ANNEXURE A: RESPONSE TO ITEM 13

The activity requiring the destruction of scattered stone artefacts is the construction of a concentrated solar thermal power plant. The plant will have a capacity of 50MW and occupy an area of 350 hectares. The plant infrastructure consists mainly of a large array of parabolic mirrors and power block where the energy conversion takes place. The nature of the infrastructure requires the project site to be cleared and levelled prior to installation, for this reason it will be necessary to remove any of the above-mentioned artefacts discovered within the 350ha site.
