

ANNEXURE 3

Public Consultation

ANNEXURE 3.1

List of Interested and Affected Parties ("I&AP")

Public Participation Process (“**PPP**”) undertaken:

A PPP under the EIA Regulations was undertaken as part of the Scoping Phase, which included the following:

- Placing site notices at both the entrance to the site and on site;
- Placing adverts in the Express (25 September 2019) and the Bloem News (26 September 2019) newspapers;
- a Notification and Background Information Document (“**BID**”) regarding the project was sent to all identified Interested and Affected Parties (“**I&AP**”). This included the adjacent landowners, stakeholders and relevant authorities.

A time period of 30 days was allowed for the public to register and / or send their issues and concerns regarding the Project to Turn 180 Environmental Consultants.

Due to the COVID-19 lockdown, the timeframe for the public commenting period on the Draft EIA Report was extended.

Ms. Ragna Redelstorff	SAHRA	021 462 4502 (Tel) P.O. Box 4637 Cape Town 8000 111 Harrington Street Cape Town 8001 redelstorff@sahra.org.za (E-mail)	BID uploaded on SAHRIS on 27/09/2019. SAHRIS was offline, thus Draft Scoping Report was emailed to Ms. Redelstorff on 15/11/2019. Draft Scoping Report uploaded on SAHRIS on 18/11/2019. Final Scoping Report uploaded on SAHRIS on 08/01/2020. Draft EIA Report uploaded on SAHRIS on 17/03/2020.	<p>Comments: SAHRA indicated that they will await the Heritage Impact Assessment ("HIA") and the Paleontological Impact Assessment ("PIA") to be submitted before providing a final comment. They indicated that a field-based PIA is required as the proposed area falls within an area of very high palaeontological sensitivity. Later, SAHRA commented that they have reviewed the Heritage Scoping Report and PIA and has no objections against the development subject to the following conditions:</p> <ul style="list-style-type: none"> ○ Should any objects of archaeological or palaeontological remains be found during construction activities, work must immediately stop in that area and the Environmental Control Officer (ECO) must be informed. ○ The ECO must inform the South African Heritage Recourse Agency (SAHRA) and contact an archaeologist and/or palaeontologist, depending on the nature of the find, to assess the importance and rescue them if necessary (with the relevant SAHRA permit). No work may be resumed in this area without the permission from the ECO and SAHRA. ○ If the newly discovered heritage resource is considered significant a Phase 2 assessment may be required. A permit from the responsible heritage authority will

Contact Person	Organisation	Contact detail	Manner of notification	Comments & Response
				<p>be needed.</p> <ul style="list-style-type: none"> o A Chance Finds Procedures must be developed for the project to ensure that standard protocols and steps are followed should any heritage and/or fossil resources be uncovered during all phases of the project. These procedures should outline the steps and reporting structure to be followed in the instance that heritage resources are found. This must be included in the Environmental Awareness Plan. o The final EIA and appendices must be submitted to SAHRA upon submission to DEA. Should the project be granted Environmental Authorisation, SAHRA must be notified and all relevant documents submitted to the case file. <p>Response</p> <p>A HIA and PIA will be included in the EIA phase of the project and the EIA reports will be submitted to SAHRA. The conditions stipulated by SAHRA following their review of the HIA and PIA will be adhered to. If any archaeological or palaeontological remains are found during construction activities, work will stop immediately and the ECO and SAHRA will be notified. Chance Finds Procedures for the project are included in the HIA and PIA. These appendixes, along with the Final EIA Report will be submitted to SAHRA.</p>
Ms. L. Philip	Free State Heritage Authority	078 448 9307 (Cell) 051 447 9609 (Tel) National Museum 36 Aliwal Street	BID sent via e-mail on 27/09/2019. Draft Scoping Report delivered on 14/11/2019. Final Scoping Report delivered on 09/01/2020. Draft EIA	No comments received.

		Bloemfontein 9301 loudinep@gmail.com loudine.philip@nasmus.co.za (E-mail)	Report delivered on 17/03/2020.	
Mr Anesh Madanlal (Manager)	N3 Toll Concession	PO Box 1052 Harrismith 9880 Bergview Complex, Warden Street Harrismith 9880 058 623 0860 (Tel) aneshm@n3tc.co.za (E-mail)	BID sent via registered mail on 27/09/2019. Draft Scoping Report sent via registered mail on 14/11/2019. Final Scoping Report sent via registered mail on 09/01/2020. Draft EIA Report sent via registered mail on 17/03/2020.	<p>Comments:</p> <p>Mr. Madanlal asked that the N3 Toll Concession be registered as an Interested and Affected Party. He had the following comments:</p> <ol style="list-style-type: none"> 1. Provide intended detail of access on to the N3 and impact of traffic on the N3. 2. Provide a Traffic Impact Assessment. 3. Impact of dust on the N3 4. Impact of lighting on the adjacent N3 traffic. 5. Impact of Emissions/smoke on the safety of the road user on the N3 taking cognisance of change in prevailing wind. 6. Impact of fire hazard 7. Impact of Spillage of hazardous materials on environment and N3TC road reserve. 8. Impact of potential widening of the N3 Road Reserve to accommodate a future Van Reenen Development Project as identified by the Minister of Transport in 2017. 9. Acceptance of storm water runoff from the N3. 10. Building line restriction, both SANRAL and municipal requirements 11. Impact of security and boundary wall/fence. N3TC /

Contact Person	Organisation	Contact detail	Manner of notification	Comments & Response
				<p>SANRAL will not be responsible for maintenance / accident damage.</p> <p>Response: Turn 180 confirmed that the N3 Toll Concession will be registered as an I&AP and will receive all reports. Turn 180 also responded:</p> <ol style="list-style-type: none"> 1. The existing access road where Nywerheids Road connects with the N3 will be used. No new access road is planned. 2. The project will not have an impact on the traffic of the N3, as the site will not be directly accessed from the N3. Please refer to the previous point. 3. Dust monitoring will be implemented to ensure that dust fallout does not exceed the limits. It is planned that the site be paved in the future. If dust proves to be problematic, it will be advised that the site be paved sooner. 4. Lights will be placed so that they face away from the N3 to avoid having impacts on the traffic on the N3. 5. An emulsion plant does not have a stack with smoke emissions. An emulsion plant is primarily a collection of storage tanks. The primary emissions associated with an emulsion plant are fugitive emissions originating from "working and breathing losses" from the storage tanks. The emissions are not to an extent

Contact Person	Organisation	Contact detail	Manner of notification	Comments & Response
				<p>that they will have an impact on traffic in terms of visibility. However, an Atmospheric Impact Assessment will be done as part of the EIA phase and will be included in the EIA reports.</p> <p>6. An emulsion plant has very strict safety regulations and best practices will be followed at all times during the storage of hazardous substances. The applicant has a Fire Safety Management Plant that will be included in the Scoping and EIA reports.</p> <p>7. Best practices will be followed at all times for the storage of hazardous substances. All potentially hazardous substances will be stored in a bunded area with an impermeable surface that can contain 110% of the volume of the substance. If any spills of hazardous substances occur, these spills will be cleaned immediately by disposing of the contaminated soil as hazardous waste. Tanks will be inspected regularly for leaks and if any are found, they will be fixed immediately.</p> <p>8. Could you perhaps provide us with more information on the potential widening of the N3 Road Reserve to accommodate a future Van Reenen Development Project as identified by the Minister of</p>

OMGEWINGSIMAKSTUDIE

NOTICE PUBLIC CONSULTATION PROCESS
Notice is given of an application for Environmental Authorisation ("EA") in terms of the 2014 Environmental Impact Assessment ("EIA") Regulations as amended under the National Environmental Management Act (Act 107 of 1998), for the establishment of an Emulsion Plant on Erf 1559, Harburg, Free State ("Site"). The establishment of an Emulsion Plant is scheduled as a Mocatam Preparation Process that also requires an Atmospheric Emission License ("AEL") in terms of the National Environmental Management Air Quality Act (Act 39 of 2004). The establishment of a process that requires an AEL in terms of legislation governing the release of emissions is also defined as a listed activity in terms of the NEMA EIA Regulations that need AEL. Scoping and Environmental Impact Assessment ("S&EIA") Process will be followed to obtain EA and the AEL for the proposed project. The Competent Authority ("CA") for the EA is the Department of Economic, Small Business Development, Tourism and Environmental Affairs ("DESA") and the CA for the AEL is the Thabo Mofutsanyana District Municipality. The Emulsion Plant will have the capacity to store approximately a total of 1 102 000 L of dangerous substances. This will include 816 000 L Raw Bitumen, 9 000 L Diesel, 23 000 L Paraffin and 254 000 L Bitumen Emulsion. Approximately 5 tons of Caustic Soda and 5 000 L of Hydrochloric Acid will also be stored on site. You are requested to send any issues and/or concerns regarding the proposed project to Turn 180 Environmental Consultants at Suite 221, Private Bag X01, Brandhof, 9324 or 072 873 6665 (t) or 072 967 7962/072 838 8189 (c) or ansune@turn180.co.za (e-mail) within 30 days of the date of this advertisement (on or before 26 October 2019).

OIS OMGEWINGSIMAKSTUDIE

NOTICE PUBLIC CONSULTATION PROCESS
Notice is given of an application for Environmental Authorisation ("EA") in terms of the 2014 Environmental Impact Assessment ("EIA") Regulations as amended under the National Environmental Management Act (Act 107 of 1998), for the establishment of an Emulsion Plant on Erf 1559, Harburg, Free State ("Site"). The establishment of an Emulsion Plant is scheduled as a Mocatam Preparation Process that also requires an Atmospheric Emission License ("AEL") in terms of the National Environmental Management Air Quality Act (Act 39 of 2004). The establishment of a process that requires an AEL in terms of legislation governing the release of emissions is also defined as a listed activity in terms of the NEMA EIA Regulations that need AE. A Scoping and Environmental Impact Assessment ("S&EIA") Process will be followed to obtain EA and the AEL for the proposed project. The Competent Authority ("CA") for the EA is the Department of Economic, Small Business Development, Tourism and Environmental Affairs ("DESTE") and the CA for the AEL is the Thabo Mofutsanyana District Municipality. The Emulsion Plant will have the capacity to store approximately a total of 1 102 000 L of dangerous substances. This will include 816 000 L Raw Bitumen, 9 000 L Diesel, 23 000 L Paraffin and 254 000 L Bitumen Emulsion. Approximately 5 tons of Caustic Soda and 5 000 L of Hydrochloric Acid will also be stored on site. You are requested to send any issues and/or concerns regarding the proposed project to Turn 180 Environmental Consultants at Suite 221, Private Bag X01, Brandhof, 9324 or 072 873 6665 (t) or 072 967 7962/072 838 8189 (c) or ansune@turn180.co.za (e-mail) within 30 days of the date of this advertisement (on or before 26 October 2019).

Site notice at entrance to the proposed site.

ANNEXURE: 3.3

Proof that adjacent landowners and stakeholders received written notification

Example of the Notification and BID delivered/sent to adjacent landowners and stakeholders:

25 September 2019

Dear Interested and Affected Party

NOTICE OF AN APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

Notice is given of an application for Environmental Authorisation ("EA") in terms of the 2014 Environmental Impact Assessment ("EIA") Regulations as amended under the National Environmental Management Act (Act 107 of 1998) ("NEMA"), for the establishment of an Emulsion Plant on erf 1559, Hardustria, Harrismith, Free State ("Site"). The establishment of an Emulsion Plant is scheduled as a Macadam preparation process that also needs an Atmospheric Emission License ("AEL") in terms of the National Environmental Management Air Quality Act (Act 39 of 2004) ("NEM:AQA").

This notification provides stakeholders and / or identified Interested and Affected Parties ("I&AP") with the opportunity to comment on the proposed project and to indicate their interest.

Related Activities

The following activities will be applied for:

GN. R. 893 of the NEM: AQA 2013 Regulations:

- Category 2: Subcategory 2.4: Storage and Handling of Petroleum Products: *"All permanent immobile liquid storage facilities at a single site with a combined storage capacity of greater than 1000 cubic meters."*
- Category 5: Mineral Processing, Storage and Handling, Subcategory 5.10: Macadam Preparation - *"Permanent facilities used for mixtures of aggregate; tar or bitumen to produce road-surfacing materials."*

GN. R. 325 of the NEMA 2014 Regulations as amended:

SUITE 221 | PRIVATE BAG X01 | BRADHOF | 9324

21 DROMEDARIS STREET | DAN PIENAAR | BLOEMFONTEIN | 9301

TEL: 072 967 7962 | E-MAIL: admin@turn180.co.za

- Activity 4 – *“The development and related operation of facilities or infrastructure, for the storage, or storage and handling of a dangerous good, where such storage occurs in containers with a combined capacity of more than 500 cubic metres.”*
- Activity 6 – *“The development of facilities or infrastructure for any process or activity which requires a permit or licence or an amended permit or licence in terms of national or provincial legislation governing the generation or release of emissions, pollution or effluent”.*

Project Description:

- Turn 180 Environmental Consultants was appointed by the applicant (i.e. South African Road Binders (Pty) Ltd.) as Environmental Assessment Practitioner to manage the required authorisation processes on their behalf.
- Applications will be submitted to the Department of Economic, Small Business Development, Tourism and Environmental Affairs (“**DESTEA**”) to obtain EA and to the Thabo Mofutsanyana District Municipality to obtain an AEL.

The development will entail the establishment of an Emulsion Plant for which approximately 0.74 ha of vegetation will need to be cleared. Bitumen emulsion that is produced during the operational phase of the proposed plant will be sold commercially to be used in projects involving the construction and repair of roads. The basic operation of the plant includes mixing heated raw bitumen with water, emulsifiers, chemicals and additives in a colloid mill. The product is then stored in cold storage tanks, ready to be sold. The Emulsion Plant will have the capacity to store approximately a total of 1 102 000 L of dangerous substances. This will include 816 000 L Raw Bitumen, 9 000 L Diesel, 23 000 L Paraffin and 254 000 L Bitumen Emulsion. Approximately 5 tons of Caustic Soda and 5 000 L of Hydrochloric Acid will also be stored on site.

Locality:

The development will involve erf 1559, Hardustria, Harrismith, Free State at the following coordinates:

28°17'46.80"S and 29° 8'15.25"E

Please refer to the map attached hereto (Figure 1) for an indication on the location of the proposed activities.

Proposed Site Description:

- The Site has an approximate footprint of 0.74 ha.
- The Site is currently zoned as “General Industrial”. However, the site may need to be rezoned in order to allow an Emulsion Plant, which falls under Noxious Industrial.
- The Site is not located close to any natural wetlands or watercourses. The closest watercourse is the Wilgeriver, which is located approximately 1.3 km to the southwest of the Site. This will be verified by an ecologist.

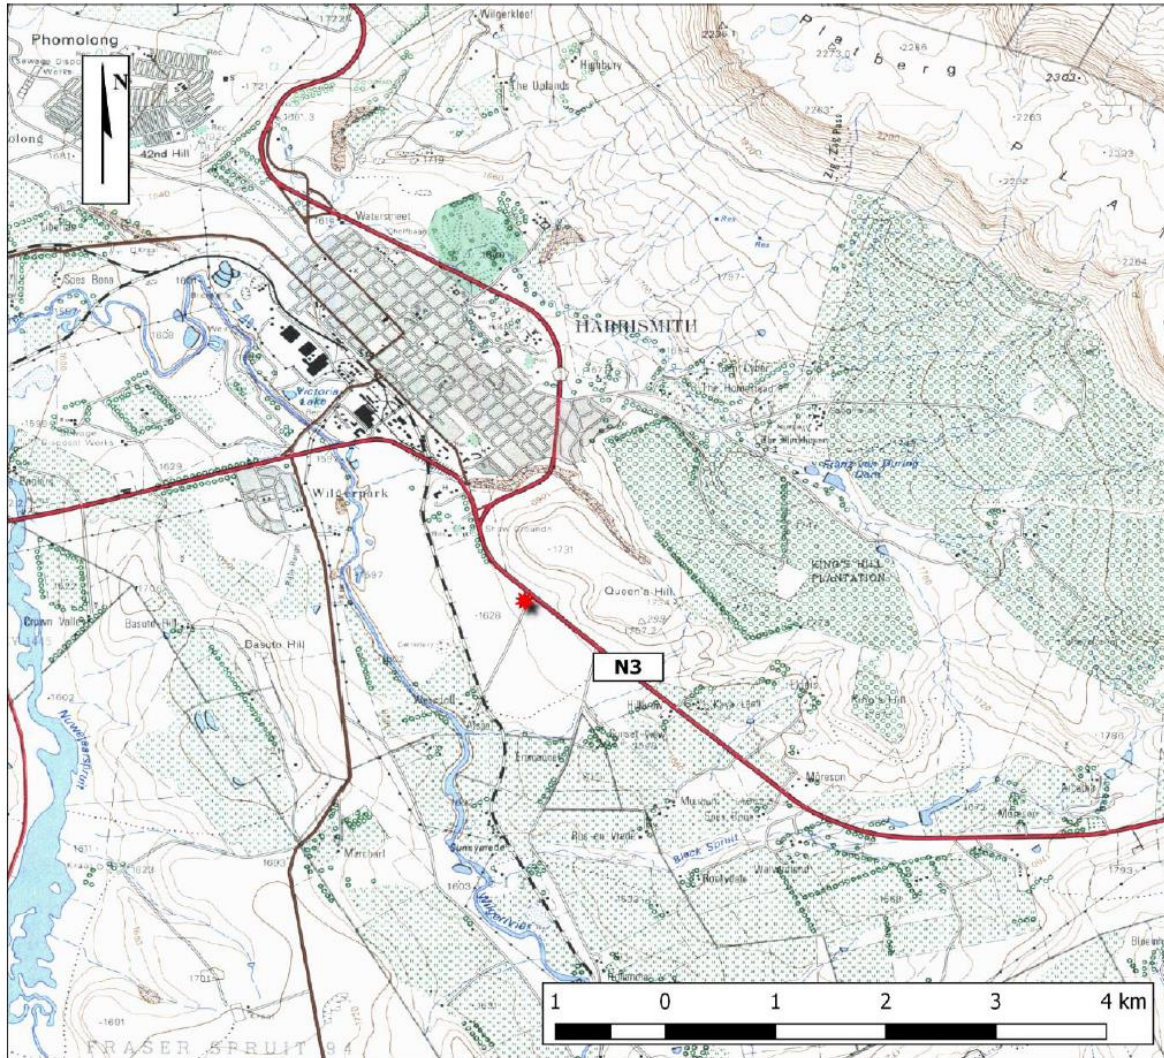

- The Site falls within the Eastern Free State Sandy Grassland (Gm 4) vegetation type, which is classified as Least Concern according to the National List of Threatened Ecosystems (Notice 1477 of 2009) (National Environmental Management Biodiversity Act, 2004). The Site also falls within an Ecological Support Area 1 as per the Free State Biodiversity Management Plan (2015). However, it should be noted that the Site is situated within an industrial area of a town and thus the Site is degraded.

Potential Impacts of Proposed Project and Mitigation Measures:

- Contamination of soil and groundwater resources may occur due to spillage of hazardous substances. However, potentially hazardous substances will be stored inside a bunded area with an impermeable surface which has the capacity to store more than 110% of the volume of the substance.
- The proposed project may have a negative aesthetic impact due to its industrial look, especially since it is located adjacent to a national road. The Site will always be kept clean and neat through correct housekeeping and waste disposal. It should be noted that the Site is located within an industrial area.
- Construction and operational activities will lead to noise and dust generation. Appropriate measures will be taken to minimize this. Activities will only take place during daylight working hours and appropriate dust suppression measures will be implemented if necessary.
- The Emulsion Plant will generate some emissions during operation. An air emission monitoring programme will be implemented and air emissions from the plant will comply with NEM:AQA. An Atmospheric Impact Report will be done as part of the EIA process and will be included in the EIA reports.
- A Heritage and Paleontological Impact Assessment will be conducted as part of the EIA process and will be included in the EIA reports.
- The proposed project will have a positive impact on the socio-economic structure of the area, as jobs may be provided to local people.

Invitation to participate

You are requested to send any issues and/or concerns regarding the proposed project to Turn 180 Environmental Consultants at Suite 221, Private Bag X01, Brandhof, 9324 or 072 873 6665 (T) or 072 967 7962/072 838 8189 (C) or ansune@turn180.co.za / admin@turn180.co.za (e-mail) before **26 October 2019**.

ANNEXURE: 3.4

**Proof that Authorities and Organs of State
received written notification**

Example of Notification and BID delivered/sent to Authorities and Organs of State:

27 September 2019

South African Heritage Resources Agency
111 Harrington Street
Cape Town
8001

Attention: Ms. R. Redelstorf

NOTICE OF AN APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

Notice is given of an application for Environmental Authorisation ("EA") in terms of the 2014 Environmental Impact Assessment ("EIA") Regulations as amended under the National Environmental Management Act (Act 107 of 1998) ("NEMA"), for the establishment of an Emulsion Plant on erf 1559, Hardustria, Harrismith, Free State ("Site"). The establishment of an Emulsion Plant is scheduled as a Macadam preparation process that also needs an Atmospheric Emission License ("AEL") in terms of the National Environmental Management Air Quality Act (Act 39 of 2004) ("NEM:AQA").

This notification provides stakeholders and / or identified Interested and Affected Parties ("I&AP") with the opportunity to comment on the proposed project and to indicate their interest.

Related Activities

The following activities will be applied for:

GN. R. 893 of the NEM: AQA 2013 Regulations:

- Category 2: Subcategory 2.4: Storage and Handling of Petroleum Products: *"All permanent immobile liquid storage facilities at a single site with a combined storage capacity of greater than 1000 cubic meters."*
- Category 5: Mineral Processing, Storage and Handling, Subcategory 5.10: Macadam Preparation - *"Permanent facilities used for mixtures of aggregate; tar or bitumen to produce road-surfacing materials."*

GN. R. 325 of the NEMA 2014 Regulations as amended:

- Activity 4 – *“The development and related operation of facilities or infrastructure, for the storage, or storage and handling of a dangerous good, where such storage occurs in containers with a combined capacity of more than 500 cubic metres.”*
- Activity 6 – *“The development of facilities or infrastructure for any process or activity which requires a permit or licence or an amended permit or licence in terms of national or provincial legislation governing the generation or release of emissions, pollution or effluent”.*

Project Description:

- Turn 180 Environmental Consultants was appointed by the applicant (i.e. South African Road Binders (Pty) Ltd.) as Environmental Assessment Practitioner to manage the required authorisation processes on their behalf.
- Applications will be submitted to the Department of Economic, Small Business Development, Tourism and Environmental Affairs (“**DESTEA**”) to obtain EA and to the Thabo Mofutsanyana District Municipality to obtain an AEL.

The development will entail the establishment of an Emulsion Plant for which approximately 0.74 ha of vegetation will need to be cleared. Bitumen emulsion that is produced during the operational phase of the proposed plant will be sold commercially to be used in projects involving the construction and repair of roads. The basic operation of the plant includes mixing heated raw bitumen with water, emulsifiers, chemicals and additives in a colloid mill. The product is then stored in cold storage tanks, ready to be sold. The Emulsion Plant will have the capacity to store approximately a total of 1 102 000 L of dangerous substances. This will include 816 000 L Raw Bitumen, 9 000 L Diesel, 23 000 L Paraffin and 254 000 L Bitumen Emulsion. Approximately 5 tons of Caustic Soda and 5 000 L of Hydrochloric Acid will also be stored on site.

Locality:

The development will involve erf 1559, Hardustria, Harrismith, Free State at the following coordinates:

28°17'46.80"S and 29° 8'15.25"E

Please refer to the map attached hereto (Figure 1) for an indication on the location of the proposed activities.

Proposed Site Description:

- The Site has an approximate footprint of 0.74 ha.
- The Site is currently zoned as “General Industrial”. However, the site may need to be rezoned in order to allow an Emulsion Plant, which falls under Noxious Industrial.
- The Site is not located close to any natural wetlands or watercourses. The closest watercourse is the Wilgeriver, which is located approximately 1.3 km to the southwest of the Site. This will be verified by an ecologist.

- The Site falls within the Eastern Free State Sandy Grassland (Gm 4) vegetation type, which is classified as Least Concern according to the National List of Threatened Ecosystems (Notice 1477 of 2009) (National Environmental Management Biodiversity Act, 2004). The Site also falls within an Ecological Support Area 1 as per the Free State Biodiversity Management Plan (2015). However, it should be noted that the Site is situated within an industrial area of a town and thus the Site is degraded.

Potential Impacts of Proposed Project and Mitigation Measures:

- Contamination of soil and groundwater resources may occur due to spillage of hazardous substances. However, potentially hazardous substances will be stored inside a bunded area with an impermeable surface which has the capacity to store more than 110% of the volume of the substance.
- The proposed project may have a negative aesthetic impact due to its industrial look, especially since it is located adjacent to a national road. The Site will always be kept clean and neat through correct housekeeping and waste disposal. It should be noted that the Site is located within an industrial area.
- Construction and operational activities will lead to noise and dust generation. Appropriate measures will be taken to minimize this. Activities will only take place during daylight working hours and appropriate dust suppression measures will be implemented if necessary.
- The Emulsion Plant will generate some emissions during operation. An air emission monitoring programme will be implemented and air emissions from the plant will comply with NEM:AQA. An Atmospheric Impact Report will be done as part of the EIA process and will be included in the EIA reports.
- A Heritage and Paleontological Impact Assessment will be conducted as part of the EIA process and will be included in the EIA reports.
- The proposed project will have a positive impact on the socio-economic structure of the area, as jobs may be provided to local people.

Invitation to participate

You are requested to send any issues and/or concerns regarding the proposed project to Turn 180 Environmental Consultants at Suite 221, Private Bag X01, Brandhof, 9324 or 072 873 6665 (T) or 072 967 7962/072 838 8189 (C) or ansune@turn180.co.za / admin@turn180.co.za (e-mail) before **28 October 2019**.

Proof of submission on SAHRIS:

The image shows two screenshots of the SAHRIS website. The top screenshot displays the case details for 'Harrismith Emulsion'. The status is 'SUBMITTED'. The case type is 'Section 38 (8) - Statutory Comment Required'. The proposal description is 'APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE'. The application date is Friday, September 27, 2019 - 13:40. The case ID is 14374. The applicant is South African Road Binders (Pty) Ltd. The consultant is Louis De Villiers. There is a table for 'OtherReferences' with columns: Dept, CaseReference, DueDate, and FinalDecision. The table contains one entry: DESTEA. Below this is a section for 'AdditionalDocuments' with a list of 6 items: 1. Background Information Document, 2. Draft Scoping Report, 3. Annexure 1 - Project Team, 4. Annexure 1 - Project Team, 5. Annexure 2 - Locality Map and Layout Plan, and 6. Annexure 2 - Locality Map and Layout Plan. To the right, there is a section for 'Official Decisions & Comments' with a table showing two entries: 19/12/2019 Interim Comment and 11/10/2019 Interim Comment. There are also social media sharing buttons for Like, Tweet, and LinkedIn.

The bottom screenshot shows a scrollable list of 33 documents. The list includes: 6. Annexure 2 - Locality Map and Layout Plan, 7. Annexure 2 - Locality Map and Layout Plan, 8. Annexure 2 - Locality Map and Layout Plan, 9. Annexure 3 - Public Participation, 10. Annexure 4 - Photographic Report, 11. Annexure 5 - Other Information, 12. Annexure 5 - Other Information, 13. Annexure 5 - Other Information, 14. Annexure 5 - Other Information, 15. Annexure 5 - Other Information, 16. Annexure 5 - Other Information, 17. Annexure 5 - Other Information, 18. Final Scoping Report, 19. Annexure 1 - Project Team, 20. Annexure 1 - Project Team, 21. Annexure 2 - Locality Map and Layout Plan, 22. Annexure 2 - Locality Map and Layout Plan, 23. Annexure 2 - Locality Map and Layout Plan, 24. Annexure 2 - Locality Map and Layout Plan, 25. Annexure 3 - Public Participation, 26. Annexure 4 - Photographic Report, 27. Annexure 5 - Other Information, 28. Annexure 5 - Other Information, 29. Annexure 5 - Other Information, 30. Annexure 5 - Other Information, 31. Annexure 5 - Other Information, 32. Annexure 5 - Other Information, and 33. Annexure 5 - Other Information.

Comments and responses report

Comments from I&AP regarding BID delivered/sent:

Comments from authorities and organs of state and feedback given:

N3 Toll Concession (Mr. Anesh Madanlal):

From: Anesh Madanlal
Sent: 24 October 2019 13:01
To: 'asune@turn180.co.za'
Cc: 'admin@turn180.co.za'
Subject: Emulsion Plant Harrismith (EIA) _N3TC IAP

Good Day Ansune

Would you please register N3 Toll Concession (RF) Proprietary Limited as an interested and affected party and we place our comments; listed below on record.

1. Provide intended detail of access on to the N3 and impact of traffic on the N3.
2. Provide a Traffic Impact Assessment.
3. Impact of dust on the N3
4. Impact of lighting on the adjacent N3 traffic.
5. Impact of Emissions/smoke on the safety of the road user on the N3 taking cognisance of change in prevailing wind.
6. Impact of fire hazard
7. Impact of Spillage of hazardous materials on environment and N3TC road reserve.
8. Impact of potential widening of the N3 Road Reserve to accommodate a future Van Reenen Development Project as identified by the Minister of Transport in 2017.
9. Acceptance of storm water runoff from the N3.
10. Building line restriction, both SANRAL and municipal requirements
11. Impact of security and boundary wall/fence. N3TC / SANRAL will not be responsible for maintenance / accident damage.

Forward all correspondence to:

Mr. Douglas Judd, e-mail douglasj@n3tc.co.za, PO Box 67166, Highveld Park, 0169, tel: 087 285 6382

Mr. Anesh Madanlal – e-mail aneshm@n3tc.co.za, P.O. Box 1052, Harrismith, 9880. Tel 058 623 0860

Kind Regards,

Anesh Madanlal
Route Maintenance Manager

Good day Mr. Madanlal

My apologies for only responding to your email now. I've been out of office at sites yesterday and early this morning.

We have received your comments and you have been registered as an Interested and Affected Party. You will receive all future reports regarding this project.

I have also sent your comments on to the applicant. Once I receive a response from them regarding certain concerns that you had, I will formally answer your comments.

I trust you will find the above-mentioned in order. Please do not hesitate to contact us for any further information.

Kind regards

ANSUNÉ WEITSZ

To: 'Anesh Madanlal'
Subject: RE: Emulsion Plant Harrismith (EIA) _N3TC IAP

Good day Mr. Madanlal

This email serves as a response to your comments received by our office on 24 October 2019.

1. The existing access road where Nywerheids Road connects with the N3 will be used. No new access road is planned.
2. The project will not have an impact on the traffic of the N3, as the site will not be directly accessed from the N3. Please refer to the previous point.
3. Dust monitoring will be implemented to ensure that dust fallout does not exceed the limits. It is planned that the site be paved in the future. If dust proves to be problematic, it will be advised that the site be paved sooner.
4. Lights will be placed so that they face away from the N3 to avoid having impacts on the traffic on the N3.
5. An emulsion plant does not have a stack with smoke emissions. An emulsion plant is primarily a collection of storage tanks. The primary emissions associated with an emulsion plant are fugitive emissions originating from "working and breathing losses" from the storage tanks. The emissions are not to an extent that they will have an impact on traffic in terms of visibility. However, an Atmospheric Impact Assessment will be done as part of the EIA phase and will be included in the EIA reports.
6. An emulsion plant has very strict safety regulations and best practices will be followed at all times during the storage of hazardous substances. The applicant has a Fire Safety Management Plant that will be included in the Scoping and EIA reports.
7. Best practices will be followed at all times for the storage of hazardous substances. All potentially hazardous substances will be stored in a bunded area with an impermeable surface that can contain 110% of the volume of the substance. If any spills of hazardous substances occur, these spills will be cleaned immediately by disposing of the contaminated soil as hazardous waste. Tanks will be inspected regularly for leaks and if any are found, they will be fixed immediately.
8. Could you perhaps provide us with more information on the potential widening of the N3 Road Reserve to accommodate a future Van Reenen Development Project as identified by the Minister of Transport in 2017?
9. Storm water management measures in the form of berms and/or culverts will be constructed around the site to divert clean storm water originating from the N3 road around the site into natural drainage lines.
10. A surveyor was appointed to delineate the site according to the Title Deed.
11. The site will be surrounded by a 2.5 to 3 m tall wall. This will reduce the visual impact of the plant and also provide security. A security guard will also be present on site, especially during night time.

We trust you will find the above in order. Please do not hesitate to contact us for any further information.

Kind regards

ANSUNÉ WEITSZ

Interim Comment

In terms of Section 38(8) of the National Heritage Resources Act (Act 25 of 1999)

Attention: South African Road Binders (Pty) Ltd

APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

The proposed project entails the establishment of an emulsion plant on Erf 1559, Hardustria, Harrismith, Free State Province. The Background Information Document noted that "a Heritage and Paleontological Impact Assessment will be conducted as part of the EIA process and will be included in the EIA reports".

Interim comment

The SAHRA Archaeology, Palaeontology and Meteorites (APM) Unit awaits the HIA and PIA to be submitted to the application before providing a final comment. It must be noted that a field-based PIA is required as the proposed area falls within an area of very high palaeontological sensitivity.

Should you have any further queries, please contact the designated official using the case number quoted above in the case header.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Ragna Redelstorff'.

Final Comment

In terms of Section 38(8) of the National Heritage Resources Act (Act 25 of 1999)

Attention: South African Road Binders (Pty) Ltd

APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

The proposed project entails the establishment of an emulsion plant on Erf 1559, Hardustria, Harrismith, Free State Province. A Heritage desktop Scoping Report and Paleontological Impact Assessment (PIA) were submitted to the case as requested in interim comments from 11 October 2019 and 19 December 2019, together with the draft EIA.

PHILIP, L. 2020. HERITAGE SCOPING REPORT OF ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE PROVINCE, FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT.

The author concluded from a literature research that no archaeological or built environment heritage resources are likely to be impacted due to prior disturbance by the clearing of the natural vegetation and installation of water, sewerage and electrical infrastructure in the establishment of the industrial suburb, Hardustria. A Chance Find Procedure is attached and must be implemented.

BUTLER, E. 2020. PALAEOLOGICAL FIELD ASSESSMENT FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

The proposed development footprint area is underlain by sedimentary rocks of the Normandien Formation (Adelaide Subgroup, Beaufort Group, Karoo Supergroup), which are of very high palaeontological sensitivity. A field survey revealed no evidence of fossiliferous outcrops, and as such an overall low palaeontological sensitivity is allocated to the development footprint area. A Chance Find Protocol must be implemented by the ECO/site manager in charge of these developments.

Final comment

The SAHRA APM Unit has reviewed the Heritage Scoping Report and PIA and has no objections against the development subject to the following conditions that must be adhered to and must be incorporated into the Environmental Management Programme (EMPr) for implementation:

1. Should any objects of archaeological or palaeontological remains be found during construction activities, work must immediately stop in that area and the Environmental Control Officer (ECO) must be informed.
2. The ECO must inform the South African Heritage Recourse Agency (SAHRA) and contact an archaeologist and/or palaeontologist, depending on the nature of the find, to assess the importance and rescue them if necessary (with the relevant SAHRA permit). No work may be resumed in this area without the permission from the ECO and SAHRA.
3. If the newly discovered heritage resource is considered significant a Phase 2 assessment may be required. A permit from the responsible heritage authority will be needed.
4. A Chance Finds Procedures must be developed for the project to ensure that standard protocols and steps are followed should any heritage and/or fossil resources be uncovered during all phases of the project. These procedures should outline the steps and reporting structure to be followed in the instance that heritage resources are found. This must be included in the Environmental Awareness Plan.
5. The final EIA and appendices must be submitted to SAHRA upon submission to DEA. Should the project be granted Environmental Authorisation, SAHRA must be notified and all relevant documents submitted to the case file.

Should you have any further queries, please contact the designated official using the case number quoted above in the case header.

Yours faithfully

Attention: Mr. Hennie de Winnaar

APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

This letter serves as a response to the comments we received from you per e-mail on 27 September 2019 regarding the above-mentioned project.

Please note that the developer will make health, safety and environmental aspects a priority during the construction and operational phases of the project. The developer aims to have a good relationship with the surrounding community.

Best Practices will be followed at all times for the storage of hazardous substances (diesel, paraffin and bitumen):

- Hazardous substances will be stored in bunded areas with impermeable surfaces. These bunded areas will be able to contain 110% of the volume of the stored substance.
- Storage tanks will be inspected regularly for leaks and if leaks are detected they will be fixed immediately.
- If any spills of hazardous substances occur, the spill will be cleaned immediately.
- Storm water management measures will be implemented on site.
 - Berms and/or trenches will be constructed around site to divert clean storm water around the site and to prevent dirty storm water from leaving the site.

SUITE 221 | PRIVATE BAG X01 | BRANDHOF | 9324

21 DROMEDARIS STREET | DAN PIENAAR | BLOEMFONTEIN | 9301

TEL: 072 967 7962 | E-MAIL: admin@turn180.co.za

- o Storm water will never be allowed to pond on site.

The developer will implement measures to reduce the visual impacts of the plant. A wall of 2.5 to 3 m high will be constructed around the site. If deemed necessary, the developer will also investigate other measures, such as planting trees along the wall in order to reduce the visual impact. All activities relating to the plant will also take place within the property boundaries.

It should be noted that an Emulsion Plant does not have a stack that releases smoke into the atmosphere. An Emulsion Plant is essentially a collection of tanks that stores, heats and mixes bitumen emulsion, a substance that is used during road surfacing. The only emissions associated with an Emulsion Plant are fugitive emissions due to breathing and working losses originating from the tanks that heat the bitumen. However, an Atmospheric Impact Assessment will be conducted as part of the EIA phase of the project in order to assess the possible impacts, including health impacts, of the plant. The specialist conducting this assessment was also notified of your concern regarding the impact on your seeds and they will investigate this. A Dust Fallout Monitoring Programme will also be implemented if dust generation proves to be problematic. This programme will be implemented up until the site and all roads are paved.

All potential impacts of the proposed development, along with mitigation and management measures for these impacts, will be discussed in detail in the Scoping and EIA Reports for the project. As you have registered as an Interested and Affected Party, you will receive all future reports for the project.

If any other measures, in addition to the measures mentioned above, are thought of in order to reduce any potential impacts on your property, please feel free to contact us.

We trust you will find this in order. Please do not hesitate to contact us for any further information regarding this project.

Kind regards

Ansuné Weitz

147 North Reef Road
Bedfordview
2008

Attention: Mr. Steven Gottschalk
cc. Mr. Guy Nicolson

APPLICATION FOR ENVIRONMENTAL AUTHORISATION AND AN ATMOSPHERIC EMISSION LICENSE FOR THE PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH, FREE STATE.

This letter serves as a response to the comments we received from you per e-mail on 4 October 2019 regarding the above-mentioned project.

Please note that the developer will make health, safety and environmental aspects a priority during the construction and operational phases of the project. The developer aims to have a good relationship with the surrounding community.

Best Practices will be followed at all times for the storage of hazardous substances (diesel, paraffin and bitumen):

- Hazardous substances will be stored in bunded areas with impermeable surfaces. These bunded areas will be able to contain 110% of the volume of the stored substance.
- Storage tanks will be inspected regularly for leaks and if leaks are detected they will be fixed immediately.
- If any spills of hazardous substances occur, the spill will be cleaned immediately.
- Storm water management measures will be implemented on site.
 - o Berms and/or trenches will be constructed around site to divert clean storm water around the site and to prevent dirty storm water from leaving the site.

SUITE 221 | PRIVATE BAG X01 | BRANDHOF | 9324

21 DROMEDARIS STREET | DAN PIENAAR | BLOEMFONTEIN | 9301

TEL: 072 967 7962 | E-MAIL: admin@turn180.co.za

- o Storm water will never be allowed to pond on site.

The developer will implement measures to reduce the visual impacts of the plant. A wall of 2.5 to 3 m high will be constructed around the site. If deemed necessary, the developer will also investigate other measures, such as planting trees along the wall in order to reduce the visual impact. All activities relating to the plant will also take place within the property boundaries.

It should be noted that an Emulsion Plant does not have a stack that releases smoke into the atmosphere. An Emulsion Plant is essentially a collection of tanks that stores, heats and mixes bitumen emulsion, a substance that is used during road surfacing. The only emissions associated with an Emulsion Plant are fugitive emissions due to breathing and working losses originating from the tanks that heat the bitumen. However, an Atmospheric Impact Assessment will be conducted as part of the EIA phase of the project in order to assess the possible impacts, including health impacts, of the plant. A Dust Fallout Monitoring Programme will also be implemented if dust generation proves to be problematic. This programme will be implemented up until the site and all roads are paved.

All potential impacts of the proposed development, along with mitigation and management measures for these impacts, will be discussed in detail in the Scoping and EIA Reports for the project. As you have registered as an Interested and Affected Party, you will receive all future reports for the project.

If any other measures, in addition to the measures mentioned above, are thought of in order to reduce any potential impacts on your property, please feel free to contact us.

We trust you will find this in order. Please do not hesitate to contact us for any further information regarding this project.

Kind regards

Ansuné Weitsz

Subject: RE: PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH

Hello Ansune

PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559 HARDUSTRIA – HARRISMITH – COMMENTS ON DRAFT ENVIRONMENTAL IMPACT REPORT

Thank you for the draft Environmental Impact Report of March 2020 for the above project which I have reviewed. The delay in response is related to the intervening lockdown period, within which the specialist referred to below who assisted my in the comments was not available.

In this regard, I forwarded the report and its specialist Atmospheric Impact Report prepared by uMoya-Nilu dated 29th November 2019 to Mr. Peter Butland, an air impact assessment specialist of the firm Coex for review, and please see his review letter attached. You will see in his letter that Peter Butland has a number of queries / questions that need to be responded to by your own atmospheric impact assessment specialists in order for him to get more clarity on certain aspects of the project. These queries / questions are covered in the series of bullet points within his letter.

As my client, Value Logistics, has a light industrial type warehouse sensitive to air pollution impacts adjacent to the applicant site, and also that it is intended to rezone your applicant site from General Industrial to Noxious, you will appreciate that it is important that any of the raised queries are fully addressed in your responses to these queries, and that these responses that adequately address these concerns are provided both to myself and the competent authorities in the manner appropriate to the EIA process under way.

Thank you for the opportunity to provide this review and response.
Kind regards

Guy Nicolson MSc.Prof.Sci.Nat.
GUY NICOLSON CONSULTING CC

Attention: Guy Nicolson

Dear Guy;

Re: Review of Atmospheric Impact Report (AIR) for a proposal by South African Road Binders' to install and operate an emulsion plant in Harrismith in the Free State

Value Logistics operate a facility in Harrismith in the Free State province. You requested on behalf of Value Logistics that I conduct a brief review of an Atmospheric Impact Report (AIR) for a proposed bitumen emulsion plant in Harrismith and that I comment on the AIR. At the outset it is worth noting the following:

- I have accepted all of the results documented in the AIR in good faith and I have not calculated any air emissions or conducted any dispersion modelling in conducting the review.
- I have had approximately 25 years' experience on environmental issues (in particular air emission issues) associated with industrial processes. In this time, I have encountered a wide range of industrial processes but I have had no past experience on bitumen emulsion plants. As such I am not aware of any potential air quality issues that may be specifically associated with bitumen emulsion plants.

The AIR was conducted by uMOYA-NILU who are, in my opinion, competent to undertake the AIR study. I have briefly reviewed the AIR and I do not currently anticipate that the proposed plant is likely to have a significant adverse impact on ambient air quality (and associated human health) based on the results of the AIR and based on the assessment documented in the AIR. However, I have a number of queries / questions in order to get more clarity on certain aspects of the project. I list these questions below:

- Emissions from two different sources have been quantified in the emission inventory namely emissions from the combustion of diesel and emissions from the storage of heated bitumen. The proposed production process involves further activities in addition to the combustion of diesel and the storage of bitumen such as the blending of bitumen emulsions etc.

Are any emissions generated or anticipated in the balance of the production process (such as the blending of bitumen emulsions etc.)?

If yes, were they quantified and included in the emission inventory? If no, then on what basis did the consultants conclude that no emissions were anticipated from the balance of the production process?

- Were any potential sources of dust / particulate matter emissions identified apart from the combustion of diesel?

(I would not anticipate any other significant sources of particulate matter emissions based on the process description of the proposed plant given in the AIR. However, it is stated on Page 12 of the AIR that Chapter 13 of AP-42 entitled *Miscellaneous Sources* was a “chapter of interest.” Chapter 13 considers potentially significant sources of dust / particulate matter emissions such as paved and unpaved roads, aggregate handling and storage piles and wind erosion and I therefore want to establish whether any of these sources such as aggregate handling or storage piles, roads with elevated silt loadings etc will be present at the proposed site).

- In connection with emissions of organic substances, the AIR estimates benzene, toluene, ethyl benzene and xylene (BTEX) emissions and evaluates potential health risks associated with these emissions. It is my understanding that a non-volatile petroleum product such as bitumen will typically contain negligible levels of volatile aromatic substances such as BTEX. On the other hand, volatile petroleum products (e.g. gasoline) can contain high levels of BTEX.

I am not surprised with the conclusion in the AIR that “*the impact of modelled ambient concentrations of ... BTEX are well below the respective national and international health-based ambient air quality standards and guidelines*” as I would expect bitumen to contain negligible BTEX. I am however concerned that the AIR does not consider any emissions of organic substances apart from BTEX. In particular, I am concerned that emissions of polycyclic aromatic hydrocarbons (PAHs) have not been considered in the study. The Wikipedia article for polycyclic aromatic hydrocarbons notes that “*industrial activity that can produce and distribute PAHs includes aluminum, iron, and steel manufacturing; coal gasification, tar distillation, shale oil extraction; production of coke, creosote, carbon black, and calcium carbide; road paving and asphalt manufacturing; rubber tire production; manufacturing or use of metal working fluids; and activity of coal or natural gas power stations*” and notes further that “*cancer is a primary human health risk of exposure to PAHs*”. Section 11.1 of AP-42 dealing with emissions from hot mix asphalt plants (which utilize bitumen as a raw material) gives emission factors for PAHs which indicates that PAH emissions could be anticipated from processes which utilize heated bitumen. **It would be appreciated if the AIR could consider the potential for PAH emissions and any associated health risk.**

- Section 2.1 of the AIR notes that 2 listed activities defined in terms of Section 21 of the National Environmental Management: Air Quality Act (Act No. 39 of 2004) will be triggered; namely:
 - *Listed Activity Subcategory 2.4 for the Storage and Handling of Petroleum Products;*
 - and,
 - *Listed Activity Subcategory 5.10 for Macadam Preparation.*

Will *Listed Activity Subcategory 3.3 entitled Tar Processes* and described (or defined) as “*processes in which tar, creosote or any other product of distillation of tar is distilled or is heated in any manufacturing process*” also be triggered by the proposed plant and if not, why not?

- Please confirm whether all onsite roads (for employees, raw material and product deliveries etc) will be paved?
- Could proposed storage and use of hydrochloric acid result in emissions of hydrochloric acid / hydrogen chloride? If yes, then should the potential impact be assessed?
- Could the proposed emulsion plant to result in odorous air emissions? If yes, then should this not be assessed?

Please do not hesitate to contact me if you have any queries in connection with this correspondence.

Kind regards

Peter Butland

On the other hand, volatile petroleum products (e.g. gasoline) can contain high levels of BTEX.</p> <p>I am not surprised with the conclusion in the AIR that "the impact of modelled ambient concentrations of ... BTEX are well below the respective national and international healthbased ambient air quality standards and guidelines" as I would expect bitumen to</p>	<p>PAH's are present in bitumen in very low quantities and with lower-ring compounds, such as naphthalene, and significantly fewer five- or seven-ring compounds such as benzo-a-pyrene (IARC, 2011). Coal tar and petroleum pitch are associated with much higher levels of PAH's.</p> <p>The emulsion process is a closed system in a tank and therefore does not generate process emissions.</p>

	<p>contain negligible BTEX. I am however concerned that the AIR does not consider any emissions of organic substances apart from BTEX. In particular, I am concerned that emissions of polycyclic aromatic hydrocarbons (PAHs) have not been considered in the study. The Wikipedia article for polycyclic aromatic hydrocarbons notes that "industrial activity that can produce and distribute PAHs includes aluminum, iron, and steel manufacturing; coal gasification, tar distillation, shale oil extraction; production of coke, creosote, carbon black, and calcium carbide; road paving and asphalt manufacturing; rubber tire production; manufacturing or use of metal working fluids; and activity of coal or natural gas power stations" and notes further that "cancer is a primary human health risk of exposure to PAHs". Section 11.1 of AP-42 dealing with emissions from hot mix asphalt plants (which utilize bitumen as a raw material) gives emission factors for PAHs which indicates that PAH emissions could be anticipated from processes which utilize heated bitumen. It would be appreciated if the AIR could consider the potential for PAH emissions and any associated health risk.</p>	<p>It should be noted that the emulsion plant is a separate process from asphalt process, and therefore the reference text mentioned is not applicable.</p>
4.	<p>Section 2.1 of the AIR notes that 2 listed activities defined in terms of Section 21 of the National Environmental Management: Air Quality Act (Act No. 39 of 2004) will be triggered; namely:</p> <ul style="list-style-type: none"> o Listed Activity Subcategory 2.4 for the Storage and Handling of Petroleum Products; and, o Listed Activity Subcategory 5.10 for Macadam Preparation. <p>Will Listed Activity Subcategory 3.3 entitled Tar Processes and described (or defined) as "processes in which tar, creosote or any other product of distillation of tar is distilled or is heated in any manufacturing process" also be triggered by the proposed plant and if not, why not?</p>	<p>The sub-category 3.3 is not applicable. Tar and bitumen are different substances. In addition, the asphalt process is not evaluated in this AIR.</p>
5.	<p>Please confirm whether all onsite roads (for employees, raw material and product deliveries etc) will be paved?</p>	<p>Yes, onsite roads will be paved.</p>
6.	<p>Could proposed storage and use of hydrochloric acid result in emissions of hydrochloric acid / hydrogen chloride? If yes, then should the potential impact be assessed?</p>	<p>The storage and use of hydrochloric acid is in very low quantities and does not trigger the sub-category 7.2 of Section 21. Therefore it was not evaluated. The emulsion process is a closed system in a tank and therefore does not generate process emissions.</p>
7.	<p>Could the proposed emulsion plant to result in odorous air emissions? If yes, then should this not be assessed?</p>	<p>No substance in use at the plant was associated with an obvious odorous emission. This was not evaluated.</p>

Good day Mr. Forbes

Thank you for contacting our office. I will register you as an Interested and Affected Party.

The Draft Scoping Report and its Appendixes was sent out to all other I&APs yesterday. I will send this report to you via We Transfer. You will receive a link via email and if you follow this link you will be able to download the files. The files will be available for download for 7 days.

If you prefer to also receive a CD of the report, please let me know and I will send one to you on Monday. In this case, please just provide me with a postal address.

We trust you find the above-mentioned in order.

Kind regards

ANSUNÉ WEITSZ

Dear Ansune,

Thanks for your email and the link.

I have downloaded the relevant documents.

I don't require a CD, but for your records my postal address is:

26 Plantations
47 Shongweni Road
Hillcrest 3610

It is noted that you have not directly responded to a potential deleterious impact on value of adjacent properties raised by Guy Nicolson. Will this aspect be addressed in the final report?

1

Kind regards,

John Forbes Pr.PlIn

Good day Mr. Forbes,

The comment made by Mr. Nicolson regarding the impact on the value of adjacent properties has been noted. However, this is seen as an issue that relates more to the Town Planning side of the project. The Town Planners for the project have been notified about this comment as an application for rezoning will be made.

It should be noted that the property for the proposed project does fall within an industrial area.

However, we attempted to respond to Mr. Nicolson's comment by addressing measures of how aesthetic impacts will be reduced, as this may be related to the impact on property values.

We trust you will find this in order.

Kind regards

Hi Asune,

1

The Final Scoping Report does not shed any more light on the town planning aspects of the proposal.

Please would you kindly refer this email to your principals with a view to establishing:-

- When the special consent for a non-primary land use is to be sought,
- By whom, and their contact details, and
- The contact details of the planning department responsible for Harrismith within the Maluti-a-Phofung Municipality with whom the special consent application has been, or is to be, lodged.

Contact details if possible to include names, phone numbers and email addresses.

Many thanks and kind regards,

John A Forbes Pr.PlIn. Reg. No. A/457/1986

Dear Ansune,

Thank you link from which I have downloaded the respective files. I note your comment in the Draft EIA Report that the town planning aspects raised have been referred to the Town Planners for the project - see below in italics, however to date I have heard nothing back from from them and have NO contact details. Further you have not specifically responded to my earlier requests of 13 and 15 January 2020 for same. It would be highly appreciated if you would provide such contacts.

1

As I am sure you appreciate, from news reports the Maluti-a-Phofung Municipality appears all but dysfunctional and attempts to contact them have proved fruitless. I am hoping that the project's town planners, who presumably work in the area, may be more *au fait* with the situation on the ground.

Kind regards,

John A Forbes Pr.Pl.n. Reg. No. A/437/1986

Good day Mr. Forbes

My apologies for not sending you any contact details yet. However, as indicated in the response that was sent to you on 15 January, your request and comments were forwarded to the Town Planners.

I have been awaiting a response from the Town Planners regarding this. They have been struggling to contact someone from the municipality regarding the land use change.

I just contacted the Town Planners again and it seems that they have managed to get a hold of someone at the municipality. I have asked the Town Planners to contact you in regards to your request. You should receive an email from them soon. They will also provide you with the details of their contact person at the municipality.

I hope you find this in order.

Kind regards

Subject: PROPOSED ESTABLISHMENT OF AN EMULSION PLANT ON ERF 1559, HARDUSTRIA, HARRISMITH

Good Morning Ansune,

Thank you for your query this morning.

I received the following reply from Hein Potgieter of Urban Dynamics Town and Regional Planners:-

"We intent submitting the land use application once the EA as well as all the necessary comments from municipal departments have been obtained.

The contact details of the municipal official is as follows:

Tsoeu Mokomatsili: Pr. PIn A054/2008

Maluti-A-Phofung Local Municipality

Private Bag x 805

Witsieshoek

9870

Cell: 079 084 3014"

I subsequently made contact with Tsoeu Mokomatsili of the Municipality who supplied me with an electronic copy of the Harrismith Town Planning Scheme but who was unable, due to size constraints, to forward me a copy of the scheme map which would have showed the actual zoning of the site.

Assuming the existing zoning is industry, as stated in your document, there are three potential industrial zones that it could be - Light, General or Noxious Industry. If the the site is zoned anything other than Noxious Industry, which would allow it to proceed, there is no special consent option under either Light or General Industry zones that would alternatively allow it by the consent procedure.

Erf 1559 would therefore have to be rezoned to Noxious Industry. The uses permitted in this zone are defined in the Scheme's Schedule A - see extract below:

SCHEDULE A

NOXIOUS INDUSTRIES

The following businesses are classified as noxious industries for the purposes of the Scheme:

(i) Brick-kilns, lime-kilns, coke-ovens, salt-glazing works, sintering of sulphur-bearing materials, smelting of ores or minerals, calcinating, puddling and rolling of iron and other metals, annealing, hardening, forging, converting and carburising of iron or other metals. Works which are to produce or will use the following: Cellulose Lacquers, cyanogens or cyanogen compounds, hot pitch or bitumen, pyridine, liquid or gaseous sulphur dioxides, sulphur-chlorides. Works which produce acetate of amyl, aromatic esters, butyric acid, caramel, enamelled wire, glass, hexamine (hexamethylenetetramine), iodoform, lampblack, B-naphthol, resin products other than synthetic resin powders, salicylic acid, sulphonated organic compounds, ultramarine, zinc chlorides, zinc oxides.

(ii) Any building designed for the purpose of carrying on any of the following industries, businesses, or trades:

Abattoirs, chicken farms, chicken meat processing, animal charcoal manufacturing, organic animal material processing, animal bristle hair and hair processing, bacon-making, blood-boiling, blood-drying, bone-boiling and bone-steaming, grinding and storing of bones, bone processing, brewing, candle-making, charcoal burning, preparation of chemicals, chitterling boiling (not carried on as a subsidiary to retail trade or business operation), cyanide fumigator, trading in blood, skins, hides or butcher's waste, trading in rags and/or bones (including receiving, sorting, handling and storing of rags in an offensive condition or which are likely to become so or any bones, animal skins or feathers, animal fat, or any similar putrescible animal products). Distilleries, dye factories, fat melting or extracting, fellmongery, fertiliser manufacturing, fish curing and canning, fish frying for wholesale trade, fish oil manufacturing, flock-making, gum-making, grit scraping and cleaning, cardboard

manufacturing, hide processing and storing, hoof and horn processing, knackery, leather dressing, making nutritional meal for poultry, dogs, cattle or other animals from any fish, blood, bone, fat or animal offal in an offensive condition or which will be subjected to any process causing noxious or injurious effluvia, malt manufacturing, manure making and storing, oil pressing and processing, paper making, parchment making, large-scale sausage and polony making, scrap dealing, string making, skin curing and storing, soap making, sugar milling and refining, tallow melting, tanning, tripe cleaning or boiling, wattle bark processing, wool scouring, yeast making.

(iii) Any business that involves keeping livestock or poultry in camps or batteries within boundaries of the Scheme.

(iv) Any other industry that the Council deems dangerous or harmful to the general public because of noise and waste.

As the applicant planners have not yet initiated the land use application to rezone the site to Noxious Industry we are not in a position as yet to lodge objections to the proposals, but which we shall do when the time comes.

I hope that clarifies the situation for now.

Kind regards and keep safe,

Ansune
