**Palaeontological heritage assessment:**

**REVISED LAYOUT FOR THE PROPOSED ABERDEEN 200 MW WIND FARM,  
CAMDEBOO LOCAL MUNICIPALITY, EASTERN CAPE.**

Dear Ms Muniongo,

This letter is to confirm that I have briefly reviewed the proposed revised layout (100 turbines) for the Aberdeen Wind Farm. The conclusions of my original palaeontological heritage assessment for this project (Almond, J.E. November 2014) still stand, namely:

Given the inferred LOW impact significance of the proposed Aberdeen Wind Farm in the construction phase as far as palaeontological heritage is concerned, no further specialist palaeontological heritage studies or mitigation are considered necessary here, pending the discovery or exposure of substantial new fossil remains during development.

Regards,

**Dr John E. Almond**
