ANNEXURES

1.0 INTRODUCTION

The purpose of this report is to fulfil a request by Human Settlements on our meeting held on the 29th of June 2018 and should be read with Human Settlements Unit's "Relocation Plan for Klaarwater Station Housing Project" dated 22nd of May 2018.

2.0 EARTHWORKS

The relocation area consists of four (4) platforms of varying surface area, as indicated in Table 1 below:

PLATFORM NUMBER	AREA (m ²)
1	1 512
2	2 947
3	3 402
4	3 414

Platform 1 to 4 falls inside the project outside figure in Phase 1C and forms the main relocation area. The platforms can accommodate up to 450 families living in temporary structures.

The banks are cut at 1:1,75m and the platforms have a maximum of 4% surface slope to allow for stormwater drainage and prevent ponding.

All platforms will be fenced-off and a single point of entry will be established.

3.0 SANITATION

Shipping container communal ablution blocks will be provided at locations as indicated on the layout, and connected to the existing trunk water mains with diameter 160mm uPVC pipes in accordance with eThekweni Municipality's standards.

4.0 REHABILITATION AFTER RELOCATIONS

Once beneficiaries are allocated their new completed units on the project, the temporary structure will be demolished within a couple of hours to prevent invasion, the site will then be rehabilitated and vegetation introduced to return it to its original state as much as possible. Where platforms 1 to 4 are located, the new infrastructure will be constructed and new units build as per Town planning and Engineering layouts.
