

APPENDIX B

Photographs

Figure 1: Panorama of the site along the western border. Note the existing structures, low vegetation cover and establishment of low shrubs (red figure) as a result of disturbance and overgrazing.

Figure 2: Panorama of the south western portion of the site. Note the low percentage vegetation cover and bare patches.

Figure 3: Panorama of the southern portion of the site. Note the low percentage vegetation cover and isolated trees.

Figure 4: Panorama of the site. Note the low percentage vegetation cover. Weeds are also abundant in these areas.

Figure 5: Panorama of the north western portion of the site. Note increase of low shrubs and piles of scrap metal.

Figure 6: panorama of the eastern portion of the site. Buildings dominate this portion with isolated planted trees.

Figure 7: Panorama of the eastern portion of the site. Note that vegetation has been cleared by previous land uses. In the background a portion of thicket is visible (red figure).

Figure 8: Isolated specimens of the protected bulb species, *Brunsvigia radulosa* (red circles), occur in the western portion of the site.

Figure 9: Several specimens of the protected Wild Olive tree, *Olea europaea* subsp. *africana*, occur in the northern portion of the study area.
