ASSUMPTIONS, UNCERTAINTIES AND GAPS IN KNOWLEDGE

The following assumptions, uncertainties and gaps in knowledge were identified for this process:

1. EIA Process

The EIA process is multi-disciplinary, which was informed by the project team. It is thus necessary to presume that the information as provided to the project team to date by external sources is accurate, appropriate and correct.

Data shown in the maps was supplied by various sources and was used after it was reviewed and verified where considered necessary. Verification was, however, restricted to available sources of information only.

2. Public Participation Process

Every effort was made to contact and provide written notification to all stakeholders and adjacent landowners within the study area. Written notification was provided to the landowner, occupiers of the land, adjacent landowners, the ward councillor and the NMBM. Information presented by the stakeholders is presumed to be accurate and presented timeously with respect to the process at hand.
