

Rhino Oil and Gas Exploration South Africa (Pty) Ltd

BACKGROUND INFORMATION ON PROPOSED PETROLEUM EXPLORATION ON VARIOUS FARMS IN IN FREE STATE, GAUTENG & MPUMALANGA (294 ER)

Version 2 January 2016

INTRODUCTION

Rhino Oil and Gas Exploration South Africa (Pty) Ltd has lodged an application for an exploration right with the Petroleum Agency South Africa (PASA) in terms of section 79 of the Minerals and Petroleum Resources Development Act, 28 of 2002 (MPRDA). Minerals included in the application are oil, gas, condensate, coal bed methane, helium and biogenic gas. The exploration area is broad and encompasses large parts of the north-eastern Free State and small parts of Gauteng and Mpumalanga (see Figure 1).

In this application Rhino Oil & Gas has only applied for approval to undertake early-phase exploration for oil and gas which might be located within suitable geological strata. The purpose of the work would be solely to determine the presence of any possible petroleum resource which could be investigated further. The 3-year exploration work programme will be restricted to non-invasive techniques, as well as seismic surveys and the drilling of less than 10 core boreholes.

ENVIRONMENTAL AUTHORISATION PROCESS

Prior to the granting of an Exploration Right for the proposed project an environmental assessment process must be conducted and approved by PASA in terms of the National Environmental Management Act, 107 of 1998 (NEMA). Rhino Oil and Gas will make an application to PASA for environmental authorisation. The 2014 Environmental Impact Assessment Regulations (GN R982 promulgated in terms of NEMA) are applicable as the application for an exploration right is activity 18 in Listing Notice 2 (GN R984). The EIA Regulations define the assessment process which includes: a scoping phase, environmental impact assessment (EIA) phase and an environmental management programme (EMPr). Public participation is a key component of the environmental assessment process.

SLR Consulting (Pty) Ltd (SLR), an independent firm of environmental consultants, has been appointed by Rhino Oil and Gas Exploration South Africa (Pty) Ltd to manage the environmental assessment process.

This document has been prepared by SLR to inform you about:

- * the application and proposed project activities;
- * the environmental assessment process to be followed; and
- * how you can have input into the environmental assessment.

The primary objective of the scoping process is to identify the key issues that need to be addressed in the assessment phase.

FRACKING or NOT?

No hydraulic fracturing (fracking) is included in the 3-year exploration programme proposed. Rhino Oil & Gas have stated that there is not currently enough information to determine what techniques might be required for future gas extraction.

If a resource was identified and subsequently proven to be commercial, then hydraulic fracturing could be one of the potential techniques for gas production. However, a lot of investigation, multiple environmental assessments and authority approvals would be required before reaching that point. This includes:

1. Complete the early phase exploration as proposed and approved through this application.
2. If the early-phase exploration were to confirm the presence of a potential resource, then Rhino Oil & Gas would seek further approval from PASA for the additional exploration work required to investigate this. Any further approval would be subject to an additional environmental assessment process with further public consultation. Approvals are also likely to be required by other legislation.
3. Undertake the detailed phases of exploration as approved.
4. If the detailed exploration led to the discovery of a commercial resource suitable for development then Rhino Oil & Gas would need to secure a production right from PASA. Any application for a production right has to be subject to an environmental assessment process with further public consultation. Approvals are also likely to be required by other legislation.
5. Develop the production project.

All future exploration or production activities that may arise if resources are discovered are therefore beyond the scope of the current scoping and EIA process.

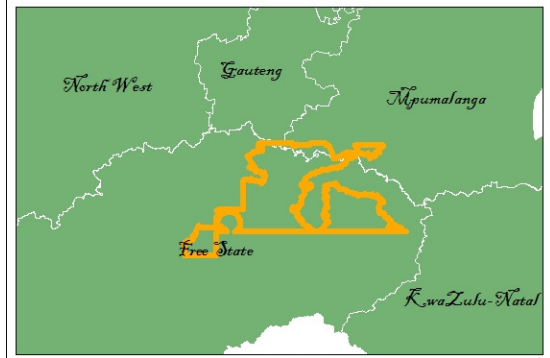

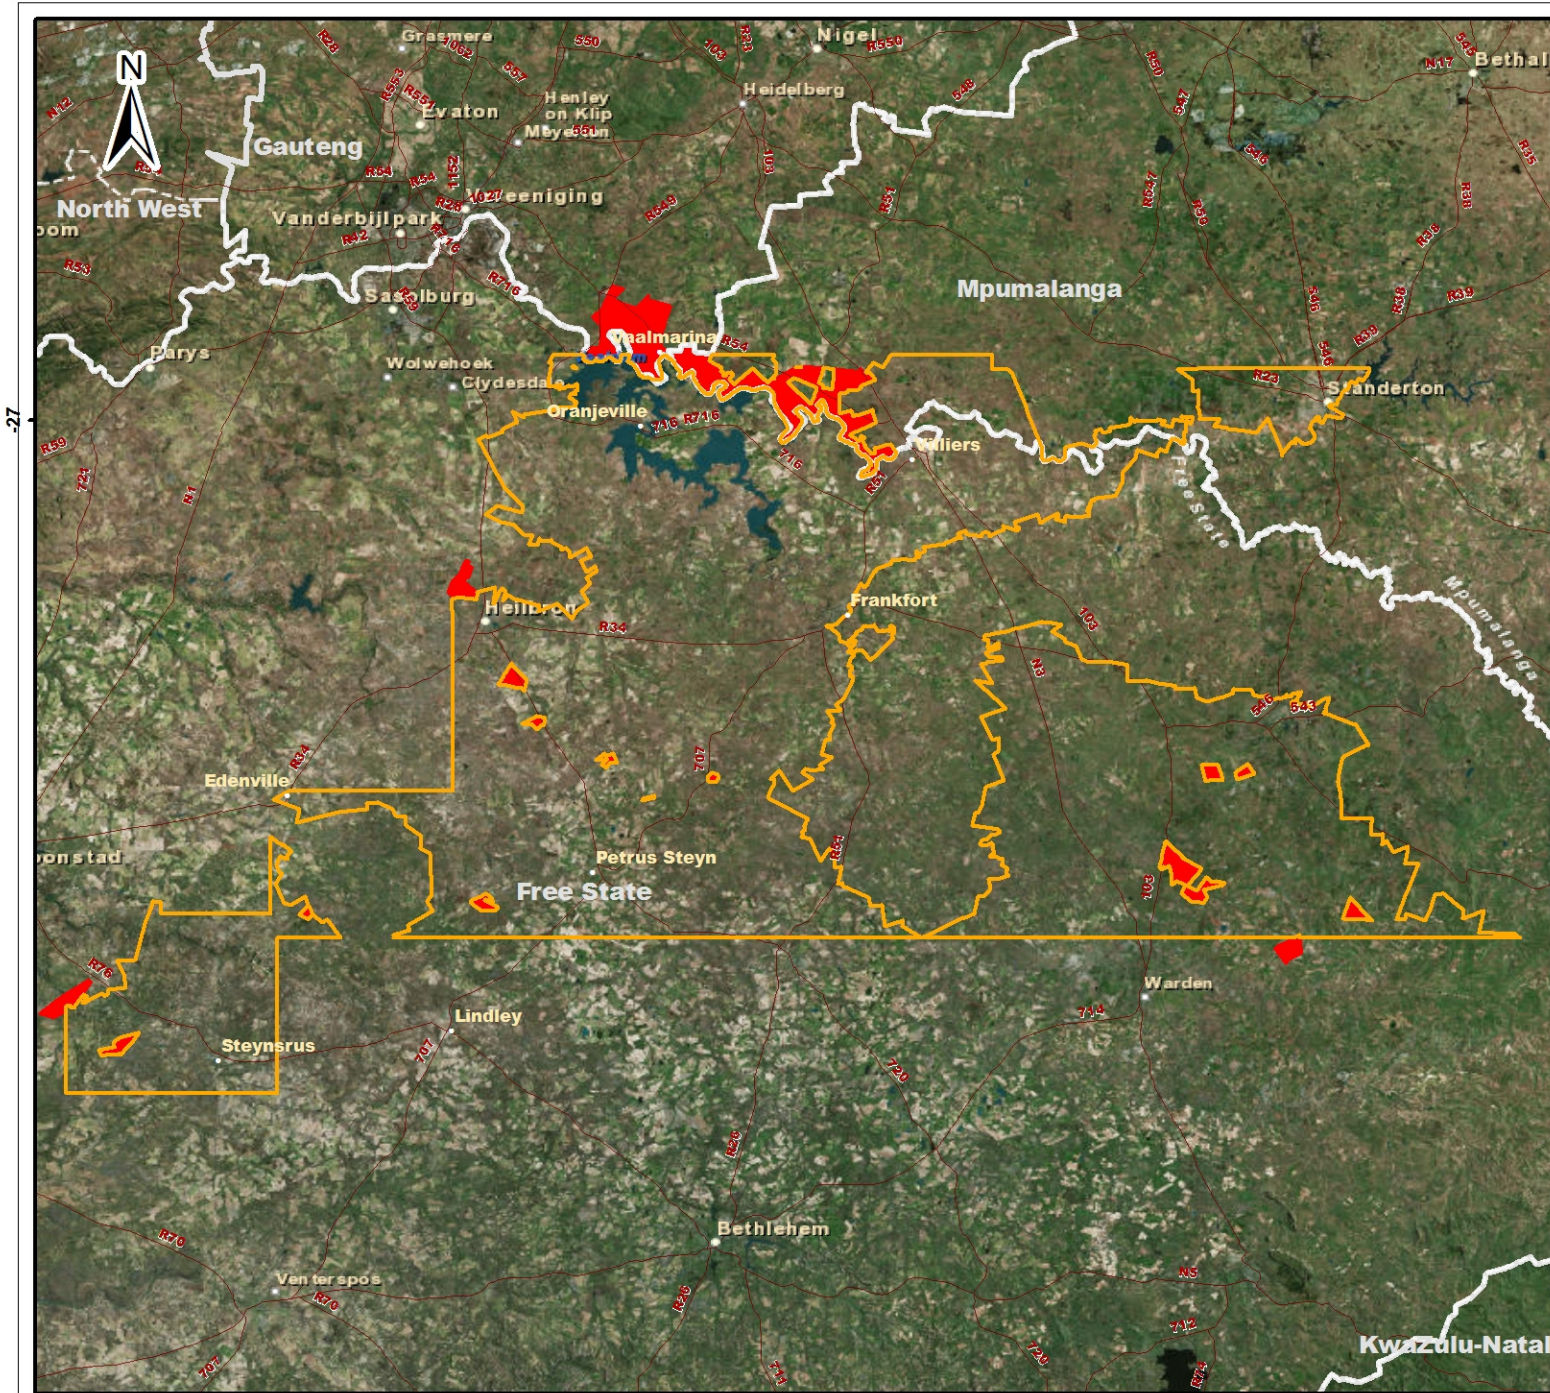

HOW TO RESPOND

Responses to this document can be submitted by means of the attached comments sheet and/or through communication with SLR.

WHO TO CONTACT: JC Pretorius or Matthew Hemming

BRIEF OVERVIEW OF PROPOSED EXPLORATION	SEISMIC SURVEYS
<p data-bbox="81 181 810 219" style="text-align: center;">APPLICATION</p> <p data-bbox="81 226 810 389">The Petroleum Agency South Africa has accepted the application lodged by Rhino Oil and Gas for an exploration right for petroleum products. Acceptance of the application by PASA only permits the applicant to continue with the necessary process and does not constitute authorisation.</p> <p data-bbox="81 396 810 533">An application for environmental authorisation was submitted to PASA in October 2015. The scoping and EIA process is subject to the timeframes prescribed in the 2014 Environmental Impact Assessment Regulations.</p>	<p data-bbox="815 181 1551 365">Rhino will purchase seismic data where available and may commission seismic surveys to image subsurface geology. During a survey low frequency acoustic waves are generated and the reflected waves recorded. Analysis of the return waves provides information about rock types and possible gases or fluids in rock formations.</p> <p data-bbox="815 371 1551 555">Rhino is planning up to 100 km of two-dimensional (2D) surveys. Survey teams generate controlled acoustic energy (using explosives, air gun or seismic vibrator) and record the return waves in geophones laid at set spacing in a linear alignment.</p> <p data-bbox="815 562 1551 689">Survey teams require short-term access to farms to place survey equipment and record the data. Survey lines will follow existing access roads and disturbances with due consideration of environmental constraints.</p>
<p data-bbox="81 539 810 577" style="text-align: center;">GENERAL</p> <p data-bbox="81 584 810 674">The 3-year exploration work programme proposed by Rhino Oil and Gas is aimed at determining if there is an oil or gas resource in the area that would warrant further exploration.</p> <p data-bbox="81 680 810 882">Year 1: the evaluation of geological data through a comprehensive desk-top study. Much of this data is only available to parties whom hold exploration rights. Sub-surface structural features and stratigraphy will be mapped. Data on source-rock geochemistry will be acquired. Geological models may be developed.</p> <p data-bbox="81 889 810 978">Year 2: further geochemical data analysis as well as the possible use of apatite fission track analysis and full tensor gradiometry gravity (FTG) surveys.</p> <p data-bbox="81 985 810 1120">Year 3: the drilling of core boreholes at target sites identified from the earlier work. The final exploration activity would be purchase and/or undertaking seismic surveys.</p> <p data-bbox="81 1126 810 1189">No pressure testing, hydraulic fracturing or water abstraction is included in the proposed exploration work.</p>	<p data-bbox="815 696 1551 741" style="text-align: center;">DRILLING</p> <p data-bbox="815 748 1551 1055">A maximum of 10 core boreholes are planned across the exploration area. Boreholes would be drilled by a truck or trailer mounted, mobile drilling rig very similar in size to a water borehole rig. Drill sites will be accessed using existing roads and farm tracks. The drill rig will be accompanied by supporting equipment (vehicles, trailers, compressors, water tanks, pumps, caravan etc). A typical exploration rig and equipment requires an operating area of approximately 1 000 m². See photos below.</p> <p data-bbox="815 1061 1551 1151">Rock core will be extracted from the target strata and removed to a laboratory. Samples will be examined, described and tested for gas related properties.</p> <p data-bbox="815 1158 1551 1294">Once drilling is completed the rig, all associated equipment and waste products will be removed from site. The borehole will be capped pending further investigation or sealed with cement if not required further.</p>
<p data-bbox="81 1196 810 1234" style="text-align: center;">LOCATION</p> <p data-bbox="81 1240 810 1469">In broad terms the exploration right application area is located in the north-eastern areas of Free State, extending marginally into Gauteng north of Villiers and Mpumalanga near to Standerton. It includes ~ 6 500 farms over an area of ~ 1 000 000 ha. The area lies largely north of Reitz and Warden. Heilbron in the west and Vrede in the east are included (see attached Figure and list of farms).</p> <p data-bbox="81 1476 810 1637">Physical, on-the-ground exploration activities will only be undertaken at a limited number of sites. The exact location of the target sites can only be determined once Rhino has completed the initial phases of exploration and examined the available data.</p> <p data-bbox="81 1644 810 1877">The application area excludes all properties where the granting of an exploration right is prohibited by Section 48 of the MPRDA. All other properties are included, even where a constraint may restrict exploration activity. Rhino Oil & Gas will ensure that their activities are only undertaken at sites where it is lawful and environmentally responsible to do so.</p>	<p data-bbox="815 1301 1551 1339" style="text-align: center;">STAFF AND HOUSING</p> <p data-bbox="815 1346 1551 1447">Early phase exploration will create relatively few job opportunities as most work is contracted to specialist service providers. The company will recruit locally as far as possible.</p> <p data-bbox="815 1453 1551 1592">A seismic survey team comprises about 20 staff. A drill-rig is normally manned by a crew of up to 5 persons. No on site housing facilities are planned. Staff will be accommodated in nearby towns or at locations agreed with land owners.</p>
<p data-bbox="81 1883 810 1928" style="text-align: center;">FTG SURVEYS</p>	<p data-bbox="815 1599 1551 1637" style="text-align: center;">TIMING</p> <p data-bbox="815 1644 1551 1744">The exploration work programme is planned over a 3 year period. The programme is divided in phases with successful completion of one phase informing the next.</p> <p data-bbox="815 1751 1551 1877">FTG surveys are completed in a matter of hours. Seismic surveys are undertaken over a period of months but the personnel and equipment are on site for short periods. Drilling at each site can take 1 to 3 months to complete.</p>
<p data-bbox="81 1935 810 2101">Full tensor gradiometry gravity (FTG) surveys will be undertaken to image subsurface geology in order to aid exploration. Such surveys will be flown in fixed wing aircraft and require no access to farms.</p>	<p data-bbox="815 1883 1551 1921" style="text-align: center;">ENVIRONMENTAL MANAGEMENT</p> <p data-bbox="815 1928 1551 2101">An environmental management programme will be written to prescribe commitments needed to ensure environmentally responsible operations. A key aspect will be the restriction or prohibition of exploration activities at sites which have been identified to be incompatible with</p>

exploration.

The establishment, management and rehabilitation of all exploration sites will be done in consultation with land owners. The process of managing the operations, the impacts thereof and rehabilitating the exploration sites will be conducted in terms of the EMP approved by PASA.

LAND ACCESS

It is likely that access will be required to only a few of the properties within the exploration area. Private property will only ever be accessed with prior consent of the landowner and then in terms of a written agreement.

The locality of exploration sites is largely flexible and can be adapted to minimise disturbance to land owners, occupiers, agriculture and the environment.

MOTIVATION FOR THE PROPOSED PROJECT

Petroleum products remain a vital source of energy. Natural gas comprises mostly methane and is a relatively clean, environmentally friendly form of energy. It can be used to generate electricity or provide heat for domestic and industrial purposes. Once extracted gas can be easily contained, transported and safely used in many applications. The type of downstream use is entirely dependent on the commercial scale of the resource.

Exploration is necessary to determine if there might be a petroleum resource which could be investigated further.

FUTURE EXPLORATION OR PRODUCTION

The current application is only to authorise the work as described above (and in detail in the Scoping Report). Any further exploration work to evaluate an identified resources or a future production would require further approval from PASA in terms of the MPRDA & NEMA. Such approvals will be subject to the relevant legal requirements which include further public consultation and environmental assessment.

Rhino maintains that is not useful to speculate on the possible future direction of the project as the range of options is vast and the available information very limited.

PUBLIC RESPONSE TO DATE

Notification to and consultation with IAPs commenced in October 2015. A series of public meetings were held across the application area in October 2015. The public participation process to date has elicited significant response to the application. Overall the public response is very much **opposed to the exploration right application** and this has been documented.

The issues that have been raised are too numerous to elaborate on here, but included calls for further consultation and a demand that more time be allowed in the scoping and EIA schedule. SLR consulted with PASA on five key issues that were material to the overall application and the EIA process. A summary of each issue and an extract of the response from PASA are provided below:

Issue 1: Most persons participating in the EIA process stated their opposition or lodged an objection. Many of the objections were made with reasons relating to production and fracking. It is clear that the EIA process will not be able to resolve such objections. What mechanisms exist for these objections to be addressed? PASA: *"There is no mechanism under NEMA to address objections, however as part of the EIA process the EAP must consider issues raised and engage with respective parties to resolve or provide clarity on issues raised. Section 10 of the MPRDA provides for the Regional Mining Development and Environmental Committee to consider and advise the Minister on objections received in respect of applications."*

Issue 2: Most IAPs have demanded that the current EIA process present details on production and undertakes an assessment of potential production (including fracking) related impacts, even though the current application does not cover further exploration or production. What is PASA's instruction with regards the scope of the current EIA?

PASA: *"The current EIA is aligned with the proposed exploration work programme submitted with the application for an exploration right. If the applicant wanted to pursue any activities beyond the scope of the proposed work programme then environmental authorisation for such activities would have to be obtained. This process provides for further engagement with IAPs and in-depth assessment of the associated issues."*

Issue 3: Many IAPs have asked why the current Karoo Strategic Environmental Assessment (SEA) is not applicable to all areas of South Africa. Moreover, the IAPs have demanded that all exploration right applications and related EIA processes be stopped until the SEA is complete. What is PASA's response in this regard?

PASA: *"The scope and terms of reference for the SEA are finalised and the assessment has commenced. Queries on the SEA should be directed to the Department of Environmental Affairs as the driver of that process."*

Issue 4: Most IAPs have argued that the time available in the current EIA schedule is insufficient to allow for the required public consultation for an application area of such large extent. Will PASA grant an extension of time within the EIA process to allow the project to respond to these issues and adjust the public participation process accordingly?

PASA: *"The Agency can consider requests received in writing from the EAP or applicant to extend the timeframe provided that the requests comply with the provisions of the EIA Regulations."*

In order to incorporate further public interaction and investigation to augment the scoping process, SLR applied to PASA for an extension of time. In December 2015 PASA granted an extension for the scoping process, with the requirement that the final scoping report be submitted to PASA by the 20th of April 2016.

Issue 5: IAPs have raised the concern that many properties/sites within the application areas are either protected outright or incompatible with exploration and/or the production of oil and gas. In some instances legislation prevents exploration work from taking place in these areas. The question has been asked "why undertake an EIA to obtain exploration rights in areas where any gas, if it were to be found, would not be able to be extracted because of the restrictions imposed by protected area legislation and Regulation 122 of the Petroleum Regulations (GN R 466 of 2015) relating to the location of wells?". The demand is that the application be stopped, all of the future non-compatible/unlawful areas removed and then a new EIA be commenced for the revised area. What is PASA's response in this regard? PASA: *"The EAP has the responsibility to identify environmental attributes; to assess the risks and impacts and provide appropriate mitigation measures. In doing so the EAP has the obligation to consider and apply the provisions of the relevant environmental legislation. PASA, as the regulator, has no authority to direct the EAP or applicant to stop the EIA to remove incompatible areas. The application will be evaluated in line with the provisions of NEMA and other relevant legislation. The Agency will make recommendations that will be aligned with the relevant provisions to ensure that specified environment receives the necessary protection."*

The application and the scoping and EIA process will be undertaken in accordance with the guidance from PASA.

POTENTIAL ENVIRONMENTAL IMPACTS

The following issues and impacts are examples of concerns related to exploration. Their inclusion in this list is neither indication to the probability of occurrence nor an indication of possible significance. Relevant issues identified during scoping will be investigated as part of the EIA process.

Farm Safety – Access by unknown persons to farms has the potential to influence security on farms. Operating heavy vehicles and equipment may pose safety risks. Run away fires may present a potential safety risks for both people and livestock.

Farm Infrastructure – farms roads, gates and fences may be damaged during exploration activity.

Soil and land capability– activities at the seismic and drill sites may affect soils and land capability if poorly regulated and not rehabilitated.

Biodiversity – activities at the seismic and drill sites have the potential to disturb and/or destroy vegetation, habitat units and related ecosystem functionality, including the disturbance of protected species.

Surface water – The proposed activities at the seismic and drill sites has the potential to pollute surface water resources through consumptive use and the discharge of contaminants.

Groundwater – the proposed drilling has the potential to consume and contaminate groundwater resources which could impact availability to other groundwater users and the ecosystem.

Air – The proposed project has the potential to contribute to air pollution, particularly through dust emissions from vehicles on gravel roads and the release of gas from boreholes.

Noise and vibrations – The proposed project has the potential to cause noise pollution during drilling activities. Seismic surveys may cause damage to structures and disturb livestock and wildlife.

Visual – the placement of seismic and drilling equipment has the potential to create short-term visual impacts.

Heritage resources – the proposed project has limited potential to damage heritage resources.

Land use –The seismic and drill sites may conflict with land use for the duration.

Socio-economic – the project has very limited potential to contribute towards socio-economic impacts. Positive impacts include job creation and stimulation of the local and regional economy. Potential negative socio-economic impacts include potential for increased crime, spread of disease and pressure on support services provision.

Cumulative and future impacts – although the current work may have limited impacts, a concern is that approval of this work could open the way for future, larger-scale projects in the area. These may have much greater impact and be difficult to stop if investment has been made.

ENVIRONMENTAL ASSESSMENT

The assessment process aims to:

- provide information on the project & alternatives
- provide information on the potentially affected environment;
- provide an assessment of the significance of the identified impacts;
- report on management measures required to mitigate impacts to an acceptable level; and
- allow for informed, transparent and accountable decision-making by the relevant authorities.

STEPS IN THE ASSESSMENT PROCESS

Pre Application phase (August to October 2015)

Identify and inform IAPs & regulatory authorities of the proposed project (via direct consultation, newspaper advertisements, site notices, this document)
Receive issues and responses from IAPs.
Submit application to PASA (ito NEMA)

Scoping phase (October – April 2016)

Continued consultation and receipt of responses.
Identify issues that need to be addressed.
Define outstanding issues and terms of reference for work to address potential impacts
Compile scoping report
Make draft scoping report available for review by IAPs and other regulatory authorities.
Collect IAP comments, update Scoping Report and forward to decision making Authorities.

EIA and EMP phase (May to September 2016)

Undertake any specialist investigations.
Assess impacts of proposed project and compile EIA and EMP report.
Make this available to IAPs and regulatory authorities for review.
Host possible public-feedback meetings.
Collect IAP comments, update EIA and EMPr and forward to decision making Authorities.

Decision and Appeal

PASA to review EIA and EMPr and make a decision.
Notify IAPs and regulatory authorities.
Appeal process in terms of Appeal Regulations

REGISTER AND COMMENT

All stakeholders are invited to register as Interested & Affected Parties (IAP). You must register as an IAP if you would like more information or wish to participate in the environmental assessment of the project. To register, or to raise any environmental issues or concerns regarding the project, please complete the **Response Form** and return it to SLR at your earliest convenience. IAPs registered on the project's database will receive notification of further meetings, report review periods and the decision.
