**Attention: Ms Aneesah Alwie**

Dear Madam

**SPECIALIST STUDY: NOISE IMPACT ASSESSMENT: SPLIT OF THE SAN KRAAL WIND ENERGY FACILITY AND CHANGE OF WIND TURBINE SPECIFICATIONS – PART II AMENDMENT**

The above-mentioned issue as well as report AC-SKWEF/ENIA/201709-Rev 0 is of relevance.

I, Morné de Jager, conducted an Environmental Noise Impact Assessment (ENIA) during the end of 2017 for the proposed San Kraal Wind Energy Facility (WEF).

With the input data as used, the above-mentioned assessment indicated that the proposed wind farm would have a noise impact of:

- **medium significance** on one potential noise-sensitive development (NSD) in the area during the construction phase, mainly due to night-time construction of the Alternative option 1 overhead line.
- **low significance** on all the potential noise-sensitive developments (NSDs) in the area during the operational phase, using the Acciona AW125/3000 wind turbine for all operational wind speeds (generating 108.4 dBA) – maximum noise level less than 38.1 dBA at all NSDs.

The San Kraal WEF is authorised for a maximum generation capacity of 390 MW, with a total of up 78 turbines with an individual rating of between 3 and 5 MW, with a rotor diameter of 150 m, the hub height of 150 m and a blade length of 75 m.

The developer of the San Kraal WEF has since split the WEF into two smaller wind farms, namely the San Kraal Split 1 and Hartebeesthoek East wind farms (see **Figure 1**). This letter specifically addresses the Hartebeesthoek East Wind Farm as well as the proposed changes in the wind turbine details, including:

- A hub height of 137m with a rotor diameter of 175m;
- Increasing the turbine output to 6.2 MW per turbine.

The change, however, does not move any wind turbines closer than 1,000 m to any identified NSDs and will reduce the number of wind turbines. Considering the proposed changes to the layout, wind turbine specifications and the turbine output, it is my opinion that the change will not increase or change the significance of the noise impact.

A full noise impact assessment with new modelling will not be required, and the recommendations as contained in the previous document will still be valid. This recommendation is based on the outcome of the report, which indicated that the extent of the potential impact is limited to 1, 000m from the closest wind turbines (Section 9.3.2, pg. 106). The impacts, the significance, findings and the recommendations of the noise report (report AC-SKWEF/ENIA/201709-Rev 0) will remain the same, and it will not be required to do any additional or other acoustic studies for the proposed changes.

Should you require any further details, or have any additional questions, please do not hesitate to call me on the above numbers.

Yours Faithfully,

Morné de Jager

## SUMMARY

Morné has been in private consulting for the last 20 years, managing various projects for the mining and industrial sector, private developers, business, other environmental consulting firms as well as the Department of Water Affairs. During that period he has been involved in various projects, either as specialist, consultant, trainer or project manager. During that period he gradually moved towards environmental acoustics, focusing on this field exclusively since 2007. He focused on Environmental Noise Measurement, Prediction and Control. He has been doing work in this field for the past 11 years and was involved with more than 300 noise studies in the last few years for a plethora of different projects, including studies for numerous existing and proposed mines, power stations, wind farms, road and transportation networks, residential development and pipeline development amongst others.
