# **DEFINITIONS AND TERMMINOLOGY**

Alternatives	Different mechanisms for achieving the general purpose and need of the proposed activity or development. Alternatives may be in terms of location, activity, processes, timing, or "do nothing" (i.e. "no-go" option).
Assessment	The evaluation, judgement, organising, rating, interpreting and communicating information which is relevant.
Biota	The animal and plant life of a particular region, habitat or ecosystem.
Construction activity	Any action taken by the Contractor, his subcontractors, suppliers or personnel in undertaking the construction work, otherwise referred to as "Works"
Construction area(s)	All areas used by the Contractor in order to carry out the required construction activities. This includes all offices, accommodation facilities, testing facilities / laboratories, batching areas, storage & stockpiling areas, workshops, spoiling areas, access roads, traffic accommodation (e.g. bypasses), etc.
Applicant/Employer	The person applying for Environmental Authorisation or carrying out the activity. The person or legal entity that has made application to the competent authority for environmental authorizations and who will have the overall responsibility to adhere to the relevant legislation and comply with the environmental authorization.
Ecosystem	A biological community of interacting organisms (plants and animals) and their physical environment.
Endangered species	A species of plant or animal which has been categorised by the International Union for Conservation of Nature (IUCN) Red Data List as likely to become extinct.
Endemic	A plant or animal species that is native or restricted to a certain area or range.
Environment	<ul> <li>The surroundings within which humans exist and that are made up of –</li> <li>land, water and atmosphere;</li> <li>micro-organisms, plant and animal life;</li> <li>any part or combination of the above and the interrelationships among and between them;</li> </ul>
	interrelationships among and between them;

Environmental Authorisation	<ul> <li>the physical, chemical, aesthetic and cultural properties and conditions of the foregoing that influence human health and wellbeing.</li> <li>The permission required from the competent authority for an</li> </ul>
	activity as listed according to the NEMA regulations.
Environmental Impact	Any change to the environment, whether desirable or undesirable, that would result directly or indirectly from any construction activity.
Environmental Management	Ensuring that environmental concerns are included in all stages of development in order to ensure that the proposed activity or development is done in a sustainable manner and does not exceed the carrying capacity of the surrounding local environment.
Hazardous material / substance	es Any waste that contains organic or inorganic elements or compounds, that may, owing to its inherent physical, chemical or toxicological characteristics, have a detrimental impact on health and the environment.
Indigenous	A "native" species of plant or animal that occurs naturally in a particular place or region, and was not artificially or intentionally introduced.
Invasive Alien Plants	All undesirable vegetation, defined as but not limited to, all declared category 1 and category 2 plants in terms of the National Environmental Management: Biodiversity Act 2014 (Act 10 of 2004), as amended.
Local Authority	Otherwise referred to as the "Council" – the local municipal authority that operates or is responsible in said area.
Rehabilitation	Returning an area impacted by activities/works to its original or better condition prior to the impacts from the activities/works having occurred.
Significant impact	An impact that may, but its magnitude, duration, intensity, or probability, have a notable effect on one or more aspects of the environment.

# 1. INTRODUCTION

The company Secundis Beleggings (Pty) Ltd. is proposing to commence with the process of procuring the Remaining Extent of the Farm Reliance No. 347 near the town of Griekwastad in the Northern Cape Province (19 ha). The reason for the intended procurement is for establishing One (1) seed potato farming pivot on the farm of natural previously uncultivated land.

The Environmental Management Plan aims to present management measures that will eliminate, offset or reduce adverse environmental impacts, as well as to provide a framework for environmental monitoring. The primary purpose of the Environmental Management Plan is to ensure that negative environmental impacts of the project are effectively managed within acceptable limits and that the positive impacts are enhanced. In order to give full effect to the Environmental Management Plan, it must form part of the contractual agreement between the relevant contractor(s) and the developer.

### **1.1 Legislative requirements**

Regulation 19(4) of the National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA) Environmental Impact Assessment (EIA) Regulations of 2014 provides the content requirements for Environmental Management Programmes. The table below lists the relevant requirements, indicates whether the relevant information is included in this report or not, and provides cross-references as to where the relevant information can be found in this report.

Reg.	EMPr Content	Included (Yes, No or N/A)	Report Section Reference
(a)	<ul> <li>(1) An EMPr must comply with section 24N of the Act and include-</li> <li>(a) details of -</li> <li>(i) the EAP who prepared the EMPr; and</li> </ul>	Yes	Chapter 2
	<ul><li>(ii) the expertise of that EAP to prepare an EMPr, including a curriculum vitae</li></ul>	Yes	Chapter 2
(b)	a detailed description of the aspects of the activity that are covered by the EMPr as identified by the project description;	Yes	Chapter 9
(c)	a map at an appropriate scale which superimposes the proposed activity, its associated structures, and infrastructure on the environmental sensitivities of the preferred site, indicating any areas that any areas that should be avoided, including buffers;	Yes	Chapter 3
(d)	a description of the impact management objectives, including management statements, identifying the impacts and risks that need to be avoided, managed and mitigated as identified through the environmental impact assessment process for all phases of the development including-	Yes	Chapter 9
	(i) planning and design;	Yes	Chapter 9
	(ii) pre-construction and construction activities;	Yes	Chapter 9
	(iii) construction activities;	Yes	Chapter 9

# Final EMP – Secundis Beleggings

Reg.	EMPr Content	Included (Yes, No or N/A)	Report Section Reference
	(iv) rehabilitation of the environment after construction and where applicable post closure; and	Yes	Chapter 11
	(v) where relevant, operation activities;	Yes	Chapter 9
(e)	a description and identification of impact management outcomes required for the aspects contemplated in paragraph (d);	Yes	Chapter 3 and 11
(f)	a description of proposed impact management actions, identifying the manner in which the impact management objectives and outcomes contemplated in paragraphs (d) and (e) will be achieved, and must, where applicable, include actions to -	Yes	Chapter 9
	<ul> <li>(i) avoid, modify, remedy, control or stop any action, activity or process which causes pollution or environmental degradation;</li> </ul>	Yes	Chapter 9
	<ul> <li>(ii) comply with any prescribed environmental management standards or practices;</li> </ul>	Yes	Chapter 9
	<ul><li>(iii) comply with any applicable provisions of the Act regarding closure, where applicable; and</li></ul>	Yes	Chapter 9
	<ul><li>(iv) comply with any provisions of the Act regarding financial provisions for rehabilitation, where applicable;</li></ul>	Yes	Chapter 9
(g)	the method of monitoring the implementation of the impact management actions contemplated in paragraph (f);	Yes	Chapter 5, 6 and 9
(h)	the frequency of monitoring the implementation of the impact management actions contemplated in paragraph (f);	Yes	Chapter 9
(i)	an indication of the persons who will be responsible for the implementation of the impact management actions;	Yes	Chapter 9
(j)	the time periods within which the impact management actions contemplated in paragraph (f) must be implemented;	Yes	Chapter 9
(k)	the mechanism for monitoring compliance with the impact management actions contemplated in paragraph (f);	Yes Chapter 9	
(I)	a program for reporting on compliance, taking into account the requirements as prescribed by the Regulations;	Yes	Chapter 9
(m)	an environmental awareness plan describing the manner in which-		
	<ul> <li>(i) the applicant intends to inform his or her employees of any environmental risk which may result from their work; and</li> </ul>	Yes	Chapter 8
	(ii) risks must be dealt with in order to avoid pollution or the degradation of the environment; and	Yes	Chapter 8
(n)	any specific information that may be required by the competent authority.	N/A	

#### 2. ENVIRONMENTAL ASSESSMENT PRACTIRIONER

The National Environmental Management Act, Act 1998 stipulates that an Independent Environmental Assessment Practitioner need to be appointed for the compilation of the Environmental Management Plan. This Environmental Management Plan was prepared by Mr. Johan Botes from Eco-Con Environmental. The sections below provide the detail of the EAP and explain the EAP's expertise to prepare this Environmental Management Plan.

#### 2.1 Details of the EAP

#### Table 2: Details of the EAP

Company Name	Eco-Con Environmental (Pty) Ltd.	
Individuals Name:	Mr. Johan Botes	
Physical address:	9 Gascony Crescent, Helicon Heights,	
	Bloemfontein, 9300	
Postal address:	P.O. Box 29262, Danhof, Bloemfontein, 9310

Cell Phone         +27 (0)82 459 8206		
Fax:	+27 (0)86 592 2282	
E-mail:	johan@eco-con.co.za	
	B.A Honours in Geography - UFS	
EAP Qualifications:	B.A Geography and Environmental	
	Management - UFS	
EAP Registrations:	IAIA`sa: 4043	
EAF REgistrations.	SAGIC: 1032	

#### 2.2 Expertise of the EAP

The experience of the EAP can be summarised under different sub-sections as outlined below:

#### Project Management Experience

- Conducting of Environmental Impact Assessment Report for the proposed 45MW Meerkat Hydro Power Facility in the Northern Cape.
- Conducting of Environmental Impact Assessment Report for the proposed 150MW PV Metsimatala Solar Power Project in the Northern Cape.
- Conducting of Basic Assessment processes for the proposed Optic fibre cable installation in and around the town of Lephalale on behalf of NEOTEL.
- Conducting of Basic Assessment processes for the proposed Optic fibre cable installation in and around the town of Thohoyandou on behalf of NEOTEL.
- Conducting of Basic Assessment processes for the proposed Optic fibre cable installation in and around the town of Groblersdal on behalf of NEOTEL.
- Conducting of Basic Assessment processes for the proposed upgrading and widening of Nathen Bridge in Blomfontein on behalf of the Mangaung Metropolitan Municipality

• Conducting of Basic Assessment processes for the proposed construction of two new roads and the upgrading of one existing road in Botshabeo on behalf of the Mangaung Metropolitan Municipality.

#### Environmental Impact Assessment Experience

- Conducting of Environmental Impact Assessment Report for the proposed 180 hectare Cecilia Park Residential development in Bloemfontein on behalf of Mzansi Africa Civils Engineering.
- Conducting of Environmental Impact Assessment Report for the proposed construction of a steel galvanizing plant in Botshebelo, Free State Province on behalf of Bombenero Investments.
- Conducting of Environmental Impact Assessment Report for the proposed opening of 3 borrow pits and 1 gravel quarry around the Ladybrand area, Free State Province.

### **Basic Assessment Experience**

- Conducting of Basic Assessment report for the proposed construction of the Lucas Steyn Filling station in Bloemfontein, Free State Province.
- Conducting of Basic Assessment report for the proposed construction of Gabions in the Bath River in Caledon, Western Cape Province.
- Conducting of Basic Assessment report for the proposed expansion of the Nicsha Petroleum Depot in Bloemfontein, Free State Province.
- Conducting of Basic Assessment report for the proposed Fuel Zone Petroleum Depot in Welkom, Free State Province.
- Conducting of Section 24 G Rectification application for the already established residential development on the farm Proteahof 217, Delportshoop, Northern Cape.
- Conducting of Basic Assessment processes for the proposed opening of 9 borrow pits around the Ladybrand area, Free State Province.
- Conducting of Basic Assessment processes for the proposed Optic fibre cable installation between Prince Albert and Oudtshoorn on behalf of NEOTEL.
- Conducting of Basic Assessment report for the proposed Nooitgedach Retirement Village in White River, Mpumalanga.
- Conducting of Basic Assessment processes for the proposed construction of 19 signalling masts in the railway reserves of Cape Town and Stellenbosch on behalf of the Passenger Rail Association of South Africa (PRASA).
- Conducting of Basic Assessment processes for the proposed construction of 1 signalling mast in the railway reserve at St James Station, Cape Town on behalf of the Passenger Rail Association of South Africa (PRASA).
- Conducting of Basic Assessment processes for the proposed construction of 1 signalling mast in the railway reserve at Clovelly Station, Cape Town on behalf of the Passenger Rail Association of South Africa (PRASA).
- Conducting of Basic Assessment processes for the proposed upgrading and widening of Nathen Bridge in Bloemfontein on behalf of the Mangaung Metropolitan Municipality.

• Conducting of Basic Assessment processes for the proposed construction of two new roads and the upgrading of one existing road in Botshabeo on behalf of the Mangaung Metropolitan Municipality.

# Experience in Auditing and as an Environmental Control Officer

- Annual Environmental Audit in Terms of Section 34 of Government Notice 982 for the Mission Point Mining near Sasolburg, Free State Province.
- Environmental Gap Audit for the Meadow Meats Abattoir in Vryheid, KwaZulu-Natal.
- Environmental Gap Audit for the Meadow Meats Abattoir in Wesselbron, Free State Province.
- Environmental Control Officer (ECO) for the Mission Point Sand Mining facility near Sasolburg, Free State Province.
- Environmental Control Officer (ECO) for the Rooikraal Truck stop facility near Vrede, Free State Province.
- Environmental Control Officer (ECO) for the widening of bridge structures over the Orange River for BVi on behalf of SANRAL, near Hopetown, Northern Cape
- Environmental Control Officer (ECO) for the construction of a 2.7 km Bus route, Thaba Nchu, Free State Province.
- Environmental as an Environmental Control Officer (ECO) for the installation of optic fibre cables in and around the town of Nelspruit on behalf of NEOTEL.
- Environmental as an Environmental Control Officer (ECO) for the construction of the Khi Solar One Concentrated Solar Power facility near Upington.
- Environmental as an Environmental Control Officer (ECO) for the construction of a 132kV Substation in Bloemfontein for Dihlase Consulting Engineers.
- Environmental as an Environmental Control Officer (ECO) for the installation of optic fibre cables in and around the town of Thohoyandou on behalf of NEOTEL.
- Environmental as an Environmental Control Officer (ECO) for the installation of optic fibre cables in and around the town of Lephaale on behalf of NEOTEL.
- Environmental as an Environmental Control Officer (ECO) for the installation of optic fibre cables in and around the town of Grobersdal on behalf of NEOTEL.
- Environmental as an Environmental Control Officer (ECO) for the installation of optic fibre cables in and around the town of Kathu on behalf of NEOTEL.

# Experience in Permits and Licencing

- Water Use Licence Application for the installation of carbon optic fibre cable within 32 metres of a watercourse on behalf of NEOTEL.
- Water Use Licence Application (General Authorisation) for the installation of carbon optic fibre cable within 500 metres of a wetland on behalf of NEOTEL.

• Waste Management Licence for the storage and reuse of hazardous waste water for the Bombenero Galvanizing Steel Facility in Botshabelo, Free State Province on behalf of Bombenero Investments.

#### Experience in Environmental Risk Assessments

- Conducting of Environmental Risk Assessment for the proposed establishment of a Diesel Depot in Welkom, Free State Province.
- Compiling Environmental Risk Assessment for the proposed optic fibre cable installation in and around the town of Groblersdal on behalf of NEOTEL.
- Compiling Environmental Risk Assessment for the proposed optic fibre cable installation in and around the town of Lephalale on behalf of NEOTEL.
- Compiling Environmental Risk Assessment for the proposed optic fibre cable installation in and around the town of Thohoyandou on behalf of NEOTEL.
- Compiling Environmental Risk Assessment for the proposed optic fibre cable installation in and around the town of Nelspruit on behalf of NEOTEL.
- Compiling Environmental Risk Assessment for the proposed optic fibre cable installation in and around the town of Kathu on behalf of NEOTEL.
- Compiling Environmental Risk Assessment for the proposed optic fibre cable installation in and around the town of Groblersdal on behalf of NEOTEL

# Other Experience

- Compilation of Fire Management Plan for the Proposed 150MW Metsimatale CSP Facility, Postmansburg, Northern Cape.
- Calculating Financial Provisions (Quantum Calculations) for the Mission Point Mining near Sasolburg, Free State Province.
- Compilation of construction and operational phase Waste Management Plan for the proposed Cecilia Park Residential Development, Bloemfontein, Free State Province.
- Training of construction personnel and environmental advisory services for personnel of the Khi Solar One Concentrated Solar Power facility near Upington.
- GIS mapping and technical support for various projects, including the drawing of locality and sensitivity maps.
- Public participation processes and assistance to several projects.
- Compilation of Bitumen Waste Report for Penny Farthing Engineering, Venterstad, Eastern Cape.

# 3. PROJECT DESCRIPTION

The company Secundis Beleggings (Pty) Ltd. is proposing to commence with the process of procuring the Remaining Extent of the Farm Reliance No. 347 near the town of Griekwastad in the Northern Cape Province (154 ha). The reason for the intended procurement is for establishing Fifteen (15) seed potato farming pivots on the farm of natural previously uncultivated land. However, due to the time constraint applicable to seed potato planting, the client has a small window at which the planting has to commence and be completed. <u>It was therefore recommended that two</u> <u>separate applications will be submitted</u> as the client cannot only wait for the approval of the scoping and eia reports. It was then recommended that <u>fourteen (14) (135ha) pivots will be applied for using</u> <u>the scoping and eia application process</u> (which run simultaneously with this application) and this application for one (1) 19ha pivot will run the Basic Assessment process. This will allow the client to start with this one pivot while awaiting approval for the scoping and eia reports for the other 14 pivots. These applications are not linked or related. If either one is rejected for some other reason, the other can still proceed.

It has to be noted that the seed potato pivot planting/development follow an 8-year rotation cycle. In other words, the pivot will be planted only once every 8 years. After each season, the pivot will be rehabilitated using buffalo grass and will remain dormant/inactive for a period of 7 years, before planting will again commence on the pivot. This cycle will continue.

In order to achieve the above, the following is proposed:

#### Layout Alternative 1 (Preferred Alternative)

As the client is aiming to also develop other areas on the farm which will run in a separate scoping and eia applications, only one layout alternative exist. The preferred layout alternative includes the development of one (1) seed potato pivots which will constitute a 19ha cultivated pivot land. This pivot will be located towards adjacent to the existing gravel road which was recommended by the ecologist as this area is less dense and less sensitive.

Figure 1: Preferred Layout Alternative

Seed potato farming is very labour intensive and numerous job opportunities will be created. Furthermore, seed potato farming has one of the highest value per cubic metre water (R50/m3) in comparison with wheat which is R5/m3).

Already established two track farm roads are already in place and will link up to the pivot.

A new water pipeline will be constructed and put in place to extract water from the already existing and approved / licensed 4 X boreholes. This will be used for the irrigation of all seed potato pivots as described in this report.

The project will entail two major aspects namely:

- The construction of a pipeline for irrigation form the existing boreholes.
- Cultivation of 19 ha seed potato pivot

### Construction of a pipeline for irrigation form the existing boreholes.

A new water pipeline will be constructed and put in place to extract water from the already existing and approved / licensed 4 X boreholes. This will be used for the irrigation of all seed potato pivots as described in this report.

### Extraction Pump:

- The following extraction pumps will be erected at each of the already approved and licensed boreholes: 1 x 5.5kW, pump and 3 x 2.2kW pumps which will pump into a new 116 000 litre zinc dam. This borehole was drilled around 1975 and used to irrigate crops since. Water will be pumped by a centrifugal pump from the dam to the centre pivot.
- The power for the extraction pumps will be obtained from existing 100 KVA point.
- The extraction pumps will run for approximately 12 hours per day, pumping water to the amount of 95 m3 per hour (Monday to Saturday for a 3-month period.

# Pipelines:

 A new 250 mm pipeline of approximately 0.8 km in length joining a 200mm pipeline of approximately 2.8km will be constructed to transport water from the zinc dam to the pivot areas. A narrow section of approximately 900mm will be cleared in order to accommodate the piping infrastructure. A trench of approximately 900 mm wide will be excavated in order to accommodate the subsurface burial of the pipeline.

#### On site Settling Dams:

As part of the above-mentioned pipeline and extraction pumps, the following settling dam and pumps will also be constructed on site:

• The existing boreholes will feed into an 8m zinc dam (50m2 / 116m3). The co-ordinates of the dam: 28°43'53.75"S; 23°10'23.88"E. The dam level will be kept between 50% and 90% by a level sensor that automatically switches the borehole pumps on/off as required. The overflow of the dam will be directed into a natural existing drainage line.

- The dam will also be fitted with a 55 kW pump that will feed into the pipeline towards the centre pivots. Due to the long distance and high hill over which the pipeline will traverse, the pump will only deliver water at a rate of 95 m3/h and will run on average 12 hours per day (1140 m3) and will peak for about 3 weeks at 1900m3 per day. The growing season for early generation seed potatoes is from 10 January to 10 April with peak water requirements in March.
- At the dam site there will also be 2 x 5000L JoJo tanks for liquid fertilizer application through the irrigation system. These tanks will be mounted on a concrete foundation with a retainer wall (bund wall) surrounding the tanks to prevent environmental damage in case of spillages.

#### Figure 2: Proposed Pipeline Route

#### Cultivation of 19 ha Seed potato pivot

19 ha (One (1) pivot circle) will be established on the proposed project footprint.

#### The cultivation and planting process will work as follows:

- The area will be cleared with the use of a Bulldozer and deep-ripped with the dozer tines to breakup and aerate the soils.
- Surface rocks will be manually removed from the area.
- Soil preparation will then be conducted by cultivation with the use of a chisel plough.

- Amelioration recommendations will be obtained from a soil scientist through chemical and organic soil analyses in order to ensure the appropriate nutrients/minerals, as required for the pivots, are incorporated into the growth medium (soil) prior to planting.
- A pivot irrigation system will be constructed and implemented over the entire proposed pivot area.
- Irrigation water will be abstracted from the existing and licensed four (4) boreholes as per the allotted water use license for the farm portion.
  - See Appendix G for the water use rights documentation indicating the allowable water use.
- Planting of seed potatoes will be conducted manually through manual labour.

# 3.1. Project Phases

This document includes the EMP for the planning/construction phase and the operational phase of the project. Should the applicant wish to decommission the project, an additional Impact assessment with EMPr should be compiled which is in line with the NEMA listed activities.

# Planning/Construction Phase

• The Planning construction phase of the project will involve the clearance of vegetation and soil preparation for the planting season for planting seed potatoes.

# **Operational Phase**

• The operational phase of the project will involve the continuous replanting of Wheat, Maize, Soya seeds and Cotton Seeds during their respective seasons, as well as the continuous maintenance of the pipeline and pivot areas.

# 3.2. Listed activities triggered

This proposed project triggered the following listed activities in terms of the National Environmental Management Act, 1998 and the Environmental Impact Regulation of 2014 as amended in 2017.

Regulation	Activity	Description of trigger activity in proposed project
GN. R. 983 Listing Notice 1	Activity 27 The clearance of an area of 1 hectares or more, but less than 20 hectares of indigenous vegetation, except where such clearance of indigenous vegetation is required for— (i) the undertaking of a linear activity; or (ii) maintenance purposes undertaken in accordance with a maintenance management plan.	The project will entail the clearance of 19ha of indigenous vegetation

#### Table 3: NEMA Listed Activities triggered

### 4. EXISTING ENVIRONMENT AND IMPACT SUMMARY

The following sections provide for a summary of impact as identified during the Impact Assessment phase and also provide for a description of the baseline environment.

#### 4.1 Baseline Environment

The small portion of the assessment area associated with the proposed approximate 19 ha cultivated pivot land footprint as well as surrounding landscape consists of a relatively natural, open flat medium height grassland. A well represented woody component is present but mainly constitutes low woody shrubs ( $\leq 2$  m) with small to medium sized trees being sparsely scattered throughout the area. The footslope of a large elevated hill complex commences approximately 180 m to the north-east of the proposed cultivated pivot land footprint and the density and height of the woody component outside of the proposed footprint gradually increases towards the hill complex. The hill complex forms part of an ESA and is utilised by various larger antelope species such as Kudu as well as other mammal and bird species as refuge and for breeding/persistence purposes. It is therefore recommended that a sufficient corridor must be buffered out around the footslope of the hill complex if practicably possible in order to ensure continued ecological connectivity and functionality of the adjacent ESA and to allow for movement of fauna and flora through the broader area.

A confined area within the western portion of the proposed footprint has been significantly degraded due to the presence of a drinking water point for livestock. Livestock usually tend to concentrate their grazing and resting activities in the vicinity of such drinking water points to enable quick access when required. The grass layer of this portion has been severely overgrazed which has had a surface creeping and grass 'carpet' forming effect. Virtually no grass tufting is present. The area mainly constitutes a relatively dense stand of *Vachellia karroo* and the legally declared invasive species *Prosopis sp.* (Category 3) with few *Ziziphus mucronata* individuals also being present.

The low woody shrub layer of the remaining majority of the footprint area is dominated by the nationally protected tree species *Vachellia haematoxylon*. The average density of these shrubs within the footprint area amounts to approximately 30 shrubs/ha which equates to a total estimate of approximately 570 shrubs within the footprint area which will need to be removed. Their density and the fact that their sizes and growth forms are mainly restricted to low shrubs ( $\leq 2$  m) indicates the potential impact of historic farm management practices which may have induced a degree of bush encroachment of this species, rather than natural representation/distribution. This assumption therefore detracts somewhat from their significance as nationally protected species on this specific site. Medium sized tree individuals of this species are also sparsely scattered throughout the area.

Only two tree individuals of significant size of this species were however found to be present within the footprint area. They will also need to be removed.

A single isolated clump of five medium sized tree individuals of the nationally protected tree species *Vachellia erioloba* were found to be present within the central portion of the footprint area. They will also need to be removed.

Other tree and shrub species also found to be sporadically present within the cultivated pivot land footprint area include *Senegalia mellifera*, *Grewia flava*, *Searsia burchellii* & *Tarchonanthus camphoratus*.

The lower shrub and forb layer is mainly dominated by the species *Euryops subcarnosus*, *Hertia* pallens, Pterothrix spinescens & Crotolaria orientalis. Other species also found to be present include Salsola aphylla, Osteospermum leptolobum, Pteronia sp., Hermannia comosa, Lycium horridum, Wahlenbergia nodosa, Senna italica subsp arachoides, Lebeckia spinescens, Hermannia tomentosa, Barleria rigida, Dicoma schinzii, Indigofera dalaeoides, Acrotome inflata, Harpagophytum sp. (provincially specially protected but only remnants of a single individual was found) & Elephantorrhiza elephantina.

The medium height grass layer is mainly dominated by the species *Aristida congesta, Stipagrostis uniplumis* & *Schmidtia pappophoroides* while other species also found to be present include *Eragrostis lehmanniana, Pogonarthria squarrosa* & *Cymbopogon pospischilii.* 

No Red Data Listed-, or any other species of conservational significance were found to be present within the proposed cultivated pivot land footprint.

The open grassland is utilised by various smaller antelope species such as Steenbok (Raphicerus campestris), burrowing mammals as well as numerous reptiles such as lizards, snakes & tortoises for foraging/persistence habitat but the small size of the development footprint and the mobility of such animals along with the vast, continuous, undeveloped surrounding natural landscape allows for individuals to simply leave an area where disturbance is taking place and disperse to other similar, adequate areas. The assessment area does not fall within any Important Bird Areas (IBA) as per the latest IBA obtained from the Birdlife SA website map (www.birdlife.org.za/conservation/importantbirdareas/iba-map). No important bird species, unique or specialised bird habitats were observed either.

#### 4.2 Summary of Impacts

Below is a summary of impact evaluated during the Impact Assessment process:

#### Construction Phase Impacts:

PLANNING, DESIGN AND CONSTRUCTION PHASE

# 5. PERSONS RESONSIBLE FOR IMPLIMENTING THE EMP

The implementation of this EMPr requires the involvement of several stakeholders, each fulfilling a different but vital role to ensure sound environmental management during the construction phase.

The following stakeholders will be involved with the EMPr either during the construction phase, operational phase or both.

#### **5.1 Competent Authority: DENC**

DENC is the Northern Cape competent authority responsible for issuing environmental authorisations in term of NEMA, NEM:WA, NEM:BA. This Directorate has overall responsibility for ensuring that the Applicant complies with the conditions of its environmental authorisation as well as this EMPr once approved.

During the operational and decommissioning phases of the EMPr the lead authority will have the following role to play:

- Conduct ad hoc compliance inspections.
- Read the ECO's performance reports and take action as deemed necessary.
- Whenever necessary, the authorities are to provide assistance in understanding and meeting the specified requirements.
- Ensure and timeously recommend suitable corrective measures are undertaken by the Applicant/ER where the applicant has reported non-compliance or when an audit report is received indicating any non-compliance
- Enforcing compliance by the Applicant

### 5.2 Applicant

Under South African environmental legislation, the Applicant is accountable for the potential impacts of the activities that are undertaken and is responsible for managing these impacts, both in the construction and operational phases. The Applicant therefore has overall and total environmental responsibility to ensure that the EMPr is implemented and that both the EMPr and the EA are complied with at all times. The Applicant is also responsible for ensuring that all other environmental and water related legislation is complied with.

The Applicant is responsible for the development and implementation of the conditions of the Environmental Authorisation in terms of the planning and design of the development and construction thereof.

The Applicant remains fully responsible for the implementation of this EMPr, and compliance with the EMPr and EA until such time as an application for amendment indicating a change in ownership or transfer of the EA to another party is submitted to DEA. Only once this amendment application has been approved is this responsibility then shifted to the new holder of the EA.

Amongst the general responsibilities above the applicant is also completely and solely responsible for:

Ensuring that any changes to the project or aspects thereof, as approved during the EIA process by the issuance of an EA, are timeously communicated to DESTEA as these may require amendments to the EA via an amendment application process.

• Appointing an ECO, and where required an environmental auditor

- It is the Applicants responsibility to notify DESTEA within 24 hours of an occurrence of any noncompliance with the EA, EMPr or any other environmental and water related legislation.
- Take the necessary action in terms of non-compliances.
- Ensuring that all of the applicants, staff, representatives, contractors, consultants and any other agent operating under the employ of the applicant comply with the EA, EMPr and any other environmental and water related legislation.
- Ensuring that all the necessary authorisations and permits have been obtained.
- Considering the ECO's observations and recommendations, taking action where required.

# **5.3 Applicants Representative**

The Employer's Representative (ER) would act as the Applicant's (Employer's) on-site implementing agent and has the responsibility to ensure that the Employer's responsibilities are executed in compliance with relevant legislation and the environmental authorisation.

Any on-site decisions/inputs regarding environmental management are ultimately the responsibility of the ER.

The on-site ER will have the following responsibilities in terms of the implementation of the Construction phase of this EMPr and assisting the applicant to ensure compliance with the EA, EMPr and any other environmental and water related legislation:

Ensuring, in conjunction with the applicant, that the authorisations and permits have been obtained and conditions have been met.

- Ensure where required by the EA that a notice of commencement is submitted to DENC at least two (2) weeks prior to commencement.
- Assist the Applicant with the appointing of an ECO and, where specifically required by the EA an Environmental Auditor.
- The ER will ensure that the appointed ECO is paid timeously thereby ensuring an ongoing ECO service.
- Should the Applicant or the ER change ECO's, should the applicant or ER cancel the ECO's services (either verbally, in writing or implied due to non-payment of fees) or should the ECO terminate their services the ER must notify DEA of this in writing within 14 days.
- Take action in regards to any non-compliance that is reported on or noted.
- Ensuring that the Applicant is aware of any environmental non-compliance on site.
- Considering the ECO's observations and recommendations.
- Ensuring that ECO is made aware of any changes in terms of the project.
- Reviewing and approving the Contractor's method statements.
- Ensuring that all Contractor's and Sub-contractors are implementing the EMPr and meeting the necessary requirements of the EA.
- Ensuring that all works are occurring within the permitted areas.
- Assisting the Contractor in finding environmentally responsible solutions to problems.
- Ordering the removal of person(s) and/or equipment not complying with the EMPr specifications.

- Ensure that the ECO is provided with any documentation required from the project team or contractors.
- Issuing fines for transgressions of site rules and penalties for contravention of the EMPr, with input from the ECO and providing proof in this regard.

### 5.4 Environmental Control Officer

The Environmental Control Officer (ECO) will be an independent environmental consultant appointed by the Applicant. The role of the ECO is to assist with the monitoring and where possible to provide guidance in terms of environmental matters.

The ECO will regularly monitor and review the on-site environmental management and implementation of the construction phase of this EMPr.

The ECO is not responsible for ensuring or enforcing compliance with the EA, EMPr or any other environmental and water related legislation. This is the responsibility of the applicant and authorities. The role of the ECO is that of a monitoring and supportive function and advising the Applicant of non-compliance with respect to the conditions of the EA.

The ECO's duties consist of the following:

Where required, provide assistance in terms of the Notice of commencement to DEA.

- Conducting monthly site inspections.
- Monitoring and verifying as far as possible adherence to the EMPr and the environmental authorisation.
- Monitoring and verifying that environmental mitigation measures are in place where necessary to facilitate keeping environmental impacts to a minimum.
- Reporting to the applicant and the applicant's representative any relevant observations made during site inspections.
- The ECO will report all noted/observed non-compliances with the EMPr and EA to the applicant's representative.
- As far as possible advise the applicants representative in regards to environmental matters that may become an issue.
- Reviewing the Contractor's construction method statements together with the ER.
- The ECO will make recommendations to the ER, with regards to the issuing of penalties in accordance with the EMPr.
- Facilitating the maintaining of open and direct lines of communication between the ER, Employer, Contractor and where necessary, the public, with regard to environmental matters.
- Assisting with the appointing of the relevant specialists (botanists, wetland specialists, etc.), as required, to advise the Engineer, Applicant or ER.
- Assist the contractor with basic awareness training of all construction staff, as to the requirements for working on the site.
- Assisting the Contractor in finding environmentally responsible solutions to problems.

- Monitoring the undertaking by the Contractor of environmental awareness training for all personnel and subcontractors coming onto site and assisting with this where necessary.
- Advising on the removal of person(s) and/or equipment not complying with the specifications (via the ER).
- Recommending the issuing of fines for transgressions of site rules and penalties for contraventions of the EMPr to the ER for action.
- Reporting to the applicant on the implementation of the EMPr and compliance with the environmental authorisation on a regular basis.
- Where necessary, recommending additions and/or changes to the EMPr to the directorate.
- The ECO will draft an environmental performance report on a monthly basis (except during shutdown periods). This report will be submitted to the Contractor, ER and to the DEA. The ECO may submit this via email.

### 5.5 The Contractor

The contractor is bound by the requirements of this EMPr. The Contractor will be subject to the issuance of penalties by the ER as stipulated herein. Any damage to the environment temporary or otherwise as a result of non-compliance with this EMPr will be made good at the contractors cost. In addition, the Contractor will have the following responsibilities:

- The Contractor will ensure that all senior and management staff involved with the project are aware and familiar with the requirements of this EMPr.
- The ECO will assist with the environmental induction training of site staff. It is the contractor's responsibility however to ensure that all staff and sub-contractors attended and undergo the necessary environmental site inductions. The Contractor will maintain a register of all staff and sub-contractors that have undergone an environmental site induction.
- The contractor will adhere to and comply with all of the requirements and specifications of this EMPr. Any noncompliance will be reported to the ECO and ER immediately.
- The contractor is fully responsible for all sub-contractors and service providers and their compliance with this EMPr on site. The Contractor will ensure that all sub-contractors and services providers are made aware of the requirements of the EMPr and that they have a responsibility to comply with the EMPr.
- The Contractor is responsible for ensuring that all sub-contractors and service providers comply with this EMPr.
- The Contractor will read the ECO performance reports and take action as required.

#### 5.6 Environmental Auditor

Where required by the EA an environmental auditor will be appointed by the applicant. The auditor will be an independent environmental consultant. The auditor will carry out a compliance audit based on the EA and EMPr of all of the activities being undertaken. The auditor will conduct and report audit findings based on the audit requirements stipulated in the EA. Any audit costs are for the Applicants account and are in addition to regular ECO services.

### 6. LIASON, CO-ORDINATING AND REPORTING

The structure for all communication, correspondence and reporting between project stakeholders will be defined at the beginning of the Project with the Contractors. The EMP will be an item on the daily site meeting agenda, which will be attended by the HS Representatives, including the Environmental Coordinator. If, at any time, the Owner's Representative (Field Superintendent) is uncertain in any respect of the implementation of any aspect of the EMP, he shall consult with the Environmental Coordinator. The ESO and Environmental Co-ordinator shall report directly to the Owner's Representative (Field Superintendent). All reports concerning non-compliance by any of the sub-contractors shall be routed through the Owner's Representative (Field Superintendent) and shall be discussed at the monthly site meetings. The SHEQ Manager shall be informed of the environmental issues relating to the rectification of non-compliance and any other relevant environmental management aspect.

### 6.1 Reporting

In addition to all reporting requirements identified in the EMP, records shall be kept by the Environmental Co-ordinator of all monitoring results, monitoring reports, incident records, audit reports and management reviews. Minutes of all environmental project meetings shall be submitted to the Environmental Co-ordinator. All report requirements shall be agreed at the beginning of the Project with sub-Contractors but in general shall be as follows: the sub-contractor site supervisor(s) shall report environmental matters to the ESO, who shall report to the clients Environmental Co-ordinator and the Field Superintendent. The clients Environmental Co-ordinator shall ensure reporting to the Project Manager, and SHE Manager, as well as clear communication about activities to the Field Superintendent.

# 7. METHOD STATEMENTS

Method statements are written submissions by the Contractor to the ER (with input from the ECO) in response to the requirements of this EMPr or to a request by the ER or ECO. A minimum requirement will consist of the listed MS's below. Further MS's may be requested by the ER or ECO.

The Contractor shall be required to prepare method statements for several specific construction activities and/or environmental management aspects as specified. Annexure 2 provides an example for a method statement template. It is the Contractors responsibility to ensure that the required method statements are drafted and submitted.

The Contractor shall not commence the activity for which a method statement is required until the ER has approved the relevant method statement.

Method statements must be submitted at least seven (7) business days prior to the date on which approval is required (start of the activity). Should the method statement be rejected this will be done so with comment. The seven-day submission period will commence once again on re-submission of the MS. Should the MS be submitted and no response (acceptance or rejection) be obtained within 7 days from the ER or ECO the MS will be considered as having been accepted and work can commence in line with the submitted MS.

Failure to submit a method statement may result in suspension of the activity concerned until such time as a method statement has been submitted and approved.

An approved method statement shall not absolve the Contractor from any of his obligations or responsibilities in terms of the contract. However, any damage caused to the environment through activities undertaken without an approved method statement shall be rehabilitated at the contractor's cost and to the satisfaction the ECO and ER.

The method statements shall cover relevant details with regard to:

- Construction procedures and location of the construction site.
- Start date and duration of the procedure.
- Materials, equipment and labour to be used.
- How materials, equipment and labour would be moved to and from the site as well as on site during construction.
- Storage, removal and subsequent handling of all materials, excess materials and waste materials of the procedure.
- Emergency procedures in case of any reasonably potential accident / incident which could occur during the procedure.
- Mitigation measure that will be employed.
- Compliance / non-compliance with the EMPr Specification and motivation if non-compliant

# 8. ENVIRONMENTAL AWARENESS PLAN

#### 8.1 Environmental Awareness and Risk Training

All staff members involved in work on site are to be briefed on their obligations towards environmental controls and methodologies in terms of this EMPr, prior to work commencing. The briefing will usually take the form of an on-site talk and demonstration by the ECO. The education / awareness programme should be aimed at all levels of management within the contractor team. See "basic rules of conduct" below.

#### 8.2 Basic Rules of Conduct

The following list represents the basic *Do's* and *Don'ts* towards environmental awareness, which all participants in this project must consider whilst carrying out their tasks. These are not exhaustive and serve as a quick reference aid. **NOTE:** ALL new site personnel must attend an environmental awareness/induction presentation. Please inform your foreman or manager if you have not attended such a presentation or contact the ECO.

DO:

- Clear your work areas of litter and building rubble at the end of each day use the waste bins provided and prevent litter from being blown away by wind.
- Report all fuel or oil spills immediately and stop the spill from continuing.

- Dispose of cigarettes and matches carefully, so to prevent veld fires (arson and littering is an offence).
- Confine work and storage of equipment to within the immediate work area.
- Use all safety equipment and comply with all safety procedures.
- Ensure a working fire extinguisher is immediately at hand.
- Prevent excessive noise.

#### DO NOT:

- Do not litter report dirty or full facilities, i.e. full dustbins and dirty or blocked toilets.
- Do not make any fires.
- Do not enter any fenced off or demarcated areas.
- Do not allow waste, litter, oils or foreign materials into any storm water channels or drains or watercourses.
- Do not litter or leave food lying around.

### 9. MONITORING AND COMPLIANCE

A suitably-qualified Environmental Control Officer (ECO) should be appointed by the Applicant / Developer to oversee the implementation of the operational and decommissioning phase mitigation measures described in this EMPr, as well as the conditions of authorisation as described in the Environmental Authorisation.

The ECO should have at least 5 years' experience as an ECO, or be supported by a qualified ECO. He/she may not be someone appointed by the contractor, engineer or other party involved with this project, other than the Applicant / Developer.

The following applies, amongst others, to the ECO's role:

- The ECO should undertake a permanent site inspection role during vegetation clearance and ad hoc inspection during the planting seasons (operational phase),
- The ECO must **report to** the Applicant / Developer only.
- The ECO should present an **environmental site induction / awareness training session** to all personnel before work on site commences, as are also described below; and
- After completion of the construction activities, an environmental audit should be undertaken by the ECO, before commencement of the operational phase, in order to determine compliance with the EMPr and the Environmental Authorisation. The audit report should be submitted to the competent authority.

The ECO can recommend the stopping of works if in his/her opinion there is a serious threat to, or impact on the environment, caused directly from the construction and / or operational phase. This

authority is to be limited to emergency situations where consultation with the engineer or applicant is not immediately available and proof of that made available. In all such work stoppage situations the ECO is to inform the engineer and applicant of the reasons for the stoppage as soon as possible.

Upon failure by the contractor or his employee(s) to show adequate consideration to the environmental aspects of this contract, the ECO may recommend to the engineer to have the contractor's representative or any employee(s) removed from the site or work suspended until the matter is remedied. No extension of time will be considered in the case of such suspensions and all costs will be borne by the contractor.

# 9.1 ECO Site Inspection Reports

The ECO site inspection reports (also called "ECO checklists") will report on the compliance of the construction and operational phase mitigation measures contained in the EMPr, as well as the conditions of approval described in the Environmental Authorisation. The report should be submitted to the applicant, within five (5) days of the ECO site inspection. Copies of the inspection reports should be kept on site.

The contractor's meeting minutes must reflect environmental queries, agreed actions and dates of eventual compliance. These minutes form part of the official environmental record.

# 9.2 Photographs

Photographs of all environmental transgression during the construction and operational phase must be included in ECO reports. These photographs should be stored with other records related to this EMPr. If captured in digital format, hard copies, in colour, must be kept with all other records relevant to the implementation of this EMPr.

# **10. IMPACTS AND MITIGATION MEASURES**

A number of potential environmental impacts that may arise during the project have been identified. These are outlined in the following table below, and guidelines and mitigation measures are provided.

The Contractor must familiarise himself with the requirements of the EMPr, keeping in mind that other site-specific requirements as outlined in the Environmental Authorisation must also be complied with.

### Table 4: Construction Phase EMP

	CONSTRUCTION/DEVELOPMENT PHASE					
No.	Aspect	Associated Impacts	Objective & Target	Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
1. <u>A</u>	CTIVITY: PERMITS	AND AUTHORISATIONS	1		1	1
1.1	Legislative compliance.	Non-compliance with South African environmental legislation.	Objective:Ensure compliancewith all triggeredenvironmentallegislation.Target:Commence siteestablishment with allpermission andapprovals received andon hand.	<ul> <li>a. The Developer is to have the following permits on commencement:</li> <li>Environmental Authorisation;</li> <li>Water Use License;</li> <li>Environmental Management Program; and,</li> <li>River Maintenance Management Plan.</li> </ul>	Obtain copies of all permits; Record Keeping	Responsibility: Developer Monitoring Frequency: Once off - prior to commencement of site clearing & earthworks.
2. <u>AC</u>	TIVITY: SITE LAYO	UT PLANNING	-			
2.1	Site Layout Plan.	Negative impact on the environment of unmanaged and unplanned placement of Infrastructure.	Objective:To ensure acceptableimpact andmanagement ofenvironmental issuesat the main site andstorage site duringconstruction by properplanning of layout ofinfrastructureplacement.Target:All areas notdemarcated forconstruction shouldremain vegetated in	<ul> <li>a. Draw up and submit for approval a Site Layout Master Plan. This plan must show the final positions and extent of all permanent and temporary site structures and infrastructure,</li> <li>b. The planning for layout must be done in consultation with the ECO.</li> <li>c. The contractor may not deface, paint, damage or mark any natural features situated in or around the site for survey or other purposes;</li> <li>d. No servicing of vehicles must be permitted on site, unless for emergency purposes;</li> <li>e. Stockpiles should not be situated such that they obstruct pathways; and,</li> <li>f. Place infrastructure as far as possible on sites that have already been transformed.</li> </ul>	Record Keeping	Responsibility: Developer Monitoring Frequency: Once off - prior to commencement of site clearing & earthworks.

			CONSTRUCTIO	)NC	DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target		Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
3. <u>AC</u>	TIVITY: CONSTRU	CTION PROGRAMME / SCHEDULE	impact should be minimised.				
3.1	Project Management.	Order and timing of construction activities and associated impacts.	<b>Objective:</b> To Provide a clear indication of the order by which key construction activities will transpire. <b>Target:</b> Anticipate timing of impacts to coordinate the availability of any specialists and/or authorities who may be required to conduct site inspections.	b. c. d.	Draw up and sign off a project schedule with all contributing parties and service providers to commit to a timeline during which time construction milestones will be completed; Communicate any deviation from this schedule with all parties, so as to provide parties with sufficient opportunity for alternative arrangements to be made; Establish a risk register to identify and monitor potential factors which may result in setbacks/ delays on tasks within the project schedule; Hold management meetings with representatives of the project manager, contractor, engineer and other contributing parties to monitor and anticipate changes; and, Should circumstances/ incidents arise which may pose a risk to the project schedule, the construction contractor, and engineer and ECO are to keep records of this and the latter communicate this in the ECO Bi-Weekly Audit Checklist.	Meetings; Risk Register; ECO Audit Checklist; Photographs	<u>Responsibility:</u> Contract Project Manager / Contractor / ECO <u>Monitoring Frequency:</u> Once off
4. <u>AC</u>	<u>TIVITY:</u> COMMUN	ICATION WITH LAND-OWNERS		1			
4.1	Landowner Consent.	Disturbance of existing land use.	Objective: Maintain a conflict-free relationship with landowners / users. <u>Target:</u> No complaints received from		Landowners are to be aware and in agreement of site access arrangements; The landowner has to be requested to liaise with the site supervisor of the construction contractor prior to entering the construction footprint area for safety purposes;	Meetings; Risk Register.	Responsibility: Contract Project Manager / Contractor / ECO Monitoring Frequency: Once off

			CONSTRUCTIO	)NC	DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target		Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
			landowners / users of affected property.	d.	All property gates are to be kept closed when not in use (or kept in the open/closed state in which it was found); and, Any complaint or liaison with regard to environmental aspects, compensation or disorder to economic activities, must not be addressed by the contractor. A public complaint register must be kept on site and the contract project manager must inform the Developer and/or ECO to take further action. Construction batching and residence sites or other significant infrastructure required as part of the proposed development must be located in consultation with the landowner or occupants on site.		
5. <u>AC</u>	TIVITY: SITE ESTA	BLISHMENT	L	I		L	
5.1	Demarcation of the site and vegetation removal.	Direct impact on vegetation during construction and loss of species.	<b>Objective:</b> Prevent unnecessary habitat destruction. <b>Target:</b> All areas not demarcated for construction should remain vegetated	a. b. c. d. f.	No natural surfaces are to be marked other than using droppers, beacons or other artificial object; Ensure the upkeep of demarcation boundaries throughout the period of construction until rehabilitation has been completed; Construction areas must be fenced; After the final layout has been approved, conduct a thorough footprint investigation to detect and map (by GPS) any protected plant species and active animal burrows; Protected plant species must be relocated where possible; Keep areas affected to a minimum, strictly prohibit any disturbance outside the demarcated foundation footprint area;	ECO to take photographs of site before clearance; ECO Audit Checklist.	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly

			CONSTRUCTIO	ON/DEVELOPMENT PHASE
No.	Aspect	Associated Impacts	Objective & Target	Management Action         Monitoring Action         Responsible Party & Monitoring Frequency
				<ul> <li>g. Clear as little indigenous vegetation as possible, aim to maintain vegetation where it will not interfere with the construction or operation of the development, rehabilitate an acceptable vegetation layer according to rehabilitation recommendations of the relevant EMP'r, if possible;</li> <li>h. Indigenous vegetation unique to the area must be used during landscaping activities;</li> <li>i. There should be a preconstruction environmental induction for all construction staff on site to ensure that basic environmental biodiversity principles are adhered to;</li> <li>j. Where the ECO deems it necessary (e.g. sensitive, natural areas) the ecologist appointed to do the vegetation study will be utilized;</li> <li>k. Restoration measures will be required to reinstate functionality in the disturbed soil and vegetation;</li> <li>l. Impacts to sensitive sites (drainage lines) should be avoided; and,</li> <li>m. No vegetation may be gathered for the purpose of creating fire;</li> </ul>
5.2	Topsoil stripping and conservation.	Destruction of topsoil.	Objective: Conserve and protect topsoil from erosion and destruction. <u>Target:</u> Topsoil condition maintained.	<ul> <li>a. In the absence of a distinguishable topsoil layer, strip the uppermost 300 mm of soil;</li> <li>b. Stockpile topsoil separately from subsoil, in heaps no higher than 2m;</li> <li>c. Topsoil stockpiles are to be kept free of weeds;</li> <li>d. Limit unnecessarily prolonged exposure of stripped areas and stockpiles;</li> <li>e. Topsoil stockpiles to be placed on a levelled area and measures to be implemented to</li> </ul>

			CONSTRUCTIO	DN/	DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target		Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
				i. j. k.	safeguard the piles from being washed away in the event of heavy rains/ storm water; Topsoil need to be stored in designated areas only. This need to be planned and indicated on the site-layout plan; Retain vegetation and soil in position for as long as possible, removing it immediately ahead of construction/ earthworks in that area; Strip and stockpile herbaceous vegetation, overlying grass and other fine organic matter along with the topsoil; Ensure that topsoil is not mixed with subsoil and/or any other excavated material; Temporarily stored topsoil must be re-applied within 6 months, topsoil stored for longer need to be managed according to a detailed topsoil management plan; Topsoil must be used in all rehabilitation activities, and may not be compacted to ensure that its plant support capacity remain of high quality; No topsoil may be stored within a watercourse; Do not strip topsoil when it is wet; and, Do not mix topsoil obtained from different sites, unless the ECO gives permission.		
6. <u>AC</u>	TIVITY: EARTH-W	ORKS					
6.1	Excavations; cut and fill; shaping and trimming.	Alteration of the terrain by civil works.	Objective: Minimise impact to the physical terrain features of the site. Target:		Cut and fill areas must be identified by the Engineer and protection measures provided through an appropriate method and technology; Dispose of excess material at a registered solid waste landfill site (Bloemfontein Landfill Site as per the Basic Assessment Report); and,	ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly

			CONSTRUCTIO	DN/	DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target		Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
7 40	TIVITY. SITE INED	ASTRUCTURE PLACEMENT AND OPE	Maintain Civil Works to within the construction footprint area.	C.	Shaping and trimming operations are to be planned to allow for topsoil application, with provision for the specified depth of reapplied topsoil made.		
7.1	Structures and lay-down areas.	Deterioration of site features and surrounding areas.	Objective:         Prevent the         deterioration of site         features like soil,         rainwater runoff and         erosion         Target:         The preservation of         site conditions evident         on establishment of         structures and lay-         down areas.	a. b. c. d. e.	Locate all structures and storage areas, including offices, workshops and stores in approved locations are per the Site Layout Plan; The camp with storage and laydown areas are to be kept secure and neat with access control measures adopted during construction; Clearly define which activities are to occur within which areas of the site by erecting signage. All hazardous substances, such as fuel, oil, diesel, paint, etc., must be stored in a secondary containment system (trays or bund) which is capable of storing at least 110% of the liquid capacity. If bund areas are used, it should be sealed to avoid seepages; and A vehicle service area should be in place, for vehicle repairs, in such way that no spillages will occur into the environment.	Photographs; ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly
8. <u>AC</u>	TIVITY: CONSTRU	CTION SITE OPERATIONS		1		Γ	
8.1	Security and fencing.	Prevent danger to trespassing of persons.	Objective: Keep the site secure from trespassing or theft and keep animals out. <u>Target:</u> Site remains secure during construction	a. b. c.	Be responsive to open or closed status of gates; New or the upkeep of fences should align to ensure safety of animals and maintain a reliable boundary area; Limit clearing of vegetation for fencing to the removal of trees and shrubs within 1 m of the fence line. All undergrowth should be maintained;	Photographs; ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly

			CONSTRUCTIO	DN/	DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target		Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
			with no incidences of trespassing, theft and injury or death to animals.	d. e.	Should construction activity require the removal of fences or gates to execute tasks, this must be replaced as soon as possible following completion; and, In all cases, the landowners on whose property any use of fences or gates, must be consulted, to ensure that parties are informed of construction activity, schedules and vehicle movement.		
8.2	Existing Services and Infrastructure.	Damage to existing services and infrastructure.	<b>Objective:</b> No damages to existing services and infrastructure. <b>Target:</b> No damages to existing services and infrastructure.	a. b.	Take cognisance of the position of existing services and infrastructure (e.g. roads, pipelines, power lines and telephone services) that may get damaged due to construction activities. Ensure that existing services are not damaged or disrupted unless required by the contract and with the permission of the project manager; and In the event that infrastructure is damaged or services interrupted during construction, it will be done at the expense of the Contractor and shall receive top priority over all other activities.	Photographs; ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly
8.3	Traffic.	Impact on traffic.	Objective: Minimise the disruption of road users. <u>Target:</u> Minimal disruption of road users.	a. b.	All vehicles must be road-worthy and drivers must be qualified, made aware of the potential road safety issues, and need for strict speed limits; Vehicles used for transport of materials and sand must be fitted with tarpaulins to prevent the release of such material or items onto road surfaces;	Incident Register; Photographs; ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly

			CONSTRUCTIO	DN/	DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target		Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
				d.	Construction vehicles may not leave the designated roads and tracks and turnaround points must be limited to specific sites; Abnormal loads should not be transported after dark; Abnormal loads should be timed to avoid times of year when traffic volumes are likely to be higher, as would be expected over national holidays, weekends and school holiday periods; Transport of materials should be limited to the least amount of trips possible; and Traffic deviations around the construction area must be planned in conjunction with the local authority to ensure safe and free flow of traffic.		
8.4	Traffic.	Traffic impacts associated with the movement of construction vehicles on site.	<b>Objective:</b> To minimise the destruction of biodiversity, compaction of valuable topsoil and mortalities of fauna on site. <b>Target:</b> Minimal destruction of biodiversity, compaction of valuable topsoil and mortalities of fauna on site.	c.	Safety signs must be utilised. After the final layout has been approved, conduct a thorough footprint investigation (walk-through) to detect and map (by GPS) all protected plant species, which have to be removed and animal burrows present within the project site. Animal burrows must be monitored by the ECO prior to construction for activity/presence of animal species. If detected, such animals must be removed and relocated by a qualified professional/contractor; During construction create designated turning areas and strictly prohibit any off-road driving or parking of vehicles and machinery outside designated areas; Ensure that runoff from compacted or sealed surfaces is slowed down and dispersed sufficiently to prevent accelerated erosion	Photographs; ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly

				<ul> <li>compensate the fire-fighting costs borne by farmers and local authorities;</li> <li>f. Fire breaks are to be established and maintained around the Work Sites as and when specified by the ECO;</li> <li>g. Equip vehicles and site structures with fire extinguishers. Rubber beaters should also be stored on site;</li> <li>h. No open fires are allowed anywhere on site;</li> <li>i. Storage of fuel or chemicals under trees is not permitted;</li> <li>j. Gas and liquid fuel is not to be stored in the same place;</li> <li>k. Smoking may only occur within a 3m radius from designated areas;</li> <li>l. Personnel must be adequately trained in the handling of firefighting equipment; and,</li> <li>m. Fuel, diesel, oil, or any other flammable substance should be stored 6m away from the smoking area.</li> </ul>		
8.11	Local communities.	Impact of construction workers on local communities, construction personnel and the local community.	<b>Objective:</b> Construction workers should not alter existing social dynamics of local communities. <b>Target:</b> No incidences of conflict between.	<ul> <li>a. Where possible, the Employer should make it a requirement for contractors to implement a 'locals first' policy for construction jobs, specifically semi and low-skilled job categories. This will reduce the potential impact that this category of worker could have on local family and social networks;</li> <li>b. The Employer should consider the establishment of a Monitoring Forum (MF) for the construction phase. The MF should be established before the construction phase commences and should include key stakeholders, including representatives from</li> </ul>	ECO Audit Checklist	Responsibility: Construction contractor; ECO Monitoring Frequency: Monthly

			CONSTRUCTIO	ON/DEVELOPMENT PHASE		
No.	Aspect	Associated Impacts	Objective & Target	Management Action	Monitoring Action	Responsible Party & Monitoring Frequency
				<ul> <li>the local community, local councillors, farmers, and the contractor. The role of the MF would be to monitor the construction phase and the implementation of the recommended mitigation measures. The MF should also be briefed on the potential risks to the local community associated with construction workers;</li> <li>c. The Employer and the contractors should, in consultation with representatives from the MF, develop a Code of Conduct for the construction phase. The code should identify what types of behaviour and activities by construction workers are not permitted. Construction workers that breach the code of good conduct should be dismissed. All dismissals must comply with the South African labour legislation;</li> <li>d. The Employer and the contractor should implement an HIV/AIDS awareness programme for all construction workers at the outset of the construction phase;</li> <li>e. The movement of construction workers on and off the site should be closely managed and monitored by the contractors. In this regard the contractors should be responsible for making the necessary arrangements for transporting workers to enable workers from outside the area to return home over weekends and or on a regular basis during the construction phase. This would reduce the risk posed by</li> </ul>

pivot	It is not foreseen that this project will be decommissioned as this is an existing profitable agricultural project. If in the future the applicant wishes to decommission the pivots and water pipelines, a new/separate Environmental Impact Assessment in line with the NEMA listed activities has to be undertaken, with an Environmental Management Plan, for the decommissioning phase of the project.						

# **11. EMERGENCY RESPONSE PLAN**

The following table is provided to assist the ECO and Site Manager contractor with remedial work options and problem solving:

Observation or Event	Action by Inspector or Observer	Action by Site Manager
Spillage of diesel or hydrocarbons on soil	<ul> <li>Report to Site Manager and continue observations.</li> <li>Also check:</li> <li>That the source causing the spillage has ceased, and that the affected area is isolated to prevent spreading of the hazardous substance, where after it should be rehabilitated.</li> </ul>	<ul> <li>Action will be required ASAP by following the next steps:</li> <li>Dig down into the soil to see how far down the pollution penetrated,</li> <li>If less than 300mm penetrated: <ul> <li>a. Turn the soil over to expose it to the air.</li> <li>b. Apply Mono Ammonium Phosphate (MAP) at a rate of 58gr/m<sup>2</sup> to the overturned soil.</li> <li>c. Water enough to keep the soil moist.</li> </ul> </li> <li>If penetration is greater than 300mm: <ul> <li>a. Remove the affected soil and spread in a layer not more than 300mm thick.</li> <li>b. Apply MAP at a rate of 50gr/m<sup>2</sup>.</li> <li>c. Water enough to keep the soil moist.</li> </ul> </li> <li>Repeat the above steps every 6 weeks or until the soil is clean.</li> </ul>
Erosion	<ul> <li>Report to Site Manager and continue observations.</li> <li>Also check:</li> <li>That all vehicular movement is restricted to existing access routes to prevent crisscrossing of tracks through undisturbed areas.</li> </ul>	<ul> <li>Action will be required ASAP:</li> <li>Implement erosion protection works at identified problem areas.</li> <li>Implement remedial works at affected areas in order to restore the area to its previous or better status.</li> </ul>

# **12. INCIDENT REGISTER**

	INCIDENT REGISTER: SPITSKOP RESIDENTIAL DEVELOPMENT					
NAME OF PERSON REPORTING THE INCIDENT	INCIDENT	DATE OF INCIDENT IDENTIFIED	HOW WAS INCIDENT ADDRESSED?	DATE OF RECTIFICATION	SIGNATURE	

### **13. REHABILITATION MEASURES AND CLOSURE PLAN**

The rehabilitation phase follows completion of the operational phase and entails site clean-up and site rehabilitation. The underlying aim of rehabilitation is the process of returning land within the site boundary to some degree of its former natural state.

Key aspects within this process include the:

- Removal of structures and infrastructure;
- Handling of inert waste and rubble;
- Handling of hazardous waste and pollution control;
- Final shaping of the terrain;
- Topsoil replacement and soil amelioration;
- Ripping and scarifying of surfaces;
- Planting of indigenous occurring vegetation (if deemed necessary); and
- Maintenance.

#### **12.1** Rehabilitation Measures

#### **Removal of structures and infrastructure**

- On completion of a section of works, the area must be rehabilitated by suitable landscaping, levelling, topsoil dressing, land preparation, alien plant eradication and where ascribed for by the ECO, vegetation establishment;
- Clear and completely remove from site all operational structures and temporary infrastructure;
- All permanent infrastructures must be returned to a useable state.
- Once construction is completed and these areas are vacated, they must be rehabilitated to a standard as set by the ECO.

Topsoil replacement and soil amelioration

- The reinstatement of disturbed areas must follow immediately after the removal of structures and temporary infrastructure;
- Topsoil backfilling must be undertaken when the soil is dry, and not following any recent rainfall events;
- All stockpiled topsoil together with herbaceous vegetation should be replaced and redistributed over a disturbed area such as temporary access roads;
- Topsoil must be returned to the same site from where it was stripped;
- When insufficient topsoil remains, soil of a similar quality can be obtained from a nearby area within the site area which was disturbed;
- Once topsoil has been returned to the ground, stripped vegetation should be randomly spread by hand over the area.

#### Inert waste

• Domestic waste must be completely removed from the site and disposed of at a landfill site.

#### Maintenance

- All re-growth of invasive vegetative material will be monitored by the Developer for one year;
- All areas under rehabilitation are to be treated as no-go areas using danger tape and steel droppers/fencing and cordoned off, to prevent vehicular, pedestrian and livestock access.
- Any re-vegetation must be done using plant species in occurrence on site;
- Control invasive plant species and weeds using approved methods of manual or chemical intervention;
- The reestablishment of vegetation should be allowed several rainy seasons, given the arid nature of the climate and region.

### 14. PREVENT TRIGGERING OF FURTHER LISTED ACTIVITIES

It is of utmost importance to adhere to the following guidelines in order to prevent the triggering of activities that may need to be authorised:

PLEASE DO NOT	TO PREVENT TRIGGERING
ARCHAEOLOGY	
Avoid archaeological, historical sites or any exhumed artefacts discovered through excavations.	Archaeological survey / SAHRA permit
