APPENDIX G: ENVIRONMENTAL MANAGEMENT PROGRAMME REPORT

# Draft Environmental Management Programme Report (EMPr) for the Lephalale Solar Plant Remaining Extent of Farm Appelvlakte No. 448, Lephalale Local Municipality, Waterberg District, Limpopo Province

Draft for Public Participation

April 2022

K2021699383 (South Africa) Proprietary Limited GCS Project Number: 21-0037 Client Reference: PR-CLI-001 LDEDET Reference: 12/1 /9/2-W94

 GCS (Pty) Ltd.
 Reg No: 2004/000765/07
 Est. 1987

 Offices:
 Johannesburg (Head Office) | Durban | Gaborone | Lusaka | Maseru | Windhoek | Ostrava

 Directors:
 AC Johnstone (CEO) | A Gunn (COO) | A Wilke | M Van Rooyen | W Sherriff (Financial) | N Marday (HR)

 Non-Executive Director:
 B Wilson-Jones

# Draft Environmental Management Programme Report (EMPr) Lephalale Solar Plant

Remaining Extent of Farm Appelvlakte No. 448, Lephalale Local Municipality, Waterberg District, Limpopo Province

**Draft for Public Participation**

# LIST OF APPENDICES

APPENDIX A APPENDIX B

# 1 INTRODUCTION

GCS Water and Environmental Consultants (Pty) Ltd (GCS) has been appointed by K2021699383 (South Africa) (Pty) Ltd (the applicant) as the Environmental Assessment Practitioner (EAP) to undertake the Application for Environmental Authorisation (EA) for Lephalale Solar Project, Remaining Extent of Farm Appelvlakte No. 448, Lephalale Local Municipality, Waterberg District, Limpopo Province, in terms of the 2014 Environmental Impact Assessment (EIA) Regulations, as amended. See Figures 1 & 2. This application for EA will be submitted to the Limpopo Department of Economic Development, Environment and Tourism (LDEDET).

The site was selected through a site selection process which is detailed in the Final Scoping Report (FSR). The site is located approximately 15 km northwest of Lephalale, is owned by the Exxaro Grootegeluk Coal Mine, and is currently undeveloped and forms part of the Manketti Private Nature Reserve, which is under the ownership of Exxaro. An overhead powerline runs along the eastern boundary of the site. As such the study area is largely in its natural state with extensive mining activities associated with the Exxaro Grootegeluk Coal Mine located to the west of the site. The Marapong settlement is located approx. 1.5 km south of the site.

The following site-specific characteristics derived from the web-based national screening tool (17/08/2021) (Department of Environment, Forestry and Fisheries, 2021) [Appendix D of the FSR] have informed the applicable listed activities:

- The entire study area is classified as an Ecological Support Area (ESA 1) (LDEDET, 2013); and
- The entire study area falls within a Freshwater Ecosystem Priority Area (FEPA), although there are no natural watercourses or wetlands within 500 m of the study area.

K2021699383 (South Africa) (Pty) Ltd (the Applicant) proposes the development of a solar plant that will generate electricity using photovoltaic (PV) panels to supplement power at the Grootegeluk coal mine. The solar plant and associated infrastructure will be approximately 256 hectares (ha) in extent and will generate approximately 100 megawatts (MW) of power. This opportunity leverages the potential cost savings of such supplementary supply while taking advantage of the reduced carbon footprint of the renewable nature of the technology. The Lephalale Solar facility is being developed with a maximum installed capacity of 100 MWp (DC) which produces 80 MWac (AC) of electricity. The facility will be in operation for at least 20 years. A detailed description of the aspects of the project covered in this Environmental Management Programme Report (EMPr) is provided later in this section. Note that a development envelope is proposed to allow for the micro-sitting of the associated infrastructure during the detailed engineering phase of the project (i.e., post-EA).

Figure 1: Regional Locality Map

Figure 2: Site layout and affected properties

Ancillary infrastructure (the proposed access road, proposed overhead 132kV powerline, and the existing Grootegeluk 33 kV substation) is located on the following surrounding farms:

- Remainder of Appelvlakte 448 LQ;
- Portion 1 of Appelvlakte 448 LQ;
- Daarby 458 LQ;
- Portion 1 Nelsonkop 464 LQ; and
- Enkelbult 462 LQ.

Based on the nature of the project and the results of the online screening tool and the Procedures for the Assessment and Minimum Criteria for Reporting on Identified Environmental Themes in terms of Sections 24(5)(a) and (h) and 44 of the National Environmental Management Act, 1998 (Act No, 107 of 1998) (NEMA), when applying for EA (GN R320 of 20 March 2020), the following specialist studies were commissioned:

- Air Quality Impact Assessment;
- Ecology Impact Assessment;
- Heritage and Paleontological Impact Assessment;
- Geohydrological Impact Assessment;
- Surface Water Impact Assessment;
- Socio-Economic Assessment;
- Soils, Land Capability, and Land Use Assessment;
- Traffic Assessment; and
- Visual Impact Assessment.

#### 1.1 Purpose of the EMPr

Section 19 of the NEMA Environmental Impact Assessment (EIA) Regulations of 2014, as amended (GN R982 in GG 38282, December 2014), requires that the Applicant submit an EMPr to the Competent Authority. This EMPr will form part of the EA for the Lephalale Solar Plant, once approved.

The EMPr is an important environmental management tool, developed in line with best practices under NEMA and other environmental legislation, and informed by the EAP's professional experience as well as any relevant specialist information. The EMPr provides management guidance for activities undertaken at the development site. If correctly followed,

the EMPr ensures that any adverse environmental impacts which could result from the development are adequately managed and mitigated.

The EMPr outlines all environmental management and monitoring actions required throughout the project lifecycle. The EMPr is legally binding and any person who contravenes the provisions herein is liable for imprisonment or a fine. This document should be viewed as "live" and thus, should be updated as and when necessary. The purpose of this document is therefore to guide environmental management throughout the various lifecycle phases of the proposed development.

The objectives of the EMPr are as follows:

- Ensure compliance with the relevant environmental legislation and conditions of the EA;
- Ensure that development activities are appropriately managed;
- Verify environmental performance through information on impacts as they occur;
- Respond to changes or unforeseen events; and
- Provide feedback on the continual improvement in environmental performance.

It is understood that all contract documentation related to the construction, operation and decommissioning (if required) of the proposed development will include the conditions of the EA and provisions of the EMPr. It is important to note that the contractual obligations must include the recording of any complaints on the project in the environmental register. Further, it is incumbent on the ECO to keep an accurate audit trail showing compliance with the EMPr during the construction phase.

This EMPr will remain a dynamic document throughout the life of the project. Once the EA has been issued by LDEDET, the EMPr must be updated to include the specific conditions in the EA, as well as any required monitoring or reporting requirements of LDEDET.

#### 1.2 Content of the EMPr

According to Appendix 4 of the NEMA EIA Regulations of 2017, as amended (GNR 326 in GG 40772, April 2017), the EMPr for a project must include certain information. Table 1 describes how this report meets those requirements.

| REQUIREMENT  | SECTION IN THIS |
|--|-----------------|
|  | REPORT          |
| Details of-  |                 |
| (i) the EAP who prepared the EMPr; and                                       | Section 1.3 and |
| (ii) the expertise of that EAP to prepare an EMPr, including a curriculum    | Appendix A      |
| vitae;   |                 |
| A detailed description of the aspects of the activity that are covered by    | Section 1.7     |
| the EMPr as identified by the project description;                           | Section 1.7     |
| A map at an appropriate scale which superimposes the proposed activity,      |                 |
| its associated structures, and infrastructure on the environmental           | Eiguro 2        |
| sensitivities of the preferred site, indicating any areas that should be     | rigule 5        |
| avoided, including buffers;  |                 |
| A description of the impact management outcomes, including                   |                 |
| management statements, identifying the impacts and risks that need to        |                 |
| be avoided, managed and mitigated as identified through the                  |                 |
| environmental impact assessment process for all phases of the                |                 |
| development including-   |                 |
| (i) Planning and design;   | Section 5       |
| (ii) Pre-construction activities;  |                 |
| (iii) Construction activities;   |                 |
| (iv) Rehabilitation of the environment after construction and where          |                 |
| applicable post-closure; and   |                 |
| (v) Where relevant, operation activities;                                    |                 |
| A description of proposed impact management actions, identifying the         |                 |
| manner in which the impact management outcomes contemplated above            |                 |
| will be achieved, and must, where applicable, include actions to-            |                 |
| (i) Avoid, modify, remedy, control or stop any action, activity or process   |                 |
| which causes pollution or environmental degradation;                         |                 |
| (ii) Comply with any prescribed environmental management standards or        | Section 5       |
| practices;   |                 |
| (iii) Comply with any applicable provisions of the Act regarding the         |                 |
| closure, where applicable; and   |                 |
| (iv) Comply with any provisions of the Act regarding financial provision for |                 |
| rehabilitation, where applicable;  |                 |
| The method of monitoring the implementation of the impact management         | Section 5       |
| actions;   |                 |

| Postal Address  | The Connexxion, 263 West Avenue, Die Hoewes, Centurion, 0157 |

#### 1.5 Assumptions and Limitations

This EMPr has been drafted with the acknowledgement of the following assumptions and limitations:

- Information used to guide the development of this EMPr was gained during the site visit, through the national web-based screening tool, through specialist input and using the EAP's experience in such developments;
- Note that a development envelope is proposed to allow for the micro-sitting of the associated infrastructure during the detailed engineering phase of the project (i.e., post-EA); and
- The mitigation measures recommended in this EMPr document are based on the preliminary risks/impacts identified in the FSR. These impacts were identified according to the activities described and the known receiving environment. The risks will have to be reassessed and mitigation measures updated accordingly based on further detailed impact assessment in the EIA phase.

# 1.6 Applicable legislation, policy and best practice guidelines

The EMPr has been developed using knowledge of relevant national, provincial and local legislation and policy as well as best practice guidelines. The Applicant is bound to comply with the legislation and policy provisions throughout the life cycle of the project. Table 4 lists the relevant legislation and guidelines applicable to the development.

The environment is considered to be composed of biophysical, ecological, economic and social components. Construction is a disruptive activity, and all due consideration must be given to the environment, including the social environment during the execution of the project to minimize negative impacts on affected parties. Minimisation of areas disturbed by construction activities (i.e. the footprint of the development area) should reduce many of the construction-related environmental impacts of the project and reduce rehabilitation requirements and costs. All relevant standards relating to international, national, provincial and local legislation, as applicable, should be adhered to. This includes requirements relating to waste generation and emissions, waste disposal practices, noise regulations, road traffic ordinances, etc. Every effort should be made to minimize, reclaim, and/or recycle waste materials.

| LEGISLATION/<br>GUIDELINES  | DESCRIPTION  | APPLICABILITY   |
|---|--|---|
| The Constitution<br>of the Republic of<br>South Africa (Act<br>108 of 1996)<br>Environmental<br>Conservation Act<br>(73 of 1989) (ECA),<br>as amended | <ul> <li>The Constitution is the supreme act to which all other acts must speak to and sets out the rights for every citizen of South Africa and aims to address past social injustices. With respect to the environment, Section 24 of the constitution states that:</li> <li>"Everyone has the right:</li> <li>a) To an environment that is not harmful to their health or well-being;</li> <li>b) To have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that: <ul> <li>i. Prevent pollution and ecological degradation;</li> <li>ii. Promote conservation; and</li> <li>iii. Secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development".</li> </ul> </li> <li>The ECA has now largely been replaced by the NEMA but certain provisions remain in force.</li> <li>Section 21 of the ECA relates to the control of activities that may have a detrimental effect on the environment, which require written authorization issued by the relevant authority.</li> <li>The national Noise Control Regulations (NCR) (GN R154 in Government Gazette No. 13717 dated 10 January 1992) (NCR) were promulgated In terms of Section 25 of the ECA, relating to noise, vibration and shock. The NCRs were revised under Government Notice Number R55 of 14 January 1994 to make it obligatory for all authorities to apply the regulations. In accordance with the Act, two procedures exist for assessing and controlling noise, respectively: <ul> <li>South African National Standard (SANS) 10328:2008 Methods for environmental noise impact assessments;</li> <li>SANS 10103:2004 'The measurement and rating of environmental noise with respect to annoyance and speech communication'; and</li> <li>Other SANS.</li> </ul></li></ul> | The Applicant must ensure that<br>environmental impacts are avoided,<br>mitigated or managed as far as<br>possible throughout the life cycle of<br>the project.<br>The proposed development is likely<br>to increase ambient noise levels<br>during the construction (temporary)<br>and operational phases. Noise<br>impacts are closely related to<br>construction activities and heavy<br>traffic volumes. The EMPr includes<br>mitigation measures relating to the<br>mitigation of noise impacts. |
| Environmental<br>Management Act<br>(Act 107 of 1998)  | Framework law giving effect to the constitutional<br>environmental right. Provides the framework for<br>regulatory tools in respect of environmental   | in terms of the 2014 NEMA EIA<br>Regulations, as amended, are:  |

# Table 4: Applicable legislation, policy and best practice guidelines

| LEGISLATION/<br>GUIDELINES  | DESCRIPTION  | APPLICABILITY  |
|---|--|--|
| (NEMA), as<br>amended   | <ul> <li>impacts. Section 24 of NEMA regulates<br/>environmental authorisations.</li> <li>Section 28(1) states that "Every person who<br/>causes, has caused or may cause significant<br/>pollution or degradation of the environment must<br/>take reasonable measures to prevent such<br/>pollution or degradation from occurring,<br/>continuing or recurring, or, in so far as such harm<br/>to the environment is authorised by law or cannot<br/>reasonably be avoided or stopped, to minimise<br/>and rectify such pollution or degradation of the<br/>environment".</li> </ul>   | <ul> <li>Listing Notice 1, Activity 11;</li> <li>Listing Notice 1, Activity 24;</li> <li>Listing Notice 2, Activity 1;</li> <li>Listing Notice 2, Activity 4;</li> <li>Listing Notice 2, Activity 15.</li> <li>As such, a S&amp;EIA process must be followed to obtain the necessary EA in terms of the NEMA.</li> <li>The Applicant must ensure that environmental impacts are avoided, mitigated or managed as far as possible throughout the life cycle of the project.</li> </ul>  |
| National<br>Environmental<br>Management:<br>Waste Act (Act 59<br>of 2008) (NEM:<br>WA), as amended        | <ul> <li>Regulates inter alia the duty of care,<br/>management, transport and disposal of waste.</li> <li>Section 16(1) of the NEM: WA provides that:</li> <li>"A holder of waste must, within the holder's<br/>power, take all reasonable measures to -</li> <li>a) avoid the generation of waste and where such<br/>generation cannot be avoided, to minimise<br/>the toxicity and amounts of waste that are<br/>generated;</li> <li>b) reduce, re-use, recycle and recover waste;</li> <li>c) where waste must be disposed of, ensure that<br/>the waste is treated and disposed of in an<br/>environmentally sound manner;</li> <li>d) manage the waste in such a manner that it<br/>does not endanger health or the environment<br/>or cause a nuisance through the noise, odour<br/>or visual impacts;</li> <li>e) prevent any employee or any person under<br/>his or her supervision from contravening this<br/>Act; and</li> <li>f) prevent the waste from being used for an<br/>unauthorised purpose."</li> <li>The NEM: WA also provides for a licensing regime<br/>specific to waste Classification and Management<br/>Regulations specify waste classification and<br/>disposal to landfill for various types of wastes.</li> </ul> | While no Waste Management Licence<br>is required for this development, the<br>Applicant must ensure that waste is<br>appropriately managed throughout<br>the life cycle of the project.<br>Waste generated on site will be<br>sorted and separated into<br>appropriate containers and or<br>prepared areas. All waste will be<br>collected and transported to licensed<br>waste disposal sites through<br>registered service providers.<br>Hazardous waste, such as cement<br>bags, will be handled by a hazardous<br>waste contractor and disposed of to<br>licenced landfill site. |
| National<br>Environmental<br>Management: Air<br>Quality Act (Act 39<br>of 2004) (NEM:<br>AQA), as amended | Regulates activities which may have a detrimental<br>effect on ambient air quality including certain<br>processes and dust-generating activities.<br>The NEM: AQA Dust Control Regulations (1<br>November 2013). prescribe dust fallout rates for<br>residential and non-residential areas. For<br>activities where the dustfall standard is   | An Air Emissions Licence will not be<br>required, however, a duty of care<br>should be employed during<br>construction to minimise air pollution<br>as far as possible. The Applicant<br>must take all reasonable measures to<br>minimise the generation of dust and   |

| LEGISLATION/<br>GUIDELINES  | DESCRIPTION  | APPLICABILITY  |
|---|--|--|
|   | exceeded, a dustfall monitoring report must be compiled and submitted.   | ensure compliance with the Dust<br>Control Regulations.  |
| National<br>Environmental<br>Management:<br>Biodiversity Act<br>(Act 10 of 2004)<br>(NEM: BA) | <ul> <li>The Act aims for the management of all biodiversity within South Africa. The 2007</li> <li>Threatened or Protected Species Regulations (GN R150, as amended) provides protection through a permit system as well as through the identification of restricted activities. If required, the relevant permits will be applied for.</li> <li>The Act also provides for duty of care with regards to control of alien species and provides a listing of threatened or protected ecosystems and species in one of the following four categories: critically endangered (CR), endangered (EN), vulnerable (VN), protected (species only), and least threatened (LT).</li> <li>The NEM: BA Alien and Invasive Species</li> <li>Regulations (Government Notice 590 of August 2014) categorises the different types of alien and invasive plant and animal species and how they should be managed:</li> <li>Category 1a Listed Invasive Species - species that must be combatted or eradicated;</li> <li>Category 2 Listed Invasive Species - species that require a permit and must not be allowed to spread outside of the designated area; and</li> <li>Category 3 Listed Invasive Species - species which are subject to exemptions in terms of the section requiring a permit, but where such a species occurs in riparian areas, must, for these regulations, be considered to be a Category 1b Listed Invasive Species and must be managed according to regulation 3.</li> </ul> | <ul> <li>Various protected tree species were<br/>identified on site. A permit will be<br/>required from the Natural Resources<br/>Management section of the Forestry<br/>Management Branch of DFFE to<br/>remove or relocate protected<br/>species. These include: <ul> <li>Boscia albitrunca (Shepherds<br/>Tree);</li> <li>Sclerocarya birrea subspecies<br/>caffra (Marula);</li> <li>Spirostachys africana<br/>(Tamboti); and</li> <li>Vachellia erioloba (Camel<br/>Thorn).</li> </ul> </li> <li>An upfront count and GPS mapping of<br/>affected protected trees will be<br/>undertaken by a qualified botanist to<br/>assess relocation and permitting<br/>requirements. The requirements for<br/>tree replacement and replanting are<br/>to be confirmed with DFFE.</li> <li>The Applicant must control and<br/>eradicate alien and invasive species<br/>in line with the NEM: BA Alien and<br/>Invasive Species Regulations.</li> </ul> |
| Conservation of<br>Agricultural<br>Resources Act (Act<br>43 of 1983) (CARA)                   | The purpose of CARA is to ensure that natural agricultural resources of South Africa are conserved through maintaining the production potential of land, combating and preventing erosion, preventing the weakening or destruction of water sources, protecting vegetation, and combating weeds and invader plants. Most of the provisions are accounted for in more recent legislation such as NEM: BA and NEMA and no applications are required in terms of CARA.  | Measures to mitigate potential<br>impacts on agricultural resources,<br>such as soil erosion, alien invasion<br>and protection of vegetation and<br>water resources are included in the<br>EMPr, which will be updated in the<br>EIA phase.  |

| LEGISLATION/                                    | DESCRIPTION   | APPLICABILITY  |
|---|---|--|
| GUIDELINES                                      | Section 2 of the National Water Act, 1998 (Act No.<br>36 of 1998( (NWA) provides for the protection,<br>use, development, conservation and control of<br>water resources while ensuring:<br>• Promoting sustainable use of water;   | Specialist studies have confirmed<br>that there are no natural<br>watercourses or wetlands located<br>within the study area.   |
|   | <ul> <li>Protection of aquatic and associated<br/>ecosystems and biological diversity; and</li> <li>Reducing and preventing pollution and<br/>degradation of water resources.</li> </ul>  | A separate water use authorisation<br>process in terms of the NWA for the<br>various identified water uses<br>associated with this project will be<br>undertaken simultaneously with this<br>environmental assessment process.                                       |
|   | <ul> <li>Sections 12 -20 of the NWA include provisions relating to the protection of water resources, including the water reserve and water quality.</li> <li>Section 13 relates to the establishment of water quality objectives, including: <ul> <li>The presence and concentration of particular substances in the water</li> <li>The characteristics and quality of the water resource and the in-stream and riparian</li> </ul> </li> </ul>  | <ul> <li>Water uses associated with the proposed solar plant include:</li> <li>21 (a) - related to the abstraction of water from borehole (borehole will also need to be registered with DWS);</li> <li>21 (g) - Storage of sewage in a conservancy tank.</li> </ul> |
| National Water Act<br>(Act 36 of 1998)<br>(NWA) | <ul> <li>habitat</li> <li>The characteristics and distribution of aquatic biota</li> <li>The regulation and prohibition of in-stream and land-based activities which may affect the quantity and quality of the water resources</li> </ul>  | Consultation with the DWS has<br>confirmed that the water uses fall<br>within the General Authorisation<br>(GA) limits. A GA application is being<br>undertaken with the DWS   |
|   | Section 19 of the NWA provides for pollution<br>prevention and requires that a person who owns,<br>controls occupies or uses the land in question, is<br>responsible for taking reasonable measures to<br>prevent pollution of water resources. A<br>catchment management agency may take action<br>to prevent or remedy the pollution and recover all<br>reasonable costs from the responsible party. The<br>'reasonable measures' which have to be taken<br>may include measures to:<br>• Cease, modify or control any act or process<br>causing the pollution; |  |
|   | <ul> <li>Comply with any prescribed waste standard<br/>or management practice;</li> <li>Contain or prevent the movement of</li> </ul>   |  |
|   | pollutants;   |  |
|   | <ul> <li>Eliminate any source of pollution;</li> <li>Remedy the effects of the pollution; and</li> </ul>  |  |
|   | <ul> <li>Remedy the effect of any disturbance to the<br/>bed and banks of a watercourse".</li> </ul>  |  |

| LEGISLATION/<br>GUIDELINES   | DESCRIPTION   | APPLICABILITY   |
|--|---|---|
|  | <ul> <li>"Pollution may be deemed to occur when the following are affected:</li> <li>The quality, pattern, timing, water level and assurance of instream flow;</li> </ul>   |   |
|  | <ul> <li>The water quality, including the physical,<br/>chemical and biological</li> </ul>  |   |
|  | Characteristics of the water;   |   |
|  | <ul> <li>The character and condition of the in-<br/>stream and riparian habitat;</li> </ul>   |   |
|  | <ul> <li>The characteristics, condition and<br/>distribution of the aquatic biota".</li> </ul>  |   |
|  | Section 21 of the NWA recognises and defines<br>water uses that require the approval of the<br>Department of Water and Sanitation (DWS) in the<br>form of a General Authorisation or Water Use<br>Licence (WUL). There are restrictions on the<br>extent and scale of identified activities,<br>determined through a risk assessment, for which<br>General Authorisations apply.  |   |
| The National<br>Heritage Resources<br>Act (Act 25 of<br>1999) (NHRA) | In terms of the NHRA, any person who intends to<br>undertake "any development which will change<br>the character of a site exceeding 5,000 m2 in<br>extent", "the construction of a roadpowerline,<br>or pipelineexceeding 300 m in length" must at<br>the very earliest stages of initiating the<br>development notify the responsible heritage<br>resources authority, namely the South African<br>Heritage Resources Agency (SAHRA) or the<br>relevant provincial heritage agency. | A Phase 1 Heritage Assessment<br>including a desktop paleontological<br>assessment was undertaken. No sites<br>of cultural or heritage significance<br>were identified within the study<br>area.<br>The HIA report will be submitted to<br>the heritage authorities via the<br>online South African Heritage<br>Resources Information System<br>(SAHRIS). |
| National Road<br>Traffic Act (93 of<br>1996) (NRTA), as<br>amended   | The NRTA intends to provide for road traffic<br>matters which shall apply uniformly throughout<br>the Republic and for matters connected<br>therewith. The NTRA was established in order to<br>manage and control the use of South African roads<br>and in order to ensure that the vehicles and<br>drivers that operate on these roads are safe and<br>competent.  | A TIA has been compiled which<br>assesses the traffic impact of the<br>proposed development and provides<br>input with regard to route planning<br>and road upgrades. The various road<br>authorities have been consulted<br>during the Scoping phase and will be<br>provided with an opportunity to<br>comment on the environmental<br>application.      |
| National Veld and<br>Forest Fire Act<br>(101 of 1998)                | The purpose of the Act is to prevent and combat<br>veld, forest and mountain fires throughout South<br>Africa. The Act applies to the open countryside<br>beyond the urban limit and puts in place a range of<br>requirements. The Act sets out the responsibilities<br>of landowners or persons in control of the land<br>which includes:  | The proposed solar plant site is<br>located in the countryside beyond<br>the urban limit, and thus the<br>provisions of the Act are applicable.<br>Measures to mitigate the risk of veld<br>fires have been included in this<br>EMPr.   |

| LEGISLATION/<br>GUIDELINES   | DESCRIPTION  | APPLICABILITY   |
|--|--|---|
|  | <ul> <li>Prepare firebreaks on their side of the boundary if there is a reasonable risk of veld fire;</li> <li>Have such equipment, protective clothing and trained personnel for extinguishing fires as are prescribed (in the regulations);</li> </ul>   | A fire break will be maintained<br>between the plant fence and the<br>perimeter fence.  |
|  | <ul> <li>If there are no regulations, reasonably<br/>required in the circumstances, take all<br/>reasonable steps to notify the FPO of the<br/>local FPA (if there is one) when a fire breaks<br/>out; and</li> </ul>  |   |
|  | <ul> <li>Do everything in their power to stop the spread of the fire.</li> </ul>   |   |
| Spatial Planning<br>and Land Use<br>Management Act<br>(Act 16 of 2013)<br>(SPLUMA) | SPLUMA aims to provide a uniform system of<br>spatial planning and land use management<br>throughout the country. SPLUMA places emphasis<br>on the fundamental role municipal planning and<br>municipalities have on effective spatial planning<br>and development. Based on the above use is<br>primarily governed by the applicable land use or<br>zoning scheme and land may not be used in<br>contravention of such a scheme. Despite any<br>issued environmental authorisation, activities can<br>only be executed on land with the appropriate<br>zoning permitting such activities. | The proposed solar plant site falls<br>outside the town planning scheme<br>and no zoning is applicable.<br>SPLUMA informs the development<br>principles for the proposed solar<br>plant project.  |
| Subdivision of<br>Agricultural Land<br>Act (70 of 1970)<br>(SALA)                  | The purpose of this Act is to control the subdivision and, in connection therewith, the use of agricultural land.  | Applications should be made to the<br>provincial Department of Agriculture<br>and Rural Development to allow for<br>long term leases, the subdivision or<br>rezoning of agricultural land, as well<br>as other prohibited actions in terms<br>of the Act. An application will be<br>submitted to LDARD for authorisation<br>following the conclusion of the EIA<br>process should it be required. LDARD<br>has been included in the EIA process<br>to obtain preliminary comment as<br>part of the process. |
| Carbon Tax Act<br>(Act 15 of 2019)   | Regulates and guides the imposition of taxes on businesses or organisations in relation to their carbon emissions.   | The Applicant must adhere to the reporting stipulations within the Act.   |
| Occupational<br>Health and Safety<br>Act (Act 85 of<br>1993) (OHSA)                | Makes provision to protect the health and safety<br>of employees at work or others affected by<br>activities undertaken by businesses or industries.   | The Applicant must adhere to the stipulations within the Act throughout the lifecycle of the activity.  |
| Regulations for<br>Hazardous<br>Chemical   |  | Contractors must comply with the<br>Construction Regulations which lay  |

|---|---|---|
| EIA Guideline for<br>Renewable Energy<br>Projects (DEA,<br>2015)  | To facilitate the development of the first phase<br>Independent Power Producers (IPPs) procurement<br>programme in South Africa, these guidelines have<br>been written to assist project planning, financing,<br>permitting, and implementation for both<br>developers and regulators. This guideline aims to<br>ensure that all potential environmental issues<br>pertaining to renewable energy projects are<br>adequately and timeously assessed and addressed<br>as necessary to ensure the sustainable roll-out of<br>these technologies by creating a better<br>understanding of the environmental approval<br>process for renewable energy projects.   | The proposed development is a<br>renewable energy project (PV Power<br>Plant).  |
| Limpopo<br>Environmental<br>Management Act<br>(Act No. 7 of 2003) | This Act provides the lists for Protected and<br>Specifically Protected Species under Schedule 2, 3<br>and 12 as well as the stipulation for a permit<br>application to remove these species. In addition,<br>it gives protection measures for the terrestrial<br>and aquatic biota and systems. Schedule 9 lists<br>aquatic plant species that are prohibited in the<br>province.  | An upfront count and GPS mapping of<br>affected protected trees will be<br>undertaken by a qualified botanist to<br>assess relocation and permitting<br>requirements. The requirements for<br>tree planting are to be confirmed<br>with DFFE.<br>Should additional protected species<br>be identified during the construction<br>process, permits must be obtained<br>prior to removal. |
| Limpopo<br>Conservation Plan<br>version 2, 2013                   | This conservation plan is consistent with the<br>principles of national legislation and is designed<br>to support integrated development planning and<br>sustainable development by identifying an<br>efficient set of Critical Biodiversity Area (CBAs)<br>and Environmental Support Areas (ESAs) that are<br>required to meet national and provincial<br>biodiversity objectives, in a configuration that is<br>least conflicting with other land uses and<br>activities. Quantitative targets were set for all<br>biodiversity features to assess the degree to<br>which the identified CBA network sufficiently<br>included all targets for biodiversity features was<br>evaluated and reported on. | The entire study area falls within an<br>area classified as part of the ESA 1 in<br>terms of the Limpopo Conservation<br>Plan version 2, 2013.<br>Cognisance must be taken of the<br>various management measures within<br>the provincial and/or municipal<br>plans.  |
| Limpopo<br>Environmental<br>Outlook Report,<br>2016 (LEO)         | The LEO Report provides a moment to take stock<br>of and assess the current state or condition of the<br>environment, in general, and environmental<br>resources, in particular. It identifies and assesses<br>environmental issues and challenges, determines<br>the condition and trends, and identifies priority<br>environmental challenges and trends in resource<br>use. It evaluates the effectiveness of<br>environmental policies, strategies, plans,<br>programmes, projects and actions that are in<br>place. It also looks into the future and presents<br>appropriate responses to improve the status quo.<br>It highlights how a range of interrelated measures                           | In accordance with LEO, the Limpopo<br>Green Economy Plan (LGEP) (LEDET,<br>2013) identified the potential to<br>develop renewable energy through<br>concentrated solar plants with<br>generation capacity of no less than<br>100 MW, which is in line with the<br>proposed project proposal.   |

| LEGISLATION/<br>GUIDELINES  | DESCRIPTION   | APPLICABILITY   |
|---|---|---|
|   | may either enhance or undermine the environmental resilience of Limpopo.  |   |
| Waterberg<br>Environmental<br>Management Plan,<br>2006 (WEMP)                                     | This management plan provides for the protection<br>of the environment and describes how activities<br>that have, or could have, an adverse impact on<br>the environment, should be managed, mitigated,<br>controlled and monitored. The management plan<br>is a coarse-scale planning tool that outlines<br>strategic objectives for environmental<br>management. All new developments in the<br>Waterberg District Municipality should be aligned<br>with these environmental management<br>objectives.   | The purpose of this EMPr is to ensure<br>that the extent of the impact of the<br>project's implementation is<br>minimised, to ensure rehabilitation<br>of disturbed areas and to prevent<br>long term environmental<br>degradation, all in line with the<br>objectives of the WEMP. |
| Draft<br>Environmental<br>Management<br>Framework for the<br>Waterberg district,<br>2010 (DEMFWD) | The aim of the Environmental Management<br>Framework (EMF) is to support decision making in<br>the Waterberg District Municipality area to<br>facilitate appropriate and sustainable<br>development. The EMF integrates policies and<br>frameworks and aligns government mandates to<br>streamline decision-making and improve<br>cooperative governance. The EMF has several<br>specific objectives, which include identifying the<br>status quo, development pressures and trends in<br>the area and development of a decision support<br>system for development in the area to ensure that<br>environmental attributes, issues and priorities are<br>taken into account. | The proposed project is in line with<br>the environmental guidelines and<br>priorities of the DEMFWD, with<br>specific reference to potential<br>reduction in the air pollution<br>potential of the District.   |
| Lephalale Draft<br>Spatial<br>Development<br>Framework (SDF),<br>2017                             | The spatial development framework was compiled<br>by the Lephalale Municipality to guide the form<br>and location of future physical development<br>within the municipal area to address imbalances<br>of the past. The plan identifies environmentally<br>sensitive areas (e.g. mountain ridges, riverine<br>environments, etc.) and makes recommendations<br>regarding proposed developments in these areas.  | Cognisance must be taken of the<br>SDF's goals and objectives expressed<br>spatially through strategies designed<br>to address physical, social and<br>economic defects.  |

# 1.7 Aspects of the activity that are covered by the EMPr

The proposed Lephalale Solar plant comprises various aspects which fall within the 256 ha development area and which are the subject of this EMPr. These are outlined in this Section.

The Global Positioning System (GPS) coordinates of the proposed solar plant are provided in Table 5.

|                    | Latitude                     | Longitude                    |

#### Table 5: GPS coordinates

#### 1.7.1 Solar PV Field

- Solar PV panels raised approximately 1.5 m above natural ground level and will make provision for a single-axis tracking system (preferred option) allowing maximization of solar energy harvesting (maximum tilt height of 4 m). The panels will be connected by electrical cables and connected to inverter stations via low voltage underground direct-current cables;
- Steel support structure and tracker system on concrete foundations or screw or pile foundations;
- Inverter stations on concrete pads;
- Transformers, switchgear and related equipment; and
- Internal roads ≤ 10 km of ≤ 4 m wide gravel or dirt roads internal service roads within the plant boundary, including road signage, stormwater channels and drainage controls. The internal roads will allow for maintenance, inspections, and panel cleaning during the operational phase. The exact design and location of the internal

roads will be finalised during the detailed engineering phase of the project (i.e., post-EA).

- 1.7.2 Associated infrastructure
  - Substation complex (33/132 kV) including control rooms and grid control yards; ≤ 2 ha in extent with a maximum height of 30 m. The substation complex will allow for conversion and step-up of the electricity generated by the PV facility to a grid suitable power supply. The medium voltage side of the substation complex is referred to as a "collector substation". The high voltage side of the onsite substation complex is referred to as a "collector substation" as it acts as a switch to evacuate the electricity into the 132 kV transmission line. The substation complex will include transformers, measurements equipment, feeder bay, control rooms and grid control yards for the Independent Power Producer (IPP)/owner (a concrete single-storey building that houses switch gears);
  - Internal underground/sub-surface 33kV powerlines will feed into the proposed tiein substation;
  - 132kV overhead transmission lines (OHL) and transmission towers ± 4 km long evacuation powerlines that will follow a 67 m wide corridor (extent of the corridor is approximately 25 ha, main access road to the facility) along the southern boundary of the fence line - connect the existing Eskom/Grootegeluk Main 33kV substation to the Grootegeluk 33 kV substation located approximately 4 km south-west of the proposed development site;
  - Battery Energy Storage System (BESS) adjacent to the substation complex will be housed with associated operational, safety and control infrastructure, including monitoring units and the plant controller. The BESS will have container heights of 5 m (with lightning masts of 20 m) and 2,700 m<sup>3</sup> of batteries. The 100 megawatt-hour (MWh) BESS will store the electricity generated and allows for the use of stored energy during peak demand periods;
  - Operations and maintenance buildings with ablutions including:
    - o Workshops;
    - Small storage areas for materials and spare parts for use on site for maintenance activities during the operation phase;
    - Single storey brick building with control room, offices, ablution facilities and kitchen for staff, security and visitors;
    - o Security building at the entrance of the proposed site with ablution facilities;
    - Water storage tanks;
    - Small diameter water supply pipeline connecting existing boreholes or existing pipeline access points to storage;
    - o Central waste collection and storage area The waste generated during the

construction phase will be mainly packaging, general construction and domestic waste; however, the majority of waste produced during operation is domestic waste. Waste generated on site will be sorted and separated into appropriate containers and or prepared areas. All waste will be collected and transported to licensed waste disposal sites through contracts with registered waste companies. The waste may not necessarily be stored on site during the operational phase; and

- Parking facilities.
- Water Treatment Plant (to treat water for potable supply and washing of solar panels)- Water will be sourced from a borehole(s) on site as well as from the mine to make up the demand during the construction and operational phases of the project. Borehole water will be treated at the treatment plant to supply the domestic demands of personnel during the operational phase. The water will further undergo demineralization prior to being used for washing the solar panels. During plant operation the brine from the water treatment plant will be collected and disposed of off-site at a suitable, licensed facility. Note that potable water will be provided separately for domestic water consumption demands by personnel during the construction phase;
- Borehole (to supply water during the operational phase for the washing of the solar panels) Drilling of one water borehole of approximately 60 metres. The hole will be drilled to 6.5-inch diameter and will have a 5-inch slotted casing across the water zone. Solid 5-inch casing through the unconsolidated material (top ~ 18 metres). Headworks sanitary seal and concrete block with lockable cap;
- Water tanks water tanks sufficient to store 160 m<sup>3</sup> per day will be provided for the first 3 months of construction. Storage of 90 m<sup>3</sup>/d will be provided for the next 21 months of construction. It is assumed that during the operational phase, 48 hours' supply of water would be available, equating to 36 m<sup>3</sup>/d storage and thus 36 m<sup>3</sup> tank storage;
- Access road construction of a new ≤15 km long, ≤8 m wide gravel access road running from the main Lephalale road to the site. The access road will fall within the proposed 132kV overhead transmission lines corridor, Further consultation with Roads Agency Limpopo is required to confirm the design of this access;
- Perimeter fencing and security systems The perimeter fence will have a perimeter sensor. Other security systems will include closed-circuit television (CCTV) cameras motion sensors and floodlights. There will be a 5 m buffer area between the perimeter fence and any plant equipment. Two fences will be utilised; a plant fence and a perimeter fence, 5m apart. On the inside of the plant fence and the outside of the perimeter fence, vegetation will be limited to grass and will be cut twice a year. In between the plant fence and the perimeter fence a buffer area will be maintained as
a fire break. The road will be outside of the 5 meter area between the internal fence and the outer perimeter fence;;

- Access control (gate & security building) at site entrance 24-hour security service will be required to guard the solar PV facility during the construction and operation phases. Security staff will be stationed in a brick building with ablution facilities at the site entrance;
- Sewerage infrastructure During construction, portable toilets will be used and will be emptied by a tanker and sewage removed from the site for disposal at municipal works. During operation, domestic effluent will be discharged to a buried, concrete conservancy tank, recommended to have a capacity of 25 m3. The tank shall then be emptied weekly by tanker and disposed of off-site at an appropriate facility; and
- Stormwater infrastructure A conceptual stormwater management plan forms part of the Hydrological Assessment. Where required, stormwater infrastructure will be constructed to ensure that stormwater run-off from the site is appropriately managed.
- 1.7.3 Temporary Infrastructure combined maximum size of 10 hectares
  - Concrete batching facility cement bin, an aggregate bin, an aggregate conveyor and the cement and aggregate batchers;
  - Temporary offices for the construction period;
  - Construction yard; and
  - Laydown area.

#### 1.8 Project Phases and Activities

The proposed Lephalale Solar Plant project will have the following phases which are included within the scope of this EMPr:

Planning and Design Phase activities will include:

- Site design and layout;
- Pre-construction assessment of White-backed Vulture nesting sites (two months before the construction commences);
- Identification of service infrastructure already present in the area;
- Construction planning; and
- Relevant permitting.

Construction phase activities will extend over 24 months and will include:

• Vegetation clearance - part of the fenced construction staging/lay-down area will form the operational lay-down area;

- Construction of ±15 m wide access road;
- Excavation;
- Service infrastructure installation;
- Transport of material and equipment (including the use of abnormal load vehicles for the transport of transformers) including building materials (bricks, sand, aggregate, cement, gravel, sheeting, fencing, etc.);
- Paving and concreting;
- Building; and
- Rehabilitation.

During the operational phase, which will extend over 20 years, activities will include:

- Generation of electricity;
- Maintenance, inspections, and panel cleaning;
- Use of service infrastructure;
- Stormwater Management; and
- Use of roads.

The facility will be in operation for at least 20 years. Should decommissioning be deemed necessary, the decommissioning activities would extend over one year and would include:

- Demolition of structures;
- Decommissioning of service infrastructure; and
- Removal of building rubble.

Throughout the project lifecycle, the construction, operating and decommissioning teams must be prepared for unplanned emergencies or incidents threatening human health or the environment.

#### 1.9 Composite Environmental Sensitivity Map

Based on the results of the desktop assessment and specialist studies, a composite environmental sensitivity map showing the proposed solar plant and associated infrastructure is shown in Figure 3.

Key sensitive features identified within the proposed project footprint through the Scoping process include the following:

• Very High Terrestrial and Aquatic Sensitivity based on the web-based national screening tool owing to the location within National Freshwater Ecosystem Priority

Area (NFEPA). Site investigations have shown that there are no natural watercourses or wetlands within the study area;

- The endangered White-backed Vulture was seen to fly over the study area. Several suitable large nesting trees are present within the study site. The removal of these trees during the construction phase will decrease the nesting habitat;
- The study area falls within ESA 1 in terms of the 2013 Limpopo Conservation Plan (version 2) (LDEDET, 2013); and
- Several protected tree species were identified within the study area. An upfront count and GPS mapping of affected protected trees will be undertaken by a qualified botanist to assess relocation and permitting requirements. The requirements for tree replacement and replanting are to be confirmed with DFFE.

Figure 3: Composite Environmental Sensitivity Map

# 2 ENVIRONMENTAL IMPACT STATEMENT

Appendix 4 of the 2014 NEMA EIA Regulations, as amended, requires that the EMPr include a description of the impact management outcomes, including management statements, identifying the impacts and risks that need to be avoided, managed and mitigated as identified through the environmental impact assessment process for all phases of the development. The results of the impact assessment indicated that the most significant impacts on the receiving environment would be those listed below in Table 6 and Table 7. The correct implementation of the mitigation measures outlined within this document will ensure that all impacts are managed, mitigated or avoided as far as practicably possible.

| Environmental Aspect                | Impacts   |
|-------------------------------------|---|
|                                     | Generation of inhalable PM2.5, PM10 and TSP and impacts on        |
| Air Quality & Climate               | health  |
|                                     | GHG emissions during the construction activities                  |
|                                     | <ul> <li>Potential loss of indigenous vegetation units</li> </ul> |
|                                     | Potential increase in alien vegetation                            |
|                                     | Potential loss of floral species of conservation importance       |
|                                     | Loss of catchment area and decreased water inputs                 |
| vegetation                          | Contamination of the area by petrochemical spillages              |
|                                     | Contamination of the area by construction and domestic waste      |
|                                     | Contamination of the area as a result of leaking portable toilet  |
|                                     | facilities.   |
|                                     | Potential loss of faunal species of conservation importance       |
|                                     | Potential loss of vulture breeding habitat (White-backed          |
|                                     | Vulture)  |
|                                     | Potential loss of foraging habitat for game species               |
| Wildlife                            | Contamination of the area by petrochemical spillages              |
|                                     | Contamination of the area by construction and domestic waste      |
|                                     | Contamination of the area as a result of leaking portable toilet  |
|                                     | facilities.   |
|                                     | Road Mortalities  |
|                                     | Soil Contamination  |
|                                     | Soil loss / Soil erosion  |
| Soils, Land Capability and Land Use | Loss of agricultural potential                                    |
|                                     | • Temporary change in land use from open veld (zoned for          |
|                                     | mining) to construction   |
|                                     | Increase in water turbidity due to sediment inputs and/or         |
| Water Quality                       | erosion   |

#### Table 6: Key impacts during the construction phase

|                                    | Physio-chemical water pollution related to potential spillages of |
|------------------------------------|---|
|                                    | cement and fuels  |
|                                    | Negative visual impact on aesthetics                              |
| Visual                             | Change of visual landscape and character                          |
|                                    | Visual intrusion due to glare, light trespass and skyglow         |
|                                    | Noise disturbance from the movement of construction vehicles      |
| Noise                              | Noise disturbance from the operation of machinery                 |
|                                    | Loss of cultural heritage resources                               |
| Heritage & Paleontological Impacts | Loss of palaeontological resources                                |
|                                    | Increased annoyance, air quality and noise                        |
|                                    | Increase in crime   |
|                                    | Increased risk of HIV infections                                  |
|                                    | Influx of construction workers                                    |
| Social                             | Hazard exposure   |
|                                    | Disruption of daily living patterns and social and community      |
|                                    | infrastructure  |
|                                    | Job creation and skills development                               |
|                                    | Positive economic impacts   |
|                                    | Increase in traffic   |
|                                    | Increase of incidents with pedestrians and livestock              |
|                                    | Increase in dust from gravel roads                                |
| Traffic                            | Increase in road maintenance                                      |
|                                    | Additional abnormal loads   |
|                                    | Increase in dust from gravel roads                                |
|                                    | New / larger access points  |

# Table 7: Key impacts during the operational phase

| Environmental Aspect             | Impacts  |
|----------------------------------|--|
| Renewable Energy Goals and Green | Contribution to Renewable Energy Goals and Green           |
| House Gas Reduction              | House Gas Reduction  |
|                                  | <ul> <li>Spreading of alien invasive vegetation</li> </ul> |
|                                  | Loss of catchment area and decreased water inputs          |
|                                  | Contamination of the area by petrochemical                 |
| Vegetation                       | spillages  |
|                                  | Contamination of the area by domestic waste                |
|                                  | Contamination of the area as a result of leaking           |
|                                  | ablution facilities.                                       |
|                                  | Potential increase in the number of bird-strikes           |
|                                  | along the connection powerline                             |
| Wildlife                         | Potential disruption of open space corridor                |
|                                  | Potential loss of foraging habitat for game species        |

|                                     | Contamination of the area by petrochemical           |
|-------------------------------------|--|
|                                     | spillages  |
|                                     | Contamination of the area by domestic waste          |
|                                     | Contamination of the area as a result of leaking     |
|                                     | ablution facilities.                                 |
|                                     | Road Mortalities                                     |
|                                     | Soil contamination                                   |
| Solls, Land Capability and Land Use | Soil erosion   |
|                                     | Increase in water turbidity due to sediment inputs   |
|                                     | and/or erosion                                       |
|                                     | Potential sedimentation several months after the     |
|                                     | site has been constructed.                           |
|                                     | Physio-chemical water pollution related to potential |
| Water Quality & Quantity            | spillages / leakages of fuels and oils               |
|                                     | Lowering of groundwater levels- groundwater          |
|                                     | abstraction from BH2                                 |
|                                     | Lowering of regional groundwater levels within the   |
|                                     | aquifer  |
|                                     | Lowering of the water table due to dewatering        |
|                                     | Landscape visual change                              |
|                                     | Change of visual character                           |
| Visual                              | • Visual intrusion due to glare, light trespass and  |
|                                     | skyglow  |
|                                     | Glint & glare  |
| Social                              | Transformation of the sense of place                 |
|                                     | Positive economic impacts                            |
|                                     | Increase in dust from gravel roads                   |
| Traffic                             | New / larger access points                           |

# 3 ROLES AND RESPONSIBILITIES

The effective implementation of this EMPr is dependent on established and clear roles, responsibilities and reporting lines within an institutional framework. This section of the EMPr gives guidance to the various environmental roles and reporting lines, however, project-specific requirements will ultimately determine the need for the appointment of a specific person(s) to undertake specific roles and or responsibilities. As such, it must be noted that if no specific person, for example, an Environmental Control Officer (ECO) is appointed, the holder of the EA remains responsible for ensuring that the duties of the ECO indicated in this document are undertaken. See Table 8.

### Table 8: Roles and Responsibilities for Implementation of the EMPr

| Responsible Person                   | Roles and Responsibilities   |
|--------------------------------------|--|
| Developer's Project<br>Manager (DPM) | <u>Role</u><br>The Project Developer is accountable for ensuring compliance with the EMPr and any conditions of approval from<br>the competent authority (CA). An ECO will be contracted by the Project Developer to objectively monitor the<br>implementation of the EMPr according to relevant environmental legislation, and the conditions of the EA. The<br>Project Developer is further responsible for providing and giving the mandate to enable the ECO to perform<br>responsibilities, and he must ensure that the ECO is integrated as part of the project team while remaining<br>independent.               |
|                                      | <ul> <li><u>Responsibilities</u></li> <li>Be fully conversant with the conditions of the EA;</li> <li>Ensure that all stipulations within the EMPr are communicated and adhered to by the Developer and its Contractor(s);</li> <li>Issuing of site instructions to the Contractor for corrective actions required;</li> <li>Monitor the implementation of the EMPr throughout the project through site inspections and meetings. Overall management of the project and EMPr implementation; and</li> <li>Ensure that periodic environmental performance audits are undertaken on the project implementation.</li> </ul> |
| Developer Site Supervisor<br>(DSS)   | Role<br>The DSS reports directly to the DPM, oversees site works, liaises with the contractor(s) and the ECO. The DSS is<br>responsible for the day to day implementation of the EMPr and for ensuring the compliance of all contractors with<br>the conditions and requirements stipulated in the EMPr.   |
|                                      | <ul> <li><u>Responsibilities</u></li> <li>Ensure that all contractors identify a contractor's Environmental Officer (cEO);</li> <li>Must be fully conversant with the conditions of the EA. Oversees site works, liaison with Contractor, DPM and ECO;</li> <li>Must ensure that all landowners have the relevant contact details of the site staff, ECO and cEO;</li> <li>Issuing of site instructions to the Contractor for corrective actions required;</li> <li>Will issue all non-compliances to contractors; and</li> <li>Ratify the Monthly Environmental Report.</li> </ul>                                      |
| ECO                                  | Role<br>The ECO should have appropriate training and experience in the implementation of environmental management<br>specifications. The primary role of the ECO is to act as an independent quality controller and monitoring agent<br>regarding all environmental concerns and associated environmental impacts. In this respect, the ECO is to conduct<br>periodic site inspections, attend regular site meetings, pre-empt problems and suggest mitigation and be available  |

| to advise on incidental issues that arise. The ECO is also required to conduct compliance audits, verifying the monitoring reports submitted by the cEO. The ECO provides feedback to the DSS and DPM regarding all environmental matters. The Contractor, cEO and developer Environmental Officer (dEO) are answerable to the ECO for non-compliance with the Performance Specifications as set out in the EA and EMPr.   |
|--|
| The ECO provides feedback to the DSS and DPM, who in turn reports back to the Contractor and potential and Registered Interested and Affected Parties (I&AP's), as required. Issues of non-compliance raised by the ECO must be taken up by the Employer's Project Manager and resolved with the Contractor as per the conditions of his contract. Decisions regarding environmental procedures, specifications and requirements which have a cost implication (i.e. those that are deemed to be a variation, not allowed for in the Performance Specification) must be endorsed by the Employer's Project Manager. The ECO must also, as specified by the EA, report to the relevant CA as and when required. |
| Posponsibilitios   |
| The responsibilities of the ECO will include the following:  |
| - Be aware of the findings and conclusions of all EA related to the development;   |
| - Be familiar with the recommendations and mitigation measures of this EMPr;   |
| <ul> <li>Be conversant with relevant environmental legislation, policies and procedures, and ensure compliance with them;</li> <li>Undertake regular and comprehensive site inspections/audits of the construction site according to the generic EMPr and applicable licenses to monitor compliance as required;</li> </ul>  |
| - Educate the construction team about the management measures contained in the EMPr and environmental licenses;  |
| - Compilation and administration of an environmental monitoring plan to ensure that the environmental management measures are implemented and are effective;   |
| <ul> <li>Monitoring the performance of the Contractors and ensuring compliance with the EMPr and associated Method<br/>Statements (to be compiled once detailed designs have been completed);</li> </ul>   |
| - In consultation with the DSS order the removal of person(s) and/or equipment which are in contravention of the specifications of the EMPr and/or environmental licenses;   |
| <ul> <li>Liaison between the DPM, Contractors, authorities and other lead stakeholders on all environmental concerns;</li> <li>Compile a regular Environmental Audit Report (EAR) highlighting any non-compliance issues as well as satisfactory or exceptional compliance with the EMPr;</li> </ul>   |
| - Validating the regular site inspection reports, which are to be prepared by the cEO;   |
| - Checking the cEO's record of environmental incidents (spills, impacts, legal transgressions etc.) as well as   |
| corrective and preventive actions taken;   |
| - Unecking the CEU's public complaints register in which all complaints are recorded, as well as action taken;<br>Assisting in the resolution of conflicts:  |
| - Facilitate training for all personnel on the site - this may range from carrying out the training to reviewing the   |
| training programmes of the Contractor;   |
|  |

|                         | <ul> <li>In the case of non-compliances, the ECO must first communicate this to the Senior Site Supervisor, who has the power to ensure this matter is addressed. Should no action or insufficient action be taken, the ECO may report this matter to the authorities as non-compliance;</li> <li>Maintenance, update and review of the EMPr;</li> <li>Communication of all modifications to the EMPr to the relevant stakeholders.</li> </ul>  |
|-------------------------|---|
| developer Environmental | Role  |
| Officer (dEO)           | The dEOs will report to the DPM and are responsible for the implementation of the EMPr, environmental monitoring and reporting, providing environmental input to the DPM and Contractor's Manager, liaising with contractors and the landowners as well as a range of environmental coordination responsibilities.  |
|                         | Responsibilities  |
|                         | - Be fully conversant with the EMPr;  |
|                         | <ul> <li>Be familiar with the recommendations and mitigation measures of this EMPr, and implement these measures;</li> <li>Ensure that all stipulations within the EMPr are communicated and adhered to by the Employees, Contractor(s);</li> <li>Confine the development site to the demarcated area;</li> </ul>   |
|                         | <ul> <li>Conduct environmental internal audits with regards to EMPr and authorisation compliance (or cEO);</li> <li>Assist the contractors in addressing environmental challenges on site;</li> </ul>   |
|                         | <ul> <li>Assist in incident management:</li> <li>Reporting environmental incidents to the developer and ensuring that corrective action is taken, and lessons learnt shared:</li> </ul>   |
|                         | <ul> <li>Assist the contractor in investigating environmental incidents and compiling investigation reports;</li> <li>Follow-up on pre-warnings, defects, non-conformance reports;</li> </ul>   |
|                         | - Measure and communicate environmental performance to the Contractor;  |
|                         | - Conduct environmental awareness training on site together with ECO and cEO;   |
|                         | - Ensure that the necessary legal permits and/or licenses are in place and up to date;  |
|                         | - Acting as Developer's Environmental Representative on site and working together with the ECO and contractor.  |
| Contractor              | Role<br>The Contractor encoded the effort of the second back of the second entities and estimate  |
|                         | The Contractor appoints the CEO and has overall responsibility for ensuring that all work, activities, and actions linked to the delivery of the contract are in line with the EMPr and that Method Statements are implemented as described (to be compiled once detailed designs have been completed). External contractors must ensure compliance with this EMPr while performing the onsite activities as per their contract with the Project Developer. The contractors are required, where specified, to provide Method Statements setting out in detail how the impact management actions contained in the EMPr will be implemented (to be compiled once detailed designs have been completed). |
|                         | Responsibilities<br>- Project delivery and quality control for the development services as per appointment;   |

|     | <ul> <li>Employ a suitably qualified person to monitor and report to the Project Developer's appointed person on the daily activities on-site during the construction period;</li> <li>Ensure that safe, environmentally acceptable working methods and practices are implemented, and that equipment is properly operated and maintained, to facilitate proper access and enable any operation to be carried out safely;</li> <li>Attend on site meeting(s) prior to the commencement of activities to confirm the procedure and designated activity zones;</li> <li>Ensure that contractors' staff repair, at their own cost, any environmental damage as a result of a contravention of the specifications contained in EMPr, to the satisfaction of the ECO.</li> </ul>   |
|-----|---|
| cEO | Role<br>Each Contractor affected by the EMPr should appoint a cEO, who is responsible for the on-site implementation of<br>the EMPr (or relevant sections of the EMPr). The Contractor's representative can be the site agent; site engineer;<br>dedicated environmental officer; or an independent consultant. The Contractor must ensure that the Contractor's<br>Representative is suitably qualified to perform the necessary tasks and is appointed at a level such that she/he can<br>interact effectively with other site Contractors, labourers, the Environmental Control Officer and the public. As a<br>minimum the cEO shall meet the following criteria:   |
|     | <ul> <li><u>Responsibilities</u></li> <li>Be on site throughout the project and be dedicated to the project;</li> <li>Ensure all their staff are aware of the environmental requirements, conditions and constraints with respect to all of their activities on site;</li> <li>Implementing the environmental conditions, guidelines and requirements as stipulated within the EA, EMPr and Method Statements (to be compiled once detailed designs have been completed);</li> <li>Attend the Environmental Site Meeting;</li> <li>Undertaking corrective actions where non-compliances are registered within the stipulated timeframes;</li> <li>Report back formally on the completion of corrective actions;</li> <li>Assist the ECO in maintaining all the site documentation;</li> <li>Prepare the site inspection reports and corrective action reports for submission to the ECO;</li> <li>Assist the ECO with the preparing of the monthly report; and</li> <li>Where more than one Contractor is undertaking work on site, each company appointed as a Contractor will appoint a cEO representing that company.</li> </ul> |

# 4 ENVIRONMENTAL DOCUMENTATION REPORTING AND COMPLIANCE

To ensure accountable and demonstrated implementation of the EMPr, several reporting systems, documentation controls and compliance mechanisms must be in place as a minimum requirement.

### 4.1 Document control/Filing system

The holder of the EA is solely responsible for the upkeep and management of the EMPr file. As a minimum, all documentation detailed below will be stored in the EMPr file. A hard copy of all documentation shall be filed, while an electronic copy may be kept where relevant. A duplicate file will be maintained in the office of the DSS (where applicable). This duplicate file must remain current and up-to-date. The filing system must be updated, and relevant documents added as required. The EMPr file must be made available at all times on request by the CA or other relevant authorities. The EMPr file will form part of any environmental audits undertaken as prescribed in the EIA Regulations.

### 4.2 Documentation to be available

At the outset of the project the following preliminary list of documents shall be placed in the filing system and be accessible at all times:

- A full copy of the signed EA from the CA in terms of NEMA;
- Any amendments to the EA;
- Copy of the generic and site-specific EMPr as well as any amendments thereof;
- Copy of declaration of implementing generic EMPr and subsequent approval of site-specific EMPr and amendments thereof;
- All method statements (to be compiled once detailed designs have been completed);
- Completed environmental checklists;
- Minutes and attendance register of environmental site meetings;
- An up-to-date environmental incident log;
- A copy of all instructions or directives issued;
- A copy of all corrective actions signed off. The corrective actions must be filed in such a way that a clear reference is made to the non-compliance record;
- Complaints register.

# 4.3 Weekly Environmental Checklist

The dEOs are required to complete a Weekly Environmental Checklist, the format of which is to be agreed upon prior to commencement of the activity. The dEOs are required to sign and date the checklist, retain a copy in the EMPr file and submit a copy of the completed checklist to the DSS weekly. The checklists will form the basis for the Monthly Environmental Reports. Copies of all completed checklists will be attached as Annexures to the EAR as required in terms of the EIA Regulations.

### 4.4 Environmental site meetings

Minutes of the environmental site meetings shall be kept. The minutes must include an attendance register and will be attached to the Monthly Report that is distributed to attendees. Each set of minutes must record "Matters for Attention" that will be reviewed at the next meeting.

### 4.5 Required Method Statements

The method statement will be done in such detail that the ECOs and EOs can assess whether the contractor's proposal is in accordance with the EMPr (to be compiled once detailed designs have been completed).

The method statement must include the following:

- Development procedures;
- Materials and equipment to be used;
- Getting the equipment to and from the site;
- How the equipment/ material will be moved while on site;
- How and where the material will be stored;
- The containment (or action to be taken if containment is not possible) of leaks or spills of any liquid or material that may occur;
- Timing and location of activities;
- Compliance/ non-compliance with the EMPr; and
- Any other information deemed necessary by the ECO.

Unless indicated otherwise by the Developer's Project Manager, the Contractor shall provide the following method statements to the Developer's Project Manager no less than 14 days prior to the commencement date of the activity:

- Site establishment Camps, Lay-down or storage areas, satellite camps, infrastructure;
- Batch plants;
- Workshop or plant servicing;
- Handling, transport and storage of Hazardous Chemical Substances;
- Vegetation management Protected, clearing, aliens, felling;
- Access management Roads, gates, crossings etc.;
- Fire plan;
- Waste management -transport, storage, segregation, classification, disposal (all waste streams);
- Social interaction complaints management, compensation claims, access to properties etc.;
- Water use (source, abstraction and disposal), access and all related information, crossings and mitigation;

- Emergency preparedness Spills, training, other environmental emergencies;
- Dust and noise management methodologies;
- Fauna interaction and risk management only if the risk was identified wildlife interaction especially on game farms; and
- Heritage and palaeontology management.

The dEOs shall monitor and ensure that the contractors perform in accordance with these method statements. Completed and agreed method statements between the holder of the EA and the contractor must be included in the environmental file. A generic format of a method statement is supplied as Appendix B.

### 4.6 Environmental Incident Log (Diary)

The dEOs are required to maintain an up-to-date and current Environmental Incident Log (environmental diary). The Environmental Incident Log is a means to record all environmental incidents and/or all non-compliance notice would not be issued. An environmental incident is defined as:

- Any deviation from the listed impact management actions (listed in this EMPr) that may be addressed immediately by the ECOs. (For example, a contractor's staff member littering or a drip tray that has not been emptied);
- Any environmental impact resulting from an action or activity by a contractor in contravention
  of the environmental stipulations and guidelines listed in the EMPr which as a single event would
  have a minor impact but which if cumulative and continuous would have a significant effect (for
  example no toilet paper available in the ablutions for an afternoon); and
- General environmental information such as road kills or injured wildlife.

The dEOs are to record all environmental incidents in the Environmental Incident Log. All incidents regardless of severity must be reported to the Developer. The Log is to be kept in the EMPr file and at a minimum, the following will be recorded for each environmental incident:

- The date and time of the incident;
- Description of the incident;
- The name of the Contractor responsible;
- The incident must be listed as significant or minor;
- If the incident is listed as significant, a non-compliance notice must be issued, and recorded in the log;
- Remedial or corrective action taken to mitigate the incident; and
- Record of repeat minor offences by the same contractor or staff member.

The Environmental Incident Log will be captured in the EAR.

# 4.7 Non-compliance

A non-compliance notice will be issued to the responsible contractor by the ECO via the DSS or DPM. The non-compliance notices will be issued in writing; a copy filed in the EMPr file and will at a minimum include the following:

- Time and date of the non-compliance;
- Name of the contractor responsible;
- Nature and description of the non-compliance;
- Recommended / required corrective action; and
- Date by which the corrective action is to be completed.

The contractors shall act immediately when a notice of non-compliance is received and correct whatever is the cause for the issuing of the notice. Complaints received regarding activities on the development site pertaining to the environment shall be recorded in a dedicated register and the response noted with the date and action taken. The ECO should be made aware of any complaints. Any non-compliance with the agreed procedures of the EMPr is a transgression of the various statutes and laws that define how the environment is managed. Failure to redress the cause shall be reported to the relevant CA for them to deal with the transgression, as it deems fit. The contractor is deemed not to have complied with the EMPr if, inter alia, there is a deviation from the environmental conditions, impact management outcomes and impact management actions activities, as approved in generic and site-specific EMPr as relevant as set out in the EMPr, which deviation has, or may cause, an environmental impact.

# 4.8 Corrective action records

For each non-compliance notice issued, a documented corrective action must be recorded. On receiving a non-compliance notice from the DSS, the contractor's cEO will ensure that the corrective actions required take place within the stipulated timeframe. On completion of the corrective action, the cEO is to issue a Corrective Action Report in writing to the ECO. If satisfied that the corrective action has been completed, the ECO is to sign-off on the Corrective Action Report and attach the report to the non-compliance notice in the EMPr file.

Corrective action is considered complete once the report has been signed off by the ECO.

# 4.9 Photographic record

A digital photographic record will be kept. The photographic record will be used to show before, during and post-rehabilitation evidence of the project as well used in cases of damages claims if they arise. Each image must be dated, and a brief description note attached. The Contractor shall:

- Allow the ECO and EOs access to take photographs of all areas, activities and actions.
- The EOs shall keep an electronic database of photographic records which will include:
  - Pictures of all areas designated as work areas, camp areas, development sites and storage areas taken before these areas are set up;
  - All bunding and fencing;
  - Road conditions and road verges;
  - o Condition of all farm fences;
  - Topsoil storage areas;
  - All areas to be cordoned off during construction;
  - o Waste management sites;
  - Ablution facilities (inside and out);
  - Any non-conformances deemed to be "significant";
  - All completed corrective actions for non-compliance;
  - o All required signage;
  - Photographic recordings of incidents;
  - o All areas before, during and post-rehabilitation; and
  - o Include relevant photographs in the Final Environmental Audit Report.

#### 4.10 Complaints register

The ECOs shall keep a current and up-to-date complaints register. The complaints register is to be a record of all complaints received from communities, stakeholders and individuals. The Complaints Record shall:

- Record the name and contact details of the complainant;
- Record the time and date of the complaint;
- Contain a detailed description of the complaint;
- Where relevant and appropriate, contain photographic evidence of the complaint or damage (ECOs to take relevant photographs); and
- Contain a copy of the ECOs written response to each complaint received and keep a record of any further correspondence with the complainant. The ECO's written response will include a description of any corrective action to be taken and must be signed by the Contractor, ECO and affected party. Where a damage claim is issued by the complainant, the ECOs shall respond as described below.

#### 4.11 Claims for damages

If a Claim for Damages is submitted by a community, landowner or individual, the EOs shall:

• Record the full detail of the complaint as described above;

- The DPM will evaluate the claim and associated damage and submit the evaluation to the Senior Site Representative for approval;
- Following consideration by the DPM, the claim is to be resolved and settled immediately, or the reason for not accepting the claim communicated in writing to the claimant. Should the claimant not accept this, the ECO shall, in writing report the incident to the Developer's negotiator and legal department; and
- A formal record of the response by the EOs to the claimant as well as the rectification of the method of making payments not amount will be recorded in the EMPr file.

# 4.12 Interactions with I & APs

Open, transparent and good relations with affected landowners, communities and regional staff are an essential aspect to the successful management and mitigation of environmental impacts.

The EOs shall:

- Ensure that all queries, complaints and claims are dealt with within an agreed timeframe;
- Ensure that any or all agreements are documented, signed by all parties and a record of the agreement kept in the EMPr file;
- Ensure that complaints telephone numbers are made available to all landowners and affected parties; and
- Ensure that contact with affected parties is courteous at all times;

# 4.13 Environmental audits

Internal environmental audits of the activity and implementation of the EMPr must be undertaken. The findings and outcomes are included in the EMPr file and submitted to the CA at intervals as indicated in the EA.

The ECO must prepare a monthly EAR. The report will be tabled as the key point on the agenda of the Environmental Site Meeting. The Report is submitted for acceptance at the meeting and the final report will be circulated to the Developer's Project Manager and filed in the EMPr file. At a frequency determined by the EA, the ECOs shall submit the monthly reports to the CA. At a minimum the monthly report is to cover the following:

- Weekly Environmental Checklists;
- Deviations and non-compliances with the checklists;
- Non-compliances issued;
- Completed and reported corrective actions;
- Environmental Monitoring;
- General environmental findings and actions; and
- Minutes of the Bi-monthly Environmental Site Meetings.

# 4.14 Final environmental audits

On completion of the rehabilitation and/or requirements of the EA, a final EAR is to be prepared and submitted to the CA. The EAR must comply with Appendix 7 of the EIA Regulations.

# 4.15 Environmental Training and Awareness-Raising

The Contractor, sub-contractors and employees require an appropriate level of environmental awareness and competence to ensure continued compliance with environmental legislation, conditions of the EA and the provisions in the EMPr. Training needs should be identified based on the available and existing capacity of site personnel (including all Contractors and sub-contractors) to undertake the required management actions and monitoring activities. All personnel must be adequately trained to perform their designated tasks to an acceptable standard.

Upfront environmental training is aimed at:

- Promoting environmental awareness;
- Informing the main contractor of all environmental procedures, policies and programmes applicable;
- Providing generic training on the implementation of environmental management specifications; and
- Providing job-specific environmental training to understand the key environmental features of the construction site and the surrounding environment.

Training will be offered in the main languages (Afrikaans, Northern Sotho and English). In addition to the upfront environmental training by the ECO, the Contractor should make provision for regular training or "Toolbox Talks".

General environmental awareness must be fostered to ensure that environmental incidents are minimised and there is environmental compliance.

# 5 PROPOSED IMPACT MANAGEMENT ACTIONS

This section outlines aspects related to the development of the proposed solar plant and associated infrastructure and for each aspect, a set of prescribed impact management outcomes and associated impact management actions have been identified. Holders of EAs are responsible to ensure the implementation of these outcomes and actions for all projects as a minimum requirement, to mitigate the impact of such aspects.

This must be signed and dated on each page by both the contractor and the holder of the EA prior to commencement of the activity. The method statements are prepared and agreed to by the holder of the EA (to be compiled once detailed designs have been completed - a generic format is supplied as

Appendix B). Each method statement must also be duly signed and dated on each page by the contractor and the holder of the EA. This template, once signed and dated, is legally binding. The holder of the EA will remain responsible for its implementation.

Appendix 4 of the 2014 NEMA EIA Regulations requires that the EMPr aim to achieve the following through the proposed impact management actions:

- Avoid, modify, remedy, control or stop any action, activity or process which causes pollution or environmental degradation;
- Comply with any prescribed environmental management standards or practices;
- Comply with any applicable provisions of the Act regarding the closure, where applicable; and
- Comply with any provisions of the Act regarding financial provision for rehabilitation, where applicable.

| ASPECT: ENVIRONMENTAL TRAINING - PRE-CONSTRUCTION PLANNING AND DESIGN AND CONSTRUCTION PHASES   |  |  |   |                   |  |   |  |
|---|--|--|---|-------------------|--|---|--|

#### 6 DECLARATION

The proponent/applicant or holder of the EA affirms that he/she will abide and comply with the prescribed impact management outcomes and impact management actions and have the understanding that the impact management outcomes and impact management actions are legally binding. The proponent/applicant or holder of the EA affirms that he/she will provide written notice to the CA 14 days prior to the date on which the activity will commence of commencement of construction to facilitate compliance inspections.

\_\_\_\_\_

-----

Signature Proponent/applicant/ holder of EA

Date

NOTE:

Should the EA be transferred to a new holder, this declaration must be completed by the new holder and submitted with the application for an amendment of the EA in terms of Regulations 29 or 31 of the EIA Regulations, whichever applies. The information submitted for an amendment to an environmental authorisation will be considered to be incomplete should a signed copy of the EMPr not be submitted. Once approved, the EMPr becomes legally binding to the new EA holder.

### APPENDIX A

Curriculum Vitae of Environmental Assessment Practitioner (EAP)

### CORE SKILLS

- Project Management
- Technical & Impact Assessment Guidance
- Environmental Assessment
- Water Use Licencing
- Waste Management Licencing
- Environmental & Waste Auditing and Compliance Monitoring

al

#### DETAILS

#### Qualifications

- B.Sc. Microbiology (Honours) University of Pretoria 1996
- B.Sc. Biological Sciences University of Pretoria 1994

#### Memberships

- International Association for Impact Assessors of South Africa (IAIA)
- Institute of Waste Management of South Africa (IWMSA)
- SACNASP (No.117348) (South African Council for Natural Scientific Professionals)

#### Languages

- Afrikaans
- English

#### Countries worked in:

South Africa, Zambia, Namibia

#### Gerda Bothma

## Durban Environmental Unit Head

### PROFILE

Gerda has over 22 years' experience within the environmental and waste management field and strives to deliver custom environmental services to clients.

Gerda began her career in the environmental field within the government sector, managing environmental aspects and impacts as well as reviewing environmental assessments with the view of authorizing or declining authorization of the developments.

After six years within the government sector she joined a consulting engineering firm where she was ultimately responsible for the Management of the Environmental Sub-Division. Gerda has experience in project and client management, financial management and the compilation and costing of project proposals and tenders. She has been involved in several engineering projects as the Environmental Assessment Practitioner as well as the Environmental Control Officer during construction working closely with the Occupational Health and Safety Officer. Gerda has also been involved in projects where waste licensing as well as water use licensing processes formed an integral part of the services offered. Environmental auditing and compliance monitoring of waste disposal sites also forms part of her experience gained. She also has experience in dealing with projects which involve NEC3 Contracts.

Gerda has specialist skills in the following areas:

- Project proposals, planning, costing and timing
- Project and Client Management
- Authority Liaison
- Basic Assessments & Scoping/EIA Processes
- Compilation
- Amendment of EA's & EMP's
- Facilitation of Public Participation Processes & stakeholder
   engagement
- IWULA & IWWMP Applications
- Environmental Control Officer (ECO) duties
- Environmental Compliance Auditing (IFC Performance Standards & Equator Principles)
- Mentorship & Guidance

# Work Experience

| Period             | Employer  | Position  | Role/ Responsibility  |
|--------------------|---|---|---|
| 2019 to<br>Current | GCS Water and<br>Environment (Pty) Ltd                              | Environmental Unit Manager  | Management of the environmental unit in the Durban Office. Management of applications for rectification in terms of Section 24G of the EIA Regulations, undertaking basic environmental assessment and full scoping&eir applications in terms of the Regulations. Management of Integrated Water Use License Applications in terms of the NWA. Undertaking of environmental compliance audits for various construction projects as well as environmental legal audit reviews and environmental due diligence investigations.    |
| 2018 to 2019       | Terramanzi Group (Pty)<br>Ltd                                       | Senior Environmental Consultant   | Management of the environmental unit within the Terramanzi Group. Management<br>of applications for rectification in terms of Section 24G of the EIA Regulations,<br>undertaking basic environmental assessment and full scoping&eir applications in<br>terms of the Regulations. Undertaking of environmental compliance audits for<br>various construction projects as well as environmental legal audit reviews and<br>environmental due diligence investigations.   |
| 2014 to 2017       | GIBB (Pty) Ltd  | Senior Environmental Scientist  | Management of applications for rectification in terms of Section 24G of the EIA Regulations, undertaking of basic environmental assessment and full scoping&eir applications in terms of the Regulations. Management of Integrated Water Use License Applications in terms of the NWA. Undertaking of environmental compliance audits for various construction projects as well as environmental legal audit reviews and environmental due diligence investigations.  |
| 2011 to 2013       | WorleyParsons RSA   | Senior Environmental Scientist &<br>Durban Department Head<br>Environment | Management of the environmental unit in the Durban Office. Management of applications for rectification in terms of Section 24G of the EIA Regulations, undertaking of basic environmental assessment and full scoping&eir applications in terms of the Regulations. Management of Integrated Water Use License Applications in terms of the NWA. Undertaking of environmental compliance audits for various construction projects as well as environmental legal audit reviews and environmental due diligence investigations. |
| 2003 to 2011       | KV3 Engineers   | Senior Environmental Scientist  | Management of applications for exemption from compliance with the EIA Regulations, undertaking of basic environmental assessment applications, as well as full environmental impact assessment applications.  |
| 2000 to 2003       | Gauteng Department of<br>Agriculture, Conservation<br>& Environment | Assistant Director: Waste<br>Management Division                          | Project management and environmental management pertaining to all developments within a designated area in Gauteng Province. Review of EIAs, formulation of commonts and or authorizations within designated area in Gauteng  |
| 1999 to 2000       | Gauteng Department of<br>Agriculture, Conservation<br>& Environment | Senior Environmental Officer:<br>Waste Management Division                | Province. Liaison with waste contractors, industries and others. Management of legal interventions required in terms of environmental legislation within a designated area. Supporting environmental officers at all levels in terms of   |
| 1997 to 1999       | Gauteng Department of<br>Agriculture, Conservation<br>& Environment | Environmental Officer: Waste<br>Management Division                       | technical and environmental guidance, input into strategic decisions, resolving complex and potentially challenging issues.   |
| 1996               | Spartan Private School  | Teacher: Natural Science &<br>Biology                                     | Teacher in Biology and Natural Science for Grades 7 to 12.  |

### APPENDIX B

Generic Method Statement

### Generic Method Statement

Information pertaining to the activity which will be undertaken:

What activity will take place?

How will the activity be undertaken (methods)?

Machinery/plant/equipment or vehicles which will be needed?

Materials required and relevant hazard status?

Where on site will the activity take place and what will the extent of the activity be?

Timeframes of activity (start and end dates)?

Impact and Risk Assessment of the Activity:

| Impact sources |  |  |
|----------------|--|--|
| Receptors      |  |  |
| Objective      |  |  |
| Risks          |  |  |
| Notes          |  |  |

The following signatures represent a binding agreement to the Method Statement and EMPr by all Contractors and Sub-Contractors involved in the above activity.

| Role                 | Name | Company | Date | Signature |
|----------------------|------|---------|------|-----------|
| Client               |      |         |      |           |
