☎ **+27(0)21 552 6024**

✉ **cape@southey.co.za**

🌐 **www.southeycontracting.com**

History

Southey was established in 1939, initially to offer industrial painting & contracting services to the mines and heavy industry. The Group is the country's largest industrial painting, blast cleaning and contracting services company catering for major industrial installations and mining operations and has grown into South Africa's leading ship repair company.

Through a policy of diversification, Southey has developed an industrial group of companies which manufacture for and service diverse market segments. The company is a market leader in South Africa and is becoming well established within several South African segments.

Mission statement

The considerable synergies that exist in the Group together with a strong belief in entrepreneurship, empowered decentralized management, a heavily performance based remuneration philosophy and a passionate focus on customer service, enables Southey to turn ordinary companies into market leaders.

Strategic Objective

Southey is a diversified industrial holding operating in developing markets with a focus on the oil and gas, power generation, mining and minerals and water reticulation sectors.

Health, Safety & Environmental Policy

- We are committed to safety, health, and environmental excellence and will conduct business with respect and care for people and the environment and, in so doing, will ensure that adequate resources are available for SHE management.
- We believe that all injuries and occupational illnesses, as well as safety and environmental incidents, are preventable, and our goal for all is zero. We will also promote off-the-job safety for all our employees.
- All management & employees take joint and individual responsibility for safety and undertake to act and work in a safe manner at all times.
- We will continuously appraise our SHE performance with the objective of continuous sustainable improvement.
- We will ensure that SHE is an integral part of our operations and that no operating condition, or urgency of service, can justify endangering the life of anyone or cause injury or damage to the environment.
- Management will be responsible for educating, training, and motivating employees and contractors in relation to SHE issues.
- This policy will apply wherever Southey operations exist, and the principles of Health and Safety Management will be applied at all levels.
- This policy will apply during the evaluation of all contracts, projects, and proposals.
- We undertake to review this policy annually to ensure that all requirements are being met.

Services

- Industrial Painting & Blasting
- Fireproofing
- Thermal Insulation
- Scaffolding
- Industrial Sheeting

Thanks Candice.

Just a few questions from my side...
How many AP participants do you have and can anyone join?
Also, when will the first meeting be held and where?
Lastly, is there a formal process of research being done on this project?

Thanks

IDENTIFISEER ASSEBLIEF U BELANG BY DIE BEOOGDE PROJEK

Bemagtiging van gemeenskappe in die Khâi Mâ Munisipale regsgebied maar meer spesifiek in Pella Wat die footprint van die myn is op ekonomiese gebied met betrekking tot die SLPs

Onderwys bemagtiging

Jeug en Vroue bemagtiging en ontwikkeling

Kultuur ontwikkeling

SKRYF U VRAE EN KOMMENTAAR ASSEBLIEF HIER NEER

Met die ontwikkeling van die nuwe Gamsberg myn is daar werklik geen noemenswaardige verskillende in ons gemeenskappe rakende ontwikkelwing en ekonomiese bemagtiging nie ten spyte van miljoene rande wat deur SLP spandeer was.

Hoe gaan die nuwe smelter help om die ekonomiese bemagtiging van ons plaaslike gemeenskappe te verbeter?

Hoe kan dit help om minder kontrakteurs buite die Noord Kaap te gebruik wat ons klein besighede kom verarm?

Hoe kan die gevestigde kontrakteurs gedwing word om klein besighede te sub-kontrakteur met die doel om hulle te bou.?

Sal die myn nou stop om buite mense en maatskappye in te bring terwyl ons plaaslike kapasiteit het?

In vergelyking met Postmasburg wat uitgebrei het na die nuwe myne, hoe sal die smelter bydrae sodat ons soortgelyke ontwikkeling in ons dorpe kan sien?

VERWITTIG SLR ASSEBLIEF VAN ENIGE ANDER BELANGSTELLEDE EN GEAFFEKTEERDE PARTY WAT IN HIERDIE OIE-PROSES INGESLUIT MOET WORD.

HI Candice

Thanks for this - registration as an IAP attached.

I'm curious to know what standing DEFF has in this process, and whether DENC is the appropriate CEA for the smelter EA? The BID is not clear on which authority will be dealing with what components - perhaps i missed it.

Moreover, the smelter is trading carefully between the existing offset and set asides, and I'm not entirely comfortable that these have been observed as closely as they should have been. Additional impacts will require recalculation of the original offset for the Gams mine, and possibly a redesigned offset in the landscape. I hope SLR will be getting good expertise on board to help them navigate this morass.

Warm regards

Mark Botha

Vir Aandag Candice

Insake PYPLYN (3)

Eerstens;

Ons se jammer dat ons so laat reageer maar ons Moes eers n vergadering met ons rolspelers gehou het.

Deur middel van die email se ons dankie dat U ons in ag geneem ivb met die 3de pyplyn van die oranjerivier deur pella na Gamsberg.

Tweedens;

Ons as Pella inwoners en die oewerboere het al n paar jare terug ontdek dat die indringer plant die oranjerivier ongelooflik uitdrink.

Dit staan die hele oewer tot by witbank ruig toe.

Derdens ;

Ons as Pella inwoners het ook ontdek dat die oranjerivier versadig is en nie n derde pyplyn sal kan onderhou nie , dus se ons nee vir n derde pyplyn.

Dit sal nie in die volgende 10jaar kan gebeur hier uit ons rivier en oor ons grond nie jammer.

Vierdens;

Ons as Pella gemeenskap forum het 2017 vir Vedanta gevra om die indringer plant met wortel en tak uit the roei tot op hede het niks gebeur so hoe dink hulle waar moet die rivier nou genoeg water kry vir hulle pyplyn hulle moes na ons geluister en gedoen het, dan kon die oranjerivier miskien ek se miskien gered gewees het.

Ons is jammer maar ons weier vir n derde pyplyn want ons beskerm die bietjie water vir ons gemeenskap en nageslaagte.

Geen pyplyn gaan ons toelaat nie.

Ons wens julle voorspoed toe vir duisende mislukkings in die toekoms.

Die Uwe

Notice of an initial Public Participation Process

Dear sir / madam

Herewith please find a Background Information Document (BID) regarding the Environmental Impact Assessment (EIA) for the proposed Gamsberg Smelter Project, near Aggeneys, Northern Cape.

This Background Information Document (BID) provides initial information to stakeholders about the EIA process to be undertaken for the proposed project.

You have been sent this communication as you have been identified as a potential Interested and Affected Party (I&AP). Please let SLR know should you no longer wish to receive communications in this regard.

Should you wish to be registered as an I&AP for the Project and have the opportunity to comment on the Scoping and EIA process, please complete and return the attached form.

Kind regards

Candice Sadan
Office Administrator

NEW TECHNOLOGIES
NOVA BC

About Novatec

NOVATEC was established in 1995. in Labin, Croatia.

We conduct business worldwide managing our highly educated and skilled workers.

NOVATEC as Electrical Engineering and Process Automation company can provide you with complete solutions in control and automation of industrial processes.

We are fulfilling all customer requests starting with electrical design, manufacturing of low voltage cabinets, software development for SCADA (PLC, HMI, PCS, DCS,...), FAT testing, erection and supervision, commissioning, customer training and production support.

We provide complete Turn-Key Solutions from small size automation units to sophisticated complete plant automation.

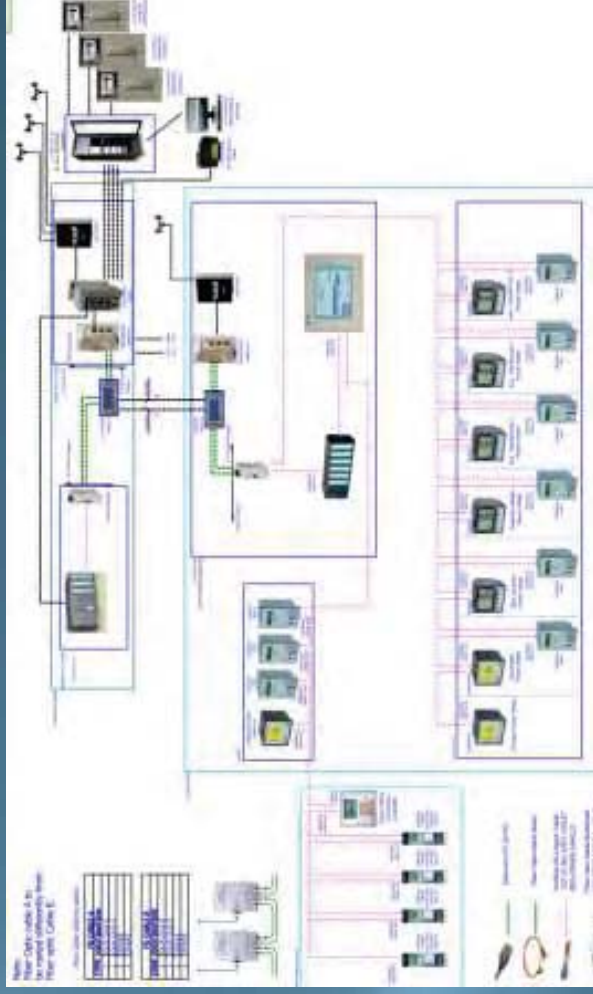

On special client request we deliver existing plants upgrading.

NOVATEC delivers and integrates different processes needed for effective control of production plant:

- **Controller Level** - implementation and execution of industrial automation processes along with HMI visualization of process status.
- **Machine/Operation Unit Level** - control and processes optimization; technological data analysis; automated status reporting on quantity and quality of created products.

PLEASE IDENTIFY YOUR INTEREST IN THE PROPOSED PROJECT

The Minerals to Metals Initiative at UCT has on-going PhD research by Nicole Uys (PhD Candidate) that is focused on demonstrating that process design for a heterogenous and complex ore body, which takes varying ore mineralogy and sustainability criteria into account, significantly influences the process flowsheet options available, relative to a conventional techno-economic design approach. This project uses a case study approach to the processing and refining of zinc sulphide ores to demonstrate the application of the methodology.

PLEASE WRITE YOUR COMMENTS AND QUESTIONS HERE

Comments:

Is the use of the term smelter not misleading? Our understanding is that it is a Roast-Leach-Electrowinning (RLE) process as opposed to a smelter.

Roasting: A pyrometallurgical process where ore/concentrates is heated to below its melting point, in the presence of air, in order to oxidise impurities. In the case of zinc sulphide ores, sulphur is oxidised. Most common equipment for this process is a rotary kiln.

Smelting: A pyrometallurgical process where metals are extracted from ore/concentrate heating above the melting point of all constituents in a furnace and separating into metal rich (blister, matte) and oxide-rich (slag) phases that are tapped separately from the furnace.

Questions:

Technology

- What was the driving factor for the Roast-Leach-Electrowinning (RLE) technology choice?
 - What is the fuel source for the roasting step (coal, gas, diesel), where is it coming from and how is it stored?
 - What are the exhausts from the RLE process?
 - What is the expected CO₂ footprint?
 - Are there any deleterious metals/dust in the exhaust gas?
 - Has gas dispersion been modelled?
 - Has any means of CO₂ capture been considered?
- What other technology options (as opposed to RLE) were considered (e.g. pressure leaching)?

Products

- Apart from zinc and sulphuric acid, are there any other proposed or potential sellable products (e.g. metal impurities such as silver, indium, germanium which are removed during purification)? If there are potential other sellable products, what is hindering their inclusion in the process flowsheet?
- Is there a reliable market for sulphuric acid?
 - If so where is the market?
 - How will it be stored and transported?
- Is there potential for a close-by facility for fertiliser production?
 - Is there a market for fertiliser?
- Will all the concentrate be processed by the proposed refining process, or will a portion of the concentrate be exported?

Waste

- What are the proposed waste management strategies?
 - In terms of leach residues, impurity removal products, flue-gas precipitates, etc.
 - What is the current plan for iron precipitates (jarosite) and gypsum products?
 - Have any other options for minimisation/elimination of waste production been considered?
- What is the expected department of deleterious elements into waste streams?

Utilities

- Is the Eskom Aggeneys Substation the sole source of the plant's electricity requirements?
 - What is the anticipated electrical power demand for the process, particularly the energy intensive electrowinning step?
 - Can Eskom Aggeneys Substation accommodate this additional electricity demand?
 - What are the impacts associated with this (locally and nationally)?
 - What additional environmental concerns need to be addressed in building the power line from the substation?
 - Given an already constrained national grid, what is the 'backup' plan if Eskom's electricity provision is constrained (periods of less or no electricity)?

PLEASE NOTIFY SLR OF ANY OTHER INTERESTED AND AFFECTED PARTY THAT SHOULD BE INCLUDED IN THIS ESIA PROCESS.

PLEASE IDENTIFY YOUR INTEREST IN THE PROPOSED PROJECT

My interest in this project as a small business owner I would like to supply (diesel, transport any size, security oil lubricants) etc.

PLEASE WRITE YOUR COMMENTS AND QUESTIONS HERE

My comments is as follow: AS social labour plan says, small business locally must be uplifted. @ We as small business owners in Khai-Mq game nothing at this projects at Gamsberg and I hope this one will not be same, like the first one.

PLEASE NOTIFY SLR OF ANY OTHER INTERESTED AND AFFECTED PARTY THAT SHOULD BE INCLUDED IN THIS ESIA PROCESS.

Please return completed forms to:

Good Day

To whom it may concern

As an entrepreneur, and as a interest party, i would like to congratulate you in development that is taking place in our Municipal Area.

Question will be who will benefit in this project and how?

With the first development of current Plant that is operational, outside company's benefited and left with the Capital. Will it be the repeat of future beneficiaries?

I am a black female business owner. My business do purified water wheryby the machine is an upmarket RO 4000 Reverse Osmosis Machine. My company did not benefited from the first project. Pofadder itself were not developed and business shift to Springbok and Kakamas. Are we going to see a repeat?

My Company's name is Rowenas Cottage, producing 'Pofadder Water'.

EIA FOR THE PROPOSED GAMSBERG SMELTER PROJECT, NEAR AGGENEYS NORTHERN CAPE and
basic assessment process for the PELLA BULK WATER pipeline

PUBLIC PARTICIPATION PROCESS

Dear Sir/Madam

Black Mountain Mining (Pty) Ltd, part of the Vedanta Zinc International, owns and operates the Gamsberg Zinc Mine. In 2010 Vedanta Resources acquired Black Mountain Mining (Pty) Ltd from Anglo American as part of the acquisition of the Zinc base metal mine take over. Following the acquisition of the Black Mountain Mining properties and rights a feasibility and optimisation of technology for the Gamsberg Zinc Mine was done.

Black Mountain Mining (Pty) Ltd is now proposing to construct a new zinc smelter and associated infrastructure to beneficiate the 250 000 to 300 000 tonnes per annum (tpa) of zinc concentrate produced at the Gamsberg Zinc Mine Phase-1 Concentrator Plant into final metal. The proposed smelter would treat the zinc concentrate from the Gamsberg mine to

produce 99% pure special high grade zinc metal for export. As a by-product 99% Sulphuric Acid will also be produced for export and consumption in South Africa.

The relevant legislation and associated activities include but are not limited to the following:

- Environmental Authorisation from the Department of Mineral Resources (DMR) in terms of the National Environmental Management Act (NEMA). The proposed project incorporates several activities listed in the Environmental Impact Assessment Regulations, 2014 (EIA Regulations): Listing Notice's 1, 2 and 3, published in Government Notice (GN) No. 983, 984 and 985 of 4 December 2014 and amended by GN No. 327, 325 and 324 of 7 April 2017. The EIA regulations being followed in this study are the EIA Regulations, 2014 published in GN No. 982 of 4 December 2014 and amended by GN No. 326 of 7 April 2017.
- A Waste Management Licence (WML) from the DMR in terms of the National Environmental Management Waste Act (NEM:WA). The proposed project incorporates waste management activities listed in GNR 921 of 29 November 2013, as amended.
- A Water Use Licence (WUL) from the Department of Water and Sanitation (DWS) in terms of the National Water Act, 1998 (No. 36 of 1998) (NWA). The proposed project incorporates water uses in terms of Section 21 of the NWA.
- An Atmospheric Emissions Licence (AEL) in terms of the National Environmental Management: Air Quality Act, 2004 (Act No. 39 of 2004) (NEM:AQA).

In addition, A new 39km bulk water pipeline is proposed to be constructed from the existing Orange River abstraction point to replace the old underground pipeline. The existing Pella Water Works would also be upgraded. The new pipeline would supply the increased potable water demands as a result of the smelter development and would be constructed within the old underground pipeline servitude. A separate Water Use Licence Application (WULA) and Basic Assessment are being undertaken for the upgraded Pella Bulk Water Pipeline.

SLR Consulting (South Africa) (Pty) Ltd has been appointed as the independent environmental assessment practitioners responsible for undertaking the necessary environmental assessment and public participation process for the project. Given that the project triggers new listed activities, the environmental assessment will include both a Scoping and Environmental Impact Assessment phase in terms of the EIA Regulations (Government Notice 982 to 986, 4 December 2014).

You have been identified as a key stakeholder who may be interested in hearing more about the proposed project and to provide input into the environmental assessment process. This email therefore serves to invite you to a public meeting which has been arranged as part of the public participation process. There are meetings planned in each of the following: Aggeneys, Pella and Pofadder for your convenience. The details of the public meetings are provided below:

Date: 2 December 2019

Venue: Aggeneys North Recreation Club, Aggeneys, 8893

Time: 16:00 to 18:00

Date: 3 December 2019

Venue: Pella Community Hall, 129 Katedraal Str. Pella, 8892

Time: 10:00 to 12:00

Date: 4 December 2019

Venue: Pofadder Community Hall, Corner of Voortrekker and Skool Street, Pofadder, 8890

Time: 14:00 to 16:00

Please again see the attached Background Information Document for your information.

Comments can be submitted at various stages of the project as follows: in writing to the undersigned, at the public meetings and after review of the various reports.

Kind regards

Candice Sadan

Good day Candice,

Thank you for the comprehensive report on the project and indeed the existing environment.

B&W were involved extensively on the concentrator project particularly when building the overhead line from Aggeney's to site regarding the line route and the process & procedures we had to adhere to.

Both B&W and the client team I believe achieved the goals set in maintaining and preserving the environment ensuring absolute minimum damage and relocation.

B&W will be attending the public meeting at Pofadder on the 4th of December 2019.

Trusting the above is in order.

Kind Regards,

Brian Harley

Good day

Attached find Registration and response form – for the above mentioned project.

We are Suppliers, based in Upington in the Northern Cape, and would be so glad if you list us as an interested party for the Gamsberg Smelter and Bulk Water Pipeline Project.

Please be so kind and keep us updated.

Thanks,

Kind Regard / Vriendelike Groete

Appendix E.7 - Minutes of Public Meetings

BLACK MOUNTAIN MINING (PTY) LTD
NOTES OF STAKEHOLDER INFORMATION MEETING

DATE:	2 December 2019 at 16:00
VENUE:	Aggeneys North Recreation Club, Aggeneys
PROJECT:	Gamsberg Smelter and Bulk Water Pipeline Project
SLR COMPANY:	South Africa
PROJECT NUMBER:	720.22013.00002
PURPOSE:	Information sharing for Smelter: Scoping and Environmental Impact Assessment and Bulk Water Pipeline: Basic Assessment process
ATTENDANCE:	An attendance register is presented in Appendix 1.

1. OPENING AND INTRODUCTION

Kate Hamilton (KH) of SLR Consulting (South Africa) (Pty) Ltd opened the meeting and welcomed attendees. The Black Mountain Mining (Pty) Ltd (BMM) team and the SLR team introduced themselves to the meeting attendees. An attendance register was signed by attendees and is included in Appendix 1.

2. APOLOGIES

No apologies were made.

3. PRESENTATIONS

Mr Pieter Venter (PV) Environmental Manager for BMM presented the background to BMM and the proposed Gamsberg Smelter Project. The presentation included an overview of the Gamsberg Zinc Mine; the project alternatives identified and related technical information for the proposed Gamsberg Smelter Project.

Mr Arno Engelbrecht (AE), Project Lead - Gamsberg Infrastructure, presented the proposed Bulk Water Pipeline Project. The presentation included an overview of the existing pipeline servitude and related technical information for the proposed Bulk Water Pipeline project.

KH gave a presentation on the Scoping and Environmental Impact Assessment (S&EIA) process and the Basic Assessment (BA) process for the proposed Gamsberg Smelter and the Bulk Water Pipeline Projects. The presentation included an overview of the legal framework regulating the Smelter S&EIA application and Water Use Licence Application (WULA) and an overview of the legal framework regulating the Bulk Water Pipeline BA and WULA process, including the specialist investigations and public participation process for each.

A copy of the presentation is attached in Appendix 2.

4. DISCUSSION

Comments raised during the meeting have been recorded and are included in Table 1 below. Where a response was provided the response has been included. Where comments/ queries were not able to be responded to in the meeting, this has been indicated in Table 1 and responses will be provided in the Comments and Responses (CRR) section of the Draft Scoping Report that will be distributed for public comment.

5. THE WAY FORWARD

KH highlighted the following:

- Submit application form (January / February 2020)
- Commenting authority and public review of Scoping Report (30 days, January/ February 2020)
- Commenting authority and public review of BA (30 days, March/ April 2020)
- Commenting authority and public review of S&EIA (30 days, June - July 2020)

6. CLOSE

KH thanked everyone for their attendance and interest in the Gamsberg Smelter and the Bulk Water Pipeline Projects and the meeting was adjourned.

TABLE 1: RECORD OF ISSUES RAISED AND RESPONSES

#	Issue raised	By whom	Response
Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.			
1	Why does the smelter not have a fixed location?	C. Olivier	KH: As part of the scoping process we are required to assess alternative sites, each having their own unique impacts. In this manner sites with higher potential impacts can be screened out.
2	The smelter placement is not relevant to the secured landfill site?	C. Olivier	KH: The closer the secured landfill facility is to the smelter. the better as this minimises the distance that the Jarosite/ Jarofix needs to be transported and the potential impacts associated with the transportation of the waste product.
3	In my experience the 107 days for DENC to respond is often exceeded.	Mr Myburg	KH: Thanks for the comment, we will keep that in mind.
4	How will you ship product?	J. du Plessis	PV: As part of the feasibility study both road and rail transport are being considered. Once the pre-feasibility phase has been completed the final method of transportation will be finalised.

**BLACK MOUNTAIN MINING (PTY) LTD
NOTES OF STAKEHOLDER INFORMATION MEETING**

DATE:	3 December 2019 at 10:00
VENUE:	Pella Community Hall, Pella
PROJECT:	Gamsberg Smelter and Bulk Water Pipeline Project
SLR COMPANY:	South Africa
PROJECT NUMBER:	720.22013.00002
PURPOSE:	Information sharing for Smelter: Scoping and Environmental Impact Assessment and Bulk Water Pipeline: Basic Assessment process
ATTENDANCE:	An attendance register is included in Appendix 1.

1. OPENING AND INTRODUCTION

Marline Medallie (MM) of SLR Consulting (South Africa) (Pty) Ltd opened the meeting and welcomed attendees. The Black Mountain Mining (Pty) Ltd (BMM) team and the SLR team introduced themselves to the meeting attendees. An attendance register was signed by attendees and is included in Appendix 1.

2. APOLOGIES

No apologies were made.

3. PRESENTATIONS

Mr Pieter Venter (PV) Environmental Manager for BMM presented the background to BMM and the proposed Gamsberg Smelter Project. The presentation included an overview of the Gamsberg Zinc Mine; the project alternatives identified and related technical information for the proposed Gamsberg Smelter Project.

Mr Arno Engelbrecht (AE), Project Lead - Gamsberg Infrastructure, presented the proposed Bulk Water Pipeline project. The presentation included an overview of the existing pipeline servitude and related technical information for the proposed Bulk Water Pipeline project.

MM gave a presentation on the Scoping and Environmental Impact Assessment (S&EIA) process and the Basic Assessment (BA) process for the proposed Gamsberg Smelter and the Bulk Water Pipeline Projects. The presentation included an overview of the legal framework regulating the Smelter S&EIA application and Water Use Licence Application (WULA) and an overview of the legal framework regulating the Bulk Water Pipeline BA and WULA process, including the specialist investigations and public participation process for each.

A copy of the presentation is attached in Appendix 2.

4. DISCUSSION

Comments raised during the meeting have been recorded and are included in Table 1 below. Where a response was provided the response has been included. Where comments/ queries were not able to be responded to in the meeting, this has been indicated in Table 1 and responses will be provided in the Comments and Responses (CRR) section of the Draft Scoping Report that will be distributed for public comment.

5. THE WAY FORWARD

MM highlighted the following:

- Submit application form (January / February 2020)
- Commenting authority and public review of Scoping Report (30 days, January/ February 2020)
- Commenting authority and public review of BA (30 days, March/ April 2020)
- Commenting authority and public review of S&EIA (30 days, June - July 2020)

6. CLOSE

MM thanked everyone for their attendance and interest in the Gamsberg Smelter and the Bulk Water Pipeline Projects and the meeting was adjourned.

TABLE 1: RECORD OF ISSUES RAISED AND RESPONSES GIVEN

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
1	How regularly does the pipeline get maintained and who maintains the pipeline?	E. Fredericks	AE: Sedibeng water has a contract with BMM to do the maintenance. They drive and inspect the line once a week and conduct maintenance as required.
2	If it was not for this project requiring water, would the pipeline still be upgraded?	L. Hugo	AE: If the project does not go ahead, BMM would not be able to upgrade the pipeline.
3	Are the smelter and pipeline already approved? How will this project benefit us? Water in Pella is expensive, and every second day Pella does not have water. The water quality is also questionable. The community must benefit from this project and not be disadvantaged. How will the mine help? What role will Sedibeng play to help benefit people?	P. van Heerden	<p>Christo Witbooi (CW): BMM will meet with Sedibeng Water to discuss maintenance concerns. BMM has made provision in the Social and Labour Plan (SLP) for water provision for farmers which will be implemented over the next five years. Ultimately, however, the provision and handling of water is the responsibility of Sedibeng Water. BMM can meet with Sedibeng Water and mention the expectations of the community.</p> <p>Satish Kumar (SK): The project has not been approved. Feasibility studies are currently being undertaken to assess the potential for the Gamsberg Smelter and Bulk Water Pipeline Projects as well as to obtain funding for the projects.</p>
4	As BMM is funding the construction of the pipeline, the Khai-Ma Council is asking for BMM's assistance getting old debt with Sedibeng Water written off as well as to ensure that the cost of water	P. van Heerden	CW: BMM can commit to supporting the Khai-Ma Council in this regard provided this is in compliance with local legislation.

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
	<p>does not increase excessively as community members cannot keep up with the water increases.</p>		
5	<p>What will the health impact be from the smelter on the communities and the environment?</p>	<p>Unidentified I&AP</p>	<p>MM: The smelter design will ensure air emissions meet the required standards. There will also be continuous monitoring undertaken to ensure the Gamsberg Smelter Project does not exceed the required standards. Air quality modelling is being undertaken as part of the EIA process to understand potential air quality impacts. The impacts identified will be assessed and commitments included in the Environmental Management Programme (EMPr), which will be available for review when the EIA gets distributed for public review.</p>
6	<p>What is the responsibility of the mine towards the provision of water for the Pella community? How much water will the smelter use? We are not in opposition to the development, but there must be a social responsibility for the mine.</p>	<p>James – Khai-Ma Development & Justice NPO.</p>	<p>CW: A while ago we made provision for the next five years for projects to be done by the mine within the community. Water provision is one of these projects as BMM understands the situation with regards to the drought as well as the concerns in Pella regarding constant water provision. In the following three months (January to March 2020) we will begin sitting with communities, specifically regarding water projects to clarify what communities want and how we can assist.</p> <p>Regarding Sedibeng debt, BMM is willing to help the Council with this and can join the Council when meeting with Sedibeng Water to provide support.</p> <p>Ralton Maree (RM): Please come to us after the meeting to ensure we have your correct contact details.</p>

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
7	<p>I represent Khai-Ma Council. I would like to see an agreement signed to ensure the debt does not get transferred to the Council or that the Council does not inherit the debt. What debt will we incur in terms of electricity and water? Regarding dust we must ensure that it does not affect people's health.</p>	L. Hugo	See response in point 4 above
8	<p>The DHSWS must also be present when discussing the debt issue with Sedibeng Water.</p>	Unidentified I&AP	Thanks for the comment, this has been noted.
9	<p>Should the project be approved, Pella must benefit from jobs. We have noticed loopholes when it comes to employment. We see many vehicles and busses bringing lots of people from outside areas. The majority of employment should be for our community and the Namakwa District municipal areas. The community must be provided with training to be able to do higher level jobs rather than only being general workers.</p>	L. Hugo	<p>Anneline Botes (AB): During the construction phase there will be 6000 jobs created. During operations there will be 1200 jobs. We have identified issues from previous employment drives in the area and these will be addressed. We also have a partnership with TVET college to ensure locals are employable and to ensure the skills are available.</p>
10	<p>We also have underground water and many fountains in the area. How can Sedibeng and DHSWS help us to access and utilise the water?</p>	L. Hugo	Noted and could be assisted with through SLP programme.
11	<p>If it was not for the smelter, you would not have come here to talk about SLP commitments. You last came here in 2015 to have meetings and we have not seen you since then. If it was not for the smelter, you would never have come back. You were here for</p>	A. Engelman	Statement noted.

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
	<p>Gamsberg and we all said no to development. For you this is a project that must succeed. What will happen to us on the ground? We asked you to put the last pipeline underground, but you did not listen and put it above ground. You also use explosives at the mines and our houses are made of clay which are cracking. I say no to the new smelter and pipeline. I don't have questions; I just wanted to make a statement.</p>		
12	<p>I just want to say that from previous experience you do not listen to us.</p>	Mr Jacobson	Statement noted.
13	<p>What skills will the people require? Tell us so we can get the required training before jobs become available.</p>	L. Hugo	<p>AB: We have a similar smelter to this one called Scorpion Zinc. We are already aware of the types of skills required to operate and our SLP looks at that specifically.</p> <p>CW: We currently have 770 Khai-Ma learners in TVET college taking part in programmes to prepare for employment.</p>
14	<p>How many people working at the Gamsberg Zinc Mine actually come from each town? Show us these people. They use our addresses and we do not recognise them.</p>	Unidentified I&AP	<p>CW: We can look at where the students come from and provide the numbers to you to look at.</p>
15	<p>You are Vedanta and BMM. You employ contractors like Moolman's and Minopex. The owners of the mines promise us employment. Now we know our people. How many Witbank and Pella people do you have working there? Take us to the mine so we can point out our people. You will see we do not recognise those people.</p>	Unidentified I&AP	<p>CW: We have a process where we work with members of the municipality to verify names and where they are from. This process must be run in collaboration with the municipality. We will get in contact with you regarding the process.</p>

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
16	<p>This is now the third pipeline you want to build. The first two pipelines were not built on BMM land. They were built on our land. For the first two pipelines we got nothing. No money. For the third pipeline, what will we get?</p>	J. Trichard	<p>CW: There are discussions regarding the servitude, and we are looking into it. BMM does understand the sensitivity surrounding the servitude. The pipeline will not proceed without the required approvals. The whole approval process is based on the servitude. I am not sure how to answer you regarding who it belongs to. The pipelines were constructed on behalf of Sedibeng.</p> <p>AE: in 1978 the government registered the servitude over the farms Aroams, Springput, Klein Pella, Aggeneys and a portion of Blomhoek. When building a powerline or pipeline, the activity must be registered within the servitude. That servitude has certain rights, for example, this servitude belongs to Sedibeng. Sedibeng is thus allowed to do certain things within that servitude. The owner of the ground can also do things on the servitude. There are rules in place for this. If you are looking for the servitude proclamation, it is available at the surveyor general offices and includes all the rules of what people may do in that servitude. In the case of Sedibeng, they may build pipelines and dams within the servitude, as well as have unrestricted access to the servitude.</p>
17	<p>So, the mine and the government work together. You must be aware that the elderly must drive or walk to Pofadder to get grant money. The government must come here so we can also get grant money easily. You are the money speakers. You can make this happen.</p>	Unidentified I&AP	<p>Reno van Wyk (RW): We have seen in the past that when we have a celebration in Aggeneys, often Standard Bank will bring a mobile ATM. I would suggest we get a count of the pensioners and see whether the banks would be able to assist with mobile ATMs. We have sent a letter to SASSA</p>

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
	<p>Pella is a disadvantaged community, especially for retirees. There is lots of money for these projects, but Pella does not benefit.</p>		<p>to get data on pensioners in each town. We will provide feedback once we get the information.</p>
18	<p>We have load shedding, soon water shedding. How will the rainfall and climate change be affected by the smelter?</p>	Unidentified I&AP	<p>MM: In terms of climate change a specialist study is being done to assess the impact on the climate as well as the impact of climate change on the smelter operations. Power supply options will also be assessed which will include both Eskom and renewables.</p>
19	<p>I feel this community is saying no to the pipeline. Us as the inhabitants of Pella feel we are not acknowledged. The municipality make decisions without us. We as a community have decided enough is enough. We must be acknowledged and recognised. What happens now is you or the municipality comes here, we say no, then in two to three months the infrastructure we said no to is built. This ground is Pella ground. Not mine ground or municipal ground. When we say no, we mean no. You will acknowledge us.</p>	S. Witbooi	<p>RM: We acknowledge your sentiment and have recorded it. I do not believe the answers we can provide today will change your opinion on the matter. We will take note of the comment and will make a record of it.</p>
20	<p>Here in this hall we said no to the second pipeline. Yet money talks and the pipeline was built. We said no to the construction in 2017, yet here it is now. Today we say no again. This is our ground. The servitude belongs to Pella. The people who signed today must take their signature back. We do not want the pipeline.</p>	M. Paulus	<p>MM: If the form is signed with your details, it does not imply you agree to or approve the project. We ask that you provide your details so that we may include you in the public participation process and you can submit your comments. The process is very specific regarding the submission of comments and queries which gets included in the EIA report and gets submitted to the authorities.</p>
21	<p>Regarding the recruitment process, Vedanta has minimum requirements for posts, so outsiders get appointed. Also, people</p>	J. Stakham	<p>RW: There have been many sentiments shared regarding the information shared and the criteria for requests. There is one important criterion that</p>

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
	<p>without the requirements get put into positions unfairly. I think the requirement is not necessary and needs to be lowered. You advertise the jobs online which we do not have access to. You must work through the municipality.</p>		<p>people consider, like organisations and universities etc. One of the criteria is the recognition of prime land. What does recognition of prime land mean? Recognition of prime land means experience that you must do the job or operate machinery. That gets taken into consideration. If there are positions available, that is part of the criteria. The other important point is the flow of information. The information flows from the mines side to the local municipality, churches and NGO's. What we do is we send all the information to these institutions. These people are expected to share this information with the community. That is how the process works. What we also do, is we send the information to all state departments which we have email addresses for. We also send the information to all the contacts we have with email addresses.</p>
22	<p>How were the public meetings advertised?</p>	G. Galan	<p>The meetings were advertised by sending out SMS's to all those on the stakeholder database as well as by email. In addition, posters were displayed in each of the towns with the dates and times of the meetings.</p>
23	<p>I live next to the road. There is lots of dust from upgrading the road. They also require water.</p>	G. Galan	<p>Dust suppression during construction activities will be in place.</p>
24	<p>Pella is not prioritised for development. You must listen to the people or there will be civil disobedience. Our people need to be heard. The municipality does not listen to us and makes decisions on our behalf. To them Pella is not part of Khai-Ma. Pofadder and Aggeneys get</p>	Unidentified I&AP	<p>Statement noted.</p>

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
	<p>water first, electricity first, services first, new expansions and roads. When us as Pella ask why, we get told to wait. Surely development should also take place here?</p>		
25	<p>Currently there is a lack of information from the municipality and mayor's office. The information does not get to the people. The jobs must be advertised properly to the community so that the people of Pella can know.</p>	Mr James	Statement noted.
26	<p>I cannot get work as an operator, yet you bring in older people from far away as operators. Give me the chance to work and I will show BMM that I can be reliable and that there are good operators in Pella community. We need a petrol station here, then we will not have so many expenses for petrol. We sit here without petrol, yet we have a mine here making millions of Rand. Give us people of Pella opportunities. It hurts me to see other people working at the mine, but not the people of Pella.</p>	Mr Ryno	Statement noted.
27	<p>This database that you set up is not providing us with work opportunities. When the database started, we stopped getting work. BMM is being mined out by people without an education. They cannot even read or write, yet I can. Those young people can't even switch on a computer. Give the young training so they can do the job properly and employ us older people who have experience.</p>	Miss Paulita	Statement noted.

#	Issue raised	By whom	Response
<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>			
28	<p>Around 3-4 months ago we received letters stating that our erven at the back are to be used by Minopex's people. They are building houses for the Minopex people. What about the people of Pella? What about development for us?</p>	A. Basson	<p>RW: BMM does not know about the Minopex Issue, but we will investigate it. That is a local government issue.</p>
29	<p>I did a computer course and was required to do a follow up course. I also followed up with the college and I followed up with BMM, but BMM never got back to me.</p>	Unidentified I&AP	<p>RW: We take note and will correspond as soon as possible.</p>
30	<p>Where do you look for work at Gamsberg?</p>	V. Visagie	<p>Recruitment facilities are at the Municipality in Pofadder and the BMM office in Pofadder.</p>
31	<p>If the project is local, can't you also train us locally?</p>	Mrs Marta	<p>CW: What we currently do is we run programmes for Pofadder. We transfer Pella people to Pofadder as the programme is offered there. We take note of your comment.</p>

**BLACK MOUNTAIN MINING (PTY) LTD
NOTES OF STAKEHOLDER INFORMATION MEETING**

DATE:	4 December 2019 at 08:30
VENUE:	DENC Offices, Springbok
PROJECT:	Gamsberg Smelter and Bulk Water Pipeline Project
SLR COMPANY:	South Africa
PROJECT NUMBER:	720.22013.00002
PURPOSE:	Information sharing for Smelter: Scoping and Environmental Impact Assessment and Bulk Water Pipeline: Basic Assessment process
ATTENDANCE:	An attendance register is presented in Appendix 1.

1. OPENING AND INTRODUCTION

Kate Hamilton (KH) of SLR Consulting (South Africa) (Pty) Ltd opened the meeting and welcomed attendees. The Black Mountain Mining (Pty) Ltd (BMM) team and the SLR team introduced themselves to the meeting attendees. An attendance register was signed by attendees and is included in Appendix 1.

2. APOLOGIES

No apologies were made.

3. PRESENTATIONS

Mr Pieter Venter (PV) of BMM gave an informal presentation on BMM and their proposed Gamsberg Smelter Project and proposed bulk water project. The presentation included an overview of the site; the alternatives identified and related technical information for the proposed project.

KH gave an informal presentation on the Scoping and Environmental Impact Assessment (S&EIA) process and the Basic Assessment (BA) process for the proposed smelter and bulk water pipeline projects.

A copy of the presentation is attached in Appendix 2.

4. DISCUSSION

Comments raised during the meeting have been recorded and are included in Table 1 below. Where a response was provided the response has been included. Where comments/ queries were not able to be responded to in the meeting, this has been indicated in Table 1 and responses will be provided in the Comments and Responses (CRR) section of the Draft Scoping Report that will be distributed for public comment.

5. THE WAY FORWARD

KH highlighted the following:

- Submit application form (January / February 2020)
- Commenting authority and public review of Scoping Report (30 days, January/ February 2020)
- Commenting authority and public review of BA (30 days, March/ April 2020)
- Commenting authority and public review of S&EIA (30 days, June - July 2020)

6. CLOSE

KH thanked everyone for their attendance and interest in the Gamsberg Smelter and the Bulk Water Pipeline Projects and the meeting was adjourned.

TABLE 1: RECORD OF ISSUES RAISED AND RESPONSES GIVEN

#	Issue raised	By whom	Response
Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.			
1	At the moment much of the ore is transported by road? The idea is to further refine the concentrate?	C. Geldenhuys	PV: All of the concentrate from the Gamsberg Zinc Mine is currently transported by road. BMM will further treat only the zinc concentrate, not the lead concentrate that comes from the current underground mine. Gamsberg will also produce some lead that will also be transported to the concentrator. Part of the feasibility study is looking at going back to Loop 10 to transport both concentrate and zinc product via the railway.
2	Will there be less bulk transport after the smelter has been built?	C. Geldenhuys	PV: There will be more transport required because of the sulphuric acid that will be produced as a by-product of the smelting process. The Gamsberg Zinc Project will produce enough acid for 30 trucks per day. The technical team is assessing the possibility of transportation via rail.
3	What is the limiting factor for transport options? Is it the condition of the road to Loop 10?	C. Geldenhuys	PV: The road to Loop 10 will need to be partially rebuilt even though it is a government road. Mpho Ndaba (MN): BMM is in discussions with Transnet to try and make an arrangement.
4	Is the smelter within the offset area?	P. Cloete	PV: No, it is not. KH: The smelter would be constructed and operated within the mining right area.

#	Issue raised	By whom	Response
Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.			
			<p>Koos Smit (KS): The proposed footprint area is located within an area that has already been offset as part of the Gamsberg Zinc Mine Offset agreement. So, all the regions on the map you see for Gamsberg Zinc Mine has already been offset. If you look at the layout you will see the Gamsberg Smelter Project attempts to avoid identified sensitive areas such as the calcretes as well as the watercourses.</p>
5	Isn't the mine overburden in the watercourse?	C. Geldenhuys	<p>PV: No, it is on the southern side of the watercourse. There is a berm to protect the watercourse.</p>
6	So, your most sensitive areas are your watercourses?	P. Cloete	<p>KS: Yes, and of course the calcretes.</p>
7	Will there be a biodiversity assessment? Who is the consultant?	P. Cloete	<p>KH: Yes, there will be. The biodiversity consultant is Simon Todd. We are also doing an air quality study to understand the dust impacts. We have updated the dust fallout in terms of more current information as well as done modelling of the SO₂, NO_x and other emissions that may come out of the smelter so we can understand the extent of the impacts and the impact it may have on biodiversity.</p> <p>EL: There is a full list of specialist studies in the presentation document we have provided you.</p>
8	I presume the majority of the water requirements of the smelter will be from the Orange River? It will not be groundwater?	C. Geldenhuys	<p>PV: That is correct. We are also focusing very heavily on treating and designing for zero discharge. If we do not design to conserve water as far as possible, we cannot build the smelter here.</p>

#	Issue raised	By whom	Response
Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.			
9	Is it possible to estimate how much additional water will be required based on the existing water requirements at Gamsberg? For example, would the smelter require 50% extra water resources?	C. Geldenhuys	<p>PV: Currently we are using 28ML/day. With the smelter we will go up to the full allocation for Sedibeng which is 44ML.</p> <p>KH: That water also supplies the towns in the area: Aggeneys, Pofadder, and Pella.</p> <p>PV: There is a large buffer built in. We cannot exceed 44 ML/day as that is the absolute limit allocated to Sedibeng. Anything more than that, there is a whole process that needs to be followed by Sedibeng to obtain additional allocation from the Orange River. There is no guarantee they can get the water and 50% is Namibia's water.</p>
10	Will there be any licence requirement for national (Environmental Affairs)?	C. Geldenhuys	KH: The air emission licence will be done but it won't be national. It will be through DENC, David Khakane.
11	For the Smelter DMR is the competent authority?	C. Geldenhuys	KH: Correct.
12	I presume there will be site visits arranged in the future for the proposed sites for authorities to inspect by you?	C. Geldenhuys	KH: We have already arranged and conducted a site visit with authorities. We met with DMR, DENC and DWS in September 2019 and gave them the opportunity to view the site, but they all know the site already. Deirdre Karsten from DMR will be handling this project application.
13	What is the prevailing wind direction around Gamsberg?	C. Geldenhuys	PV: It is east to west. You will find the dust follows the Inselberg, predominantly east to west.

BLACK MOUNTAIN MINING (PTY) LTD
NOTES OF STAKEHOLDER INFORMATION MEETING

DATE:	4 December 2019 at 14:00
VENUE:	Pofadder Community Hall, Pofadder
PROJECT:	Gamsberg Smelter and Bulk Water Pipeline Project
SLR COMPANY:	South Africa
PROJECT NUMBER:	720.22013.00002
PURPOSE:	Information sharing for Smelter: Scoping and Environmental Impact Assessment and Bulk Water Pipeline: Basic Assessment process
ATTENDANCE:	An attendance register is presented in Appendix 1.

1. OPENING AND INTRODUCTION

Marline Medallie (MM) of SLR Consulting (South Africa) (Pty) Ltd opened the meeting and welcomed attendees. The Black Mountain Mining (Pty) Ltd (BMM) team and the SLR team introduced themselves to the meeting attendees. An attendance register was signed by attendees and is included in Appendix 1.

2. APOLOGIES

No apologies were made.

3. PRESENTATIONS

Mr Pieter Venter (PV) Environmental Manager for BMM presented the background to BMM and the proposed Gamsberg Smelter Project. The presentation included an overview of the Gamsberg Zinc Mine; the project alternatives identified and related technical information for the proposed Gamsberg Smelter Project.

Mr Arno Engelbrecht (AE), Project Lead - Gamsberg Infrastructure, presented the proposed Bulk Water Pipeline project. The presentation included an overview of the existing pipeline servitude and related technical information for the proposed Bulk Water Pipeline project.

MM gave a presentation on the Scoping and Environmental Impact Assessment (S&EIA) process and the Basic Assessment (BA) process for the proposed Gamsberg Smelter and the Bulk Water Pipeline Projects. The presentation included an overview of the legal framework regulating the Smelter S&EIA application and Water Use Licence Application (WULA) and an overview of the legal framework regulating the Bulk Water Pipeline BA and WULA process, including the specialist investigations and public participation process for each.

A copy of the presentation is attached in Appendix 2.

4. DISCUSSION

Comments raised during the meeting have been recorded and are included in Table 1 below. Where a response was provided the response has been included. Where comments/ queries were not able to be responded to in the meeting, this has been indicated in Table 1 and responses will be provided in the Comments and Responses (CRR) section of the Draft Scoping Report that will be distributed for public comment.

5. THE WAY FORWARD

MM highlighted the following:

- Submit application form (January / February 2020)
- Commenting authority and public review of Scoping Report (30 days, January/ February 2020)
- Commenting authority and public review of BA (30 days, March/ April 2020)
- Commenting authority and public review of S&EIA (30 days, June - July 2020)

6. CLOSE

MM thanked everyone for their attendance and interest in the Gamsberg Smelter and the Bulk Water Pipeline Projects and the meeting was adjourned.

TABLE 1: RECORD OF ISSUES RAISED AND RESPONSES GIVEN

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
1	When Gamsberg Zinc Mine was initially developed we noticed a lot of workers coming from outside the Khai-Ma area. When there are new job opportunities available at the mine, the people of Khai-Ma must be given job preference, not people from outside Khai-Ma. Please also look after the people of Khai-Ma and train/upskill the people of Khai-Ma to be able to be considered for jobs at the mine. Work opportunities due to the smelter and associated infrastructure must be prioritised for the people of Khai-Ma.	Mr G.J Silver	Christo Witbooi (CW) – A while back we started a collaboration with the TVET college. At this stage we have 177 local community members enrolled at TVET for various courses as part of our long-term planning to ensure locals have the required skills to not only be general workers, but to get better work opportunities at the mine. It is a process we are busy with. In January this year (2019) we had our first enrolments at TVET to ensure we can train as many people as possible. The courses offered were discussed with community members of Pofadder and the youth to determine what courses people are interested in and where the work opportunities are. We will have to work together with the community to ensure we improve the process and train as many people as possible in the area.
	In the presentation you state that the Eskom infrastructure will need to be upgraded. Will the benefits of the infrastructure upgrade only benefit the Gamsberg Smelter Project or will the surrounding towns of Pofadder and Pella benefit from the upgrade of infrastructure and have more reliable electricity supply?	Mr Breyton	AE - There are two parts to the upgrade. The one is for the smelter upgrade within the Aggeneys substation. In that section we will take from the high voltage line coming from Arries, which runs at 400 kV and step it down to 132 kV. Pofadder will not be directly affected by those upgrades. Where Pofadder would benefit is from the upgrade to the Pella Midway substation for power supply to the proposed new booster pump station. The substation takes power from the 66 kV powerline and steps it down to 22 Kv. The substation then feeds electricity to Pofadder. The substation also supplies power to Pella, small Pella and Witbank. The current substation transformer is too small to

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
			provide the required power and would need to be upgraded should the Gamsberg Smelter Project go ahead. The upgrading of the substation transformers would be to the advantage of Pofadder in terms of increased power supply.
	When you talk about benefits from the project to the community and jobs, we do not want to only be general workers with short term work opportunities. We want to learn and upskill ourselves to be more than just general workers. Our children have ambitions and want to make more of their lives than just being general workers and unskilled labour.	Miss Maitolien	CW – A while back we stated a collaboration with the TVET college. At this stage we have 177 local community members enrolled at TVET for various courses as part of our long-term planning to ensure locals have the required skills to not only be general workers, but to get better work opportunities at the mine. It is a process we are busy with. In January this year (2019) we had our first enrolments at TVET to ensure we can train as many people as possible. The courses offered were discussed with community members of Pofadder and the youth to determine what courses people are interested in and where the work opportunities are. We will have to work together with the community to ensure we improve the process and train as many people as possible in the area.
	Transparency is very important. We are sitting with trained people in Khai-Ma who do not have work. I was trained to be a safety officer at Black Mountain Mine, yet here I sit without work. Many of us sit without work and it breaks my heart. Please can this be addressed.	Mr G.J Silver	CW – BMM has worked with the local municipality and community leaders to try and address these issues. This is an ongoing process to identify all skills in the communities and use these skilled/ trained people. BMM has generated a database in collaboration with the municipality which lists the people and what skills they have, however, there are still people who need to register on this database. Everyone needs to ensure they register and provide their CV's. BMM has learnt from the past and wish to do things properly going forward.

#	Issue raised	By whom	Response
	<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>		
	<p>Regarding the EIA for the smelter, what are the occupational health impacts of the smelter and will the report results be shared with us on a regular basis so that the local community can keep track of how their health may be impacted?</p>	<p>Mr T Rosino</p>	<p>Pieter Venter (PV)- Part of the applications we are applying for is to obtain an atmospheric emissions licence (AEL). The requirements for this include continuous monitoring and the generation of monthly reports, point source emissions and the requirement for ambient air quality monitoring to assess the impact of the smelter on the surrounding environment. These reports will be generated on a monthly basis and submitted to the National Atmospheric Emissions Inventory System (NAEIS). This requirement is compulsory. That report can also be made available to the council.</p> <p>MM - In addition the smelter must include various technology to minimise emissions and remain within the atmospheric emissions standards. The existing emissions levels are included in the report and in the air quality modelling. Those results will be made available as part of the EIA report when it is distributed for public comment, around June 2020. The mitigation requirements usually require continuous monitoring which would be reported on a monthly basis.</p>
	<p>Vedanta will have business partners/contractors. As a representative of organised labour, we find that there are regular protests by community members. We complied and assisted you with obtaining permits previously, but then we do not benefit. The current model for the mine has benefits for people from outside more than from Khai-Ma. We understand that sometimes you need</p>		<p>CW – We do acknowledge previous mistakes made during the Phase 1 construction. It is an issue that we know about and plan to not repeat these mistakes. However, we will need to come together with the community to plan and have those discussions to be able to put something on the table with a clear way forward. There are numerous meetings planned with the communities between now and March 2020 where we can discuss and ensure</p>

#	Issue raised	By whom	Response
	<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>		
	<p>to bring in very skilled labour that must be imported, but don't import people who put up fencing as Pofadder is full of people who can put up fencing. We see there is also a construction camp. This tells us you want to import labour from outside. If you use local people you do not need a construction camp. As organised labour we will not support you if we are not the main beneficiaries of this project. Small businesses must be given the opportunity to compete.</p>		<p>the right people get the correct training. We are also planning for an additional intake at the TVET College between now and June 2020 to see what they can do to prepare for the planned smelter.</p>
	<p>There is a misalignment of the training process and construction process. You started the process for the plant, so let's start training people with the correct skills for the job. You mention you have an agreement with TVET college. I would like to see the TVET schedule agree with the construction schedule. We should use these meetings and future meetings to ensure we correct the misalignment so that locals can obtain the required skills before the plant commences operations.</p>		
	<p>I own a local small business called Silo and Sons. I speak on behalf of SME's in the local area. It is very good news that there is new investment in the region with this new smelter. I would like to point out though that for a lot of the developments that were done during Phase 1, not all the commitments made were realised. I would like Vedanta/Black Mountain Mining to acknowledge the mistakes they made during Phase 1 and learn from those mistakes to better utilise</p>	<p>Mr E. Silo</p>	<p>CW – As part of our planning for the next five years we have decided that we need a different approach when dealing with small businesses compared to the normal commercial setup. Within our commercial department we have commenced with plans to develop a local supplier database to ensure we do not leave local small businesses behind. There is a process that we have put in place.</p>

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
	the opportunities to employ SME's locally, e.g. putting up fences, building roads and other supporting services. How will Vedanta/ Black Mountain Mining influence the EPC contractors that will construct the smelter to utilise local businesses and SME's rather than bringing people from outside. They must understand that we can also provide services rather than contacting someone from outside Khai-Ma and then bringing people in.		
	I have listened to everything you have said; however, I have not heard approximately how many jobs we can expect from the project for Khai-Ma? How will you accommodate people who do not have grade 10/11/12 who are not skilled but are looking for work? How can we assist them and train them if they do not meet the minimum TVET acceptance requirements to get enrolled at TVET? Regarding the construction camp, it is a big issue for Khai-Ma. It takes away our work and brings social ills into the area like alcohol abuse and HIV/AIDS,	Mr P. Jason	CW – Regarding the question pertaining to grade 10, we have discussed this with our TVET partners to be able to take those persons on bridging courses to go in the N1 direction, and then N2 so that we can end up with skilled people we can put in more skilled posts. However, what I have also seen is that many of our community members who have made use of the opportunity have dropped out of the course. If you get an opportunity, take that opportunity seriously as there are many people who sit and wait for that opportunity, so the chances that the opportunity will come around again is very small. If you drop out the first time, it is very difficult to get in a second time. We also discussed with TVET the recognition of prior learning, acknowledging certain experience you may have developed. Then there is also the possibility that you can get the required approval to do the work required. It is difficult to submit a CV for which there are certain requirements, however, with a college certificate you have supporting documentation that you can do the work, then the opportunity for work does exist. Again, it is a process that must be followed. We must assess

#	Issue raised	By whom	Response
	<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>		
			<p>the gaps, determine why people drop out of the training programmes and understand what must be done to ensure local people can obtain jobs.</p> <p>Satish Kumar (SK) – People ask why the construction camp. They think it means we will bring people from outside. If no people need to be brought from outside, then there is no need for a construction camp. As per Phase 1 of the project we employed between 2500 to 3000 people. We will only put the construction camp for people with skills which are not available in Khai-Ma. We do not have all the required skills available in the local municipal areas. Having said that, if the skills are here, we would rather use local labour. The construction camp for Phase 1 was for approximately 1000 people, whereas we employed 3000 people. That means almost 2000 people came from nearby areas. Similarly, for the smelter, at the peak we are expecting 6000 jobs. Now that does not mean we will put up a construction camp for 6000 people. Whatever skills are here we will use, likely 3000 to 4000 people, so we would only put up a construction camp for 2000 people, not 6000 people.</p> <p>CW – When BMM commenced with the original construction camp, it was a dry camp. Everything possible was done to ensure no alcohol was allowed in the camp. However, what then happens is that people leave the camp to drink alcohol elsewhere. This is something that needs to be assessed. BMM would thus like to sit with the community and municipal leaders to assess what could be</p>

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
			done better going forward.
	The construction camp is the exception, not the rule. You made provision for the construction camp in your EIA. We understand that. That camp even housed our own local people there. Firstly, that means there was no need for such a large camp. Secondly, we could rather have had township guesthouses so other people can come and board by us and the mine pays. Moving forward don't force us to do things. Let's rather engage.	Unidentified I&AP	RM – Your comment has been noted for inclusion in the EIA.
	I am concerned about the employment. Everyone in Pofadder and Khai-Ma must register on the employment database. I feel the system does not work. You must forget about the database and just employ local people. What are companies doing at the construction camp to ensure the people there are contributing towards corporate and social investment. What are they doing to ensure the people of Khai-Ma benefit?	Mr E. Richters	BMM would like to sit with the community and municipal leaders to assess what could be done better going forward,
	The SLP implies that BMM is responsible for Khai-Ma. I plead with BMM to please take responsibility for the people of Khai-Ma by prioritising the people for skills development and making sure that the skills and benefits stays within Khai-Ma. Give the people in this area the right skills and opportunities to build infrastructure in Khai-Ma.	Mr G.J Silver	Sean Jenniker (SJ) – From the mines side we talk about a business with purpose. We talk about being here for the community. Now if you look back the last couple years regarding the SLP and CSR, you will see there was a change in our approach. Our team has become bigger and we are more engaged in the community. These are the types of behaviours that we want to grow in the future. Perhaps in 40 years you can ask us what you have accomplished in 40 years. What we would ask is that you judge us on the last couple of years. The

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
			TVET college partnership is an initiative we started last year. So how did we get there? As CW explained, that was something the community identified that they wanted. We are now here to tell you that we are starting with the smelter process. The same intent is there to say, these are the skills that we have in Khai-Ma that we will need for the smelter and Phase 2 of the plant. I want to give the commitment from Vedanta side, and please can I ask that you go on the internet and go look at what we stand for, and that is to give back to the community. So that is our actual goal. Regarding skills development, I think the work we are doing with TVET College moving forward will help achieve this goal.
	We are struggling a lot with water. The dams are not full. With this upgrade will there be an impact on water quality or supply? Will water supply be interrupted?	Mrs A. Kriel.	AE – There are currently two water pipelines. There is a connection point that runs from the pipeline to the Pofadder dam and town. These pipelines are the responsibility of Sedibeng Water. Upgrades will take place; however, the dams will be made full before any upgrades take place. With good management and planning we anticipate that water will be available for domestic use.
	We need a strategy to get people engaged in the process. We as organised labour will make the effort with your help to include these people. I would also like to hear you use radio as a means of communication. We would also like to have a timeline and approach as to how this will be addressed.	Mr T Rosino	CW – We will be having a conversation on the radio tomorrow morning. Earlier we were at Radio NFM to discuss with them how we can reach more people. So tomorrow between 7 and 8 am we will have the on-air discussion. They are already notifying people now during the day of the on-air discussion to take place tomorrow morning. We will all talk about the project, what is planned etc. so that is something we have planned.

BLACK MOUNTAIN MINING (PTY) LTD
NOTES OF STAKEHOLDER INFORMATION MEETING

DATE:	4 December 2019 at 14:00
VENUE:	Pofadder Community Hall, Pofadder
PROJECT:	Gamsberg Smelter and Bulk Water Pipeline Project
SLR COMPANY:	South Africa
PROJECT NUMBER:	720.22013.00002
PURPOSE:	Information sharing for Smelter: Scoping and Environmental Impact Assessment and Bulk Water Pipeline: Basic Assessment process
ATTENDANCE:	An attendance register is presented in Appendix 1.

1. OPENING AND INTRODUCTION

Marline Medallie (MM) of SLR Consulting (South Africa) (Pty) Ltd opened the meeting and welcomed attendees. The Black Mountain Mining (Pty) Ltd (BMM) team and the SLR team introduced themselves to the meeting attendees. An attendance register was signed by attendees and is included in Appendix 1.

2. APOLOGIES

No apologies were made.

3. PRESENTATIONS

Mr Pieter Venter (PV) Environmental Manager for BMM presented the background to BMM and the proposed Gamsberg Smelter Project. The presentation included an overview of the Gamsberg Zinc Mine; the project alternatives identified and related technical information for the proposed Gamsberg Smelter Project.

Mr Arno Engelbrecht (AE), Project Lead - Gamsberg Infrastructure, presented the proposed Bulk Water Pipeline project. The presentation included an overview of the existing pipeline servitude and related technical information for the proposed Bulk Water Pipeline project.

MM gave a presentation on the Scoping and Environmental Impact Assessment (S&EIA) process and the Basic Assessment (BA) process for the proposed Gamsberg Smelter and the Bulk Water Pipeline Projects. The presentation included an overview of the legal framework regulating the Smelter S&EIA application and Water Use Licence Application (WULA) and an overview of the legal framework regulating the Bulk Water Pipeline BA and WULA process, including the specialist investigations and public participation process for each.

A copy of the presentation is attached in Appendix 2.

4. DISCUSSION

Comments raised during the meeting have been recorded and are included in Table 1 below. Where a response was provided the response has been included. Where comments/ queries were not able to be responded to in the meeting, this has been indicated in Table 1 and responses will be provided in the Comments and Responses (CRR) section of the Draft Scoping Report that will be distributed for public comment.

5. THE WAY FORWARD

MM highlighted the following:

- Submit application form (January / February 2020)
- Commenting authority and public review of Scoping Report (30 days, January/ February 2020)
- Commenting authority and public review of BA (30 days, March/ April 2020)
- Commenting authority and public review of S&EIA (30 days, June - July 2020)

6. CLOSE

MM thanked everyone for their attendance and interest in the Gamsberg Smelter and the Bulk Water Pipeline Projects and the meeting was adjourned.

TABLE 1: RECORD OF ISSUES RAISED AND RESPONSES GIVEN

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
1	When Gamsberg Zinc Mine was initially developed we noticed a lot of workers coming from outside the Khai-Ma area. When there are new job opportunities available at the mine, the people of Khai-Ma must be given job preference, not people from outside Khai-Ma. Please also look after the people of Khai-Ma and train/upskill the people of Khai-Ma to be able to be considered for jobs at the mine. Work opportunities due to the smelter and associated infrastructure must be prioritised for the people of Khai-Ma.	Mr G.J Silver	Christo Witbooi (CW) – A while back we started a collaboration with the TVET college. At this stage we have 177 local community members enrolled at TVET for various courses as part of our long-term planning to ensure locals have the required skills to not only be general workers, but to get better work opportunities at the mine. It is a process we are busy with. In January this year (2019) we had our first enrolments at TVET to ensure we can train as many people as possible. The courses offered were discussed with community members of Pofadder and the youth to determine what courses people are interested in and where the work opportunities are. We will have to work together with the community to ensure we improve the process and train as many people as possible in the area.
	In the presentation you state that the Eskom infrastructure will need to be upgraded. Will the benefits of the infrastructure upgrade only benefit the Gamsberg Smelter Project or will the surrounding towns of Pofadder and Pella benefit from the upgrade of infrastructure and have more reliable electricity supply?	Mr Breyton	AE - There are two parts to the upgrade. The one is for the smelter upgrade within the Aggeneys substation. In that section we will take from the high voltage line coming from Arries, which runs at 400 kV and step it down to 132 kV. Pofadder will not be directly affected by those upgrades. Where Pofadder would benefit is from the upgrade to the Pella Midway substation for power supply to the proposed new booster pump station. The substation takes power from the 66 kV powerline and steps it down to 22 Kv. The substation then feeds electricity to Pofadder. The substation also supplies power to Pella, small Pella and Witbank. The current substation transformer is too small to

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
			provide the required power and would need to be upgraded should the Gamsberg Smelter Project go ahead. The upgrading of the substation transformers would be to the advantage of Pofadder in terms of increased power supply.
	When you talk about benefits from the project to the community and jobs, we do not want to only be general workers with short term work opportunities. We want to learn and upskill ourselves to be more than just general workers. Our children have ambitions and want to make more of their lives than just being general workers and unskilled labour.	Miss Maitolien	CW – A while back we stated a collaboration with the TVET college. At this stage we have 177 local community members enrolled at TVET for various courses as part of our long-term planning to ensure locals have the required skills to not only be general workers, but to get better work opportunities at the mine. It is a process we are busy with. In January this year (2019) we had our first enrolments at TVET to ensure we can train as many people as possible. The courses offered were discussed with community members of Pofadder and the youth to determine what courses people are interested in and where the work opportunities are. We will have to work together with the community to ensure we improve the process and train as many people as possible in the area.
	Transparency is very important. We are sitting with trained people in Khai-Ma who do not have work. I was trained to be a safety officer at Black Mountain Mine, yet here I sit without work. Many of us sit without work and it breaks my heart. Please can this be addressed.	Mr G.J Silver	CW – BMM has worked with the local municipality and community leaders to try and address these issues. This is an ongoing process to identify all skills in the communities and use these skilled/ trained people. BMM has generated a database in collaboration with the municipality which lists the people and what skills they have, however, there are still people who need to register on this database. Everyone needs to ensure they register and provide their CV's. BMM has learnt from the past and wish to do things properly going forward.

#	Issue raised	By whom	Response
	<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>		
	<p>Regarding the EIA for the smelter, what are the occupational health impacts of the smelter and will the report results be shared with us on a regular basis so that the local community can keep track of how their health may be impacted?</p>	<p>Mr T Rosino</p>	<p>Pieter Venter (PV)- Part of the applications we are applying for is to obtain an atmospheric emissions licence (AEL). The requirements for this include continuous monitoring and the generation of monthly reports, point source emissions and the requirement for ambient air quality monitoring to assess the impact of the smelter on the surrounding environment. These reports will be generated on a monthly basis and submitted to the National Atmospheric Emissions Inventory System (NAEIS). This requirement is compulsory. That report can also be made available to the council.</p> <p>MM - In addition the smelter must include various technology to minimise emissions and remain within the atmospheric emissions standards. The existing emissions levels are included in the report and in the air quality modelling. Those results will be made available as part of the EIA report when it is distributed for public comment, around June 2020. The mitigation requirements usually require continuous monitoring which would be reported on a monthly basis.</p>
	<p>Vedanta will have business partners/contractors. As a representative of organised labour, we find that there are regular protests by community members. We complied and assisted you with obtaining permits previously, but then we do not benefit. The current model for the mine has benefits for people from outside more than from Khai-Ma. We understand that sometimes you need</p>		<p>CW – We do acknowledge previous mistakes made during the Phase 1 construction. It is an issue that we know about and plan to not repeat these mistakes. However, we will need to come together with the community to plan and have those discussions to be able to put something on the table with a clear way forward. There are numerous meetings planned with the communities between now and March 2020 where we can discuss and ensure</p>

#	Issue raised	By whom	Response
	<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>		
	<p>to bring in very skilled labour that must be imported, but don't import people who put up fencing as Pofadder is full of people who can put up fencing. We see there is also a construction camp. This tells us you want to import labour from outside. If you use local people you do not need a construction camp. As organised labour we will not support you if we are not the main beneficiaries of this project. Small businesses must be given the opportunity to compete.</p>		<p>the right people get the correct training. We are also planning for an additional intake at the TVET College between now and June 2020 to see what they can do to prepare for the planned smelter.</p>
	<p>There is a misalignment of the training process and construction process. You started the process for the plant, so let's start training people with the correct skills for the job. You mention you have an agreement with TVET college. I would like to see the TVET schedule agree with the construction schedule. We should use these meetings and future meetings to ensure we correct the misalignment so that locals can obtain the required skills before the plant commences operations.</p>		
	<p>I own a local small business called Silo and Sons. I speak on behalf of SME's in the local area. It is very good news that there is new investment in the region with this new smelter. I would like to point out though that for a lot of the developments that were done during Phase 1, not all the commitments made were realised. I would like Vedanta/Black Mountain Mining to acknowledge the mistakes they made during Phase 1 and learn from those mistakes to better utilise</p>	<p>Mr E. Silo</p>	<p>CW – As part of our planning for the next five years we have decided that we need a different approach when dealing with small businesses compared to the normal commercial setup. Within our commercial department we have commenced with plans to develop a local supplier database to ensure we do not leave local small businesses behind. There is a process that we have put in place.</p>

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
	the opportunities to employ SME's locally, e.g. putting up fences, building roads and other supporting services. How will Vedanta/ Black Mountain Mining influence the EPC contractors that will construct the smelter to utilise local businesses and SME's rather than bringing people from outside. They must understand that we can also provide services rather than contacting someone from outside Khai-Ma and then bringing people in.		
	I have listened to everything you have said; however, I have not heard approximately how many jobs we can expect from the project for Khai-Ma? How will you accommodate people who do not have grade 10/11/12 who are not skilled but are looking for work? How can we assist them and train them if they do not meet the minimum TVET acceptance requirements to get enrolled at TVET? Regarding the construction camp, it is a big issue for Khai-Ma. It takes away our work and brings social ills into the area like alcohol abuse and HIV/AIDS,	Mr P. Jason	CW – Regarding the question pertaining to grade 10, we have discussed this with our TVET partners to be able to take those persons on bridging courses to go in the N1 direction, and then N2 so that we can end up with skilled people we can put in more skilled posts. However, what I have also seen is that many of our community members who have made use of the opportunity have dropped out of the course. If you get an opportunity, take that opportunity seriously as there are many people who sit and wait for that opportunity, so the chances that the opportunity will come around again is very small. If you drop out the first time, it is very difficult to get in a second time. We also discussed with TVET the recognition of prior learning, acknowledging certain experience you may have developed. Then there is also the possibility that you can get the required approval to do the work required. It is difficult to submit a CV for which there are certain requirements, however, with a college certificate you have supporting documentation that you can do the work, then the opportunity for work does exist. Again, it is a process that must be followed. We must assess

#	Issue raised	By whom	Response
	<p>Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.</p>		
			<p>the gaps, determine why people drop out of the training programmes and understand what must be done to ensure local people can obtain jobs.</p> <p>Satish Kumar (SK) – People ask why the construction camp. They think it means we will bring people from outside. If no people need to be brought from outside, then there is no need for a construction camp. As per Phase 1 of the project we employed between 2500 to 3000 people. We will only put the construction camp for people with skills which are not available in Khai-Ma. We do not have all the required skills available in the local municipal areas. Having said that, if the skills are here, we would rather use local labour. The construction camp for Phase 1 was for approximately 1000 people, whereas we employed 3000 people. That means almost 2000 people came from nearby areas. Similarly, for the smelter, at the peak we are expecting 6000 jobs. Now that does not mean we will put up a construction camp for 6000 people. Whatever skills are here we will use, likely 3000 to 4000 people, so we would only put up a construction camp for 2000 people, not 6000 people.</p> <p>CW – When BMM commenced with the original construction camp, it was a dry camp. Everything possible was done to ensure no alcohol was allowed in the camp. However, what then happens is that people leave the camp to drink alcohol elsewhere. This is something that needs to be assessed. BMM would thus like to sit with the community and municipal leaders to assess what could be</p>

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
			done better going forward.
	The construction camp is the exception, not the rule. You made provision for the construction camp in your EIA. We understand that. That camp even housed our own local people there. Firstly, that means there was no need for such a large camp. Secondly, we could rather have had township guesthouses so other people can come and board by us and the mine pays. Moving forward don't force us to do things. Let's rather engage.	Unidentified I&AP	RM – Your comment has been noted for inclusion in the EIA.
	I am concerned about the employment. Everyone in Pofadder and Khai-Ma must register on the employment database. I feel the system does not work. You must forget about the database and just employ local people. What are companies doing at the construction camp to ensure the people there are contributing towards corporate and social investment. What are they doing to ensure the people of Khai-Ma benefit?	Mr E. Richters	BMM would like to sit with the community and municipal leaders to assess what could be done better going forward,
	The SLP implies that BMM is responsible for Khai-Ma. I plead with BMM to please take responsibility for the people of Khai-Ma by prioritising the people for skills development and making sure that the skills and benefits stays within Khai-Ma. Give the people in this area the right skills and opportunities to build infrastructure in Khai-Ma.	Mr G.J Silver	Sean Jenniker (SJ) – From the mines side we talk about a business with purpose. We talk about being here for the community. Now if you look back the last couple years regarding the SLP and CSR, you will see there was a change in our approach. Our team has become bigger and we are more engaged in the community. These are the types of behaviours that we want to grow in the future. Perhaps in 40 years you can ask us what you have accomplished in 40 years. What we would ask is that you judge us on the last couple of years. The

#	Issue raised	By whom	Response
	Note: The minutes do not reflect questions asked which are directly answered in the presentations or which related to standard EIA procedure and had no bearing on the scoping of issues.		
			TVET college partnership is an initiative we started last year. So how did we get there? As CW explained, that was something the community identified that they wanted. We are now here to tell you that we are starting with the smelter process. The same intent is there to say, these are the skills that we have in Khai-Ma that we will need for the smelter and Phase 2 of the plant. I want to give the commitment from Vedanta side, and please can I ask that you go on the internet and go look at what we stand for, and that is to give back to the community. So that is our actual goal. Regarding skills development, I think the work we are doing with TVET College moving forward will help achieve this goal.
	We are struggling a lot with water. The dams are not full. With this upgrade will there be an impact on water quality or supply? Will water supply be interrupted?	Mrs A. Kriel.	AE – There are currently two water pipelines. There is a connection point that runs from the pipeline to the Pofadder dam and town. These pipelines are the responsibility of Sedibeng Water. Upgrades will take place; however, the dams will be made full before any upgrades take place. With good management and planning we anticipate that water will be available for domestic use.
	We need a strategy to get people engaged in the process. We as organised labour will make the effort with your help to include these people. I would also like to hear you use radio as a means of communication. We would also like to have a timeline and approach as to how this will be addressed.	Mr T Rosino	CW – We will be having a conversation on the radio tomorrow morning. Earlier we were at Radio NFM to discuss with them how we can reach more people. So tomorrow between 7 and 8 am we will have the on-air discussion. They are already notifying people now during the day of the on-air discussion to take place tomorrow morning. We will all talk about the project, what is planned etc. so that is something we have planned.
