Importance: High

To Interested and Affected Parties, Stakeholders and Authorities,

Background Information Document: Proposed 4500 MW Gas to Power Plant, Coega IDZ

Please find attached the Background Information Document (BID) which serves as notice of the Environmental Impact Assessment process and Air Emission License for the proposed 4500 MW Gas to Power plant, Coega Industrial Development Zone (IDZ), Nelson Mandela Bay Metropolitan Area.

Should you wish to register as an Interested & Affected Party (IAP), please complete the Registration & Comment Sheet provided in the BID and return to me via email or fax. Future communications regarding the process, as well as notification of the availability of reports, will only be sent to registered IAPs.

Please note that your Registration & Comment Sheet must reach SRK Consulting by **12h00** on **22 February 2016** to ensure that your comments will be included and addressed in the draft report.

Kind Regards,

Wanda Marais B Proc
Public Participation Practitioner

Subject: RE: Background Information Document: Proposed 4500 MW Gas to Power Plant, Coega IDZ

Hi Wanda

Thank you for copying me the BID. The area has relatively few protected tree species therefore we would like to get more information regarding the project moving forward.

Regards

Thabo

COMMENTS ON 4500MW GAS TO POWER PLANTS, COEGA IDZ
BACKGROUND INFORMATION DOCUMENT (provided 22/1/16)

Dr Paul Martin, pmartin@axxess.co.za Tel: 041 4665698 (24 Jan 2016)

Initial comments on the Background Information Document for consideration at the Scoping & EIR Phases:

1. Ownership:

- a) CDC is the “applicant” undertaking the EIA and to whom the Authorisation (if granted) will presumably be issued. Which organisation(s) are envisaged to build and operate the facilities (will a build and operate tender type process be followed?).
- b) Regular environmental reports / audits / monitoring reports should be submitted to the relevant Regulatory Authorities, CDC, TNPA and the Coega EMC during the life cycle of the project.

2. Multiple Facilities:

- a) Project Alternatives investigated as part of the EIA process should include why three facilities are being considered rather than a phased implementation of one facility. Surely economies of scale dictate that it will be more efficient / cost effective to build one facility in a phased approach? These are presumably base-load stations operating 24/7?
- b) How does the proposed Floating Power Plant & LNG berth fit into the scenario?
- c) Where does Dedisa Peaking Power Plant fit into the scenario? Will Dedisa also convert to LNG if a LNG terminal is available and could it then become a baseload station?
- d) Does the proposed power station location overlap with the Aquaculture Development Zone and other proposed developments (e.g. marine pipeline servitude, WWTW outlet)?

3. Marine Environment:

- a) Fig 3 of the BID seems to indicate that a pier jetty will be located north of the existing Eastern Breakwater. Will this EIA cover all supporting infrastructure for the power stations (e.g. new berths / jetties), pipelines, seawater inlet / outlet, etc
- b) EIA Specialist Studies and Reports should include the marine environment and SANParks Marine Protected Area. E.g. heated water and pollution risk.
- c) Port of Ngqura is an important fish area and fish nursery (Matt Dicken studies)
- d) Marine alien invasive organisms, especially invertebrates, mainly hull foulants are dominant in many areas of the Port and are one of the main impacts of the Port that were not adequately addressed in the original Port EIAs and Environmental Authorisations.
Increased shipping for the project will lead to more alien invasion risks in the Port, Algoa Bay, proposed marine protected area and - due to the close proximity of the anchorage - St Croix Island group.
In light of the 2014 Invasive Species Regulations the EIA needs to indicate how

marine alien invasive species will be monitored and controlled / eradicated and this should include the St Croix Island group. The monitoring will need to continue after de-commissioning. It will need to be determined who will be responsible for funding and undertaking this function.

- e) The bi-annual water sampling and biomonitoring currently undertaken should be assessed to see if it is adequate for the added risks from this project
- f) Potential impacts on cetaceans (noise, warm water, pollution, increased shipping)
- g) Damara Terns (Critically Endangered, rarest SA coastal breeding seabird) that feed in the Port & nest very near to the proposed Z10 facilities
- h) Red tide: Will heated water increase the risk? This is already a problem, causing fish kills and workers unable to work due to odours
- i) The St Croix Island group (largest African Penguin colony in the world) must be considered sensitive receptors (noise, air and lighting). Aspergillosis is arising as a problem in the St Croix penguins
- j) The efficient operation of the sand by-pass system must not be compromised

4. Conflict with Existing EIA Mitigations / RoD / EA Conditions:

- a) Existing RoDs / EAs and the mitigating conditions in their EIAs need to be scrutinised and any conflicts with what this EIA is suggesting need to be highlighted, preferably in table form with detailed motivation. Relevant EIAs include OTCG, Landside Infrastructure, Marine Infrastructure, Port & Port Extension RoDs, Manganese Project, IDZ RoDs.
- b) Examples of potential conflicts with mitigations in the 2002 Port EIA: "*Disturbance of birds of special concern*: No activities are allowed on the eastern breakwater; regular noise and lighting audits are conducted on the port and that lighting near the islands is kept to a minimum"; "Visible plumes are to be disallowed", etc, etc.

5. Air Quality:

- a) Air quality assessment must be compatible with the Cumulative Air Quality Model and Monitoring System for the IDZ that CDC maintains
- b) The main excuse for most air pollution pulses are given as abnormal operating conditions (start-up, power failure, etc). The Air Specialist Report must indicate the frequency and consequence of abnormal conditions

6. Other Issues

- a) How will adequate fire fighting capacity and other emergency services be provided (the area is beyond the current NMBM required response time radius)

Comments (please use additional sheets of paper if required):

My primary concern is the close proximity of the plant to breeding areas of the Damara Tern. This species is considered to be critically endangered in the 2015 Red Data Book for South Africa, Lesotho and Swaziland and a large proportion of the population breeds in the vicinity of Coega and east of the Sundays River mouth.
