

Appendix B: Photographs

Figure one shows and views the study area in a “NE” orientation. Far right, there is a visible surface water which ideally means that the development is situated in wetland area. There is also a gravel road which curves towards the fencing of the development site

Figure two shows and views the study area in a “SW” orientation. Far beyond the curve gravel road, is there are grown clusters trees. Far left is the small portion of the well-developed Kimberley mental health hospital which situated next to the phase one Kimberley nursing college.

Figure three shows and views the study area in a “SW” orientation. There is a visible fencing that separates the development site and where the sewer pump station is situated. Far right, there is a constructed sewer pump station.

Figure four shows and views the study area in a “SE” orientation with a built-up sewer pump station for the development site. It is evident that there is surrounding groundwater next to the sewer pump station.

Figure five shows and views the study area in a “**SW**” orientation. It is evident that there are small rocky patches found in between the camel thorn trees.

Figure six shows and views the study area in a “**W**” orientation. The Kimberley nursing college phase one is built next to a wetland which is seen far left distant.

Figure seven shows and views a study area in a “NW” orientation.

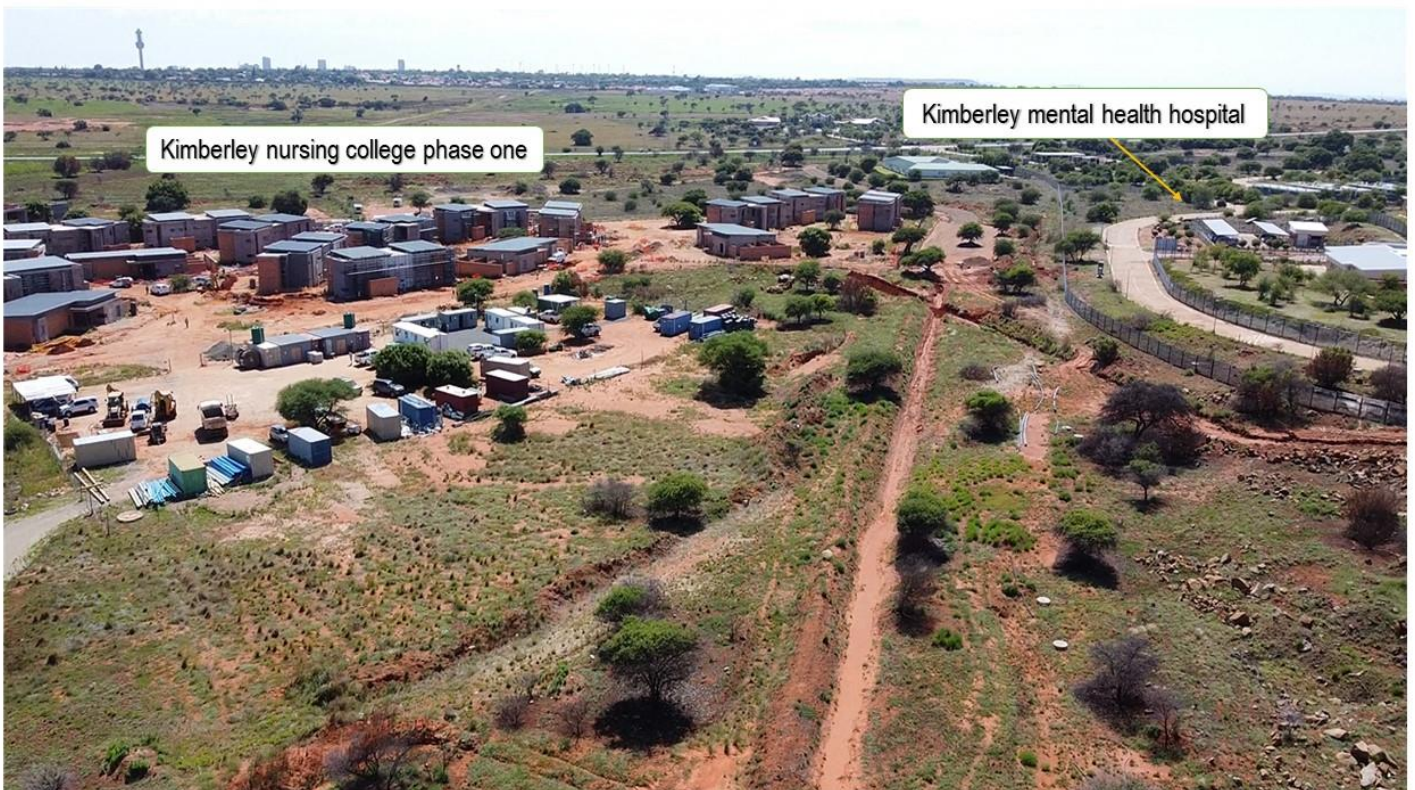

Figure eight shows and views a study area in a “W” orientation
