Dear Mr Gardiner

### **INYANDA – ROODEPLAAT WEF**

Your email to me on the 26<sup>th</sup> May 2017 and the attached Roodeplaar Wind Energy Farm (WEF) layout in Google Earth refers.

As requested, I hereby provide the following information regarding this project:

- 1) Safetech conducted a noise impact assessment of the Roodeplaar WEF and submitted a report to SRK Consulting on the findings (report number 26/7581 - Version 2 as on 17<sup>th</sup> March 2016). As discussed telephonically with you on the 31<sup>st</sup> May 2017, this is the same report which you used to compile the Final Environmental Impact Report (FEIR) for the Roodeplaar WEF.
- 2) The number and layout of the turbines, the power line alignment alternatives, and turbine dimensions (i.e. 85m hub height and 63m rotor length – 126m diameter) are the same as what I used to model the noise impacts. There are thus no differences in what I have modelled and what you have included in your FEIR. The significance ratings are thus still valid and no changes need to be made to the mitigation measures that I proposed in my report.
- 3) I also confirm that the field work that was conducted in preparing my report is adequate. Furthermore, the additional noise monitoring that I have proposed during the construction and operating phases is still valid.

- 4) I hereby confirm that I had full access to the site to conduct the field work and was not hindered in any manner.

Please feel free to contact me should you have any further requirements.

Yours sincerely
