial dam at Remainder of Erf 103 Wilkoppies, largely surrounded by dense residential areas, are not ideal habitats for *Hydriectus maculicollis* (Spotted-necked Otter), which favours more open permanent and quiet waters. No distinct possibility that the site could be used as specific habitat or foraging area by *Hydriectus maculicollis* could be observed.

#### Aquatic biodiversity theme sensitivity

Relative aquatic biodiversity theme sensitivity at the site is low and for parts of the study area very high owing to the presence of an aquatic Critical Biodiversity Area. The sites are not part of a Freshwater Ecosystem Priority Area. There is an active channel and riparian zone of a non-perennial river at Remainder of Erf 103 Wilkoppies. This non-perennial river, its riparian zone and its buffer zone of 32 m are excluded from the proposed developments. There is no distinct impact that the proposed development will have on the river of which the outer edge of the riparian zone.

#### Plant species theme sensitivity

Relative plant species theme sensitivity is low and medium, the latter owing to the possible occurrence of a sensitive species which is not threatened but which could be prone to harvesting. Possible sensitive plant species of which the likely presence or absence have been investigated are listed in Tables 4.2 – 4.9 and include plant species on a local and provincial scale which could be prone to harvesting. No Threatened or Near Threatened plant species or any of the plant sensitive species that are not threatened but which are prone to harvesting, appear to be present at the site with the exception of a few individuals of the Protected tree species *Boscia albitrunca* (Shepherd's Tree, Motlôpi, Witgatboom) at Erf 410 Freemanville. If the development is approved and the removal/ destruction of these *Boscia albitrunca* trees cannot be avoided, a permit should be applied for.

#### Terrestrial biodiversity theme sensitivity

Relative terrestrial biodiversity at the site is very high. This high sensitivity that is ascribed to the site area, is because of the presence of Critical Biodiversity Area 2, the presence of an Endangered ecosystem, the Vaal-Vet Sandy Grassland that is mapped for the site and the possibility of including the site in a Protected Area Expansion strategy. During surveys at the site, it was found that the original vegetation type has been transformed or modified at the sites. The sites are also isolated. The scope for the sites to distinctly contribute to the conservation of Vaal-Vet Sandy Grassland, is small.

Ecological sensitivity at Erf 1251 Flamwood, Erf 306 Flamwood, Erf 302 Flamwood, Erf 564 Flimieda, Erf 1253 La Hoff, Erf 412 Freemanville, Erf 216 Songloed, Erf 217 Songloed, Erf 938 Boetrand and Erf 943 Boetrand, is low.

The Remainder of Erf 103 Wilkoppies contains an extensive area of high sensitivity associated with the riparian zones and at the terrestrial zones, medium and low ecological sensitivity. Erf 410 Freemanville contains an area of high ecological sensitivity at the rocky ridge, which is surrounded by a flat area of which the ecological sensitivity is medium.

The non-perennial river, the associated riparian zone and buffer zone, as well as the artificial waterbody and its buffer zone at the Remainder of Erf 103 Wilkoppies as well as the rocky ridge at Erf 410 Freemanville are excluded from developments and demarcated with appropriate material during the construction phase, if the developments are approved.

## **11.2 HERITAGE IMPACT ASSESSMENT (HIA) (See Appendix B for a copy of this report)**

### **11.2.1 Terms of Reference for Heritage Impact Assessment**

The Terms of Reference for the study was to:

1. Identify all objects, sites, occurrences and structures of an archaeological or historical nature (cultural heritage sites) located on the portion of land that will be impacted upon by the proposed development;
2. Assess the significance of the cultural resources in terms of their archaeological, historical, scientific, social, religious, aesthetic and tourism value;
3. Describe the possible impact of the proposed development on these cultural remains, according to a standard set of conventions;
4. Propose suitable mitigation measures to minimize possible negative impacts on the cultural resources;
5. Review applicable legislative requirements;
6. Provide Motivation for Exemption from a Full Phase 1 HIA;

### **Legislative requirements of National Heritage Resources Act (NHRA), Act 25 of 1999**

Aspects concerning the conservation of cultural resources are dealt with mainly in two acts. These are the National Heritage Resources Act (Act 25 of 1999) and the National Environmental Management Act (Act 107 of 1998).

#### **The National Heritage Resources Act**

According to the above-mentioned act the following is protected as cultural heritage resources:

- a. Archaeological artifacts, structures and sites older than 100 years
- b. Ethnographic art objects (e.g. prehistoric rock art) and ethnography
- c. Objects of decorative and visual arts
- d. Military objects, structures and sites older than 75 years
- e. Historical objects, structures and sites older than 60 years
- f. Proclaimed heritage sites
- g. *Grave yards and graves older than 60 years*
- h. Meteorites and fossils
- i. Objects, structures and sites of scientific or technological value.

The National Estate includes the following:

- a. Places, buildings, structures and equipment of cultural significance
- b. Places to which oral traditions are attached or which are associated with living heritage
- c. Historical settlements and townscapes
- d. Landscapes and features of cultural significance
- e. Geological sites of scientific or cultural importance

- f. Sites of Archaeological and palaeontological importance
- g. *Graves and burial grounds*
- h. Sites of significance relating to the history of slavery
- i. Movable objects (e.g. archaeological, palaeontological, meteorites, geological specimens, military, ethnographic, books etc.)

A Heritage Impact Assessment (HIA) is the process to be followed in order to determine whether any heritage resources are located within the area to be developed as well as the possible impact of the proposed development thereon. An Archaeological Impact Assessment (AIA) only looks at archaeological resources. An HIA must be done under the following circumstances:

- a. The construction of a linear development (road, wall, power line, canal etc.) exceeding 300m in length
- b. The construction of a bridge or similar structure exceeding 50m in length
- c. *Any development or other activity that will change the character of a site and exceed 5 000m<sup>2</sup> or involve three or more existing erven or subdivisions thereof*
- d. Re-zoning of a site exceeding 10 000 m<sup>2</sup>
- e. Any other category provided for in the regulations of SAHRA or a provincial heritage authority

## 11.2.2 Methodology

### Survey of literature

A survey of available literature was undertaken in order to place the development area in an archaeological and historical context. The sources utilized in this regard are indicated in the bibliography.

### Field survey

No field-based study was undertaken for this Project.

### Oral histories

People from local communities are sometimes interviewed in order to obtain information relating to the surveyed area. It needs to be stated that this is not applicable under all circumstances. When applicable, the information is included in the text and referred to in the bibliography.

### Documentation

All sites, objects, features and structures identified are documented according to a general set of minimum standards. Coordinates of individual localities are determined by means of the Global Positioning System (GPS). The information is added to the description in order to facilitate the identification of each locality

## 11.2.3 Recommendations and Conclusions

Based on the aerial images of the area, site photographs provided by the client and the heritage desktop study, it is therefore deemed unlikely that any significant sites, features or material of cultural heritage (archaeological and/or historical) origin and/or significance will exist in the study areas (the various Erven/City of Matlosana Public Parks). Recent historical activities (mainly urban and related development activities) would have impacted on any if they did exist here in the past and would have disturbed or destroyed these to a large degree. Known archaeological and historical sites, features and material have been identified in the larger geographical area and this needs to be taken into consideration during actions related to any possible future development related to the proposed rezoning and subdivision of the various Erven. It is recommended that a Chance Find Protocol be drafted and implemented for this in order to ensure that if any previously unknown and invisible (subterranean) sites, features or material are uncovered that those could be investigated

by a Heritage Specialist, who will then make recommendations on the way forward in terms of required mitigation measures.

It is therefore recommended that Motivation for Exemption from a full Phase I Heritage Impact Assessment as part of the Environmental Authorization Process related to the City of Matlosana Local Municipalities Public Parks in the Northwest Province, be granted to the applicants taking into consideration the recommendations provided above, as well as:

**The subterranean nature of cultural heritage (archaeological and/or historical) resources must always be kept in mind. Should any previously unknown or invisible sites, features or material be uncovered during any development actions then an expert should be contacted to investigate and provide recommendations on the way forward. This could include previously unknown and unmarked graves and/or cemeteries.**

## 12. CONCLUSIONS AND RECOMMENDATIONS

**City of Matlosana Local Municipality** has appointed **AB Enviro Consult CC**, an independent environmental consultancy, to undertake an Environmental Impact Assessment process for the proposed closing of eleven (11) Park Erven, located on Erf 1251 Flamwood Ext 7; Erf 306 Flamwood Proper; Erf 302 Flamwood Proper; Erf 564 Flimieda; Erf 1253 La Hoff; Remainder of Erf 103 Wilkoppies; Erf Re 412 Freemanville; Erf 216 Songloed; 217 Songloed; Erf 938 Boetrand and Erf 943 Boetrand, City of Matlosana, North West Province.

Planning practices of the past has dictated that a certain percentage of new residential development be allocated as Park erven. The purpose of these Park erven was to provide a safe space where children can play and adults can socialise and come together as a community. These Park erven were often provided with playground apparatus such as “swings”, “slides”, “jungle gyms” etc. and were maintained by the Local Municipality. For various Political and Social reasons, especially on the Platteland, these Park erven has become derelict, unused and for most parts un-maintained, resulting in these erven becoming a haven for the homeless and criminals to sleep and gather, illegal dumping and littering. Most of these erven has become a safety and security risk for the Residents of the area.

As a result of the above mentioned, the City of Matlosana has decided to close and sub-divide these Park erven and to provide well-designed erven that can be sold off with the correct zoning to complement the surrounding neighbourhoods. The intention is to propose erven that are more or less the same size as the ones currently available in the area. It was also decided to refurbish and relocate all remaining playground apparatus to one central park, being the remaining extent of erf 103 Wilkoppies ( located opposite of Wesvalia High School) as this erf is centrally located and is also one of the few Park erven that is still relatively well maintained. (although it be mostly privately/community based maintenance) The site is home to the Klerksdorp Park Run, a Bird Bark and a Tennis Club.

This Chapter of the BAR provides a summary of the findings of the impact assessment process, including the EAP’s opinion as to whether the activity should or should not be authorised.

### 12.1 ENVIRONMENTAL IMPACT STATEMENT

The detailed environmental assessment for the proposed development, has not found any environmental impacts that *cannot* be mitigated to acceptable and manageable levels.

In the National Framework for Sustainable Development (NFSD) it is stated that *“the achievement of sustainable development is not a once-off occurrence and its objectives cannot be achieved by a single action or decision. It is an ongoing process that requires a particular set of values and attitudes in which economic, social and environmental assets that society has at its disposal, are managed in a manner that sustains human well-being without compromising the ability of future generations to meet their own need.* The NFSD further continues to emphasize that South Africa’s current development path in certain instances reflects signs of being unsustainable in the long-term. It highlights that a large percentage of growth in economic activity (measured in terms of its contribution to the GDP) is achieved by *“consuming”*

*natural resources and degrading our habitat at accelerating rates with the inevitable consequence that future economic growth and development objectives will be prejudiced."*

Consistent with national priorities, environmental authorities must support *"increased economic growth and promote social inclusion"*, whilst ensuring that such growth is *"ecologically sustainable"*. In the National Spatial Development Perspective (NSDP) it is highlighted that, to achieve the goal of stimulating sustainable economic activities and to create long-term employment opportunities, it is required that spending on economic infrastructure is focused in priority areas with potential for economic development, with development to serve the broader societies' needs equitably.

The local municipality intends to promote a more compact city in order to prevent the expansive provision of social and engineering services, as well as to prevent the economic decline of the traditional city centre. The Spatial Development Framework (SDF) addresses the scale of urban growth through planned extensions, infill and redevelopment strategies. It also addresses measures to promote compact and connected growth opportunities, such as the identification of revitalisation zones, densification and mixed land use zones.

The planning practices of the past has resulted in sprawling urban areas that are un-economical. Today, planning policies are transformed to mainly encourage infill development on vacant land within the urban environment, in order to combat urban sprawl. The proposed development falls in line with these principals, as it is infill development within the urban area.

During the construction phase, temporary employment will be created. The increased employment in the area during the construction phase will also result in increased expenditure, which, in addition, will mean that more than just the proposed jobs required for the construction on the site will be created due to economic spin-offs that will result. Due to the nature of the proposed development it will lead to an increase in employment opportunities in the operational phase and will contribute to the broadening of the income base and alleviation of poverty within the Local Municipality.

Alternatives were considered, and the following three erven were also included into the initial assessment.

- Erf 410 Freemanville
- Remaining extent of Erf 96 Roosheuvel
- Erf 17 299 Jouberton Ext 16

After further investigation it was found that the sensitivity of these 3 sites were too high. Erf 410 Freemanville is located at a sensitive koppie, Remaining Extent of Erf 96 Roosheuvel is too steep for development purposes while Erf 17 299 Jouberton Ext 16 is located at an area that is saturated with water.

An Alternative Layout Plan that was considered for the Remainder of Erf 103 Wilkoppies, the Wetland Specialist has found that the site is influenced by a wetland area and after delineation of the wetland areas, most of the site was deemed undevelopable. The site is also an active, functional Park, and as such serves the intended purpose.

The only other alternative that exists for the proposed development is the "no-go" option which will imply that the status quo will prevail. Should this option be implemented, the status quo will remain, and the areas will remain a health and safety risk for the inhabitants of the area. Therefore this option was discarded. It is therefore proposed that Alternative 1 be the preferred alternative.

Specialist studies were conducted and a full Public Participation Process is being followed. This information was used to generate a sensitivity map that was used to assess the sustainability of the design and layout plans for the proposed development.

The **Heritage Impact Assessment** revealed that it is evident that there is a low likelihood of any significant cultural heritage (archaeological and/or historical) sites or features being present in the areas. If any did exist here in the past it would have been extensively disturbed or destroyed.

The Fauna and Flora Habitat study conducted addressed these ecological sensitivities as follows.

#### Animal species theme sensitivity

Relative animal species theme sensitivity is medium. The possible presence of *Hydriectus maculicollis* (Spotted-necked Otter) that should be investigated is indicated by the screening tool. During the surveys this status quo has been confirmed or could be low instead of medium. The watercourse and artificial dam at Remainder of Erf 103 Wilkoppies, largely surrounded by dense residential areas, are not ideal habitats for *Hydriectus maculicollis* (Spotted-necked Otter), which favours more open permanent and quiet waters. No distinct possibility that the site could be used as specific habitat or foraging area by *Hydriectus maculicollis* could be observed.

#### Aquatic biodiversity theme sensitivity

Relative aquatic biodiversity theme sensitivity at the site is low and for parts of the study area very high owing to the presence of an aquatic Critical Biodiversity Area. The sites are not part of a Freshwater Ecosystem Priority Area. There is an active channel and riparian zone of a non-perennial river at Remainder of Erf 103 Wilkoppies. This non-perennial river, its riparian zone and its buffer zone of 32 m are excluded from the proposed developments. There is no distinct impact that the proposed development will have on the river of which the outer edge of the riparian zone.

#### Plant species theme sensitivity

Relative plant species theme sensitivity is low and medium, the latter owing to the possible occurrence of a sensitive species which is not threatened but which could be prone to harvesting. Possible sensitive plant species of which the likely presence or absence have been investigated are listed in Tables 4.2 – 4.9 and include plant species on a local and provincial scale which could be prone to harvesting. No Threatened or Near Threatened plant species or any of the plant sensitive species that are not threatened but which are prone to harvesting, appear to be present at the site with the exception of a few individuals of the Protected tree species *Boscia albitrunca* (Shepherd's Tree, Motlôpi, Witgatboom) at Erf 410 Freemanville. If the development is approved and the removal/ destruction of these *Boscia albitrunca* trees cannot be avoided, a permit should be applied for.

#### *Terrestrial biodiversity theme sensitivity*

Relative terrestrial biodiversity at the site is very high. This high sensitivity that is ascribed to the site area, is because of the presence of Critical Biodiversity Area 2, the presence of an Endangered ecosystem, the Vaal-Vet Sandy Grassland that is mapped for the site and the possibility of including the site in a Protected Area Expansion strategy. During surveys at the site, it was found that the original vegetation type has been transformed or modified at the sites. The sites are also isolated. The scope for the sites to distinctly contribute to the conservation of Vaal-Vet Sandy Grassland, is small.

A full Public Participation Process is being conducted and any objections or comments that will be received in relation to the proposed development will be incorporated into the Final BAR.

## **12.2 ENVIRONMENTAL MANAGEMENT PROGRAMME (EMPR)**

EMPR's aim to identify and minimise the potential impacts that the proposed construction and operational phases of the project may have on the receiving environment. An EMPR has been developed which is contained in Appendix D and includes detailed mitigatory measures for the construction phase.

As a general guideline, the EMPR should be based on a comprehensive set of environmental aspects (elements of the facility that can interact with the environment), and hence, the EMPR compiled for this application includes the following key components:

- Mechanisms for the on-going identification and assessment of environmental aspects and impacts;
- Environmental management programmes; objectives and targets;
- Environmental monitoring and reporting framework;
- Environmental management procedures; and,
- Mechanisms for the recording of environmental incidents and implementing corrective and preventative actions.

## 12.3 EAP OPINION

The information contained in this BAR and Specialist Studies, provides a detailed and comprehensive description of the proposed project, baseline environment and potential environmental impacts associated with the proposed development. As no significant impacts that cannot be mitigated were identified, AB Enviro Consult is of the opinion that the project should proceed, provided that the necessary mitigation and management measures are implemented.

Under South African environmental legislation, the Applicant is accountable for the potential impacts of the activities that are undertaken and is responsible for managing these impacts. The Applicant therefore has overall and total environmental responsibility to ensure that the implementation of the construction phase of the EMPR complies with the relevant legislation and the conditions of the environmental authorisation. The applicant will thus be responsible for the implementation of the EMPR.

The environmental management programme (EMPR) should form part of the contract between the construction company and the applicant. This will help ensure that the EMPR is adhered to. It is suggested that a suitably qualified Environmental Control Officer (ECO) be appointed for the construction phase.

## 12.4 CONDITIONS RECOMMENDED TO BE INCLUDED IN ANY AUTHORISATION THAT MAY BE GRANTED BY THE COMPETENT AUTHORITY IN RESPECT OF THE APPLICATION

**The following recommendations has been identified for the pre-construction and construction phases of the proposed development**

1. A full copy of the signed EA from DEDECT in terms of NEMA, granting approval for the development must be available on site
2. A copy of the EMPr as well as any amendments thereof must be available on site
3. A suitably qualified ECO must be appointed.
4. Impacts on the environment must be minimised during site establishment and the development footprint must be kept to the approved development area.
5. Vegetation clearing may not commence until such time as the development footprint has been clearly defined.
6. No clearance of vegetation outside of the development footprint may occur.
7. No construction workers or machinery will be allowed within the no-go area that is defined as the non-perennial river, including its riparian and buffer zone.
8. At the end of the construction phase the site and its surrounding area must be free from any pollution that originated as a result of the construction activities.
9. No disturbance of topsoil & subsoil may commence until such time as the development footprint has been clearly defined.
10. No disturbance of topsoil & subsoil outside of the development footprint may occur.
11. At the end of the construction phase the site and its surrounding area (Including the non-perennial stream) must be free from any chemical, fuel, oil and cement spills that originated as a result of the construction activities.
12. At the end of the construction phase the site and its surrounding area (Including the non-perennial stream) must be free from any sewage that originated as a result of the construction activities.
13. At the end of the construction phase the site and its surrounding area (Including the non-perennial stream) must be free from any hazardous or general waste pollution that originated as a result of the construction activities.
14. Dust prevention measures must be applied to minimise the generation of dust.
15. Noise prevention measures must be applied to minimise the generation of unnecessary noise pollution as a result of construction activities on site.
16. Absolutely no burning of waste is permitted.
17. Fires will only be allowed in facilities especially constructed for this purpose.
18. No hunting of animals will be allowed.
19. No intentional destruction of any sites, features or material of cultural heritage (archaeological and/or historical) origin or significance may occur.

20. All Contractors and sub-contractors must abide to the rules and regulations of the Occupational Health and Safety Act, 85 of 1993.

### 13. AFFIRMATION BY EAP

Mr. Jean Pierre De Villiers

declare under oath that I:

- a. act as the independent environmental practitioner in this application ;
- b. do not have and will not have any financial interest in the undertaking of the activity, other than remuneration for work performed;
- c. do not have and will not have a vested interest in the proposed activity proceeding;
- d. have no, and will not engage in, conflicting interests in the undertaking of the activity;
- e. undertake to disclose, to the competent authority, any material information that has or may have the potential to influence the decision of the competent authority or the objectivity of any report, plan or document required;
- f. will ensure that information containing all relevant facts in respect of the application is distributed or made available to interested and affected parties and the public and that participation by interested and affected parties is facilitated in such a manner that all interested and affected parties will be provided with a reasonable opportunity to participate and to provide comments on documents that are produced to support the application;
- g. will ensure that the comments of all interested and affected parties are considered and recorded in reports that are submitted to the competent authority in respect of the application, provided that comments that are made by interested and affected parties in respect of a final report that will be submitted to the competent authority may be attached to the report without further amendment to the report;
- h. will keep a register of all interested and affected parties that participated in a public participation process; and
- i. will provide the competent authority with access to all information at my disposal regarding the application, whether such information is favourable to the applicant or not.
