## PURPOSE OF THIS DOCUMENT

The purpose of this document is to provide all interested and affected parties (I&APs) with information relevant to the environmental regulatory process for surface mitigation measures project: Proposed construction of river diversions and flood protection berms within the Leeuspruit and Rietspruit at Sasol Sigma Defunct Colliery near Sasolburg, Free State Province.

This document aims to:

- Provide a description of the proposed Project;
- Provide an overview of the environmental regulatory processes which will be undertaken;
- Provide details of the Public Participation Process in accordance with the South African legislation; and
- Invite all I&APs to register as stakeholders, provide comment, raise issues or concerns, and provide suggestions for the enhanced benefit of the Project.

## BACKGROUND INFORMATION

Sasol Mining's Sigma Defunct Colliery, (Sigma Defunct Colliery), occupies a mining area of approximately 11 643 ha. Mining activities at the Sigma Defunct Colliery were conducted under Mining Licences No. 1/2001 and 3/2001,

granted by the Department of Mineral Resources (DMR).

Sigma Defunct Colliery commenced operations in 1952 with underground mining, holding mineral rights to several coal deposits in the Sasolburg district. Underground mining methods was the primary method of extracting these reserves and included mechanised board-and-pillar, rib pillar extraction and bottom coaling methods. In 1992, the mine became an opencast mine to the most north-eastern side of the reserves which occupied a mining area of approximately 385 ha. The mine utilised truck and shovel methods to extract the coal. All mining ceased in 2005 where the mine was then rehabilitated (remediated).

The Sigma Defunct Colliery applied for closure and the application and associated closure report was submitted to the DMR in 2009. The Sigma Defunct Colliery began to implement the proposed mitigation measures, as per the requirements of the Closure Plan and the Environmental Management Programme (EMP), to address all the significant risks and rehabilitation (remediation) measures which were required to obtain the closure certificate.

## PROJECT DESCRIPTION

A Risk Assessment Report was compiled which aimed to identify all the significant latent risks which Sigma Defunct Colliery face and rate them in accordance with the Sasol Risk Assessment Methodology. The report proposed mitigation measures to be implemented to reduce the significant latent risks to an acceptable residual risk level. The report was compiled in 2015 and has now been updated in 2018.

As part of the Risk Assessment Report, mitigation measures have been proposed and grouped together as underground mitigation measures (ash backfilling) and surface mitigation measures (river diversions and berm constructions). Sasol Mining have allocated funds in accordance with the mines

financial provision to provide for the implementation of the project.

The Underground Mitigation Measures which includes ash backfilling of certain areas with ash slurry is being dealt with as a separate project and under a separate environmental authorisation process.

The Surface Mitigation Measures proposed in the Risk Assessment Report requires environmental authorisation. Two rivers flow through the Sigma mining area namely the Rietspruit and the Leeuspruit. Beneath these water courses or floodplains a hazard of pillar failure exists which can result in subsidence. Subsidence is expected to have a significant impact on surface aspects should it occur and no mitigation measures are implemented. The risk of this occurring is considered to be significant. Therefore various mitigation measures have been proposed to reduce the significant risk areas to an acceptable residual risk (insignificant risk).

The Surface Mitigation Measures proposed requires Environmental Authorisation as well as a Water Use Licence (WUL).

Digby Wells Environmental (hereafter Digby Wells) has therefore been appointed by Sasol Mining to undertake the required environmental regulatory process required to implement the proposed surface mitigation measures at the Sigma Defunct Colliery. The project is considered to be a rehabilitation (remediation) project to prevent further damage to the environment. This proactive approach is considered to be critical as, without mitigation, pillar failure may occur which may result in subsidence and a significant impact on the Leeuspruit and Rietspruit Rivers.

This proposed project will require the following authorisations:

Authorisation Process	Relevant Legislation	Competent Authority
-----------------------	----------------------	---------------------

Environmental Authorisation – Basic Assessment (BA) Process	National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA)	Department of Mineral Resources (DMR)
Water Use Licence (WUL)	National Water Act, 1998 (Act No. 36 of 1998) (NWA)	Department of Water and Sanitation (DWS)
Notification of Intent to Develop (NID)	National Heritage Resources Act, 1999 (Act No. 25 of 1999) (NHRA)	South African Heritage Resources Agency (SAHRA) and Free State Provincial Heritage Resources Authority (FS-PRHA)

### PROJECT LOCATION

The river diversion project falls under the jurisdiction of the Metsimaholo Local Municipality (MLM), situated in the Fezile Dabi District Municipality (FDDM) in Free State, and is located close to Sasolburg (Plan 1 below)

### ENVIRONMENTAL AUTHORISATIONS

The activities in terms of NEMA that will be triggered by the proposed project have been listed below:

- Listing Notice 1 Activity 9 - It is proposed that the canals to divert the water will exceed 1000 metres in length and will have a width of 12.5 - 30 metres;
- Listing Notice 1 Activity 12 - The canals to be constructed to divert the water will exceed 100 square metres which are proposed to be located within a water course;

- Listing Notice 1 Activity 19 - Movement of soil of more than 10 cubic metres within a dam or watercourse;
- Listing Notice 1 Activity 27 – The clearing of vegetation of more than 1 ha but less than 20 ha
- GNR 327 - Listing Notice 1 Activity 24 - Construction of access roads to the river during construction phase and maintenance to be undertaken during operational phase.

Activities identified as water uses in terms of Section 21 of the National Water Act, 1998 (Act No. 36 of 1998) (NWA) may not be undertaken without a Water Use Licence (WUL) or General Authorisation.

The following Section 21 Water Uses will be triggered from the project:

- Section 21(c): impeding or diverting the flow of water in a watercourse;
- Section 21(i): altering the bed, banks, course or characteristics of a watercourse.

### PUBLIC PARTICIPATION PROCESS

Stakeholders affected or interested in the proposed project are invited to register as an I&AP in order to become involved in the PPP

Registered I&APs will be informed about availability of reports via their preferred means of communication (SMS, email, post or fax). Contributions from stakeholders will assist in informed decision-making for authorities and provides information to be considered by the project team and specialists conducting studies. All comments can be submitted using the contact details which appear on the cover page or as part of the Comment and Registration Sheet.

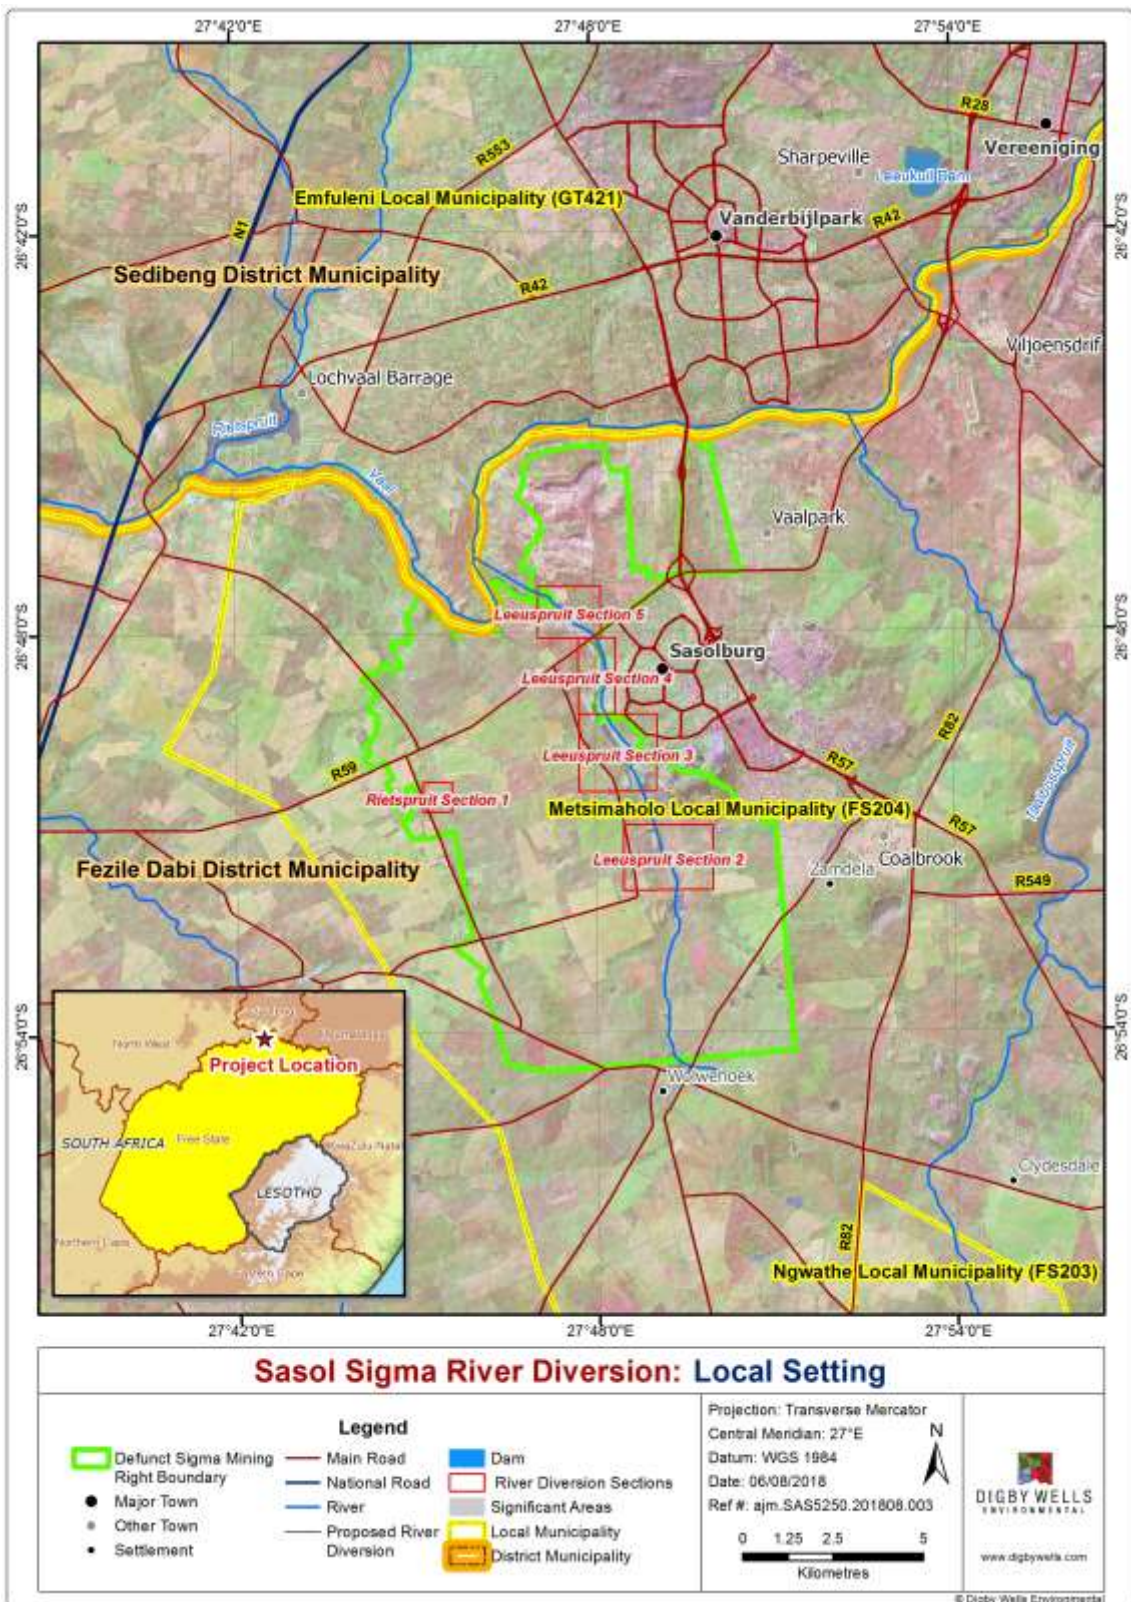

The Draft Basic Assessment Report will be available for public comment from **Tuesday 16 October 2018 to Thursday 14 November 2018** at the following places

DIGBY WELLS ENVIRONMENTAL

ENVIRONMENTAL REGULATORY PROCESS FOR SURFACE MITIGATION MEASURES PROJECT: PROPOSED CONSTRUCTION OF RIVER DIVERSIONS AND FLOOD PROTECTION BERMS WITHIN THE LEEUSPRUIT AND RIETSPRUIT AT SASOL SIGMA DEFUNCT COLLIERY NEAR SASOLBURG, FREE STATE PROVINCE

REGISTRATION AND COMMENT FORM October 2018

Registered Interested and Affected Parties (I&APs) will be informed of ongoing developments via their preferred means of communication (SMS, email, post or fax). The draft Scoping Report for comment is available between Tuesday 16 October 2018 to Thursday 14 November 2018 on www.digbywells.com (under Public Documents) and various public places, as per the announcement letter. Comments raised by stakeholders will assist in informed decision-making for authorities and provides information to be considered by the project team and specialists conducting the Environmental Assessment process. Please register as an Interested and Affected Party (I&AP) and provide comments by sending this form, or other written correspondence, to the contact details provided below:

Nondumiso Gwala of Digby Wells Environmental Stakeholder Engagement Office: Fax: 011 069 6801, Telephone: (011) 789 9495, Postal Address: Private Bag X10046, Randburg, 2125 Email: sh@digbywells.com

Table with 5 columns: Question, Yes, No, and sub-columns for Email, SMS, Post, Fax.

Please indicate which sector you represent and also provide a name

Table with 2 columns: Sector (Government Department, Municipality, Community, Non-Government Organisation, Business) and Name.

If you are a landowner or land occupier, please indicate which farm(s) and portion(s) you reside on

Table with 2 columns: Role (Landowner, Land occupier) and Farm/Portion details.

Please fill in your contact details below for the project database

Table with 5 rows: Title, Full Name; Designation; Cellphone, Fax, Tel; Email; Postal Address.

Environmental Impact Assessment Regulations of 2014, promulgated in terms of the National Environmental Management Act, as amended, Section 44 (1) requires that we gather comments from I&APs. Please complete the questions below. Should you require assistance in completing these questions please contact the Stakeholder Engagement Office at contact information provided above.

Two sections of open-ended questions: 'How do you think the project might impact (affect) you?' and 'How do you think the project might impact (affect) your socio-economic conditions? (e.g. livelihoods, farm, business, household)'

How can these impacts be managed, avoided and / or fixed?
If you are a landowner or occupier, what is your land currently being used for?
Are there any environmental, social or heritage features on the proposed project area we need to be aware of?
Where are these found?
Do you think the project could impact (affect) infrastructure you might have? (e.g. houses, buildings, roads)
If so how can these impacts (affects) be managed, avoided or fixed?

**General Comments**

If there are any other stakeholders we should include onto the stakeholder database for the proposed project, please provide their contact details.
