BA for Proposed Sea-Based Aquaculture Development Zone in Saldanha Bay: EAP Affirmation

Section 16 (1) (b) (iv), Appendix 1 Section 3 (1) (r), Appendix 2 Sections 2 (j) and (k) and Appendix 3 Section 3 (s) of the Environmental Impact Assessment (EIA) Regulations, 2014 (promulgated in terms of the National Environmental Management Act 107 of 1998, as amended - NEMA), require an undertaking under oath or affirmation by the Environmental Assessment Practitioner (EAP) in relation to:

- The correctness of the information provided in the report;
- The inclusion of comments and inputs from stakeholders and interested and affected parties;
- Any information provided by the EAP to interested and affected parties and any responses by the EAP to comments or inputs made by interested or affected parties; and
- The level of agreement between the EAP and interested and affected parties on the Plan of Study for undertaking the environmental impact assessment.

SRK Consulting (South Africa) (Pty) Ltd and the EAPs managing this project hereby affirm that:

- To the best of our knowledge the information provided in the report is correct, and no attempt has been made to manipulate information to achieve a particular outcome. Some information, especially pertaining to the project description, was provided by the applicant and/or their sub-contractors. In this respect, SRK's standard disclaimer (inserted in this report) pertaining to information provided by third parties applies.
- To the best of our knowledge all comments and inputs from stakeholders and interested and affected parties have been captured in the report and no attempt has been made to manipulate such comment or input to achieve a particular outcome. Written submissions are appended to the report while other comments are recorded within the report. For the sake of brevity, not all comments are recorded *verbatim*, and in instances where many stakeholders have made similar comments, they are grouped together, with a clear listing of who submitted which comment(s).
- Information and responses provided by the EAP to interested and affected parties are clearly presented in the report. Where responses are provided by the applicant (not the EAP), these are clearly indicated.
- With respect to EIA Reports, SRK will take account of interested and affected parties' comments on the Plan of Study and, insofar as comments are relevant and practicable, accommodate these during the Impact Assessment Phase of the EIA process.

Table of Contents

Section A: Activity Information

1. Project Description
2. Feasible and Reasonable Alternatives
3. Physical Size of the Activity
4. Site Access
5. Locality Map
6. Layout / Route Plan
7. Sensitivity Map
8. Site Photographs

Date Received:

Basic assessment report in terms of the Environmental Impact Assessment Regulations, 2014, promulgated in terms of the National Environmental Management Act, 1998 (Act No. 107 of 1998), as amended.

Kindly note that:

1. This **basic assessment report** is a standard report that may be required by a competent authority in terms of the EIA Regulations, 2014 and is meant to streamline applications. Please make sure that it is the report used by the particular competent authority for the activity that is being applied for.
2. This report format is current as of **08 December 2014**. It is the responsibility of the applicant to ascertain whether subsequent versions of the form have been published or produced by the competent authority
3. The report must be typed within the spaces provided in the form. The size of the spaces provided is not necessarily indicative of the amount of information to be provided. The report is in the form of a table that can extend itself as each space is filled with typing.
4. Where applicable **tick** the boxes that are applicable in the report.
5. An incomplete report may be returned to the applicant for revision.
6. The use of “not applicable” in the report must be done with circumspection because if it is used in respect of material information that is required by the competent authority for assessing the application, it may result in the rejection of the application as provided for in the regulations.
7. This report must be handed in at offices of the relevant competent authority as determined by each authority.
8. No faxed or e-mailed reports will be accepted.
9. The signature of the EAP on the report must be an original signature.
10. The report must be compiled by an independent environmental assessment practitioner.
11. Unless protected by law, all information in the report will become public information on receipt by the competent authority. Any interested and affected party should be provided with the information contained in this report on request, during any stage of the application process.
12. A competent authority may require that for specified types of activities in defined situations only parts of this report need to be completed.
13. Should a specialist report or report on a specialised process be submitted at any stage for any part of this application, the terms of reference for such report must also be submitted.

BASIC ASSESSMENT REPORT

14. Two (2) colour hard copies and one (1) electronic copy of the report must be submitted to the competent authority.
15. Shape files (.shp) for maps must be included in the electronic copy of the report submitted to the competent authority.

SECTION A: ACTIVITY INFORMATION

Has a specialist been consulted to assist with the completion of this section?

YES	NO
------------	-----------

If YES, please complete the form entitled “Details of specialist and declaration of interest” for the specialist appointed and attach in Appendix I.

1. PROJECT DESCRIPTION

a) Describe the project associated with the listed activities applied for

A. Background

The Department of Agriculture, Forestry and Fisheries (DAFF) aims to develop and facilitate aquaculture (the sea-based or land-based rearing of aquatic animals or the cultivation of aquatic plants for food) in South Africa to supply food, create jobs in marginalised coastal communities and contribute to national income.

Saldanha Bay is a highly productive marine environment and has an established aquaculture industry, with potential for growth. Some 468 ha of the Bay are currently allocated for aquaculture production. Of these, some 152 ha are actively farmed, mostly in Small Bay and for mussels and oysters (see Figure 1). DAFF specialist scientists have published a peer-reviewed paper that has established that the carrying capacity of the Bay can support higher bivalve production. Operation Phakisa has triggered increased interest in starting new aquaculture projects and expanding existing projects within Saldanha Bay.

DAFF proposes to establish a sea-based Aquaculture Development Zone (ADZ) in Saldanha Bay, Western Cape to encourage investor and consumer confidence, create incentives for industry development, provide marine aquaculture services, manage the risks associated with aquaculture, address cumulative impacts and provide skills development and employment for coastal communities.

B. ADZ areas assessed in the BA

The potential ADZ areas to be assessed in the Basic Assessment (BA) process¹ comprise of five precincts in Saldanha Bay, adding 1 404 ha of new aquaculture areas in Saldanha Bay for a total ADZ comprising 1 872 ha (see Table 1 and Figure 1):

- Small Bay: no additional aquaculture areas are proposed (though allocated areas are not fully utilized);
- Big Bay North: north of Mykonos entrance channel;
- Big Bay South: south of Mykonos entrance channel – two alternative layouts are proposed for this area;
- Outer Bay North: north of Port entrance channel, near Malgas Island; and
- Outer Bay South: south of Port entrance channel, near Jutten Island.

Currently farmed areas will be incorporated into the ADZ.

Table 1: ADZ precincts assessed in the BA

ADZ Precinct	Currently allocated	Currently farmed	New areas	Total future
Small Bay	163	125	-	163
Big Bay North	254	25	271	525
Big Bay South	4	1	517	521
Outer Bay North	37	1	299	336
Outer Bay South	10	-	317	327
Total	468	152	1 404	1 872

¹ The Project Definition developed by CapMarine describes the project that was assessed in the BA (see Appendix D1).

BASIC ASSESSMENT REPORT

Potentially suitable areas for aquaculture were identified based on oceanographic conditions such as depth, waves and swell. Aspects such as nutrients and dissolved oxygen in any one area were not taken into account in the selection of areas, but will have to be considered by prospective farmers in relation to individual operations.

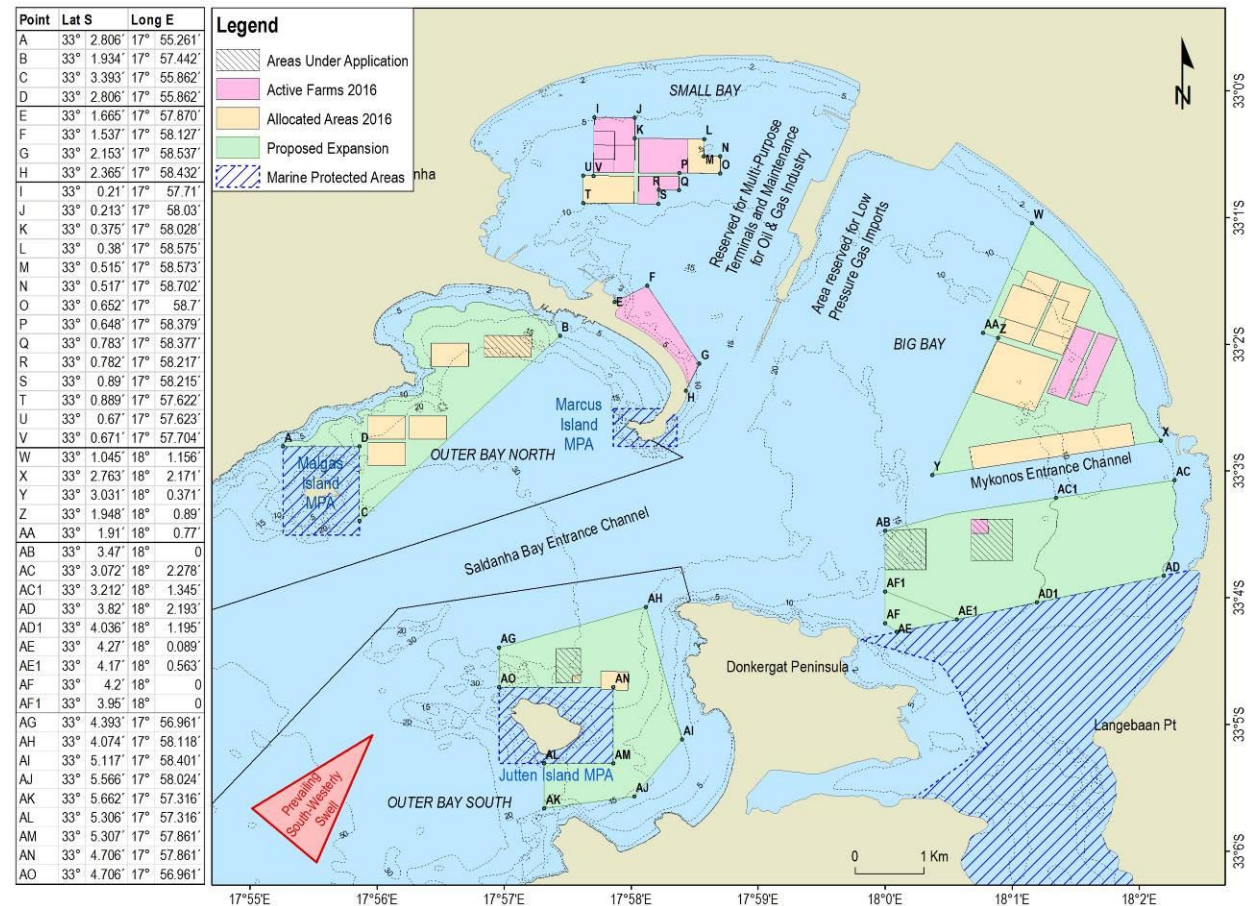

Figure 1: Existing (yellow and pink) and assessed (green) aquaculture areas in Saldanha Bay

C. Proposed species and methods

The following species are considered for farming in the ADZ:

- Currently cultivated bivalve species:
 - Pacific oyster (*Crassostrea gigas*)
 - Mediterranean mussel (*Mytilus galloprovincialis*)
 - Black mussel (*Choromytilus meridionalis*)
- Indigenous shellfish species not currently cultivated:
 - Abalone (*Haliotis midae*)
 - South African scallop (*Pecten sulcicostatus*)
- Indigenous finfish species:
 - White Stumpnose (*Rhabdosargus globiceps*)
 - Silver Kob (*Argyrosomus inodorus*)
 - Yellowtail (*Seriola lalandi*)
- Alien finfish species:
 - Atlantic salmon (*Salmo salar*)
 - Coho salmon (*Oncorhynchus kisutch*)
 - King/Chinook salmon (*Oncorhynchus tshawytscha*)
 - Rainbow trout (*Oncorhynchus mykiss*)
- Seaweed:
 - *Gracilaria gracilis*

BASIC ASSESSMENT REPORT

The following production methods are considered most viable for farming in the ADZ:

- *Longlines* for bivalve culture, comprising a surface rope with floats and moored at each end to fix the line in position. The production ropes for mussels or oyster racks are then suspended from the surface rope;
- *Rafts* for bivalve culture, comprising a floating top structure moored to the seabed from which mussel ropes are suspended;
- *Cages* for finfish production, constructed of circular flexible high density polyethylene with multi-mooring systems; and
- *Barrel culture* for abalone, which can be deployed from rafts and longlines.

Table 2 summarises the proposed species and production methods per ADZ precinct. These are also shown in Figure 2 below.

Table 2: Assessed Saldanha Bay ADZ areas, species and production methods

ADZ Precinct	Recommended species (*individual species as per list provided above)	Recommended Production Method
Small Bay	Currently cultivated bivalve species* Indigenous shellfish species not currently cultivated* Seaweed*	Rafts / longlines
Big Bay - North	Currently cultivated bivalve species* Indigenous shellfish species not currently cultivated* Seaweed*	Longlines / rafts
	Indigenous finfish species* Alien finfish species*	Floating cages (depths of more than 13m)
Big Bay – South	Currently cultivated bivalve species* Indigenous shellfish species not currently cultivated* Seaweed*	Longlines / rafts
	Indigenous finfish species* Alien finfish species*	Floating cages (depths of more than 13m)
Outer Bay - North	Mediterranean mussel (<i>Mytilus galloprovincialis</i>) Black mussel (<i>Choromytilus meridionalis</i>)	Sub-surface longlines
	Indigenous finfish species* Alien finfish species*	Floating cages
Outer Bay - South	Mediterranean mussel (<i>Mytilus galloprovincialis</i>) Black mussel (<i>Choromytilus meridionalis</i>)	Sub-surface longlines
	Indigenous finfish species* Alien finfish species*	Floating cages

BASIC ASSESSMENT REPORT

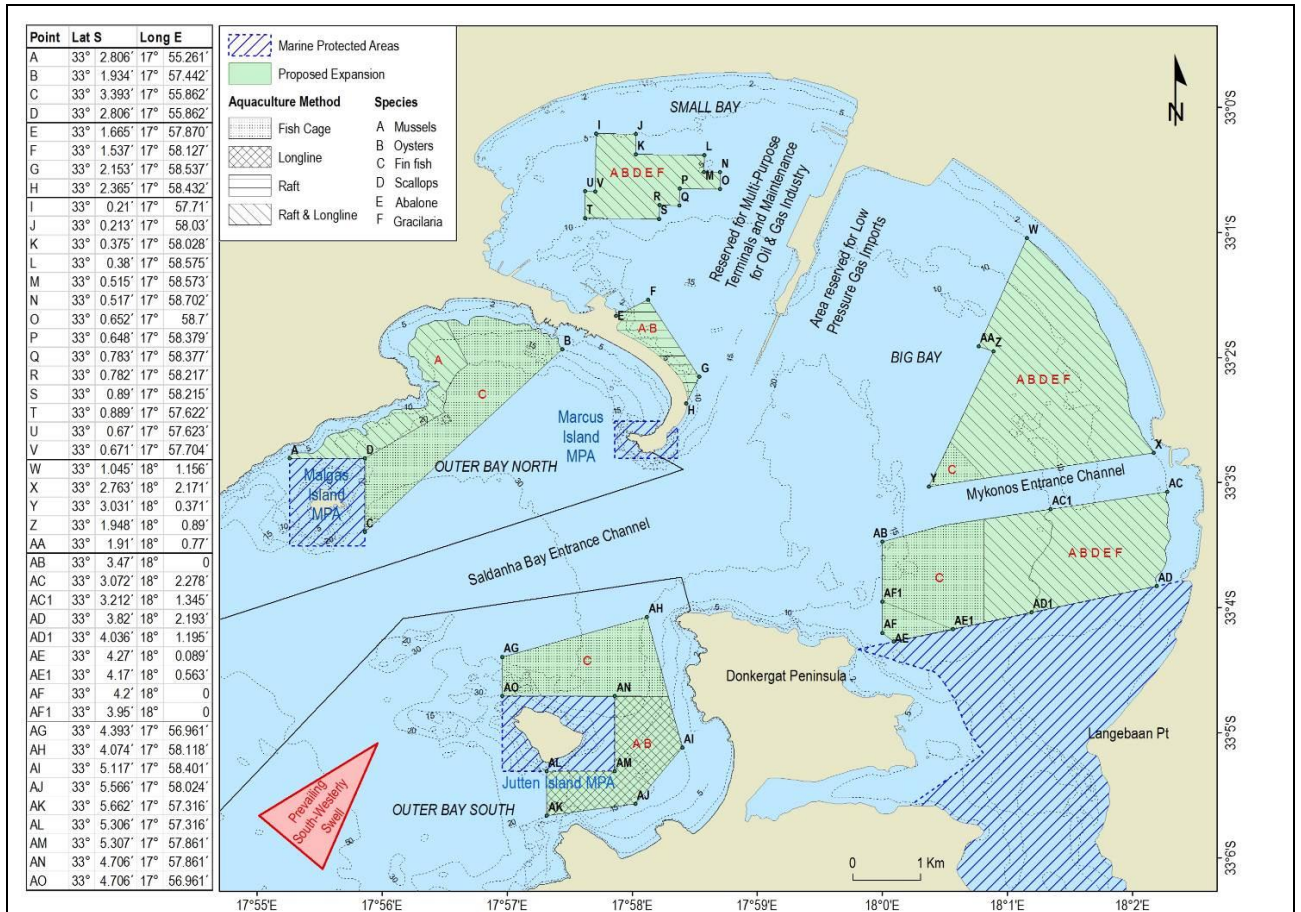

Figure 2: Assessed Saldanha Bay ADZ areas, species and production methods

Table 3 indicates the full extent of identified ADZ areas for bivalves and fish, as shown in Figure 2 above. It is assumed that areas identified as suitable for fish are also suitable for bivalve cultivation, but less so vice versa. Note that low-oxygen conditions previously experienced in Outer Bay North; these were not taken

Table 3: ADZ for bivalve and fish areas (ha) assessed in the BA

ADZ Precinct	Total ADZ Area	Bivalves	Fish
Small Bay	163	163	-
Big Bay North	525	503	22
Big Bay South	521	326	195
Outer Bay North	336	112	224
Outer Bay South	327	153	174
Total	1 872	1 257	615

D. Production volumes

D1. Bivalves

The ADZ bivalve production volumes assessed in the BA were determined based on:

- Ecological carrying capacity estimated by Probyn *et al* (2015)² for bivalves; and
- Discussion with industry and industry proposals submitted to DAFF for fish farming.

² Probyn TA, Atkins JF and Pitcher GC (2015). Saldanha Bay, South Africa III: new production and carrying capacity for bivalve aquaculture. African Journal of Marine Science, 37:4, 521-531, DOI: 10.2989/1814232X.2015.1113203.

BASIC ASSESSMENT REPORT

Probyn distinguishes between two carrying capacity concepts:

- Production Carrying Capacity (PCC), which relates to total production in the system – Probyn *et al* (2015) identify a lower and higher PCC scenario; and
- Ecological Carrying Capacity (ECC), which considers environmental requirements and provides a more conservative, management-oriented estimate of carrying capacity available for aquaculture – Probyn *et al* (2015) identify lower (10% of PCC) and higher (25% of PCC) levels for the ECC.

Table 4 provides a matrix for the various PCC and ECC densities for higher and lower scenarios for (ungraded) mussel and oyster production. Ungraded production refers to the total production volume (marketed, re-seeded and discarded) of mussels, whereas graded production refers to the marketable mussel portion only. For oysters, graded and ungraded volumes are generally equal. Probyn *et al*'s assumed a mussel : oyster ratio of 70 : 30 to derive the below densities.

Table 4: PCC and ECC densities for mussels and oysters in Saldanha Bay (t/ha)

Scenario	PCC		ECC			
	Mussels	Oysters	Mussels		Oysters	
			Low ECC	High ECC	Low ECC	High ECC
Low PCC	40	4.6	4	10	0.46	1.15
High PCC	53	6	5.3	13.25	0.6	1.5

Table 5 shows the minimum and maximum production volumes for the ADZ when applying the lowest and highest ECC densities shown (and shaded) in Table 4 to the full ADZ areas.

Table 5: Minimum and maximum mussel and oyster production volumes in the ADZ

ADZ Precinct	Area (ha)	Low PCC / Low ECC scenario (tpa)			High PCC / High ECC scenario (tpa)		
		Mussels		Oysters	Mussels		Oysters
		Ungraded	Graded		Ungraded	Graded	
Small bay	163	652	326	75	2 160	1 080	245
Big Bay North	525	2 100	1 050	242	6 956	3 478	788
Big Bay South	520	2 080	1 040	239	6 890	3 445	780
Outer Bay North	336	1 344	672	155	4 452	2 226	504
Outer Bay South	327	1 308	336	150	4 333	2 167	491
Total Area	1 871	7 484	3 742	861	24 791	12 396	2 807
Mussels and oysters		Ungraded: 8 345 / Graded: 4 603			Ungraded: 27 597 / Graded: 15 203		

Based on Probyn's calculations, the full ADZ could support total annual graded aquaculture bivalve production of between 4 603 t and 15 203 t, an increase of between 131% and 660% relative to current graded production of ~2 000 tpa.

D2. Finfish

The ADZ finfish production volumes assessed in the BA were determined based on:

- The area available for finfish farming, with an assumed average farming density of 40 t of fish per ha based on current proposals by the industry; and
- Estimated generation of nutrients from waste as Nitrate (N) as a proportion of overall estimated N in Saldanha Bay.

Table 6 indicates that some 24 600 t of finfish could be produced in the ADZ areas deemed potentially suitable for finfish production (full scenario) at a density of 40 t/ha.

Table 6: Theoretical finfish production in full ADZ at 40 t/ha

ADZ Precinct	Area available for fish (ha)	Finfish production (t)
Small Bay	-	-
Big Bay North	22	880
Big Bay South	195	7 800
Outer Bay North	224	8 960
Outer Bay South	174	6 960
Total	615	24 600

The nutrient load in Saldanha Bay was approximated using nutrient levels quoted by Monteiro et al. (1998), cited in Probyn et al (2015), which indicates N physical flux for entrainment in the Bay at 7.94 mmol Nm⁻² d⁻¹, equating to 0.03335 kg/N/m²/yr assuming a 300 day upwelling year (Probyn pers. comm.). Total natural N in Saldanha Bay (~8 960 ha) is thus estimated at approximately 3 000 tons.

Numerous studies estimate waste production from fish farming, with considerable variation (Price and Morris, 2013)³. The value used to determine fish waste production for the Saldanha Bay ADZ was derived as the mean of the upper and lower estimates by Strain and Hargrave (2005)⁴, resulting in 87.5 kg of N generated per ton of fish farmed.

It is recommended as a precautionary approach that finfish production be initially capped so that estimated N produced by finfish farming does not exceed 15% of estimated N load in the Bay, or ~450 t of N. This equates to finfish production of ~5 150 tpa.

D3. Seaweed

Research on growing seaweed commercially in southern Africa is limited, and realizing the potential of this resource will require cooperation between research agencies and industry. In the Saldanha ADZ, potentially suitable areas for Gracilaria production are likely located in Small Bay and Big Bay in areas shallower than 6 m.

E. Sea-based aquaculture activities

Sea-based activities associated with aquaculture in the ADZ include:

- Servicing and maintenance of aquaculture structures (such as rafts, lines, cages);
- Harvesting of cultivated species;
- Initial processing of bivalves, including de-clumping and grading, typically on the raft or support vessel; and
- Vessel trips between the shore and aquaculture areas, e.g. to service structures or harvest species.

F. Associated sea-based infrastructure

Besides the rafts, lines, cages and barrels (including moorings and flotation devices) required for aquaculture, the following associated sea-based infrastructure is required:

- Navigational lights demarcating aquaculture areas;
- Mooring facilities for boats.

G. Associated land-based infrastructure and activities

Land-based infrastructure and activities depend on cultivated species, production methods and processing. Mussels can largely be harvested, de-clumped and graded on the raft or support vessel. Basic land-based support infrastructure includes:

³ Price, C.S. and J.A. Morris, Jr. (2013). Marine Cage Culture and the Environment: Twenty-first Century Science Informing a Sustainable Industry. NOAA Technical Memorandum NOS NCCOS 164. 158 pp.

⁴ Strain, P.M., and B.T. Hargrave. In press. Salmon aquaculture. nutrient fluxes, and ecosystem processes in southwestern New Brunswick. In Hargrave B.T. (Ed.). Environmental Effects of Marine Finfish Aquaculture. The Handbook of Environmental Chemistry Volume 5: Water Pollution. Springer Verlag. Berlin Heidelberg New York, NY.

BASIC ASSESSMENT REPORT

- Landing quays (catering for personnel, equipment and product) that are accessible for vehicles;
- Mooring space in protected harbour areas for support vessels;
- Product holding facilities (which can be off-site if they do not rely on seawater as is the case for mussels); and
- Processing facilities for mussels.

The capacity of existing quays is deemed sufficient to accommodate a moderate expansion of the aquaculture industry.

Detailed (design) information on (new) land-based facilities, as would be required for the authorisation of such facilities in terms of NEMA and the ICMA, cannot be provided as part of this study. As such, no land-based facilities that require Environmental Authorisation (EA) are included in this assessment, and obtaining authorisation will be the responsibility of individual operators.

b) Provide a detailed description of the listed activities associated with the project as applied for

Listed activity as described in GN 983, 984 and 985	Description of project activity
<p>GN R.983 Activity 7: The development and related operation of facilities, infrastructure or structures for aquaculture of sea-based cage culture of finfish, crustaceans, reptiles, amphibians, molluscs, echinoderms and aquatic plants where the facility, infrastructure or structure will have a production output exceeding 50 000 kg per annum (wet weight).</p>	<p>The ADZ aims to establish new facilities, infrastructure or structures in Saldanha Bay for sea-based cultivation, primarily of molluscs (e.g. mussels, oysters), seaweeds and finfish. The ADZ area is projected to potentially produce up to:</p> <ul style="list-style-type: none"> - 27 597 ungraded / 15 203 graded tpa of bivalves; and - 5 000 tpa of finfish. <p>Anticipated production will thus exceed the threshold of 50 tpa at full operation of the ADZ.</p> <p>Anticipated ADZ facilities, infrastructure or structures include:</p> <ul style="list-style-type: none"> - Structures such as mussel rafts, longlines, fish cages and barrels, moored to the sea bed and held afloat by buoys, in four designated ADZ precincts within Saldanha Bay; and - Navigational buoys and lights to demarcate the position of aquaculture areas / infrastructure. <p>It is expected that operators will initially make use of existing land-based facilities and vessel (off-) loading and mooring structures.</p>
<p>GN R.983 Activity 17: Development (i) in the sea; (ii) in an estuary; (iii) within the littoral active zone; (iv) in front of a development setback; or (v) if no development setback exists, within a distance of 100 metres inland of the high-water mark of the sea or an estuary, whichever is the greater;</p> <p>in respect of (a) fixed or floating jetties and slipways; (b) tidal pools; (c) embankments; (d) rock revetments or stabilising structures</p>	<p>The aquaculture structures (such as mussel rafts, longlines, fish cages and barrels) will be moored to the sea bed. The combined footprint of moorings for each structure is well below 50 m². The combined footprint of all moorings for all structures within the ADZ may, however, exceed 50 m².</p>

BASIC ASSESSMENT REPORT

<p>including stabilising walls; (e) buildings of 50 square metres or more; or (f) infrastructure with a development footprint of 50 square metres or more, but excluding—</p> <p>(aa) the development of infrastructure and structures within existing ports or harbours that will not increase the development footprint of the port or harbour</p>	
<p>GN R.983 Activity 42: The expansion and related operation of facilities, infrastructure or structures for aquaculture of sea-based cage culture of finfish, crustaceans, reptiles, amphibians, molluscs, echinoderms and aquatic plants where the annual production output of such facility, infrastructure or structures will be increased by 50 000 kg (wet weight) or more.</p>	<p>A total of 468 ha are currently allocated for aquaculture in Saldanha Bay; of these 152 ha are operational. Existing operators also manage a number of on-shore processing facilities. The existing aquaculture areas will be located in and incorporated into the future ADZ areas.</p> <p>The proposed ADZ will increase the total allocated aquaculture area by 1 404 ha to 1 872 ha in future. Annual production is expected to increase by more than 50 000 kg (wet weight) per annum at full operation of the ADZ.</p> <p>Spatially, the ADZ may thus be considered an expansion of existing aquaculture facilities, infrastructure or structures. However, the new farms in the ADZ may also be considered new (though similar) structures, which may be operated by a range of (existing and/or new) operators, in which case it is understood that GN R.983 Activity 7 applies.</p>
<p>GN R.983 Activity 54: Expansion of facilities (i) in the sea; (ii) in an estuary; (iii) within the littoral active zone; (iv) in front of a development setback; or (v) if no development setback exists, within a distance of 100 metres inland of the high-water mark of the sea or an estuary, whichever is the greater;</p> <p>in respect of (a) fixed or floating jetties and slipways; (b) tidal pools; (c) embankments; (d) rock revetments or stabilising structures including stabilising walls; (e) buildings of 50 square metres or more; or (f) infrastructure where the development footprint is expanded by 50 square metres or more, but excluding—</p> <p>(aa) the expansion of infrastructure or structures within existing ports or harbours that will not increase the development footprint of the port or harbour</p>	<p>The aquaculture structures (such as rafts, longlines and fish cages) will be moored to the sea bed. The combined footprint of moorings for each structure is well below 50 m². The combined footprint of all moorings for all structures within the ADZ may, however, exceed 50 m².</p> <p>As aquaculture structures are already moored in Saldanha Bay, the ADZ may thus spatially be considered an expansion of existing infrastructure in the sea by more than 50 m².</p> <p>However, the new farms in the ADZ may also be considered new (though similar) structures, which may be operated by a range of (existing and/or new) operators, in which case it is understood that GN R.983 Activity 42 applies.</p>

1. FEASIBLE AND REASONABLE ALTERNATIVES

“alternatives”, in relation to a proposed activity, means different means of meeting the general purpose and requirements of the activity, which may include alternatives to—

- (a) the property on which or location where it is proposed to undertake the activity;

BASIC ASSESSMENT REPORT

- (b) the type of activity to be undertaken;
- (c) the design or layout of the activity;
- (d) the technology to be used in the activity;
- (e) the operational aspects of the activity; and
- (f) the option of not implementing the activity.

Describe alternatives that are considered in this application as required by Appendix 1 (3)(h), Regulation 2014. Alternatives should include a consideration of all possible means by which the purpose and need of the proposed activity (NOT PROJECT) could be accomplished in the specific instance taking account of the interest of the applicant in the activity. The no-go alternative must in all cases be included in the assessment phase as the baseline against which the impacts of the other alternatives are assessed.

The determination of whether site or activity (including different processes, etc.) or both is appropriate needs to be informed by the specific circumstances of the activity and its environment. After receipt of this report the, competent authority may also request the applicant to assess additional alternatives that could possibly accomplish the purpose and need of the proposed activity if it is clear that realistic alternatives have not been considered to a reasonable extent.

The identification of alternatives should be in line with the Integrated Environmental Assessment Guideline Series 11, published by the DEA in 2004. Should the alternatives include different locations and lay-outs, the co-ordinates of the different alternatives must be provided. The co-ordinates should be in degrees, minutes and seconds. The projection that must be used in all cases is the WGS84 spheroid in a national or local projection.

Alternative 3

Description	Lat (DDMMSS)	Long (DDMMSS)
n/a		

BASIC ASSESSMENT REPORT

c) Technology alternatives

Alternative 1 (preferred alternative)
A range of different aquaculture methods are proposed for the ADZ, such as cultivation of bivalves from rafts and longlines. The preferred culture method in different ADZ areas is shown in Figure 2 (also see Appendix A). Individual operators will decide on the preferred aquaculture method employed in any one area, which will depend on the environmental conditions in that area and the species farmed.
Alternative 2
n/a
Alternative 3
n/a

d) Other alternatives (e.g. scheduling, demand, input, scale and design alternatives)

Alternative 1 (preferred alternative)
n/a
Alternative 2
n/a
Alternative 3
n/a

e) No-go alternative

The No-Go alternative implies that existing aquaculture production in Saldanha Bay will continue as long as lease agreements / authorisations are valid (and aquaculture remains viable). Management measures recommended as part of the ADZ development would, however, not become binding on existing aquaculture operations.
--

Paragraphs 3 – 13 below should be completed for each alternative.

2. PHYSICAL SIZE OF THE ACTIVITY

a) Indicate the physical size of the preferred activity/technology as well as alternative activities/technologies (footprints):

Alternative:		Size of the activity:
Alternative A1	Total ADZ	1 872 ha
	New aquaculture areas	1 404 ha
Alternative A2 (if any)	Total ADZ	1 629 ha
	New aquaculture areas	1 157 ha
Alternative A3 (if any)		ha

or, for linear activities:

BASIC ASSESSMENT REPORT

Alternative:

Alternative A1 (preferred activity alternative)
 Alternative A2 (if any)
 Alternative A3 (if any)

Length of the activity:

	m
	m
	m

b) Indicate the size of the alternative sites or servitudes (within which the above footprints will occur):

Alternative:

Alternative A1 (preferred activity alternative)
 Alternative A2 (if any)
 Alternative A3 (if any)

Size of the site/servitude:

Saldanha Bay measures approximately 8 000 ha	
	m ²

3. SITE ACCESS

Does ready access to the site exist?

If NO, what is the distance over which a new access road will be built

YES	NO
m	

Describe the type of access road planned:

n/a

Include the position of the access road on the site plan and required map, as well as an indication of the road in relation to the site.

4. LOCALITY MAP

An A3 locality map must be attached to the back of this document, as Appendix A. The scale of the locality map must be relevant to the size of the development (at least 1:50 000. For linear activities of more than 25 kilometres, a smaller scale e.g. 1:250 000 can be used. The scale must be indicated on the map.). The map must indicate the following:

- an accurate indication of the project site position as well as the positions of the alternative sites, if any;
- indication of all the alternatives identified;
- closest town(s);
- road access from all major roads in the area;
- road names or numbers of all major roads as well as the roads that provide access to the site(s);
- all roads within a 1km radius of the site or alternative sites; and
- a north arrow;
- a legend; and
- locality GPS co-ordinates (Indicate the position of the activity using the latitude and longitude of the centre point of the site for each alternative site. The co-ordinates should be in degrees and decimal minutes. The minutes should have at least three decimals to ensure adequate accuracy. The projection that must be used in all cases is the WGS84 spheroid in a national or local projection).

5. LAYOUT/ROUTE PLAN

A detailed site or route plan(s) must be prepared for each alternative site or alternative activity. It must be attached as Appendix A to this document.

The site or route plans must indicate the following:

- the property boundaries and numbers of all the properties within 50 metres of the site;
- the current land use as well as the land use zoning of the site;
- the current land use as well as the land use zoning each of the properties adjoining the site or sites;
- the exact position of each listed activity applied for (including alternatives);
- servitude(s) indicating the purpose of the servitude;
- a legend; and
- a north arrow.

6. SENSITIVITY MAP

The layout/route plan as indicated above must be overlain with a sensitivity map that indicates all the sensitive areas associated with the site, including, but not limited to:

- watercourses;
- the 1:100 year flood line (where available or where it is required by DWS);
- ridges;
- cultural and historical features;
- areas with indigenous vegetation (even if it is degraded or infested with alien species); and
- critical biodiversity areas.

The sensitivity map must also cover areas within 100m of the site and must be attached in Appendix A.

7. SITE PHOTOGRAPHS

Colour photographs from the centre of the site must be taken in at least the eight major compass directions with a description of each photograph. Photographs must be attached under Appendix B to this report. It must be supplemented with additional photographs of relevant features on the site, if applicable.

8. FACILITY ILLUSTRATION

A detailed illustration of the activity must be provided at a scale of at least 1:200 as Appendix C for activities that include structures. The illustrations must be to scale and must represent a realistic image of the planned activity. The illustration must give a representative view of the activity.

BASIC ASSESSMENT REPORT

9. ACTIVITY MOTIVATION

Motivate and explain the need and desirability of the activity (including demand for the activity):

1. Is the activity permitted in terms of the property's existing land use rights?	YES	NO	Please explain
Saldanha Bay currently supports a number of aquaculture operations, and Transnet National Ports Authority (TNPA) has allocated additional areas for aquaculture that are not yet farmed, but will be integrated into the ADZ. Research has determined that the carrying capacity of Saldanha Bay can support additional aquaculture production (see Section A 1 a)).			
2. Will the activity be in line with the following?			
(a) Provincial Spatial Development Framework (PSDF)	YES	NO	Please explain
The Western Cape PSDF (WCPSDF) (2014) identifies economic growth as a primary objective (Page 59). To this end, the PSDF focuses on opening-up opportunities in the Provincial space-economy, using public investment strategically to leverage private and community investments in urban and rural markets. A component of this strategy includes investing in new regional economic infrastructure to unlock the potential of the emerging Saldanha Bay/Vredenburg regional economic nodes (Page 59). In facilitating the establishment of an ADZ, the DAFF aims to encourage investment, create incentives for industry development, provide marine aquaculture services, manage the risks associated with aquaculture and provide skills development and employment for coastal communities.			
(b) Urban edge / Edge of Built environment for the area	YES	NO	Please explain
N/A as the proposed ADZ is sea-based. ADZ areas were identified in consultation with Transnet, and areas required for existing and likely future operation of / activities at the Port of Saldanha are thus already excluded.			
(c) Integrated Development Plan (IDP) and Spatial Development Framework (SDF) of the Local Municipality (e.g. would the approval of this application compromise the integrity of the existing approved and credible municipal IDP and SDF?).	YES	NO	Please explain
The Saldanha Bay Local Municipality IDP (2015-2016) includes the objective of growing and developing four labour intensive sectors in Saldanha, including aquaculture (Page 87). The Saldanha Bay SDF (February 2011) states that due to low rainfall and inadequate water resources, the potential for intensive agricultural production in Saldanha Bay is limited. The area's livestock farming potential is also low due to the poor carrying capacity of the indigenous vegetation. The SDF therefore promotes the growth of alternative agricultural sectors such as agro-industry and aquaculture industry (Page 148).			
(d) Approved Structure Plan of the Municipality	YES	NO	Please explain
The proposed bulk power infrastructure falls within the boundaries of the Port of Saldanha, administered by TNPA. TNPA has already allocated aquaculture leases in the Bay, which will be integrated into the ADZ.			

BASIC ASSESSMENT REPORT

<p>(e) An Environmental Management Framework (EMF) adopted by the Department (e.g. Would the approval of this application compromise the integrity of the existing environmental management priorities for the area and if so, can it be justified in terms of sustainability considerations?)</p>	YES	NO	Please explain
<p>An EMF has not yet been formally adopted for the Saldanha Bay Local Municipality; although a draft EMF (dated February 2013) is available.</p> <p>The proposed aquaculture areas do not fall within the “Zone 1 - Keep Assets Intact” identified in the EMF, where aquaculture is listed as an <i>activity that would generally be deemed unacceptable</i> (the ADZ may infringe on the boundary of the 300 m wide surf zone identified as forming part of Zone 1).</p> <p>Big Bay and Outer Bay form part of “Zone 2 – Be Careful” identified in the EMF, as Big Bay is deemed important from a marine ecological perspective, which is deemed likely to increase in importance. Aquaculture is listed as an <i>activity that could be considered for public interest reasons but are likely to have significant negative impacts (scale dependent)</i> in Zone 2.</p>			
<p>(f) Any other Plans (e.g. Guide Plan)</p>	YES	NO	Please explain
<p>No other plans of key relevance were identified.</p>			
<p>3. Is the land use (associated with the activity being applied for) considered within the timeframe intended by the existing approved SDF agreed to by the relevant environmental authority (i.e. is the proposed development in line with the projects and programmes identified as priorities within the credible IDP)?</p>	YES	NO	Please explain
<p>The Saldanha Bay SDF (February 2011) promotes the expansion of agricultural sectors such as agro-industry and aquaculture industry (Page 148).</p>			
<p>4. Does the community/area need the activity and the associated land use concerned (is it a societal priority)? (This refers to the strategic as well as local level (e.g. development is a national priority, but within a specific local context it could be inappropriate.)</p>	YES	NO	Please explain
<p>Saldanha Bay Municipality experiences high unemployment and poverty, hence a high need for employment and income generation. Economic development has thus been identified as a need and objective for the Saldanha Bay Local Municipality. The project aims to create incentives for the expansion of the aquaculture industry in Saldanha Bay and provide employment and skills development for coastal communities.</p>			
<p>5. Are the necessary services with adequate capacity currently available (at the time of application), or must additional capacity be created to cater for the development? (Confirmation by the relevant Municipality in this regard must be attached to the final Basic Assessment Report as Appendix I.)</p>	YES	NO	Please explain
<p>The proposed ADZ will not require additional services from the municipality and will not compromise municipal infrastructure planning. No electricity will be required for the proposed ADZ. Expansion of aquaculture in Saldanha Bay may, however, at some stage require improved management of or additional resources for the mooring, landing and storing of vessels and produce. Similarly, some organic and inorganic waste from aquaculture may have to be disposed of at landfills.</p>			

BASIC ASSESSMENT REPORT

<p>6. Is this development provided for in the infrastructure planning of the municipality, and if not what will the implication be on the infrastructure planning of the municipality (priority and placement of services and opportunity costs)? (Comment by the relevant Municipality in this regard must be attached to the final Basic Assessment Report as Appendix I.)</p>	YES	NO	Please explain ✓
<p>The proposed ADZ activities considered as part of this scope will not require any additional infrastructure from the municipality and not compromise municipal infrastructure planning. No electricity will be required.</p>			
<p>7. Is this project part of a national programme to address an issue of national concern or importance?</p>	YES	NO	Please explain
<p>The ADZ is proposed within the framework of Operation Phakisa Oceans Economy, a presidential initiative launched in 2014 to unlock the economic potential of South Africa's oceans through innovative programmes that bring together many stakeholders to plan major economic projects. Aquaculture was identified as a key priority of Operation Phakisa, as it is considered a sustainable strategy to contribute to job creation and South African Gross Domestic Product.</p> <p>The expansion of aquaculture is also promoted in terms of other national policy documents, such as the South African Government's Nine-Point Plan announced at the 2015 State of the Nation Address and the Agricultural Policy Action Plan (APAP) 2015 – 2019.</p>			
<p>8. Do location factors favour this land use (associated with the activity applied for) at this place? (This relates to the contextualisation of the proposed land use on this site within its broader context.)</p>	YES	NO	Please explain
<p>Saldanha Bay currently supports a number of viable aquaculture operations, and TNPA has allocated additional areas for aquaculture that are not yet farmed, but will be integrated into the ADZ. DAFF has determined that the carrying capacity of Saldanha Bay can support additional aquaculture production. Due to the shelter afforded by Saldanha Bay, the Bay is one of very few suitable coastal environments in South Africa that can support marine aquaculture.</p> <p>Portions of Saldanha Bay are also utilised by other stakeholders for a range of uses, including operations of the Port of Saldanha and associated industrial activities, water sports (sailing, paddling, kayaking, diving) and associated businesses and tourism facilities, military activities, commercial fishing vessels and Marine Protected Areas.</p>			
<p>9. Is the development the best practicable environmental option for this land/site?</p>	YES	NO	Please explain
<p>According to NEMA, the "best practicable environmental option" means the option that provides the most benefit and causes the least damage to the environment as a whole, at a cost acceptable to society, in the long term as well as in the short term. In determining the best practicable environmental option, adequate consideration must also be given to opportunity costs.</p> <p>Saldanha Bay currently supports a number of viable aquaculture operations. Research has determined that the Bay can support additional production, and in principle aquaculture is thus deemed to be a viable use of Saldanha Bay.</p> <p>As noted in Item 8 above, there are also a number of other users in Saldanha Bay, and aquaculture development may not constitute the best practicable environmental option in all portions of the bay due to an overlap of uses. The implementation of proposed mitigation measures is expected to mitigate impacts on other users to acceptable levels. This is discussed in more detail in Section 2.3 of the impact assessment presented in Appendix F of the BAR.</p>			

BASIC ASSESSMENT REPORT

10. Will the benefits of the proposed land use/development outweigh the negative impacts of it?	YES	NO	Please explain
<p>The impact assessment has indicated that the project may have significant benefits in terms of investment and employment, as well as impacts in terms of marine ecology and overlay with other users of the Bay. The assessment has indicated that the implementation of mitigation measures may reduce the negative impacts to acceptable levels.</p> <p>The impact assessment is provided in Section D of this report and discussed in more detail in Section 2.3 of the impact assessment presented in Appendix F of the BAR.</p>			
11. Will the proposed land use/development set a precedent for similar activities in the area (local municipality)?	YES	NO	Please explain
<p>N/A as Saldanha Bay already supports a number of aquaculture operations. These will be incorporated into the ADZ. Management measures stipulated for the ADZ will also apply to existing operations and improve / formalise certain aspects of current management.</p>			
12. Will any person's rights be negatively affected by the proposed activity/ies?	YES	NO	Please explain
<p>Saldanha Bay is administered by TNPA, and potential ADZ areas have been identified in consultation with TNPA to prevent impacts on existing and future Port operations. As noted in Item 8 above, there are also a number of other users in Saldanha Bay, and aquaculture development may affect some of these uses (though not rights). The implementation of proposed mitigation measures is expected to mitigate impacts on other users to acceptable levels. This is discussed in more detail in Section 2.3 of the impact assessment presented in Appendix F of the BAR.</p>			
13. Will the proposed activity/ies compromise the "urban edge" as defined by the local municipality?	YES	NO	Please explain
<p>N/A as the proposed ADZ is sea-based.</p>			
14. Will the proposed activity/ies contribute to any of the 17 Strategic Integrated Projects (SIPS)?	YES	NO	Please explain
<p>N/A. The ADZ is proposed within the framework of Operation Phakisa.</p>			
15. What will the benefits be to society in general and to the local communities?	Please explain		
<p>The project aims to encourage investor and consumer confidence, create incentives for aquaculture industry development, provide marine aquaculture services, manage the risks associated with aquaculture, and provide skills development and employment for coastal communities.</p> <p>Also refer to the impact assessment provided in Section D and Appendix F of this report.</p>			
16. Any other need and desirability considerations related to the proposed activity?	Please explain		
<p>N/A</p>			

<p>17. How does the project fit into the National Development Plan for 2030?</p>	<p>Please explain</p>
<p>The National Development Plan aims to eliminate poverty and reduce inequality by 2030 by drawing on the energies of South Africa’s people, growing an inclusive economy, building capabilities, enhancing the capacity of the state and promoting leadership and partnerships throughout society (Page 14).</p> <p>According to the National Development Plan, South Africa has to do more to enhance competitiveness in areas of comparative advantage that can draw more people into work. By improving the skills base and increasing competitiveness, the economy can diversify, offsetting the distorting effects of elevated commodity prices on the rand (Page 21).</p> <p>The project forms part of a presidential initiative to unlock the potential of the oceans to create employment and income in coastal communities, and specifically aims to create incentives for development of the aquaculture industry in Saldanha Bay, which has historically already provided skills development and employment in the area. As such, the project forms part of a government initiative and aims to further the objectives of the National Development Plan in terms of economic development.</p>	
<p>18. Please describe how the general objectives of Integrated Environmental Management as set out in section 23 of NEMA have been taken into account.</p>	
<p>The general objectives of IEM as set out in Section 23 (2) of NEMA include measures taken to:</p> <ul style="list-style-type: none"> • Promote the integration of the principles of environmental management into the making of all decisions which may have a significant effect on the environment; • Identify, predict and evaluate the actual and potential impact on the environment, socio-economic conditions and cultural heritage, the risks and consequences and alternatives and options for mitigation of activities, with a view to minimizing negative impacts, maximising benefits; • Ensure that the effects of activities on the environment receive adequate consideration before actions are taken in connection with them; • Ensure adequate and appropriate opportunity for public participation in decisions that may affect the environment; • Ensure the consideration of environmental attributes in management and decision making which may have a significant effect on the environment; and • Identify and employ the modes of environmental management best suited to ensuring that a particular activity is pursued in accordance with the principles of environmental management. <p>These objectives are taken into account in the BA process. Potential impacts have been identified, measures for mitigation are presented and a public participation process is conducted as part of the BA process. The findings are presented in this BAR and are compliant with the objectives as set out in Section 23 of NEMA.</p>	

BASIC ASSESSMENT REPORT

19. Please describe how the principles of environmental management as set out in section 2 of NEMA have been taken into account.

Environmental and socio-economic factors are considered and weighed up, to ensure that the development is sustainable.

The potential impacts of the development are identified, assessed and evaluated using SRK's standard impact assessment methodology in order to determine the significance of each positive and negative impact. The significance of the impacts is described and assessed in Section D and (in more detail) in Appendix F of the BAR.

Mitigation measures are recommended in the BAR to prevent, minimise (and optimise) impacts and to secure stakeholders' environmental rights. An EMPr has been drafted, to ensure that potential environmental pollution and degradation is minimised, if not prevented.

The needs and interests of stakeholders are taken into account through a thorough public participation process conducted prior to and during the BA process. Opportunities for public participation by all stakeholders are provided for in the BA process.

10. APPLICABLE LEGISLATION, POLICIES AND/OR GUIDELINES

List all legislation, policies and/or guidelines of any sphere of government that are applicable to the application as contemplated in the EIA regulations, if applicable:

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
National Environmental Management Act 107 of 1998 (NEMA)	NEMA is the key legislation governing environmental management in South Africa. Sections 24 and 44 of NEMA make provision for the promulgation of regulations that identify activities which may not commence without an EA issued by the competent authority, in this case, the Department of Environmental Affairs (DEA).	DEA	1998
NEMA EIA Regulations, 2014 (Government Notice (GN) R982, which came into effect on 8 December 2014), promulgated in terms of NEMA	The EIA Regulations, 2014 govern the process, methodologies and requirements for the undertaking of EIAs in support of applications for EA. The EIA Regulations are accompanied by Listing Notices (LN) 1-3 that list activities that require EA. The Regulations lay out two alternative authorisation processes. SRK has determined that the proposed project triggers activities listed in terms of LN 1 and LN 3 of the EIA Regulations, 2014, requiring a BA.	DEA	2014
Environmental Impact Assessment Guideline for Aquaculture in South Africa	The objective of the guideline is to assist stakeholders in the aquaculture sector in complying	DEA	2013

BASIC ASSESSMENT REPORT

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
	with environmental legislation governing the development of aquaculture activities and to provide a basic background to integrated, responsible and sustainable environmental management practices.		
National Environmental Management: Biodiversity Act 10 of 2004 (NEM:BA)	NEM:BA involves the management and conservation of biological diversity as well as the use of indigenous biological resources, including fish and shellfish, sustainably. NEM:BA was consulted as the proposed aquaculture activities include alien or invasive species.	DEA and CapeNature	2004
National Environmental Management: Biodiversity Act 10 of 2004 (NEM:BA): Alien and Invasive Species (AIS) Regulations, 2014	The AIS Regulations in terms of NEM:BA list four categories of invasive species and the control/management of each. Both non-indigenous bivalve species proposed for production, the Pacific Oyster (<i>Crassostrea gigas</i>) and the Mediterranean Mussel (<i>Mytilus galloprovincialis</i>) are listed under Category 2 of the AIS Regulations, requiring a permit for production in terms of NEM:BA. However, these species are exempt from requiring a permit in Saldanha Bay. The two non-indigenous finfish species proposed for production, Atlantic Salmon (<i>Salmo salar</i>) and Rainbow Trout (<i>Oncorhynchus mykiss</i>) are excluded from the AIS Regulations and therefore do not require a permit.	DEA and CapeNature	2014
National Environmental Management: Integrated Coastal Management Act 24 of 2008 (NEM:ICMA)	NEM:ICMA aims to ensure that development and the use of natural resources within coastal waters is socially and economically justifiable and ecologically sustainable.	DEA	2008
National Environmental Management: Protected Areas Act 57 of 2003 (NEM:PAA)	NEM:PAA was enacted to regulate the system of protected areas in South Africa and to provide for their management. Any commercial activity undertaken in a protected area requires the written authorisation of the management authority (in this case SANParks). The proposed ADZ borders on three Marine Protected Areas (MPAs) in Saldanha Bay.	DEA	2003

BASIC ASSESSMENT REPORT

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
National Heritage Resources Act 25 of 1999 (NHRA)	Section 38 of the NHRA requires that any person who intends to undertake certain categories of development must notify the relevant heritage agencies and furnish details of the location, nature and extent of the proposed development. Section 38 also makes provision for the assessment of heritage impacts as part of an EIA process.	South African Heritage Resources Agency (SAHRA)	1999
Marine Living Resources Act 18 of 1998 (MLRA)	The MLRA governs the sustainable utilisation of marine living resources, including MPAs. The proposed ADZ will border on three MPAs, and therefore may have an impact on the ecology of these MPAs.	DAFF	1998
Integrated Environmental Management Guidelines	These guidelines documents serve as reference for conducting EIA processes in South Africa.	DEA	2014
National Development Plan for 2030	The NDP aims to eliminate poverty and reduce inequality by 2030 by drawing on the energies of South Africa's people, growing an inclusive economy, building capabilities, enhancing the capacity of the state and promoting leadership and partnerships throughout society.	National Planning Commission	
National Aquaculture Policy Framework (NAPF)	One of the objectives of the NAPF is to promote good governance for the aquaculture sector which will enable the industry to develop to its full potential within a supportive regulatory framework. The NAPF cites the lack of 'ready to invest' sites zoned for aquaculture (ADZs) as one of the most significant impediments to rapid growth and investment (Page 30).	DAFF	2013
Western Cape Provincial Spatial Development Framework (March 2014)	The WCPSPDF aims to improve economic growth, including investment in regional economic infrastructure to unlock the potential of the emerging Saldanha Bay / Vredenburg regional economic nodes.	Provincial Government of the Western Cape (PGWC)	2014
Saldanha Bay Integrated Development Plan (IDP)	The Saldanha Bay IDP identifies aquaculture as one of four labour intensive sectors which are	Saldanha Bay Municipality	2015

BASIC ASSESSMENT REPORT

Title of legislation, policy or guideline	Applicability to the project	Administering authority	Date
(2012-2017) Revision 3	expected to experience growth and development.		
Saldanha Bay Spatial Development Framework (February 2011)	The Saldanha Bay SDF states that due to low rainfall, and inadequate water resources, the potential for intensive agricultural production in Saldanha Bay is limited. The area's livestock farming potential is also low due to the poor carrying capacity of the indigenous vegetation. The SDF therefore promotes the growth of agricultural sectors such as the agro-industry and the aquaculture industry.	Saldanha Bay Municipality	2011

11. WASTE, EFFLUENT, EMISSION AND NOISE MANAGEMENT

a) Solid waste management

Will the activity produce solid construction waste during the construction/initiation phase?

YES	NO

If YES, what estimated quantity will be produced per month?

How will the construction solid waste be disposed of (describe)?

n/a

Where will the construction solid waste be disposed of (describe)?

n/a

Will the activity produce solid waste during its operational phase?

YES	NO
N/A m ³	

If YES, what estimated quantity will be produced per month?

How will the solid waste be disposed of (describe)?

Waste associated with shellfish farming in Saldanha Bay relates primarily to the harvesting and handling of shellfish during harvesting, and is washed directly overboard of the raft or harvesting vessel; this consists primarily of:

- Fouling organisms;
- Broken and undersize mussels; and
- Any silt washed off shellfish during harvesting.

Waste associated with finfish farming in Saldanha Bay relates primarily to the:

- Excess feed and faeces expelled by fish; these are discussed in Section D2 of the Project Description provided in Section A 1 a) of the BAR;
- Cleaning of fouling organisms from cages and nets; and
- Removal of dead fish from cages.

BASIC ASSESSMENT REPORT

Nets will typically be cleaned onshore; as such, fouling organisms, as well as dead fish, will be disposed of onshore. Waste volumes depend on production volumes as well as rate of fouling, which will vary over time.

If the solid waste will be disposed of into a municipal waste stream, indicate which registered landfill site will be used.

(Limited) Waste generated on land will be disposed at the Saldanha Bay landfill.

Where will the solid waste be disposed of if it does not feed into a municipal waste stream (describe)?

The majority of the waste associated with shellfish farming consists of organic material that will be disposed into Saldanha Bay.

If the solid waste (construction or operational phases) will not be disposed of in a registered landfill site or be taken up in a municipal waste stream, then the applicant should consult with the competent authority to determine whether it is necessary to change to an application for scoping and EIA.

Can any part of the solid waste be classified as hazardous in terms of the NEM:WA?

YES	NO
-----	----

If YES, inform the competent authority and request a change to an application for scoping and EIA. An application for a waste permit in terms of the NEM:WA must also be submitted with this application.

Is the activity that is being applied for a solid waste handling or treatment facility?

YES	NO
-----	----

If YES, then the applicant should consult with the competent authority to determine whether it is necessary to change to an application for scoping and EIA. An application for a waste permit in terms of the NEM:WA must also be submitted with this application.

b) Liquid effluent

Will the activity produce effluent, other than normal sewage, that will be disposed of in a municipal sewage system?

YES	NO
-----	----

If YES, what estimated quantity will be produced per month?

Will the activity produce any effluent that will be treated and/or disposed of on site?

YES	NO
-----	----

If YES, the applicant should consult with the competent authority to determine whether it is necessary to change to an application for scoping and EIA.

Will the activity produce effluent that will be treated and/or disposed of at another facility?

YES	NO
-----	----

If YES, provide the particulars of the facility:

Facility name:			
Contact person:			
Postal address:			
Postal code:			
Telephone:		Cell:	
E-mail:		Fax:	

Describe the measures that will be taken to ensure the optimal reuse or recycling of waste water, if any:

BASIC ASSESSMENT REPORT

c) Emissions into the atmosphere

Will the activity release emissions into the atmosphere other than exhaust emissions and dust associated with construction phase activities?

YES	NO
-----	----

If YES, is it controlled by any legislation of any sphere of government?

YES	NO
-----	----

If YES, the applicant must consult with the competent authority to determine whether it is necessary to change to an application for scoping and EIA.

If NO, describe the emissions in terms of type and concentration:

N/A

d) Waste permit

Will any aspect of the activity produce waste that will require a waste permit in terms of the NEM:WA?

YES	NO
-----	----

If YES, please submit evidence that an application for a waste permit has been submitted to the competent authority

e) Generation of noise

Will the activity generate noise?

YES	NO
-----	----

If YES, is it controlled by any legislation of any sphere of government?

YES	NO
-----	----

Describe the noise in terms of type and level:

N/A

12. WATER USE

Please indicate the source(s) of water that will be used for the activity by ticking the appropriate box(es):

Municipal	Water board	Groundwater	River, stream, dam or lake	Other	The activity will not use water
-----------	------------------------	------------------------	----------------------------	------------------	--

n/a

If water is to be extracted from groundwater, river, stream, dam, lake or any other natural feature, please indicate the volume that will be extracted per month:

litres	
--------	--

Does the activity require a water use authorisation (general authorisation or water use license) from the Department of Water Affairs?

YES	NO
-----	----

If YES, please provide proof that the application has been submitted to the Department of Water Affairs.

13. ENERGY EFFICIENCY

Describe the design measures, if any, which have been taken to ensure that the activity is energy efficient:

Sea-based aquaculture has no specific energy requirements (other than fuel for boats).

Describe how alternative energy sources have been taken into account or been built into the design of the activity, if any:

n/a

SECTION B: SITE/AREA/PROPERTY DESCRIPTION

Important notes:

- For linear activities (pipelines, etc) as well as activities that cover very large sites, it may be necessary to complete this section for each part of the site that has a significantly different environment. In such cases please complete copies of Section B and indicate the area, which is covered by each copy No. on the Site Plan.

Section B Copy No. (e.g. A):

- Paragraphs 1 - 6 below must be completed for each alternative.

- Has a specialist been consulted to assist with the completion of this section?

YES	NO
-----	----

If YES, please complete the form entitled "Details of specialist and declaration of interest" for each specialist thus appointed and attach it in Appendix I. All specialist reports must be contained in Appendix D.

Property description/physical address:

Province	Western Cape
District Municipality	West Coast District Municipality
Local Municipality	Saldanha Bay Local Municipality
Ward Number(s)	n/a
Farm name and number	Saldanha Bay (sea-based aquaculture) The application does not include land parcels.
Portion number	n/a
SG Code	n/a

Where a large number of properties are involved (e.g. linear activities), please attach a full list to this application including the same information as indicated above.

Current land-use zoning as per local municipality IDP/records:

<p>The municipal zoning scheme is not applicable.</p> <p>Saldanha Bay is utilised in a number of ways, including the Port of Saldanha and associated industrial activities, aquaculture and water sports.</p> <p>Certain areas in the Bay are currently designated for shipping and aquaculture.</p>
--

In instances where there is more than one current land-use zoning, please attach a list of current land use zonings that also indicate which portions each use pertains to, to this application.

Is a change of land-use or a consent use application required?

YES	NO
-----	----

BASIC ASSESSMENT REPORT

1. GRADIENT OF THE SITE

Indicate the general gradient of the site.

Alternative S1:

Flat	1:50—1:20	1:20—1:15	1:15—1:10	1:10—1:7,5	1:7,5—1:5	Steeper than 1:5
------	-----------	-----------	-----------	------------	-----------	------------------

Alternative S2 (if any):

Flat	1:50—1:20	1:20—1:15	1:15—1:10	1:10—1:7,5	1:7,5—1:5	Steeper than 1:5
------	-----------	-----------	-----------	------------	-----------	------------------

Alternative S3 (if any):

Flat	1:50—1:20	1:20—1:15	1:15—1:10	1:10—1:7,5	1:7,5—1:5	Steeper than 1:5
------	-----------	-----------	-----------	------------	-----------	------------------

2. LOCATION IN LANDSCAPE

Indicate the landform(s) that best describes the site:

2.1 Ridgeline	<input type="checkbox"/>	2.4 Closed valley	<input type="checkbox"/>	2.7 Undulating plain / low hills	<input type="checkbox"/>
2.2 Plateau	<input type="checkbox"/>	2.5 Open valley	<input type="checkbox"/>	2.8 Dune	<input type="checkbox"/>
2.3 Side slope of hill/mountain	<input type="checkbox"/>	2.6 Plain	<input type="checkbox"/>	2.9 Seafront	<input type="checkbox"/>
2.10 At sea	<input checked="" type="checkbox"/>				

3. GROUNDWATER, SOIL AND GEOLOGICAL STABILITY OF THE SITE

Is the site(s) located on any of the following?

	Alternative S1:		Alternative S2 (if any):		Alternative S3 (if any):	
	YES	NO	YES	NO	YES	NO
Shallow water table (less than 1.5m deep)	YES	NO	YES	NO	YES	NO
Dolomite, sinkhole or doline areas	YES	NO	YES	NO	YES	NO
Seasonally wet soils (often close to water bodies)	YES	NO	YES	NO	YES	NO
Unstable rocky slopes or steep slopes with loose soil	YES	NO	YES	NO	YES	NO
Dispersive soils (soils that dissolve in water)	YES	NO	YES	NO	YES	NO
Soils with high clay content (clay fraction more than 40%)	YES	NO	YES	NO	YES	NO
Any other unstable soil or geological feature	YES	NO	YES	NO	YES	NO
An area sensitive to erosion	YES	NO	YES	NO	YES	NO

If you are unsure about any of the above or if you are concerned that any of the above aspects may be an issue of concern in the application, an appropriate specialist should be appointed to assist in the completion of this section. Information in respect of the above will often be available as part of the

BASIC ASSESSMENT REPORT

project information or at the planning sections of local authorities. Where it exists, the 1:50 000 scale Regional Geotechnical Maps prepared by the Council for Geo Science may also be consulted.

4. GROUNDCOVER

Indicate the types of groundcover present on the site. The location of all identified rare or endangered species or other elements should be accurately indicated on the site plan(s).

Natural veld in good condition^E	Natural veld with scattered aliens^E	Natural veld with heavy alien infestation^E	Veld dominated by alien species^E	Gardens
Sport field	Cultivated land	Paved surface	Building or other structure	Bare soil

If any of the boxes marked with an “E” is ticked, please consult an appropriate specialist to assist in the completion of this section if the environmental assessment practitioner doesn’t have the necessary expertise.

5. SURFACE WATER

Indicate the surface water present on and or adjacent to the site and alternative sites?

Perennial River	YES	NO	UNSURE
Non-Perennial River	YES	NO	UNSURE
Permanent Wetland	YES	NO	UNSURE
Seasonal Wetland	YES	NO	UNSURE
Artificial Wetland	YES	NO	UNSURE
Estuarine / Lagoonal wetland	YES	NO	UNSURE

If any of the boxes marked YES or UNSURE is ticked, please provide a description of the relevant watercourse.

The Langebaan Lagoon is located adjacent, and connected, to Saldanha Bay. The Langebaan Lagoon forms part of the West Coast National Park and is a RAMSAR site.

6. LAND USE CHARACTER OF SURROUNDING AREA

Indicate land uses and/or prominent features that currently occur within a 500m radius of the site and give description of how this influences the application or may be impacted upon by the application:

Natural area	Dam or reservoir	Polo fields
Low density residential	Hospital/medical centre	Filling station ^H
Medium density residential	School	Landfill or waste treatment site
High density residential	Tertiary education facility	Plantation

BASIC ASSESSMENT REPORT

Informal residential ^A	Church	Agriculture
Retail commercial & warehousing	Old age home	River, stream or wetland
Light industrial	Sewage treatment plant ^A	Nature conservation area
Medium industrial ^{AN}	Train station or shunting yard ^N	Mountain, koppie or ridge
Heavy industrial ^{AN} ✓	Railway line ^N	Museum
Power station	Major road (4 lanes or more) ^N	Historical building
Office/consulting room	Airport ^N	Protected Area
Military or police base/station/compound	Harbour	Graveyard
Spoil heap or slimes dam ^A	Sport facilities	Archaeological site
Quarry, sand or borrow pit	Golf course	Other land uses (describe)

Aquaculture – portions of Saldanha Bay are currently used for aquaculture, notably in Small Bay and, to a lesser degree, in Big Bay and Outer Bay, predominantly for mussel and oyster farming.

If any of the boxes marked with an "N" are ticked, how will this impact / be impacted upon by the proposed activity? Specify and explain:

n/a

If any of the boxes marked with an "An" are ticked, how will this impact / be impacted upon by the proposed activity? Specify and explain:

Heavy industrial activity in Saldanha Bay relates primarily to the activities at the Port of Saldanha, which includes export of iron ore, import of oil and gas and shipment of other bulk cargo:

- The project could **impact on the industrial activities** at the Port of Saldanha if:
 - Aquaculture structures restrict shipping / turning lanes, either through encroachment of such lanes or if structures come loose and drift into shipping lanes;
 - ➔ During the project definition undertaken by CapMarine, ADZ areas were carefully selected in consultation with TNPA to avoid shipping lanes. Aquaculture structures must comply with international standards to ensure they remain in place and do not drift into shipping lanes;
 - Aquaculture structures restrict the planned expansion of the Port of Saldanha in future, such as the proposed Liquid Petroleum Gas (LPG) and Liquid Natural Gas (LNG) developments in Big Bay and the Moss gas Jetty in Small Bay;
 - ➔ During the project definition undertaken by CapMarine, ADZ areas were carefully selected in consultation with TNPA, to avoid areas earmarked for future expansion of Port activities;
- Industrial activities could **impact on the project** if:
 - Vessels leave the allocated shipping lanes and enter aquaculture areas, damaging structures and resulting in production losses;
 - ➔ Good shipping traffic management is required by TNPA to minimise such occurrences;
 - Water pollution from industrial activities impacts the quality of aquaculture produce. Possible sources of pollution include release of ship effluent / contaminated ballast water in the Bay, runoff of contaminated stormwater from the Port or adjacent industrial area, spill of products such as iron ore during loading or from the jetty or mobilisation of contaminated sediments during dredging for port maintenance or expansion;
 - ➔ Water quality in Saldanha Bay is regularly tested. In the event of increased pollution, the source thereof must be identified and managed to avoid negative impacts on the quality

BASIC ASSESSMENT REPORT

and marketability of aquaculture produce.

If any of the boxes marked with an "H" are ticked, how will this impact / be impacted upon by the proposed activity? Specify and explain:

n/a

Does the proposed site (including any alternative sites) fall within any of the following:

Critical Biodiversity Area (as per provincial conservation plan)	YES	NO
Core area of a protected area?	YES	NO
Buffer area of a protected area?	YES	NO
Planned expansion area of an existing protected area?	YES	NO
Existing offset area associated with a previous Environmental Authorisation?	YES	NO
Buffer area of the SKA?	YES	NO

If the answer to any of these questions was YES, a map indicating the affected area must be included in Appendix A.

7. CULTURAL/HISTORICAL FEATURES

Are there any signs of culturally or historically significant elements, as defined in section 2 of the National Heritage Resources Act, 1999, (Act No. 25 of 1999), including Archaeological or paleontological sites, on or close (within 20m) to the site? If YES, explain:

YES

NO

Uncertain

If uncertain, conduct a specialist investigation by a recognised specialist in the field (archaeology or palaeontology) to establish whether there is such a feature(s) present on or close to the site. Briefly explain the findings of the specialist:

A recognised heritage specialist was commissioned to undertake a desktop study of the proposed ADZ area within Saldanha Bay.

The specialist notes that the proposed project will have little impact on the known maritime cultural landscape other than shipwreck sites, and will not impact on historic or archaeological terrestrial sites. However, the development may affect unknown cultural remnants of utilisation of marine resources, especially in the Outer Bay – North and Big Bay – South development areas. The specialist notes that historically, these areas were the focus of fishing, sealing and whaling activities, and undocumented archaeological debris such as anchors or other flotsam and jetsam may lie on the sea floor. The placement of concrete anchor blocks on the sea floor may result in archaeological remains being covered or damaged. However, impact on potential archaeological material will be low, and it is likely that the remnants of fishing, sealing and whaling activities are ephemeral.

There is potential that an extensive Pleistocene landscape exists below the current seabed in Saldanha Bay. The landscape may contain fossils, as observed at the West Coast Fossil Park, or the remains of human activities. This landscape will not be affected by the placement of concrete mooring blocks, as evidenced by observations of the impact of mooring blocks on the seabed in Ilha de Mozambique, where comparable environmental conditions exist. While water currents resulted in some scouring of the seabed around mooring blocks, scour was shallow and negligible. The specialist states, with relative certainty, that the Pleistocene layer will not be impacted by the

BASIC ASSESSMENT REPORT

concrete block anchor arrays, as it is understood that no pylons will be sunk into the sea bed.

The specialist described 23 known shipwrecks in Saldanha Bay, of which 4 are older than 60 years and potentially lie within proposed ADZ areas:

- One wreck potentially lies in Big Bay North: Dauphin;
- One wreck potentially lies in Big Bay South: Luna; and
- Two wrecks potentially lie in Outer Bay South: Hamlet, Merestein.

However, the specialist considers the potential impact of the ADZ on shipwrecks to be low.

Will any building or structure older than 60 years be affected in any way?

YES	NO
-----	----

Is it necessary to apply for a permit in terms of the National Heritage Resources Act, 1999 (Act 25 of 1999)?

YES	NO
-----	----

If YES, please provide proof that this permit application has been submitted to SAHRA or the relevant provincial authority.

The Heritage Impact Assessment has been submitted to SAHRA. It is understood that a permit will only be required if heritage remains, notably wrecks, are impacted by e.g. moorings. It is recommended that diver surveys are conducted prior to the placement of moorings, and that heritage remains are avoided.

8. SOCIO-ECONOMIC CHARACTER

a) Local Municipality

Please provide details on the socio-economic character of the local municipality in which the proposed site(s) are situated.

Level of unemployment:

Approximately 70% of the population in the Saldanha Bay Municipality (SBM) (68 500 people) is of working age (between 15 and 64 years old), of which 45 000 actively participated in the labour market in 2011 (Census 2011). An estimated 34 359 people (76% of the population active in the labour market) were employed, while 10 470 (24%) were unemployed in 2011. The unemployment rate of 23.4% in 2011 was the highest in the West Coast District. Saldanha Bay's labour force represents 27.1% of the West Coast District labour force. Amongst the various population groups, employment rates are lower for Black African and Coloureds than Whites, while a larger proportion of the White and Coloured population is not economically active (see Table 7).

Employment figures in the SBM almost exactly mirror those of the Western Cape (see Table 7). Most employed people in the SBM work in the formal sector (Census 2011).

Table 7: Employment in the SBM (people aged 15 to 64 years) in 2011

Status	Black African		Coloured		White		Other		Total	% SBM	% W. Cape
Employed	8 374	46%	17 665	48%	7 685	62%	635	52%	34 359	50%	50%
Unemployed	3 886	21%	5 957	16%	489	4%	137	11%	10 470	15%	14%
Discouraged	1 014	6%	774	2%	96	1%	25	2%	1 909	3%	3%
Not active	4 981	27%	12 672	34%	4 096	33%	420	35%	22 168	32%	33%

BASIC ASSESSMENT REPORT

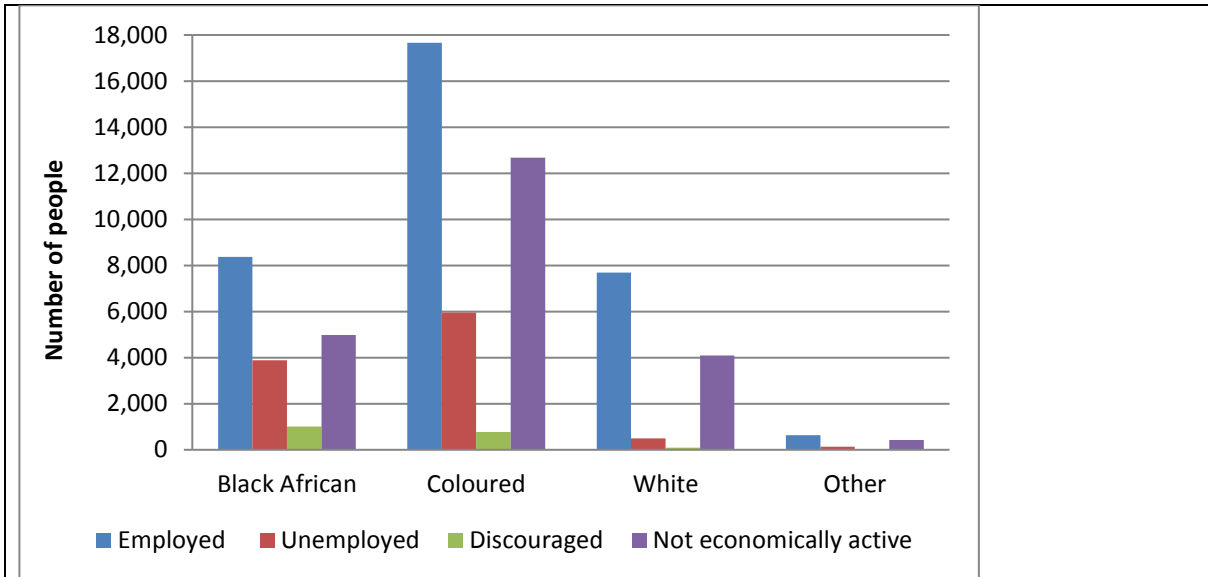

Figure 3: Employment in the SBM (people aged 15 to 64 years) in 2011

Source: Census 2011

The Finance, insurance, real estate and business services sector employed the most people (6 487) in 2011, followed by Wholesale and retail trade, catering and accommodation (3 976), Agriculture, forestry and fishing (2 972) and Manufacturing (2 470). The Transport, storage and communication sector employed the least people (1 170), followed by Construction (1 184).

The Agriculture (2 190) and Manufacturing (4 860) sectors in Saldanha Bay suffered net job losses between 2000 and 2013. The Services sector, on the other hand, displayed robust growth in skilled jobs in the same timeframe.

Approximately 40 347 people (41% of the SBM population) reported that they earned no income in 2011. Approximately 30 618 people (52% of income earners) earned less than R3 200 per month, 15 882 people (27% of income earners) earned between R3 200 and R25 600 per month and 1 588 people (3% of income earners) earned more than R25 600 per month⁵ (Census 2011).

In 2010, rural based municipalities such as Cederberg (43%), Bergrivier (34%) and Matzikama (32%) recorded alarming levels of poverty. SBM has consistently recorded low poverty rates relative to its neighbouring municipalities at around 22 - 23% for the 2001 - 2010 periods. Saldanha Bay's poverty rate is better than that of the West Coast District (30%), but slightly lower than that of the Western Cape Province (22%) (Saldanha Bay IDP 2015-2016).

Economic profile of local municipality:

The West Coast District's regional economy grew by 3.2% per annum in real terms over the period 2000 to 2013, while its workforce contracted on balance at a rate of 0.9% per annum. While this growth is below that of the Western Cape, which grew by 3.9% per annum on average, the District hosts two of the Province's 10 fastest growing non-metro municipalities, i.e. SBM and Swartland.

The principal sectors contributing to the GDP of the SBM are manufacturing (30%), transport (16%), services (15%), trade (13%), finance (12%), agriculture (7%) and construction (5%). Ward 5, incorporating the back-of-port area, contributed the most to the municipal GDP. Agriculture is typically the primary contributor to the GDP in rural wards. Key sectors are briefly described below.

- Industry / manufacturing: The development of the Port of Saldanha for iron ore export spurred major additional industrial growth in the area, including the establishment of the ArcelorMittal steel plant and the Tronox smelter. Further industrial development, e.g. through the increase of port capacity and the establishment of an IDZ, is being promoted;

⁵ Monthly incomes were not specified for 10 756 people in the survey.

BASIC ASSESSMENT REPORT

- Agriculture: Crops grown in the SBM include wheat, canola, rooibos tea, fruit, grapes and vegetables. Animal products include poultry, fresh milk and dairy products, beef, mutton, lamb and pork. Due to increased mechanisation, the sector is becoming less important for employment generation;
- Fishing: One of the historically most important economic activities, fishing activities represented in SBM includes deep-sea fishing, line fishing, lobster trapping and aquaculture. The latter takes place both in Saldanha Bay and St. Helena Bay. Fish is processed locally in various fishmeal, fish canning and other fish processing plants located primarily in St. Helena Bay and Saldanha;
- Tourism / services: The SBM is a well-known and popular tourist destination and the sector plays an increasingly important role in the economy; and
- Mining: Several mining activities have established near Saldanha and Langebaan and include mining of construction materials such as lime scales and sand.

The local economy is diversifying from being dependent on fishing and agriculture, to including manufacturing and tourism as major economic sectors. Employment in the agricultural, manufacturing, construction and trade sectors has decreased, with 9 000 jobs lost in those sectors between 1995 and 2010, especially in the agricultural sector. Employment in the other sectors - particularly in the finance, transport and service sectors, which are now the largest employers in the area - has increased since 1995, with approximately 13 300 new jobs added by 2010.

The slow growth of the West Coast District's manufacturing sector is explained to a large extent by the recessionary slump and only partial recoveries in key industries (metals and engineering, non-metal minerals, food and beverages and wood products) and the SBM seems to be at the centre of the impact.

The development of the IDZ in Saldanha Bay is expected to boost the fortunes of the local manufacturing sector, which could give rise to linkages with the more buoyant Swartland and Bergvrievier manufacturing sectors and stimulate supporting services activity as well (Saldanha Bay IDP 2015-2016).

Level of education:

Approximately 26% of the population had primary school education or less, 33% had some high school education but did not finish, 19% finished high school, 5% had an NTC qualification, diploma or certificate and 2% had a university degree (Census 2011).

Education levels in the SBM are largely comparable to those in the Western Cape Province (Saldanha Bay IDP 2015-2016).

The Social Impact Assessment undertaken for the proposed construction of the AfriSam cement plant, limestone and clay quarries in Saldanha notes that: "Information from stakeholders consulted during the SIA suggests that school attendance and drop-out rates are more significant than what the statistics show; it was identified as a major social problem in the local study area. One reason provided for high drop-out rates is that education is not provided in the children's mother tongue, rendering it frustrating and futile. Truancy as a result of drug and alcohol dependency also poses a severe problem to quality education in the municipal area." (Digby Wells, 2012).

The report further states that: "Indications are that there are many bricklayers, welders, plumbers, electricians, panel beaters and mechanics in the local study area, but few have received formal training in the skill they possess. Conversely, there are some formally trained individuals who have acquired a skill but do not have work experience using their skill." (Digby Wells, 2012).

BASIC ASSESSMENT REPORT

b) Socio-economic value of the activity

<p>What is the expected capital value of the activity on completion?</p>	<p>Capital investment may possibly amount to some R260 million for shellfish and R150 million for finfish farm development in the whole ADZ; however, farms will be developed in phases, based on ongoing monitoring, and might not reach full potential – as such, investment may be substantially lower. See Section 2.2.2.1 in App F.</p>	
<p>What is the expected yearly income that will be generated by or as a result of the activity?</p>	<p>Yearly revenue may possibly reach some R300 million for shellfish and R400 million for finfish if the whole ADZ is fully developed. However, farms will be developed in phases, based on ongoing monitoring, and might not reach full potential. Moreover, revenue depends on market prices and demand – as such, revenue is difficult to predict. See Section 2.2.3.1 in App F.</p>	
<p>Will the activity contribute to service infrastructure?</p>	<p align="center">YES</p>	<p align="center">NO</p>
<p>Is the activity a public amenity?</p>	<p align="center">YES</p>	<p align="center">NO</p>
<p>How many new employment opportunities will be created in the development and construction phase of the activity/ies?</p>	<p>The development and construction phases will result in very few employment opportunities.</p>	
<p>What is the expected value of the employment opportunities during the development and construction phase?</p>		
<p>What percentage of this will accrue to previously disadvantaged individuals?</p>		
<p>How many permanent new employment opportunities will be created during the operational phase of the activity?</p>	<p>Full production of shellfish may generate some 780 additional jobs, of which ~75% (585 staff) are likely to be unskilled / semi-skilled.</p> <p>Production of the initial 5 000 tons of finfish may generate 15 additional jobs.</p> <p>However, farms will be developed in phases, based on ongoing monitoring, and might not reach full potential – as such, investment may be substantially lower. See Section 2.2.3.2 of Appendix F.</p>	
<p>What is the expected current value of the employment opportunities during the first 10 years?</p>	<p align="center">N/A</p>	
<p>What percentage of this will accrue to previously disadvantaged individuals?</p>	<p>It is expected that a high percentage of employees will be previously disadvantaged individuals.</p>	

9. BIODIVERSITY

Please note: The Department may request specialist input/studies depending on the nature of the biodiversity occurring on the site and potential impact(s) of the proposed activity/ies. To assist with the identification of the biodiversity occurring on site and the ecosystem status consult <http://bgis.sanbi.org> or BGIShelp@sanbi.org. Information is also available on compact disc (cd) from the Biodiversity-GIS Unit, Ph (021) 799 8698. This information may be updated from time to time and it is the applicant/EAP's responsibility to ensure that the latest version is used. A map of the relevant biodiversity information (including an indication of the habitat conditions as per (b) below) and must be provided as an overlay map to the property/site plan as Appendix D to this report.

- a) **Indicate the applicable biodiversity planning categories of all areas on site and indicate the reason(s) provided in the biodiversity plan for the selection of the specific area as part of the specific category)**

Systematic Biodiversity Planning Category				If CBA or ESA, indicate the reason(s) for its selection in biodiversity plan
Critical Biodiversity Area (CBA)	Ecological Support Area (ESA)	Other Natural Area (ONA)	No Natural Area Remaining (NNA)	

- b) **Indicate and describe the habitat condition on site**

Habitat Condition	Percentage of habitat condition class (adding up to 100%)	Description and additional Comments and Observations (including additional insight into condition, e.g. poor land management practises, presence of quarries, grazing, harvesting regimes etc).
Natural	%	<p>Saldanha Bay has been transformed most notably during the construction of the Port of Saldanha in the 1970s, through the construction of the iron ore jetty and Marcus Island causeway, which altered the circulation and conditions in the Bay.</p> <p>Approximately 150 ha of Saldanha Bay (or 2% of the total Bay area) are currently utilised for aquaculture and could thus be deemed 'transformed'. However, due to the nature of the activity, structures can be easily removed and the natural state of these areas largely re-instated.</p> <p>Marine Protected Areas are located around Jutten and Malgas Island as well as on the mouth of the Langebaan lagoon.</p>
Near Natural (includes areas with low to moderate level of alien invasive plants)	%	
Degraded (includes areas heavily invaded by alien plants)	%	
Transformed (includes cultivation, dams, urban, plantation, roads, etc)	%	

BASIC ASSESSMENT REPORT

c) Complete the table to indicate:

- (i) the type of vegetation, including its ecosystem status, present on the site; and
- (ii) whether an aquatic ecosystem is present on site.

Terrestrial Ecosystems		Aquatic Ecosystems						
Ecosystem threat status as per the National Environmental Management: Biodiversity Act (Act No. 10 of 2004)	Critical	Wetland (including rivers, depressions, channelled and unchannelled wetlands, flats, seeps pans, and artificial wetlands)			Estuary		Coastline	
	Endangered							
	Vulnerable							
	Least Threatened	YES	NO	UNSURE	YES	NO	YES	NO

d) Please provide a description of the vegetation type and/or aquatic ecosystem present on site, including any important biodiversity features/information identified on site (e.g. threatened species and special habitats)

N/A as the application is for sea-based aquaculture and does not include land-based facilities.

SECTION C: PUBLIC PARTICIPATION

1. ADVERTISEMENT AND NOTICE

Publication name	Weslander	
Date published	9 June 2016	
Site notice position	Latitude	Longitude
TNPA offices	32°59'50.22"S	17°59'39.14"E

DAFF office at Pepper Bay	33° 0'57.80"S	17°56'52.27"E
Date placed	13 – 17 June 2016	

Include proof of the placement of the relevant advertisements and notices in Appendix E1.

2. DETERMINATION OF APPROPRIATE MEASURES

Provide details of the measures taken to include all potential I&APs as required by Regulation 41(2)(e) and 41(6) of GN 733.

Pre-application stakeholder engagement was undertaken to raise public and authority awareness of the proposed project early on. Pre-application stakeholder engagement included the:

- Notification of stakeholders in terms of Section 41 (2) (b) of GN R982 of 2014 on 9 June 2016;
- Release of a Background Information Document (BID) on 9 June 2016 to more than 100 public and authority stakeholders;
- Placement of an advertisement in one local newspaper (Weslander) in English and Afrikaans on 9 June 2016;
- Placement of notice boards at a number of sites around Saldanha Bay in the week of 13 June 2016;
- Focus group meetings with key (technical) stakeholders to provide input into the project definition:
 - Transnet National Ports Authority: 17 May 2016; and
 - Technical stakeholder workshop: 20 July 2016; and
- Distribution of the project definition summary to all registered stakeholders on 5 August 2016.

Stakeholders and the public were invited to register on the stakeholder database for the project, in order to be informed of the release of the draft BAR for comment.

Post-application public participation includes:

- Notification of registered stakeholders when the draft BAR is released for comment;
- Public open day to enable stakeholders to interact with the EAP and project team and discuss their questions; and
- Notification of registered stakeholders of DEA's decision.

The BAR will be released for a second public comment period prior to submission to DEA if substantial changes are required.

Key stakeholders (other than organs of state) identified in terms of Regulation 41(2)(b) of GN 733

The full database of registered stakeholders is provided in Appendix E5.

Title, Name and Surname	Affiliation/ key stakeholder status	Contact details (tel number or e-mail address)
Frank Pronk	Councillor- Ward 5	frank.pronk@sbm.gov.za

Quenton Brink	Transnet National Ports Authority (TNPA) (adjacent land owner)	quenton.brink@transnet.net

BASIC ASSESSMENT REPORT

Berneace Nel	Protea Hotel Saldanha Bay (adjacent land owner)	gm@sbph.co.za
Valason Pillay	South African National Defence Force (adjacent land owner)	valasonpillay@yahoo.com
Trevor Dyer	Saldanha Bay Yacht Club	Trevor.dyer@robbyersurgical.co.za
Sue Tonin	Bivalve Shellfish Farmers Association of South Africa	sue@saldanhabayoysters.co.za
Jaco Kotze	Chairperson Langebaan Ratepayers and Residents Association (LRRA)	info@langebaanratepayers.co.za

Include proof that the key stakeholder received written notification of the proposed activities as Appendix E2. This proof may include any of the following:

- e-mail delivery reports;
- registered mail receipts;
- courier waybills;
- signed acknowledgements of receipt; and/or
- or any other proof as agreed upon by the competent authority.

3. ISSUES RAISED BY INTERESTED AND AFFECTED PARTIES

Summary of main issues raised by I&APs	Summary of response from EAP
The increase in aquaculture, particularly fish farming, may have a negative effect on the marine ecology and important seabird breeding colonies of Saldanha Bay, particularly near Marine Protected Areas (and including e.g. attraction and entanglement of predators, establishment of alien species and introduction of diseases).	The potential biophysical impacts of the project are assessed in the marine ecology specialist study (Appendix D1 of the BAR) and the impact assessment (Appendix F of the BAR), which incorporate specific recommendations regarding e.g. buffers.
Aquaculture may affect currents (through structures) and nutrients / water quality (through feed, treatments and wastes) in the Bay (the latter concern relates particularly to fish farming).	The potential biophysical impacts of the project are assessed in the marine ecology specialist study (Appendix D1 of the BAR) and the impact assessment (Appendix F of the BAR), which incorporate specific recommendations regarding e.g. buffers.
Certain portions of the ADZ conflict with military and watersports areas in Saldanha Bay, particularly in Big Bay South and Outer Bay South, restricting access, increasing the risk of accidents and affecting competitions and events.	The potential impacts of the project on socio-economic activities are assessed in the impact assessment, and mitigation measures have been proposed to reduce the ADZ area to mitigate against user conflict (Appendix F of the BAR).
Through its impacts on watersports, the ADZ reduces tourism and jeopardizes businesses depending on watersports and tourism.	The potential impacts of the project on socio-economic activities are assessed in the impact assessment, and mitigation measures have been proposed to reduce the ADZ area to

BASIC ASSESSMENT REPORT

Summary of main issues raised by I&APs	Summary of response from EAP
	mitigate against user conflict (Appendix F of the BAR).
Aquaculture also provides some socio-economic opportunities, which must, however, consider existing economic activities in the area.	The potential impacts of the project on socio-economic activities are assessed in the impact assessment (Appendix F of the BAR).
Current aquaculture operations in Saldanha Bay are poorly managed, marked, unsightly and produce debris that washes up on the shore.	Management measures that will apply to the whole ADZ, including existing aquaculture areas, are stipulated in the EMPr and aimed at improving management at existing farms.

4. COMMENTS AND RESPONSE REPORT

The practitioner must record all comments received from I&APs and respond to each comment before the Draft BAR is submitted. The comments and responses must be captured in a comments and response report as prescribed in the EIA regulations and be attached to the Final BAR as Appendix E3.

5. AUTHORITY PARTICIPATION

Authorities and organs of state identified as key stakeholders:

Authority/Organ of State	Contact person (Title, Name and Surname)	Tel No	Fax No	e-mail	Postal address
Department of Environmental Affairs: Oceans and Coasts	Reuben Molale	021 819 2450		rmolale@environment.gov.za	PO Box 52126, Cape Town, 8001

Include proof that the Authorities and Organs of State received written notification of the proposed activities as appendix E4.

In the case of renewable energy projects, Eskom and the SKA Project Office must be included in the list of Organs of State.

6. CONSULTATION WITH OTHER STAKEHOLDERS

Note that, for any activities (linear or other) where deviation from the public participation requirements may be appropriate, the person conducting the public participation process may deviate from the requirements of that sub-regulation to the extent and in the manner as may be agreed to by the competent authority.

Proof of any such agreement must be provided, where applicable. Application for any deviation from the regulations relating to the public participation process must be submitted prior to the commencement of the public participation process.

A list of registered I&APs must be included as Appendix E5.

Copies of any correspondence and minutes of any meetings held must be included in Appendix E6.

SECTION D: IMPACT ASSESSMENT

The assessment of impacts must adhere to the minimum requirements in the EIA Regulations, 2014 and should take applicable official guidelines into account. The issues raised by interested and affected parties should also be addressed in the assessment of impacts.

1. IMPACTS THAT MAY RESULT FROM THE PLANNING AND DESIGN, CONSTRUCTION, OPERATIONAL, DECOMMISSIONING AND CLOSURE PHASES AS WELL AS PROPOSED MANAGEMENT OF IDENTIFIED IMPACTS AND PROPOSED MITIGATION MEASURES

Provide a summary and anticipated significance of the potential direct, indirect and cumulative impacts that are likely to occur as a result of the planning and design phase, construction phase, operational phase, decommissioning and closure phase, including impacts relating to the choice of site/activity/technology alternatives as well as the mitigation measures that may eliminate or reduce the potential impacts listed. This impact assessment must be applied to all the identified alternatives to the activities identified in Section A(2) of this report.

Activity	Impact summary	Significance	Proposed mitigation
Layout Alternative 1 ("Full Big Bay South Alternative")			
	Direct impacts: Construction Phase:		
	Crushing of biota in sediments during placement of mooring infrastructure	Low (-ve) without and with mitigation	<ul style="list-style-type: none"> Avoid potentially sensitive and valuable habitats such as conservation areas (Malgas Island, Jutten Island, Langebaan Lagoon MPAs), biogenic habitats (e.g. kelp beds) and reefs (e.g. Lynch Blinder, North Bay Blinder). Ensure mooring systems are well designed to prevent / limit movement of anchors and chains over the sea floor.
	Investment in the economy	Low (+ve) without and with mitigation	<ul style="list-style-type: none"> Procure goods and services from local, provincial or South African suppliers as far as possible, with an emphasis on Black Economic Empowerment (BEE) suppliers where possible.
	Increased employment, income and skills development	Very Low (+ve) without and with mitigation	<ul style="list-style-type: none"> Procure goods and services from local, provincial or South African suppliers as far as possible, with an emphasis on BEE suppliers where possible.
	Destruction, damage or alteration of heritage material or sites.	Low (-ve) without mitigation and	<ul style="list-style-type: none"> Do not place mooring blocks within 200 m of the Merestein site (33.087355°

BASIC ASSESSMENT REPORT

Activity	Impact summary	Significance	Proposed mitigation
		<p>Very Low (-ve) with mitigation</p>	<p>S, 17.955044° E).</p> <ul style="list-style-type: none"> • Undertake diver surveys prior to placing anchors / moorings, and do not place mooring blocks on visible shipwreck features (above the seabed). • Contact archaeologists should shipwreck material be identified to agree on any interventions required. • Provide the location and nature of any identified maritime and underwater cultural heritage resources to a maritime archaeologist and SAHRA for inclusion on their shipwreck database. • If a shipwreck site or part thereof has been disturbed, obtain a permit from SAHRA prior to continuing with activities.
	<p>Operations Phase:</p> <p>Modification of seabed characteristics by shellfish farming</p>	<p>Medium (-ve) without mitigation and Low (-ve) with mitigation</p>	<ul style="list-style-type: none"> • Select sites favouring well-flushed, deep and productive areas (Big Bay North, Outer Bay North, Outer Bay South) and avoid potentially sensitive and valuable habitats such as conservation areas (Malgas Island, Jutten Island, Langebaan Lagoon MPAs), biogenic habitats (e.g. kelp beds) and reefs (e.g. Lynch Blinder, North Bay Blinder). (Note: raft density within each farm, production levels per farm or the number of precincts within the agreed ADZ will also influence the level of mitigation deemed appropriate). • Leave mooring anchors or blocks in place when undertaking structure maintenance or fallowing sites to avoid repetitive impacts of the same activity at each site. • Avoid high density culture (overcrowding). The recommended density is one raft of 800 droppers per ha; 11 longlines of 832

BASIC ASSESSMENT REPORT

Activity	Impact summary	Significance	Proposed mitigation
			droppers per ha. <ul style="list-style-type: none"> • Implement recommended monitoring in seabed properties at farming sites and compile annual monitoring reports.
	Modification of seabed characteristics by finfish farming	High (-ve) without mitigation and Medium (-ve) with mitigation	<ul style="list-style-type: none"> • Select sites avoiding potentially sensitive and valuable habitats such as conservation areas (Malgas Island, Jutten Island, Langebaan Lagoon MPAs), biogenic habitats (e.g. kelp beds, seabird breeding and foraging areas) and reefs (e.g. Lynch Blinder, North Bay Blinder). • Select suitably deep sites that allow cages to be suspended at least 5 m above the seabed. • Implement buffers and a phased-in development of finfish farms. • Ensure that finfish cages do not occupy more than 30% of the total area allocated for finfish farming at any one time, both within individual licence areas and overall within the portions of the ADZ identified for finfish culture. • Manage stocking densities at levels to ensure that environment health is maintained, as determined by the environmental sampling and monitoring programme (see EMPr). • Monitor and manage feeding regimes to minimise feed wastage and chemical usage. Use high digestibility, high energy and low phosphorus feeds, species and system-specific feeds and maximize food conversion ratios (and minimize waste). • Rotate cages within a production area to allow recovery of benthos. • Limit annual increases in finfish production to no more than 1 000 t, and

BASIC ASSESSMENT REPORT

Activity	Impact summary	Significance	Proposed mitigation
			<p>only if monitoring results indicate that environment health has been maintained and impacts remain manageable, up to 5 000 tpa ungraded production.</p> <ul style="list-style-type: none"> • Only exceed finfish production of 5 000 tpa (after at least 5 years) to a maximum of 10 000 tpa if a precautionary approach is applied, involving strict and intensified monitoring programmes and adherence to environmental quality standards. Should standards or precautionary limits be approached or exceeded, the sampling and monitoring plans must include a response procedure that leads to appropriate downward adjustment of fish production. • Adopt the (relevant aspects of) MOM (Modelling-Outgrowing-Monitoring) management system (or similar) to monitor infaunal and epifaunal macrobenthic communities at farming sites.
	Modification of water column characteristics	Medium (-ve) without mitigation and Low (-ve) with mitigation	<ul style="list-style-type: none"> • Select sites avoiding potentially sensitive and valuable habitats such as conservation areas (Malgas Island, Jutten Island, Langebaan Lagoon MPAs), biogenic habitats (e.g. kelp beds, seabird breeding and foraging areas) and reefs (e.g. Lynch Blinder, North Bay blinder). • Select sites favouring well-flushed, deep and productive areas (Big Bay North, Outer Bay North, Outer Bay South). • Implement buffers and a phased-in expansion of shellfish and finfish farms. • Manage stocking densities at levels to ensure that

BASIC ASSESSMENT REPORT

Activity	Impact summary	Significance	Proposed mitigation
			<p>environment health is maintained, as determined by the environmental sampling and monitoring programme (see EMPr).</p> <ul style="list-style-type: none"> • Undertake ongoing, detailed water quality monitoring; including baseline surveys at control and impact sites, and decrease the ADZ carrying capacity should the environmental quality indicator be exceeded outside of the accepted sacrificial footprint. • Monitor and manage feeding regimes to minimise feed wastage and chemical usage. Use high digestibility, high energy and low phosphorus feeds, species and system-specific feeds and maximize food conversion ratios (and minimize waste). • Limit annual increases in finfish production to no more than 1 000 t, and only if monitoring results indicate that environment health has been maintained and impacts remain manageable, up to 5 000 tpa ungraded production. • Only exceed finfish production of 5 000 tpa (after at least 5 years) to a maximum of 10 000 tpa if a precautionary approach is applied, involving strict and intensified monitoring programmes and adherence to environmental quality standards. Should standards or precautionary limits be approached or exceeded, the sampling and monitoring plans must include a response procedure that leads to appropriate downward adjustment of fish production. • Monitor for copper leachate from antifouling

BASIC ASSESSMENT REPORT

Activity	Impact summary	Significance	Proposed mitigation
			paint.
	Creation of habitat	Medium (+ve) without and with mitigation	<ul style="list-style-type: none"> • None
	Alteration of behaviour and entanglement of seabirds and marine fauna from shellfish farming	Medium (-ve) without mitigation and Low (-ve) with mitigation	<ul style="list-style-type: none"> • Implement buffer zones at MPAs. • Minimise the potential for litter entering the marine environment (particularly plastic wastes). • Keep a log of all cetaceans, seabirds and predators recorded in the vicinity of fish farms, including behavioural observations. These data should be periodically compiled and analysed by experts.
	Alteration of behaviour and entanglement of seabirds and marine fauna from finfish farming	High (-ve) without mitigation and Low (-ve) with mitigation	<ul style="list-style-type: none"> • Implement buffer zones at MPAs. • Minimise the potential for litter entering the marine environment (particularly plastic wastes). • Remove any injured or dead fish from cages promptly. • Do not release any blood and/or offal (organic waste) from finfish into the bay. • Keep a log of all cetaceans, seabirds and predators recorded in the vicinity of fish farms, including behavioural observations. These data should be periodically compiled and analysed by experts. • Use predator exclusion nets as necessary. Enclose nets at the bottom to minimise entanglement, keep nets taut, use mesh sizes of < 6 cm and keep nets well maintained (e.g. repair holes). • Develop disentanglement protocols in collaboration with DAFF, DEA and the SA Whale Disentanglement Network and establish a rapid response unit to deal with entanglements.

Layout Alternative 2 (“Reduced Big Bay South Alternative”)			
<p>The following negative impacts are marginally lower for Layout Alternative 2:</p> <ul style="list-style-type: none"> - Modification of seabed characteristics by shellfish farming - Possible reduction in watersport activities and associated decline in tourism - Altered sense of place and visual intrusion visual intrusion from the proposed development - Altered sense of place and visual quality caused by light pollution at night <p>However, the reduction in impacts is very low, as the area excluded from the Reduced Big Bay South Alternative was not identified for finfish farming; as such any impacts related to finfish farming are not reduced as a result of implementing Alternative 2. Similarly, since it is assumed that the</p>			

BASIC ASSESSMENT REPORT

Activity	Impact summary	Significance	Proposed mitigation
	shellfish production volume calculated based on carrying capacity estimates could also be achieved in a smaller area at higher densities, provided that environmental and shellfish growth characteristics remain acceptable, most impacts related to shellfish farming are also not affected by implementing Layout Alternative 2.		
	Layout Alternative 2 therefore has identical impact ratings to those of Layout Alternative 1. Moreover, the recommendation to avoid the Big Bay South precinct entirely in mitigation of socio-economic impacts eliminates the difference between Layout Alternatives 1 and 2. (see Appendix F).		

A complete impact assessment in terms of Regulation 19(3) of GN 733 must be included as Appendix F.

2. ENVIRONMENTAL IMPACT STATEMENT

Taking the assessment of potential impacts into account, please provide an environmental impact statement that summarises the impact that the proposed activity and its alternatives may have on the environment after the management and mitigation of impacts have been taken into account, with specific reference to types of impact, duration of impacts, likelihood of potential impacts actually occurring and the significance of impacts.

Alternative A (preferred alternative)

The recommendation to avoid the Big Bay South precinct entirely in mitigation of socio-economic impacts eliminates the difference between Layout Alternatives 1 and 2. As such, one environmental impact statement is presented below.

The authorisation of an Aquaculture Development Zone (ADZ) in Saldanha Bay aims to create incentives for the further development of aquaculture in Saldanha Bay, thereby creating jobs, providing skills development and contributing to the economy under the umbrella of the Operation Phakisa initiative. Aquaculture is well-established in Saldanha Bay, and the bay is one of very few sheltered waterbodies off the South African coast that are deemed suitable for marine-based aquaculture.

The potential project impacts are summarised in Table 9.

Table 8: Summary of potential impacts of the proposed project

Impact	Description	Pre-mitigation impact	Post-mitigation impact
Construction Phase			
Biological	Crushing of biota in sediments during placement of mooring infrastructure	Low (-)	Low (-)
Socio-economic	Investment in the economy	Low (+)	Low (+)
	Increased employment, income and skills development	Very low (+)	Very low (+)
Cultural-historical	Destruction, damage or alteration of heritage material or sites	Low (-)	Very low (-)

Visual	Altered sense of place and visual intrusion from the proposed development	High (-)	Medium (-)
	Altered sense of place and visual quality caused by light pollution at night	Low (-)	Very low (-)

* High (+) if full production is ecologically sustainable.

The most significant potential negative impacts of the project (after mitigation) are related to marine ecology and visual aspects. Most notably, expanding shellfish aquaculture in Saldanha Bay, and introducing finfish aquaculture, is likely to:

- Modify seabed characteristics by deposition of fish waste (faeces and excess feed);
- Increase the risk of introducing alien invasive species or spread of fouling pests through the importation of seed stock and provision of aquaculture structures on which fouling organisms establish; and
- Alter the sense of place and present a visual intrusion as a result of the aquaculture structures that will be visible on the water surface.

The above impacts are rated as having Medium (negative) residual significance. It is recommended that additional aquaculture production of shellfish and finfish in Saldanha Bay is gradually phased in, based on environmental monitoring, to avoid unacceptable impacts on the bay. While total shellfish and finfish production volumes have been stipulated for the ADZ, these may not be achieved if environmental monitoring during early implementation phases indicates that impacts exceed acceptable thresholds with regards to marine ecology, such as water and sediment quality.

While other post-mitigation negative impacts related to marine ecology, socio-economic activities and the visual environment are rated as having Low or Very Low (negative) residual significance, implementation of mitigation measures is critical to achieve these ratings, including:

- Avoiding areas that are ecologically sensitive or significantly interfere with other uses in the bay;
- Implementing good biosecurity measures to prevent the introduction of alien invasive species and minimise the risk of diseases and genetic interaction with wild fish population;
- Utilising aquaculture equipment and methods that are suitable for the conditions in the respective precincts, notably maximum wave and swell heights; and
- Implementing good housekeeping at all times.

Implementation of mitigation measures and phasing in of aquaculture expansion is deemed to effectively mitigate negative impacts of the ADZ. It is recommended that an ADZ Management Committee (AMC), comprised of DAFF, DEA, DEA&DP and TNPA, is established to coordinate and supervise activities, environmental monitoring and environmental compliance of operators in the

ADZ. Management measures will also apply to and improve management at existing aquaculture farms in Saldanha Bay. It is further proposed that a Consultative Forum, comprised of other relevant government departments and local organisations, is established to review environmental monitoring data, advise on management and recommend measures.

Benefits of the project relate to development of the aquaculture industry in Saldanha Bay and the resultant contribution to the economy, increased employment (particularly at a low-skill level), income generation and skills development.

SRK believes that sufficient information is available for DEA to take a decision regarding the authorisation of the development. The BA has identified essential mitigation measures that will mitigate the impacts associated with this project to within acceptable limits.

In conclusion SRK is of the opinion that on purely 'environmental' grounds (i.e. the project's potential socio-economic and biophysical implications) the application as it is currently articulated, with the recommendations stipulated above and below, should **be approved**.

Alternative B

Alternative C

No-go alternative (compulsory)

The No-go alternative implies that the ADZ will not be established.

This implies that the current biophysical conditions of Saldanha Bay and socio-economic characteristics of the surrounding area will not change as a result of the ADZ. Aquaculture will continue in areas that are currently operational in Small Bay and in isolated areas in Outer Bay and Big Bay, and may expand into areas authorised through separate EIA processes. However, such expansion, particularly for shellfish farms, may take longer, resulting in the generation of fewer jobs than is possible with the ADZ. Farms of small-scale producers may not be able to expand to reach optimal production levels and become financially unviable.

There is a possibility that future development will take place in Big Bay related to the Oil and Gas industry and iron ore export operations. The No-Go alternative does not result in impacts or benefits relative to the current situation.

The AMC will not be established, and the environmental management and monitoring of existing aquaculture operations in Saldanha Bay will not be further coordinated.

Operation Phakisa objectives to increase production and employment in the aquaculture industry will not be implemented in Saldanha Bay.

SRK is of the opinion that the No-go alternative is less preferred.

SECTION E. RECOMMENDATION OF PRACTITIONER

Is the information contained in this report and the documentation attached hereto sufficient to make a decision in respect of the activity applied for (in the view of the environmental assessment practitioner)?

YES	NO
-----	----

If “NO”, indicate the aspects that should be assessed further as part of a Scoping and EIA process before a decision can be made (list the aspects that require further assessment).

If “YES”, please list any recommended conditions, including mitigation measures that should be considered for inclusion in any authorisation that may be granted by the competent authority in respect of the application.

The key recommendations for the implementation of the ADZ relate to the layout / extent of the ADZ and the phasing in of aquaculture expansion; these are listed below. A wide range of other mitigation measures are listed in the impact assessment (Section D1 and Appendix F) and the EMP; those should also form part of the authorization.

Layout / extent of the ADZ

It is recommended that a number of areas initially identified for inclusion in the ADZ are avoided in mitigation of marine ecology, socio-economic, visual and heritage impacts, thereby reducing the ADZ. These areas are shown in blue and orange shading in Figure 4 below and include the following:

- Big Bay North: 100 m-wide buffer around reefs and blinders and 1 km buffer from residents along the eastern shoreline (to mitigate marine ecology and visual impacts);
- Big Bay South: entire precinct (to mitigate marine ecology and socio-economic impacts);
- Outer Bay North: 1 000 m buffer for finfish and 500 m buffer for shellfish around the Malgas Island MPA and 100 m-wide buffer around reefs and blinders (to mitigate marine ecology impacts); and
- Outer Bay South: 250 m-wide buffer around Jutten Island MPA (aligned with the island) and the entire channel between Jutten Island and Donkergat Peninsula (to mitigate marine ecology, socio-economic and heritage impacts).

BASIC ASSESSMENT REPORT

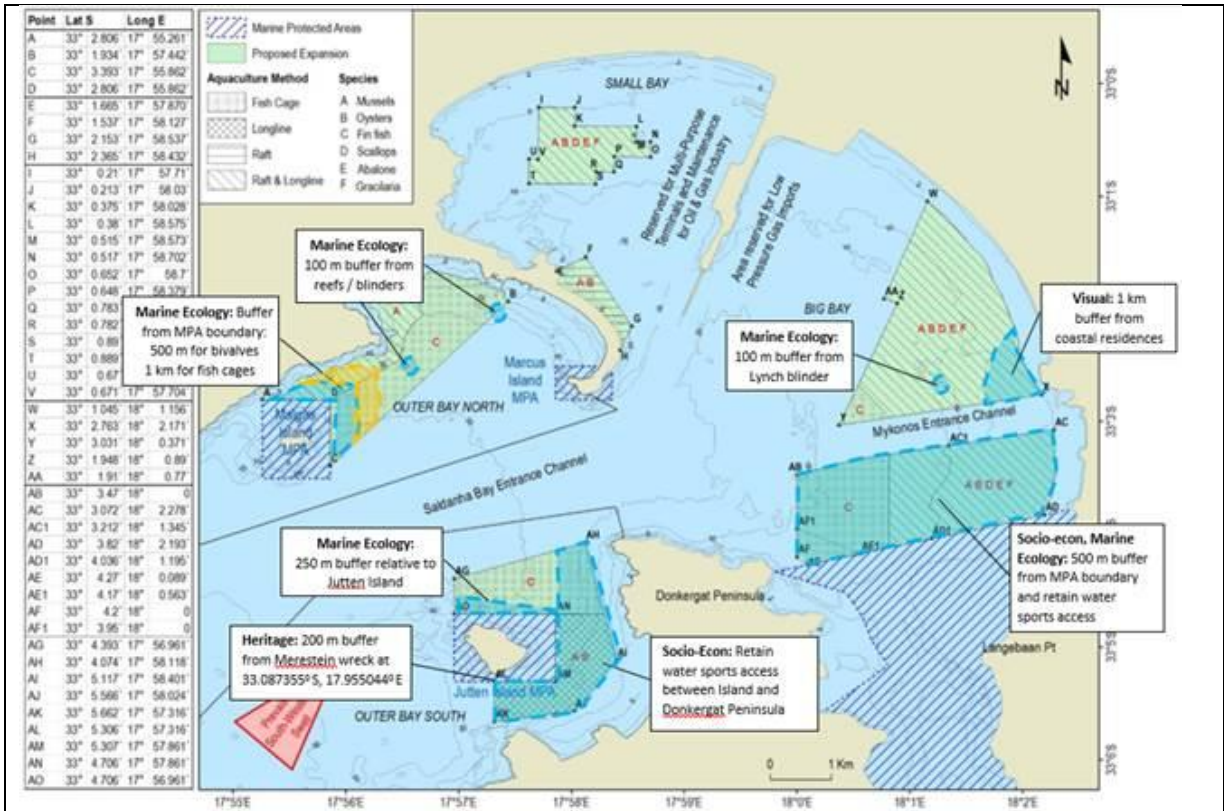

Figure 4: Areas to avoid in mitigation of impacts

The post-mitigation areas are provided in Figure 5 and Tables 9 and 10.

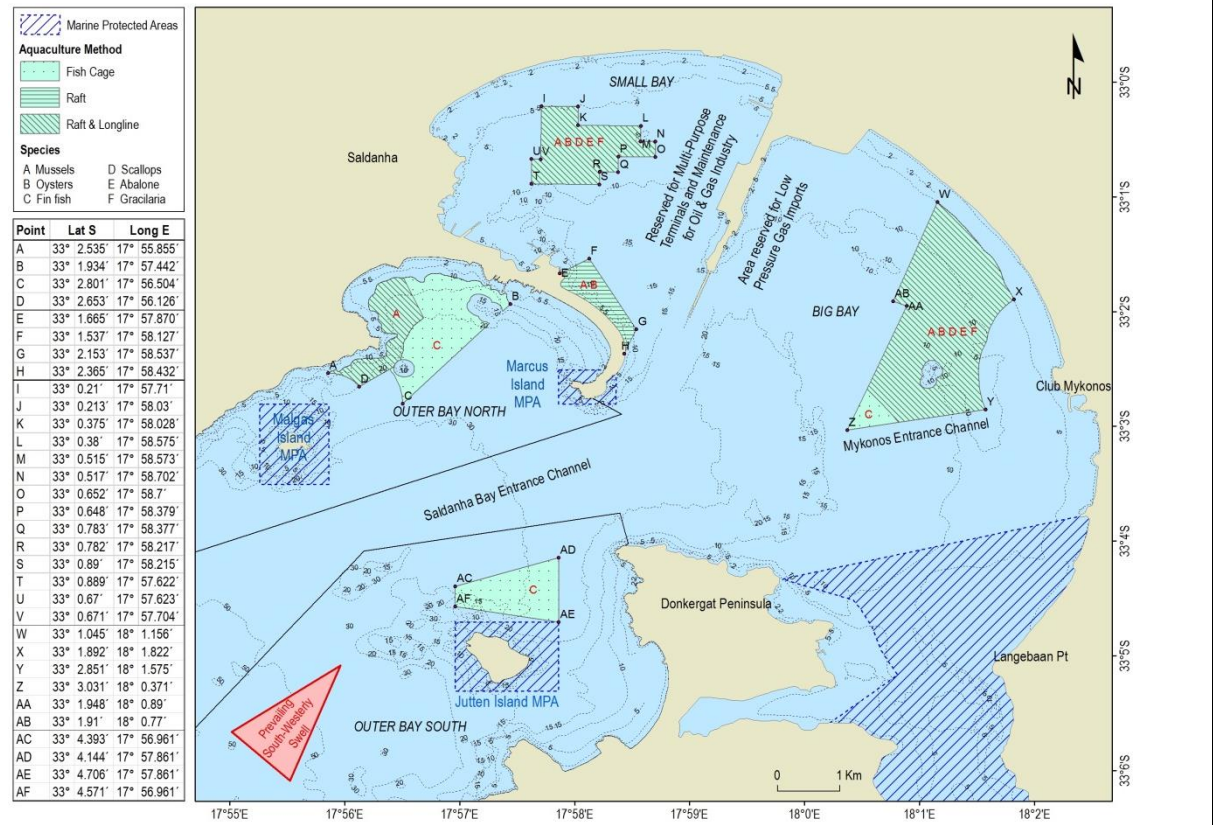

Figure 5: Post-mitigation ADZ areas

BASIC ASSESSMENT REPORT

Table 9: Post-mitigation ADZ area (ha)

Area	Currently allocated	Currently farmed	New areas	Total future
Small Bay	163	125	-	163
Big Bay North	254	25	155	409
Outer Bay North	37	1	179	216
Outer Bay South	10	-	86	96
Total	464	151	420	884

Table 10: Post-mitigation bivalve and finfish ADZ areas (ha)

Area	Total ADZ area	Bivalves	Finfish
Small Bay	163	163	-
Big Bay North	409	387	22
Outer Bay North	216	76	140
Outer Bay South	96	-	96
Total	884	626	258

Phasing in of aquaculture expansion

It is recommended that a phased approach for the expansion of aquaculture in the ADZ is implemented, notably:

- Limit annual ungraded **shellfish** production to 10 000 t for the first two years, increasing thereafter annually by 5 000 tpa only if monitoring results indicate that environment health has been maintained and impacts remain manageable, to a maximum of 27 600 tpa ungraded production; and
- Limit annual increases in **finfish** production to 1 000 t, and only if monitoring results indicate that environment health has been maintained and impacts remain manageable, up to 5 000 tpa. Split the allowable annual increase in production between Big Bay and Outer Bay.
- Finfish production beyond 5 000 tpa should only be pursued if:
 - Ecological monitoring indicates that production of 5 000 tpa has no adverse ecological effects, and there is adequate information to permit further expansion in fish production;
 - Intensified monitoring is applied (a detailed monitoring plan to be implemented) and that expanded production can only occur by following a more precautionary ramp up approach; and
 - In the ramp up period, and for any production beyond five years, a further period of strict monitoring and environmental quality standards is introduced. Should standards or precautionary limits be approached or exceeded, sampling and monitoring plans must include a response procedure that leads to appropriate downward adjustments of fish production.

Environmental monitoring must be implemented to inform management and expansion of operations as part of the phased approach.

An AMC must be constituted to oversee, facilitate, manage and monitor aquaculture operations in the ADZ.

Is an EMPr attached?

YES

NO

The EMPr must be attached as Appendix G.

BASIC ASSESSMENT REPORT

The details of the EAP who compiled the BAR and the expertise of the EAP to perform the Basic Assessment process must be included as Appendix H.

If any specialist reports were used during the compilation of this BAR, please attach the declaration of interest for each specialist in Appendix I.

Any other information relevant to this application and not previously included must be attached in Appendix J.
