Dear Interested and Affected Party and Organ of State

RE: THE PROPOSED RESTORATION AND MAINTENANCE OF THE BLUE STONE QUARRY WALL, ROBBERN ISLAND, WESTERN CAPE PROVINCE.

As part of preserving the historical significance of the Blue Stone Quarry (BSQ), the Applicant/Developer (Robben Island Museum) proposes the restoration and maintenance of the Robben Island BSQ Wall and limestone pathway that runs along the top of the wall. The restoration and/or maintenance of the BSQ Wall includes conserving the dry-stone walls by:

- Reinstating the breached section of the BSQ Wall (approximately 77 m long).
- Repairing damaged sections of the walls that are currently standing.
- Repairing the Quarry Revetment ring walls.
- Repairing any future damages within the next five years to walls and associated Infrastructure.

Robben Island Museum aim to maintain the historical integrity of the BSQ Wall and thus, will be reinstating the breached section and other damaged areas using restoration methodologies recommended in international conservation charters such as the Burra Charter (1999) for places of Cultural significance. Suitable debris from the collapsed wall will be recycled while new material will be added to strengthen the wall. No concrete or heavy machinery will be used as part of the reinstatement.

Hereby you are informed that the **Draft Maintenance Management Plan** for the abovementioned development is now available (please see attached document) and the report will be open for public review for a period starting **29 January 2021** and will end on **1 March 2021**. Attached is also the Background Information Document. Please fill it in and return to me if you would like to be registered as an Interested and Affected Party. You are encouraged to please stipulate how you would further like to receive notifications and reports (fax, email, registered post, normal post etc.)

 01 - Revised Maintenance Management Plan.pdf (2 MB)

Dear interested and affected party,

RE: THE PROPOSED RESTORATION AND MAINTENANCE OF THE BLUE STONE QUARRY WALL, ROBBERN ISLAND, WESTERN CAPE PROVINCE.

Robben Island World Heritage Site, located off the coast of the Western Cape region of South Africa, has been on the World Heritage List since 1999, and is recognised as a place of Outstanding Universal Value (OUV). The OUV of Robben Island is anchored on several landmarks associated with the use of the island by the state for political imprisonment and isolation of people who were considered as undesirable. These landmarks include the Blue Stone Quarry (BSQ) located on the northwest coast of the Island. Prisoners using hand tools mined dolomite in the quarry for the construction of many buildings on the Island. The prisoners also built the stone wall or dyke which flanks the Quarry on the seaside. The wall was originally built to prevent the ingress of seawater into the quarry area.

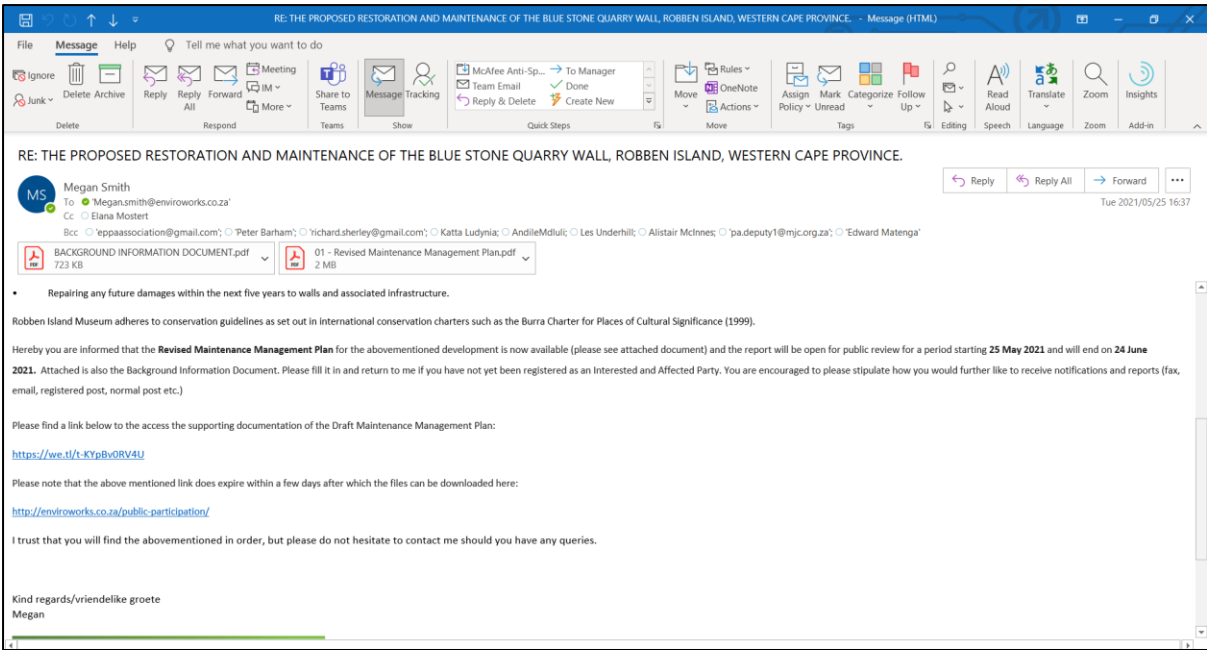

The Quarry and stone wall are, therefore, highly treasured as heritage and are significant to the Island's history of imprisonment with hard labour. BSQ and wall, and the prison precincts are the foundations for the statement of Outstanding Universal Value (OUV). Subsequently, placing Robben Island on the UNESCO World Heritage list as a site of memory and conscience.

In September 2001, a maritime storm destroyed a middle section of the wall resulting in a deluge of seawater into the quarry. The tidal action created a gap in the wall approximately 15m wide. In 2012, there was another severe tidal event and a large section of the wall collapsed extending the breached section to 82m. Currently, the breached section of the wall can be described as a pile of stones with a 1:4 gradient slope on the side facing the sea.

Responding to the disaster, Robben Island Museum has prepared a remedial plan which requires the following tasks to be undertaken (based on the 2020 Implementation Plan):

- Reinstating the breached section of the BSQ wall (approximately 77 m long).
- Repairing damaged sections of the walls that are currently standing.
- Repairing the Quarry Revetment ring walls.
- Repairing any future damages within the next five years to walls and associated infrastructure.

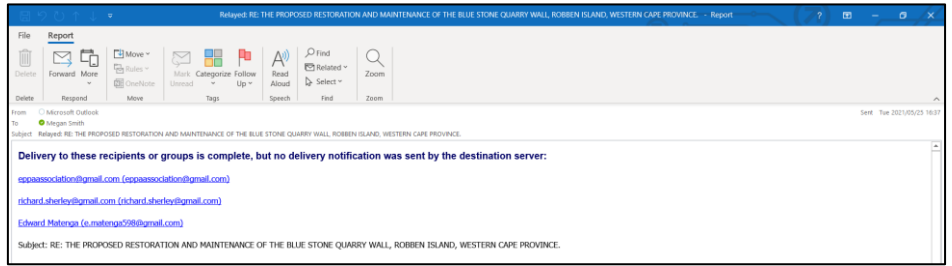

Robben Island Museum adheres to conservation guidelines as set out in international conservation charters such as the Burra Charter for Places of Cultural Significance (1999).
