RE: ROOISBOOM HOUSING PROJECT: ELECTRICAL SUPPLY CAPACITY

We hereby write this email to clarify on the above referenced subject.

We engaged with Eskom and the Municipality. We applied capacity for the whole housing project [1100 units]. Eskom acknowledged they do have capacity for the project but due to their planning and operational statutes they could only give approval of 557 units at the moment.

Their reason is that all the units will not be constructed in one year so allocating capacity for all units in one year will distort their planning figures which we fully understood.

So basically, what it means is that capacity will be released on an as and when required basis. However, we take comfort in the fact that Eskom is confident there is enough capacity for the entire project. Please find the attached report from Eskom.

Trusting the above is in order

Regards
