

10 March 2017

Dear Stakeholder

PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND POWER LINE, NORTHERN CAPE PROVINCE

NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE APPLICATION PROCESSES

The Northern Cape, and in particular, the north east region as a whole has been earmarked for the development of various mining developments and operations. With an increase of such developments, the region of Olifantshoek has undergone rapid population expansion, and as a result there is greater pressure being placed on existing electrification networks and services to meet the current capacity demands of the region. Eskom Holdings SoC Limited's (Eskom) is therefore proposing to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line to strengthen the electrification network of the area. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).
- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines.

A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

The project site is located within both the Gamagara Local Municipality of the John Taolo Gaetsewe District Municipality, and the Tatsebane Local Municipality of the ZF Mcgawu District Municipality. Farm properties affected by the development include: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574 and Erf 155.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SoC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the EIA Regulations of GN R982, GN R983 and R985, a Basic Assessment process is required to be undertaken for the proposed project. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SoC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess the potential environmental impacts associated with the proposed project, and recommend appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA processes, will also be undertaken by Savannah Environmental.

The department and/or the organisation which you represent has been identified as a commenting authority for the proposed project. In this regard, please can you provide us with the name and contact details of the relevant contact person at your department who should be liaised with regarding this project. By registering on the project database, you will receive all information relating to the project and will be provided with an opportunity to provide comment and input into the Basic Assessment process.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind Regards

Dear Stakeholder

PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND POWER LINE, NORTHERN CAPE PROVINCE

NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE APPLICATION PROCESSES

The Northern Cape, and in particular, the north east region as a whole has been earmarked for the development of various mining developments and operations. With an increase of such developments, the region of Olifantshoek has undergone rapid population expansion, and as a result there is greater pressure being placed on existing electrification networks and services to meet the current capacity demands of the region. Eskom Holdings SoC Limited's (Eskom) is therefore proposing to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line to strengthen the electrification network of the area. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).
- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom.

The project site is located within both the Gamagara Local Municipality of the John Taolo Gaetsewe District Municipality, and the Tasebane Local Municipality of the ZF Mgcawu District Municipality. Farm properties affected by the development include: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574 and Erf 155.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SoC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the EIA Regulations of GN R982, GN R983 and R985, a Basic Assessment process is required to be undertaken for the proposed project. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SoC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess the potential environmental impacts associated with the proposed project, and recommend appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA processes, will also be undertaken by Savannah Environmental.

You and/or the organisation which you represent have been identified as a directly affected or adjacent property owner that could be impacted by the proposed project. The EIA Regulations require that written notice is given to the owner or person in control of the land as well as occupiers of the affected and adjacent properties, which could be impacted by the project, are informed of the environmental assessment process. In this regard, please could you kindly inform any other persons (tenants, employees, farm managers and workers etc.) residing on your property of this Basic Assessment process. Should you or any other occupier of your property have an interest in this project, please register yourselves as Interested and Affected Parties (I&APs) and note your formal comments by sending written correspondence in this regard. By registering on the project database, you will receive all information relating

to the project and will be provided with an opportunity to provide comment and input into the Basic Assessment process.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind Regards

PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND POWER LINE, NORTHERN CAPE PROVINCE

NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE APPLICATION PROCESSES

The Northern Cape, and in particular, the north east region as a whole has been earmarked for the development of various mining developments and operations. With an increase of such developments, the region of Olifantshoek has undergone rapid population expansion, and as a result there is greater pressure being placed on existing electrification networks and services to meet the current capacity demands of the region. Eskom Holdings SoC Limited's (Eskom) is therefore proposing to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line to strengthen the electrification network of the area. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).

- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom.

The project site is located within both the Gamagara Local Municipality of the John Taolo Gaetsewe District Municipality, and the Tasebane Local Municipality of the ZF Mcgauw District Municipality. Farm properties affected by the development include: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574 and Erf 155.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SoC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the EIA Regulations of GN R982, GN R983 and R985, a Basic Assessment process is required to be undertaken for the proposed project. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SoC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess the potential environmental impacts associated with the proposed project, and recommend appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA processes, will also be undertaken by Savannah Environmental.

You and/or the organisation which you represent have been identified as a directly affected or adjacent property owner that could be impacted by the proposed project. The EIA Regulations require that written notice is given to the owner or person in control of the land as well as occupiers of the affected and adjacent properties, which could be impacted by the project, are informed of the environmental assessment process. In this regard, please could you kindly inform any other persons (tenants, employees, farm managers and workers etc.) residing on your property of this Basic Assessment process. Should you or any other occupier of your property have an interest in this project, please register yourselves as Interested and Affected Parties (I&APs) and note your formal comments by sending written correspondence in this regard. By registering on the project database, you will receive all information relating to the project and will be provided with an opportunity to provide comment and input into the Basic Assessment process.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind Regards

Dear Andrew Christian Olivier

PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND POWER LINE, NORTHERN CAPE PROVINCE

NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE APPLICATION PROCESSES

The Northern Cape, and in particular, the north east region as a whole has been earmarked for the development of various mining developments and operations. With an increase of such developments, the region of Olifantshoek has undergone rapid population expansion, and as a result there is greater pressure being placed on existing electrification networks and services to meet the current capacity demands of the region. Eskom Holdings SoC Limited's (Eskom) is therefore proposing to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line to strengthen the electrification network of the area. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).

- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).

- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom.

The project site is located within both the Gamagara Local Municipality of the John Taolo Gaetsewe District Municipality, and the Tasebane Local Municipality of the ZF Mcgauw District Municipality. Farm properties affected by the development include: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574 and Erf 155.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SoC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the EIA Regulations of GN R982, GN R983 and R985, a Basic Assessment process is required to be undertaken for the proposed project. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SoC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess the potential environmental impacts associated with the proposed project, and recommend appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA processes, will also be undertaken by Savannah Environmental.

You and/or the organisation which you represent have been identified as a directly affected or adjacent property owner that could be impacted by the proposed project. The EIA Regulations require that written notice is given to the owner or person in control of the land as well as occupiers of the affected and adjacent properties, which could be impacted by the project, are informed of the environmental assessment process. In this regard, please could you kindly inform any other persons (tenants, employees, farm managers and workers etc.) residing on your property of this Basic Assessment process. Should you or any other occupier of your property have an interest in this project, please register yourselves as Interested and Affected Parties (I&APs) and note your formal comments by sending written correspondence in this regard. By registering on the project database, you will receive all information relating to the project and will be provided with an opportunity to provide comment and input into the Basic Assessment process.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind Regards

Dear Lina Coetzee

PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND POWER LINE, NORTHERN CAPE PROVINCE

NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE APPLICATION PROCESSES

The Northern Cape, and in particular, the north east region as a whole has been earmarked for the development of various mining developments and operations. With an increase of such developments, the region of Olifantshoek has undergone rapid population expansion, and as a result there is greater pressure being placed on existing electrification networks and services to meet the current capacity demands of the region. Eskom Holdings SoC Limited's (Eskom) is therefore proposing to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line to strengthen the electrification network of the area. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).

- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom.

- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).

- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom.

The project site is located within both the Gamagara Local Municipality of the John Taolo Gaetsewe District Municipality, and the Tarsebane Local Municipality of the ZF Mkgauw District Municipality. Farm properties affected by the development include: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574 and Erf 155.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SoC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the EIA Regulations of GN R982, GN R983 and R985, a Basic Assessment process is required to be undertaken for the proposed project. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SoC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess the potential environmental impacts associated with the proposed project, and recommend appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA processes, will also be undertaken by Savannah Environmental.

You and/or the organisation which you represent have been identified as a directly affected or adjacent property owner that could be impacted by the proposed project. The EIA Regulations require that written notice is given to the owner or person in control of the land as well as occupiers of the affected and adjacent properties, which could be impacted by the project, are informed of the environmental assessment process. In this regard, please could you kindly inform any other persons (tenants, employees, farm managers and workers etc.) residing on your property of this Basic Assessment process. Should you or any other occupier of your property have an interest in this project, please register yourselves as Interested and Affected Parties (I&APs) and note your formal comments by sending written correspondence in this regard. By registering on the project database, you will receive all information relating to the project and will be provided with an opportunity to provide comment and input into the Basic Assessment process.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind Regards

Dear Antonie Egbert Jacobs

PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND POWER LINE, NORTHERN CAPE PROVINCE

NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE APPLICATION PROCESSES

The Northern Cape, and in particular, the north east region as a whole has been earmarked for the development of various mining developments and operations. With an increase of such developments, the region of Olifantshoek has undergone rapid population expansion, and as a result there is greater pressure being placed on existing electrification networks and services to meet the current capacity demands of the region. Eskom Holdings SoC Limited's (Eskom) is therefore proposing to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line to strengthen the electrification network of the area. This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the existing Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).

- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation.

Two alternative substation sites and two alternative power line routes are being considered within the Basic Assessment (BA) process. The majority of the length of the power line will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines. A corridor of 300m in width will be assessed for the siting of this project in order to allow for optimisation of the power line route in order to, *inter alia*, accommodate specialist findings where necessary. Within this corridor, a servitude of 32m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom.

The project site is located within both the Gamagara Local Municipality of the John Taolo Gaetsewe District Municipality, and the Tasebane Local Municipality of the ZF Mcgauw District Municipality. Farm properties affected by the development include: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574 and Erf 155.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SoC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the EIA Regulations of GN R982, GN R983 and R985, a Basic Assessment process is required to be undertaken for the proposed project. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SoC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess the potential environmental impacts associated with the proposed project, and recommend appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA processes, will also be undertaken by Savannah Environmental.

30 May 2017

Dear Stakeholder

**NOTIFICATION OF BASIC ASSESSMENT AND WATER USE LICENCE
APPLICATION PROCESSES
PROPOSED CONSTRUCTION OF THE OLIFANTSHOEK SUBSTATION AND
POWER LINE, NORTHERN CAPE PROVINCE**

AVAILABILITY OF THE DRAFT BASIC ASSESSMENT REPORT FOR REVIEW

It is Eskom Holdings SOC Limited's (Eskom) intention to establish a new Olifantshoek 10MVA 132/11kV substation and 31km 132kV power line as a means of delivering increased electrification to the area of Olifantshoek. The electrification plan is planned to increase the current Notified Maximum Demand (NMD) of the area from 2.5MVA to 10 MVA.

This project is referred to as the Olifantshoek Substation and Power Line and will consist of the following activities and infrastructure:

- » Construction and operation of the new 10MVA Olifantshoek 132/11kV substation (approximately 100m x 100m) and Ancillaries (including a metering station, control building, admin building, workshop and associated infrastructure).
- » The construction of a new 132kV single circuit monopole overhead power line (31km long in a 32m wide servitude) from the new Olifantshoek Substation to the Emil Switching Station, and Ancillaries (including access tracks/roads, laydown areas, operational and maintenance facilities).
- » Decommissioning of the existing 22/11kV 2.5MVA Olifantshoek Substation including all site rehabilitation and preservation

Two alternative substation sites and two alternative powerline routes are being considered within this Basic Assessment Report (Appendix A1). Grid connection will be from the new Olifantshoek Substation to the existing Emil Switching Station in Kathu. A corridor of 300m in width was assessed for the siting of this project in order to allow for optimisation of the infrastructure layout, including laydown areas, in order to, inter alia, accommodate specialist findings where necessary. Within this corridor, a servitude of 31m will be negotiated with the affected landowners.

Access roads (of up to 4m in width) will be constructed along the servitude where required. The power line is proposed to be constructed, owned and operated by Eskom. The majority of the length of these lines will run parallel to the existing Ferrum/Nieuwehoop 400kV and Ferrum/Lewensaar 275kV lines.

There are a number of farm properties affected by the development including: Lanham 539, Fritz 540, Wright 538, Bredenkamp 567, Brooks 568, Beaumont 569, Murray II 570, Cox 571, Hartley 573, Neylan 766, Neylan 574. The project site is located within Ward 3, 4 and 5 of the Gamagara Local Municipality in the John Taolo Gaetsewe district area.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Eskom Holdings SOC Limited requires authorisation from the Department of Environmental Affairs (DEA) (in consultation with the Northern Cape Department of Environmental Affairs and Nature Conservation (DENC)) for the undertaking of the proposed development. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the amended EIA Regulations of GN R 326, R327, GN R325 and R324, a Basic Assessment process is required to be undertaken for the proposed project. The project will be registered with the DEA and the reference number made known in due process. In terms of the National Water Act (Act No 36 of 1998), a Water Use License is required for watercourse crossings along the power line route.

Eskom Holdings SOC Limited has appointed **Savannah Environmental (Pty) Ltd**, as the independent environmental consultant, to undertake the required Basic Assessment and Water Use Licence Application (WULA) processes. The Basic Assessment will identify and assess all the potential environmental impacts associated with the proposed project, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The Public Participation Process, which forms part of the overall Basic Assessment and WULA process, will also be undertaken by Savannah Environmental.

AVAILABILITY OF A BASIC ASSESSMENT REPORT FOR PUBLIC REVIEW

In accordance with the EIA Regulations, a Basic Assessment Report has been made available for public review and comment. The report is available at the Olifantshoek Public Library from the **30 May 2017 – 30 June 2017**. The report is also available for download on www.savannahsa.com/projects. The due date for written comment is **30 June 2017**. Comments can be made as written submission via fax, post or email.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind Regards

MS GABRIELE STEIN
