Dear Mr Loubser

**CONSULTATION MEETING FOR THE APPLICATION OF MINING RIGHT
ON THE FARM FOURTEEN STREAMS 311 IN THE DISTRICT OF
BARKLEY WEST BY COPPERSUN TWELVE (PTY) LTD**

Your letter dated 3 April 2008 refers.

Please be hereby informed that Transnet Limited is the owner of various portions (1, 5, 10, 11, 12, 13, 14, 15, 16, 17 and 20) of the farms Fourteen Streams No 311, Registration Division Barkley West, in the Northern Cape Province. These properties are utilized for the main railway line from Johannesburg to Kimberley and the protection thereof is in national interest.

Transnet Limited, for various reasons, does not permit prospecting and mining on properties of which it is the surface right owner. We would like to draw your attention to Section 48 (1) of the Minerals And Petroleum Resources Development Act, 2002 which determines as follow:

"48. (1) Subject to section 20 of the National Parks Act, 1976 (Act No. 57 of 1976), and subsection (2), no reconnaissance permission, prospecting right, mining right or mining permit may be issued in respect of—

- (a) land comprising a residential area;***
- (b) any public road, railway or cemetery;***
- (c) any land being used for public or government purposes or reserved in terms of any other law; or***
- (d) areas identified by the Minister by notice in the Gazette in terms of section 49."***

Environmental Consultants

The Manager Transnet Property
35th floor Carlton Centre
150 Commisioner street
Johannesburg
2001

Attention: Mr. W. De Beer

APPLICATION FOR A MINING RIGHT BY COPPERSUN TWELVE (PTY) LTD ON THE FARM VEERTIEN STROME WARRENTON.

Your letter dated 3 June 2008 to Mr. Japie Loubser refers.

DERA Environmental Consultants are contracted by Coppersun Twelve (PTY) Ltd to compile the EMP/EIA for this mining right application.

Coppersun did apply for the entire farm Veertien Strome in order to secure the mineral rights. As the properties of Transnet is almost in the middle of the farm it were included in the application.

We hereby confirm that no mining activities will take place nearer then a horizontal distance of 100m from the railway lines or any other of your structures.

Please contact me for any further enquiries.

Yours sincerely

Daan Erasmus

Sir

**NOTICE OF AN OBJECTION TO AN APPLICATION FOR A MINING
PERMIT OVER PORTION 21 OF THE FARM FOURTEEN STREAMS
311 DISTRICT OF BARKLEY WEST**

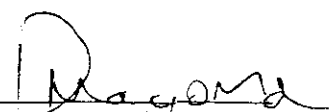

We refer to the above and would like to inform you that we hold instructions to act on behalf of the Moleko Farm Communal Property Association registration no: CPA/60/0207/A. The Communal Property Association is a statutory body governed by the provisions of the Land Restitution Act which was formed to represent beneficiaries of Moleko Farm.

We would like to inform you that we have noted an objection to your application for mining of diamonds over portion 21 of the farm Fourteen Streams with the Department of Minerals & Energy in Kimberley.

We attach a copy of a letter dated 09 April 2008 addressed to the director of the afore-said department for your attention.

We trust that you will find this in order.

Yours Faithfully

Magoma Attorneys

*Attention: Thozama Basi
By Hand*

Sir

**NOTICE OF AN OBJECTION TO AN APPLICATION FOR A
MINING PERMIT OVER PORTION 21 OF THE FARM
FOURTEEN STREAMS 311 DISTRICT OF BARKLEY WEST**

We refer to the above and would like to inform you that we hold instructions to act on behalf of the Moleko Farm Communal Property Association registration no: CPA/60/0207/A. The Communal Property Association is a statutory body governed by the provisions of the Land Restitution Act which was formed to represent beneficiaries of Moleko Farm.

Our client has instructed us to lodge an objection for application for a mining permit by Coppersun twelve (Pty) Ltd 98/19702/07, for mining of diamonds over portion 21 district of Barkley West. The afore-said property is held under title no T2284/2007 as it appears more fully on a copy of the DFA dated Friday 04 April 2008 attached hereto.

We would like to inform you further that our client is the legal owner of the above-mentioned portion of the farm and is interested in the mining of diamonds. The afore-said farm was transferred to our client by the trustees of the congregation of the sisters of Nazareth on the 30 July 2007 pursuant to a court order which was granted by Kimberley High Court.

We would like to inform you further that our client is in the process of submitting an application for prospecting and /or mining to the Department of Minerals & Energy. The delay to submit such an application in time was not caused by any fault on the part of our client but was due to failure by the Department of Land Affairs to finalise some processes in time, among others, compilation of a list of beneficiaries of the Communal Property Association who stand to benefit from any project on the farm, including mining.

As it appears on the attached notice of the DFA, Coppersun twelve (Pty) Ltd's application covers the entire 21 (twelve one) portions of the whole farm including that of our client and we submit that it will be just, fair and equitable to allow our client to conduct business of mining of diamonds over its own portion.

Our client is also concerned about the impact such an activity will have on its own environment as they were never formally informed by Coppersun Twelve (Pty) Ltd about the intended mining activity. As surface rights holder, our client was never consulted and as a results he did not grant any consent to Coppersun Twelve (Pty) Ltd to mine on its property.

We look forward to a hearing from you.

CC Coppersun Twelve (Pty) Ltd

Yours Faithfully

Sir

NOTICE IN TERMS OF SECTION 22 OF THE MINERALS AND
PETROLEUM RESOURCES DEVELOPMENT ACT

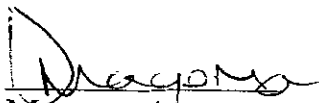

Pursuant to your notice for application for a mining right as published in the copy of DFA newspapers dated 13 June 2008, we would like to put it on record that we act on behalf of the Moleko Farm Communal Property Association (CPA).

We would like to inform you that our client has already objected in writing to the mining application as an interested party in a letter dated 09 April 2008 addressed to Coppersun Twelve (Pty) Ltd attached hereto for your attention.

For more information kindly contact our Mr David Magoma on 072 951 3214.

We trust that you will find this in order.

BIURIS LLB

Odour control

During daytime, the unique ventilation system causes a negative pressure within the system, which ensures no back draft into the toilet pan area. At night with a drop in temperature on the outside, the process can reverse. Research to overcome this is in progress. The ventilation extraction unit, positioned on top of the outlet vent pipe, assists the airflow. Air is drawn into the system via the toilet opening ensuring adequate ventilation for fast evaporation of urine and moisture removal from human excrement in the screw conveyer.

A cup of plant ash down the chute of the toilet after use will also prevent potential foul odours if the system is not in regular use. If plant ash is not available then use OdourKing. OdourKing is a powder substance that rapidly encapsulates all liquids / moisture (assist with drying process), and got odour control properties.

Material for the manufacturing of collective bags must allow air to pass through waste accumulating over a period of time in the bag.

Maintenance

EcoSan Toilets require minimal servicing, thereby enabling a saving in operating and maintenance costs.

- Rate of removal of accumulated dry waste material in the bag depends on the number of people in the household using the toilet on a daily basis. Capacity of bag is 110 litre.

For 3 members in the family it will take about 7 months for the bag to fill.

For 5 members in the family it will take about 4 months for the bag to fill.

For 8 members in the family it will take about 2.5 months for the bag to fill.

Under low usage conditions, the maintenance required can extend to once a year.

- To retrieve the dry waste, remove inspection hole cover (6) grab the handles on the bag and lift the bag out. The dry waste is extremely manageable, offering the option of being processed into compost or dispose of via municipal waste services. It is also combustible, meaning it could be used as a fuel source.
- The toilets need to be inspected on a daily basis to ensure that no blockages occurred. Especially when toilet paper is not used. Chute opening at bottom end of chute that opens into the screw conveyer must remain open at all times to allow air to pass through.
- Although not recommended, if odd objects such as beverage cans, disposable nappies or anything of that size accidentally dropped down the toilet bowl, it will not block the system.
- Human excrement skid marks on the surface of the chute can be brushed off with a toilet brush dipped into a disinfectant and washed down with a minimum of water.
- The dried waste matter can be further composted prior to use as a soil conditioner. Testing undertaken by the CSIR has proved that the technology produced one of the lowest counts of harmful bacteria.

ECOSAN DRY SANITATION TOILET SYSTEM.

Please study the assembly and installation instructions carefully as to avoid any malfunctioning of the toilet system. We at ECOSAN want you our valued customer not to be dissatisfied with your unique purchase.

The ECOSAN Toilet is a safe, water free, hygienic sanitation system that will operate effectively if used correctly.

Care must be taken in the implementation of the operating instructions:

- ✓ The ECOSAN Toilet is a dry sanitation system for human excrement only. Any excessive fluids other than urine will cause the system to malfunction and will also result in unpleasant odours.
- ✓ Should the toilet bowl require cleaning on the inside, clean with a stiff brush that was dipped into a disinfectant solution.
- ✓ The ECOSAN Toilet was designed for use by a family of 6 to 10 people only. This will prevent overloading and the system to malfunction.
- ✓ Assist and train small children to use the toilet correctly. Small children may throw articles down the toilet and put their hands into the toilet to retrieve it. Avoid putting larger foreign objects like beverage cans, stones, baby nappies and sanitary pads down the toilet.
- ✓ Use only toilet paper or similar materials.
- ✓ Ensure that the toilet seat and lid is in the down position after use.
- ✓ It will take approximately 7 to 9 months for the waste collecting bag to fill with dry, manageable waste. When the bag is full dispose of the waste in a responsible manner by burying the waste or via municipal waste collecting services.

For any further information please contact -

at

the following number -

EcoSan Technology

Mr. J.oubert, director of EcoSan as well as co-inventor and developer of the EcoSan Toilet System together with his expertise gained in research and development of the polyethylene industry, developed the EcoSan Dry Sanitation Toilet System. Widespread experience with the system in South Africa and neighbouring countries has demonstrated that it is a cost-effective, respectable, hygienic and environmentally friendly sanitation system that satisfies the dignity of all users.

Applications

- | | |
|---------------------------------------|------------------------|
| • Housing sector - rural / peri-urban | Clinics |
| • Holiday cottages | High water table areas |
| • Game farms | Farms |
| • Underground mining | Industry |
| • Walking trails | Schools |

How the system works

The EcoSan Toilet is in operation when the top lid on the toilet seat (1) is lifted. Human excrement and urine falls down a vertical chute (2) and into one open end of a specially designed helical (3) screw conveyer. After using the toilet, bring down (close) top lid on toilet seat. Every time the top lid is lifted, the galvanised steel mechanism that links the top lid with the helical screw conveyer rotates the conveyer a fraction of a full cycle. Human excrement in the mean time slowly moves along in a tumbling action to the open end on the other side of the helical screw conveyer taking about 25 days before falling into a (4) disposable bag.

Through the uniquely designed (5) ventilation system, adequate airflow is provided for the dehydration / evaporation, deodorising process. Human excrement consists of roughly 95 % moisture. Urine and moisture from the solids as the solids dry in the conveyer, evaporates and is vented to the atmosphere. The solid waste then dries into a compost-like material, roughly 5 to 10 % of its original mass.

Every EcoSan Toilet has a separate urinal for gents. The urinal divert urine for collection or discharge it direct into the soil. Collected urine is mixed with water and can be used as a fertiliser, foliar spray, on plants. Less liquid enters the system and in doing so help to speed up the drying process in the conveyer.

- In addition, the SABS has also carried out durability testing on the drum rotating mechanism and conveyer. In the event of a breakdown, the toilet can be repaired in no time, as all replaceable parts are easy to access. No sewage spillages will occur when replacing parts that drive the system. The only replaceable part to take care with when replacing is the screw conveyer as the conveyer when in use contains sewage. The use of protective clothing like a face shield, gloves, boots and a overall is advised. Water should be nearby for washing.
- In underground mining operations the system operates no different from when on surface. The only alteration is that the use of a removable bucket with a lid that seals with a clamp was recommended due to the high frequency of users. The result - waste dropping into the bucket is a wet sludge. Once the bucket is removed, lid on and sealed it is considered safe to handle and send to surface for emptying, cleansing with a disinfectant and then back underground for reuse. Safety precautionary measures must be taken when changing buckets in the event of a possible sewage spillage. Water should be nearby for washing.

Logistics

This high quality, factory assembled dry toilet system features the following design elements:

- Modern and functional design.
- Robust (manufactured from high quality polyethylene).
- Easy to transport.
- Light in weight (two men can lift one unit).
- Low maintenance.
- Easy installation.
- Affordable and easy to use. Even children lift the lid on the toilet seat.
- Factory sealed and assembled.
- Environmental friendly **green product** – will not pollute the environment.

TESTING OF A DRY SANITATION SYSTEM

1. DESCRIPTION OF SAMPLE

The sample consisted of one dry sanitation system incorporating a drum conveyor as shown on the attached photo.

2. OBJECT OF TEST

To conduct a durability test on the sample which will represent approximately 6 years at a rate of 15 cycle per day in actual use.

3. TEST METHOD

3.1 The following tests were conducted to assess the durability of the sample:

3.1.1 Opening moment of the lid. The opening moment of the toilet lid which operates the sanitation conveyor system was measured with, using a calibrated spring balance, no load and with a 7,34 kg load spread over the entire length of the drum conveying system before and after the cycling test.

3.1.2 Cycling test. The cycling test was conducted with the equipment as supplied which opened and closed the lid as in normal use. The system was operated for 32850 opening and closing cycles which represents approximately 6 years (2190 days) at a rate of 15 cycle per day and approximately 3285 full rotations of the conveying drum. The conveying system was then visually inspected for wear and workmanship.

3.2 The test sequence was as follows:

- opening moment of lid before cycling.
- cycle test.
- opening moment after cycling test.
- visual inspection.
- report.

This report relates only to the specific sample(s) tested as identified herein. It does not imply SABS approval of the quality and/or performance of the item(s) in question and the test results do not apply to any similar item that has not been tested. (Refer also to the complete conditions printed on the back of official test reports.)

Hierdie verslag het slegs betrekking op die spesifieke monster(s) wat getoets is, soos hierin geïdentifiseer. Dit impliseer nie dat die kwaliteit en/of prestasie van die betrokke artikel(s) deur die SABS goedgekeur is nie en die toetsresultate is nie van toepassing op 'n soortgelyke artikel wat nie getoets is nie. (Sien ook die volledige voorwaardes op die rugkant van amptelike toetsverslae.)

4. TEST RESULTS

- 4.1 Opening moment of the lid. The opening moment of the lid before and after the cycling test was as follows:

Test No.	Opening moment, kg			
	Before cycling		After Cycling	
	without load	with load	without load	with load
1	3,85	4,85	3,65	4,90
2	3,82	5,10	3,75	4,80
3	3,60	4,85	4,10	4,60
Average	3,76	4,93	3,83	4,77

- 4.2 Cycling test. The drum rotating mechanism and drum conveyor showed negligible wear on the moving parts and drum support positions. The system was still able to perform the duty for which it was attended.

The test sample will be disposed of if not collected within a period of 6 weeks of the date of this report.
