

Figure 1: Panorama of the site toward the east. The dominant shrub cover in the foreground consists of the exotic *Cestrum laevigatum* (Inkberry).

Figure 2: Panorama of the site toward the south. Note the low percentage vegetation cover and scattered tree cover. The trees consist of indigenous *Vachellia karroo* (Sweetthorn) but is dominated by several exotic tree species. Exotic Inkberry shrubs are also evident.

Figure 3: Panorama of the site toward the north. Grass cover is somewhat higher here although still low.

Figure 4: Panorama of the site toward the south. Note residences on the site and low percentage vegetation cover.

Figure 5: A patch of exotic Syringa (*Melia azedarach*) on the site. The buildings in the background will be demolished.
