Hi Tilly,

I have reviewed the layout "20221109\_Mulilo De Aar 2 South WEF Layout.kmz" and the layout is acceptable and respects all high bat sensitivities and their buffers, with no blades intruding into high bat sensitivity buffers (based on a rotor diameter of 165m, which equates to a rotor radius of 82.5m).

This updated layout does not require any additional mitigation for bats to what has been recommended in the amendment statement and the EMP Update and Layout Finalisation report updated on 3 November 2022.

Kind regards
