# List of tables

Table 1: Guide to roles and responsibilities for implementation of an EMPr ......4

# INTRODUCTION

#### 1. Background

The National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA) requires that an environmental management programme (EMPr) be submitted where an environmental impact assessment (EIA) has been identified as the environmental instrument to be utilised as the basis for a decision on an application for environmental authorisation (EA). The content of an EMPr must either contain the information set out in Appendix 4 of the Environmental Impact Assessment Regulations, 2014, as amended (EIA Regulations) or must be a generic EMPr relevant to an application as identified and gazetted by the Minister in a government notice. Once the Minister has identified, through a government notice that a generic EMPr is relevant to an application for EA, that generic EMPr must be applied by all parties involved in the EA process, including but not limited to the applicant and the competent authority (CA).

#### 2. Purpose

This document constitutes a generic EMPr relevant to applications for the development or expansion of substation infrastructure for the transmission and distribution of electricity, and all listed and specified activities necessary for the realisation of such infrastructure.

#### 3. Objective

The objective of this generic EMPr is to prescribe and pre-approve generally accepted impact management outcomes and impact management actions, which can commonly and repeatedly be used for the avoidance, management and mitigation of impacts and risks associated with the development or expansion of substation infrastructure for the transmission and distribution of electricity. The use of a generic EMPr is intended to reduce the need to prepare and review individual EMPrs for applications of a similar nature.

#### 4. Scope

The scope of this generic EMPr applies to the development or expansion of substation infrastructure for the transmission and distribution of electricity requiring EA in terms of NEMA. This generic EMPr applies to activities requiring EA, mainly activity 11 and 47 of the Environmental Impact Assessment Regulations Listing Notice 1 of 2014, as amended, and activity 9 of the Environmental Impact Assessment Regulations Listing Notice 2 of 2014, as amended, and all associated listed or specified activities necessary for the realization of such infrastructure.

# 5. Structure of this document

| Part | Section | Heading  | Content   |
|------|---------|--|---|
| A    |         | Provides general guidance<br>and information and is <b>not</b><br><b>legally binding</b> | Definitions, acronyms, roles & responsibilities and documentation and reporting.  |
| В    | 1       | Pre-approved generic<br>EMPr template  | Contains generally accepted impact<br>management outcomes and impact<br>management actions required for the<br>avoidance, management and mitigation of<br>impacts and risks associated with the<br>development or expansion of substation<br>infrastructure for the transmission and<br>distribution of electricity, which are presented in<br>the form of a template that has been pre-<br>approved. |
|      |         |  | The template in this section is to be completed<br>by the contractor, with each completed page<br>signed and dated by the holder of the EA prior<br>to commencement of the activity.  |
|      |         |  | Where an impact management outcome is not<br>relevant, the words "not applicable" can be<br>inserted in the template under the "responsible<br>persons" column.   |
|      |         |  | Once completed and signed, the template<br>represents the EMPr for the activity approved by<br>the CA and is legally binding. The template <b>is</b><br><b>not required</b> to be submitted to the CA as once<br>the generic EMPr is gazetted for<br>implementation, it has been approved by the<br>CA.   |
|      |         |  | To allow interested and affected parties access<br>to the pre-approved EMPr template for<br>consideration through the decision-making<br>process, the EAP on behalf of the applicant<br>/proponent must make the hard copy of this<br>EMPr available at a public location and where<br>the applicant has a website, the EMPr should<br>also be made available on such publicly<br>accessible website. |
|      | 2       | Site specific information  | Contains preliminary infrastructure layout and a declaration that the applicant/holder of the EA  |

This document is structured in three parts with an Appendix as indicated in the table below:

| Part | Section | Heading                                    | Content  |
|------|---------|--|--|
|      |         |  | will comply with the pre-approved generic EMPr<br>template contained in <u>Part B: Section 1</u> , and<br>understands that the impact management<br>outcomes and impact management actions<br>are <b>legally binding</b> . The preliminary<br>infrastructure layout must be finalized to inform<br>the final EMPr that is to be submitted with the<br>basic assessment report (BAR) or environmental<br>impact assessment report (EIAR), ensuring that<br>all impact management outcomes and impact<br>management actions have been either pre-<br>approved or approved in terms of <u>Part C</u> .<br>This section <b>must be</b> submitted to the CA<br>together with the final BAR or EIAR. The<br>information submitted to the CA will be<br>considered to be incomplete should a signed<br>copy of <u>Part B: section 2</u> not be submitted. Once<br>approved, this Section forms part of the EMPr for |
| C    |         | Site specific sensitivities/<br>attributes | the development and is legally binding.<br>If any specific environmental sensitivities/<br>attributes are present on the site which require<br>site specific impact management outcomes<br>and impact management actions, not included<br>in the pre-approved generic EMPr, to manage<br>impacts, these specific impact management<br>outcomes and impact management actions<br>must be included in this section. These specific<br>environmental attributes must be referenced<br>spatially and impact management outcomes<br>and impact management actions must be<br>provided. These specific impact management<br>outcomes and impact management actions<br>must be presented in the format of the pre-<br>approved EMPr template (Part B: section 1)  |
|      |         |  | This section will not be required should the site<br>contain no specific environmental sensitivities or<br>attributes. However, if <u>Part C</u> is applicable to the<br>site, it <b>is required</b> to be submitted together with<br>the BAR or EIAR, for consideration of, and<br>decision on, the application for EA. The<br>information in this section must be prepared by<br>an EAP and must contain his/her name and<br>expertise including a curriculum vitae. Once  |

| Part       | Section | Heading | Content   |
|------------|---------|---------|---|
|            |         |         | approved, Part C forms part of the EMPr for the site and is legally binding.  |
|            |         |         | This section applies only <b>to additional</b> impact<br>management outcomes and impact<br>management actions that are necessary for the<br>avoidance, management and mitigation of<br>impacts and risks associated with the specific<br>development or expansion and which are not<br>already included in <u>Part B: section 1</u> . |
| Appendix 1 |         |         | Contains the method statements to be prepared prior to commencement of the activity. The method statements are <b>not required</b> to be submitted to the competent authority.  |

# 6. Completion of part B: section 1: the pre-approved generic EMPr template

The template is to be completed prior to commencement of the activity, by providing the following information for each environmental impact management action:

- For implementation
  - a 'responsible person',
  - a method for implementation,
  - a timeframe for implementation
- For monitoring
  - a responsible person
  - frequency
  - evidence of compliance.

The completed template must be signed and dated by the holder of the EA prior to commencement of the activity. The method statements prepared and agreed to by the holder of the EA must be appended to the template as <u>Appendix 1</u>. Each method statement must be signed and dated on each page by the holder of the EA. This template once signed and dated is legally binding. The holder of the EA will remain responsible for its implementation.

#### 7. Amendments of the impact management outcomes and impact management actions

Once the activity has commenced, a holder of an EA may make amendments to the impact management outcomes and impact management actions in the following manner:

- Amendment of the impact management outcomes: in line with the process contemplated in Regulation 37 of the EIA Regulations; and
- Amendment of the impact management actions: in line with the process contemplated in Regulation 36 of the EIA Regulations.

# 8. Documents to be submitted as part of part B: section 2 site specific information and declaration

<u>Part B: Section 2</u> has three distinct sub-sections. The first and third sub-sections are in a template format. Sub-section two requires a map to be produced.

<u>Sub-section 1</u> contains the project name, the applicant's name and contact details, the site information, which includes coordinates of the property or farm in which the proposed substation infrastructure is proposed as well as the 21-digit Surveyor General code of each cadastral land parcel and, where available, the farm name.

<u>Sub-section 2</u> is to be prepared by an EAP and must contain his/her name and expertise including a curriculum vitae. This sub-section must include a map of the site sensitivity overlaid with the preliminary infrastructure layout using the national web based environmental screening tool, when available for compulsory use at: <u>https://screening.environment.gov.za/screeningtool.</u> The sensitivity map shall identify the nature of each sensitive feature e.g. threatened plant species, archaeological site, etc. Sensitivity maps shall identify features both within the planned working area and any known sensitive features and within 50 m from the development footprint.

<u>Sub-section 3</u> is the declaration that the applicant (s)/proponent (s) or holder of the EA in the case of a change of ownership must complete which confirms that the applicant/EA holder will comply with the pre-approved 'generic EMPr' template in <u>Section 1</u> and understands that the impact management outcomes and impact management actions are legally binding.

# (a) Amendments to Part B: Section 2 – site specific information and declaration

Should the EA be transferred, <u>Part B: Section 2</u> must be completed by the new applicant/proponent and submitted with the application for an amendment of the EA in terms of regulations 29 or 31 of the EIA Regulations, whichever applies. The information submitted as part of such an application for an amendment to an EA will be considered to be incomplete should a signed copy of <u>Part B: Section 2</u> not be submitted. Once approved, <u>Part B: Section 2</u> forms part of the EMPr for the development and the EMPr becomes legally binding to the new EA holder.

# PART A – GENERAL INFORMATION

# 1. **DEFINITIONS**

In this EMPr any word or expression to which a meaning has been assigned in the NEMA or EIA Regulations has that meaning, and unless the context requires otherwise –

"clearing" means the clearing and removal of vegetation, whether partially or in whole, including trees and shrubs, as specified;

"construction camp" is the area designated for key construction infrastructure and services, including but not limited to offices, overnight vehicle parking areas, stores, the workshop, stockpile and lay down areas, hazardous storage areas (including fuels), the batching plant (if one is located at the construction camp), designated access routes, equipment cleaning areas and the placement of staff accommodation, cooking and ablution facilities, waste and wastewater management;

"**contractor**" - The Contractor has overall responsibility for ensuring that all work, activities, and actions linked to the delivery of the contract, are in line with the Environmental Management Programme and that Method Statements are implemented as described.

"hazardous substance" is a substance governed by the Hazardous Substances Act, 1973 (Act No. 15 of 1973) as well as the Hazardous Chemical and Substances Regulations, 1995;

"method statement" means a written submission by the Contractor to the Project Manager in response to this EMPr or a request by the Project Manager and ECO. The method statement must set out the equipment, materials, labour and method(s) the Contractor proposes using to carry out an activity identified by the Project Manager when requesting the Method Statement. This must be done in such detail that the Project Manager and ECO is able to assess whether the Contractor's proposal is in accordance with this specification and/or will produce results in accordance with this specification;

The method statement must cover as a minimum applicable details with regard to:

- (i) Construction procedures;
- (ii) Plant, materials and equipment to be used;
- (iii) Transporting the equipment to and from site;
- (iv) How the plant/ material/ equipment will be moved while on site;
- (v) How and where the plant/ material/ equipment will be stored;
- (vi) The containment (or action to be taken if containment is not possible) of leaks or spills of any liquid or material that may occur;
- (vii) Timing and location of activities;
- (viii) Compliance/ non-compliance; and
- (ix) Any other information deemed necessary by the Project Manager.

"slope" means the inclination of a surface expressed as one unit of rise or fall for so many horizontal units;

"**solid waste**" means all solid waste, including construction debris, hazardous waste, excess cement/ concrete, wrapping materials, timber, cans, drums, wire, nails, food and domestic waste (e.g. plastic packets and wrappers);

**"spoil"** means excavated material which is unsuitable for use as material in the construction works or is material which is surplus to the requirements of the construction works;

**"topsoil"** means a varying depth (up to 300 mm) of the soil profile irrespective of the fertility, appearance, structure, agricultural potential, fertility and composition of the soil;

"works" means the works to be executed in terms of the Contract

# 3. ROLES AND RESPONSIBILITIES FOR ENVIRONMENTAL MANAGEMENT PROGRAMME (EMPr) IMPLEMENTATION

The effective implementation of this generic EMPr is dependent on established and clear roles, responsibilities and reporting lines within an institutional framework. This section of the EMPr gives guidance to the various environmental roles and reporting lines, however, project specific requirements will ultimately determine the need for the appointment of specific person(s) to undertake specific roles and or responsibilities. As such, it must be noted that in the event that no specific person, for example, an environmental control officer (ECO) is appointed, the holder of the EA remains responsible for ensuring that the duties indicated in this document for action by the ECO are undertaken.

| Responsible Person(s)                | Role and Responsibilities  |
|--------------------------------------|--|
|                                      |  |
| Developer's Project Manager<br>(DPM) | Role         The Project Developer is accountable for ensuring compliance with the EMPr and any conditions of approval from the competent authority (CA). Where required, an environmental control officer (ECO) must be contracted by the Project Developer to objectively monitor the implementation of the EMPr according to relevant environmental legislation, and the conditions of the environmental authorisation (EA). The Project Developer is further responsible for providing and giving mandate to enable the ECO to perform responsibilities, and he must ensure that the ECO is integrated as part of the project team while remaining independent.         Responsibilities |
|                                      | <ul> <li>Be fully conversant with the conditions of the EA;</li> <li>Ensure that all stipulations within the EMPr are communicated and adhered to by the Developer and its Contractor(s);</li> <li>Issuing of site instructions to the Contractor for corrective actions required;</li> <li>Monitor the implementation of the EMPr throughout the project by means of site inspections and meetings. Overall management of the project and EMPr implementation; and</li> <li>Ensure that periodic environmental performance audits are undertaken on the project implementation.</li> </ul>  |

**Table 1:** Guide to roles and responsibilities for implementation of an EMPr

| Responsible Person(s)               | Role and Responsibilities   |
|-------------------------------------|---|
| Developer Site Supervisor (DSS)     | Role<br>The DSS reports directly to the DPM, oversees site works, liaises with the contractor(s) and the ECO. The DSS is<br>responsible for the day to day implementation of the EMPr and for ensuring the compliance of all contractors<br>with the conditions and requirements stipulated in the EMPr.  |
|                                     | <ul> <li><u>Responsibilities</u></li> <li>Ensure that all contractors identify a contractor's Environmental Officer (cEO);</li> <li>Must be fully conversant with the conditions of the EA. Oversees site works, liaison with Contractor, DPM and ECO;</li> </ul>   |
|                                     | <ul> <li>Must ensure that all landowners have the relevant contact details of the site staff, ECO and cEO;</li> <li>Issuing of site instructions to the Contractor for corrective actions required;</li> <li>Will issue all non-compliances to contractors; and</li> <li>Ratify the Monthly Environmental Report.</li> </ul>  |
| Environmental Control Officer (ECO) | Role<br>The ECO should have appropriate training and experience in the implementation of environmental<br>management specifications. The primary role of the ECO is to act as an independent quality controller<br>and monitoring agent regarding all environmental concerns and associated environmental impacts. In<br>this respect, the ECO is to conduct periodic site inspections, attend regular site meetings, pre-empt<br>problems and suggest mitigation and be available to advise on incidental issues that arise. The ECO is also<br>required to conduct compliance audits, verifying the monitoring reports submitted by the cEO. The ECO<br>provides feedback to the DSS and Project Manager regarding all environmental matters. The Contractor,<br>cEO and dEO are answerable to the Environmental Control Officer for non-compliance with the<br>Performance Specifications as set out in the EA and EMPr. |
|                                     | The ECO provides feedback to the DSS and Project Manager, who in turn reports back to the Contractor<br>and potential and Registered Interested &Affected Parties' (RI&AP's), as required. Issues of non-compliance<br>raised by the ECO must be taken up by the Project Manager, and resolved with the Contractor as per the<br>conditions of his contract. Decisions regarding environmental procedures, specifications and requirements<br>which have a cost implication (i.e. those that are deemed to be a variation, not allowed for in the   |

| Responsible Person(s) | Role and Responsibilities  |
|-----------------------|--|
|                       | Performance Specification) must be endorsed by the Project Manager. The ECO must also, as specified by the EA, report to the relevant CA as and when required.   |
|                       | <ul> <li><u>Responsibilities</u></li> <li>The responsibilities of the ECO will include the following: <ul> <li>Be aware of the findings and conclusions of all EA related to the development;</li> <li>Be familiar with the recommendations and mitigation measures of this EMPr;</li> <li>Be conversant with relevant environmental legislation, policies and procedures, and ensure compliance with them;</li> </ul> </li> </ul>               |
|                       | <ul> <li>Undertake regular and comprehensive site inspections / audits of the construction site according to the generic EMPr and applicable licenses in order to monitor compliance as required;</li> <li>Educate the construction team about the management measures contained in the EMPr and environmental licenses;</li> <li>Compilation and administration of an environmental monitoring plan to ensure that the environmental</li> </ul> |
|                       | <ul> <li>management measures are implemented and are effective;</li> <li>Monitoring the performance of the Contractors and ensuring compliance with the EMPr and associated Method Statements;</li> </ul>  |
|                       | <ul> <li>In consultation with the Developer Site Supervisor order the removal of person(s) and/or equipment which are in contravention of the specifications of the EMPr and/or environmental licenses;</li> <li>Liaison between the DPM, Contractors, authorities and other lead stakeholders on all environmental concerns;</li> </ul>   |
|                       | <ul> <li>Compile a regular environmental audit report highlighting any non-compliance issues as well as satisfactory or exceptional compliance with the EMPr;</li> <li>Validating the regular site inspection reports, which are to be prepared by the contractor Environmental Officer (cEO);</li> </ul>  |
|                       | <ul> <li>Checking the cEO's record of environmental incidents (spills, impacts, legal transgressions etc.) as well as corrective and preventive actions taken;</li> <li>Checking the cEO's public complaints register in which all complaints are recorded, as well as action taken;</li> </ul>  |

| Responsible Person(s)                    | Role and Responsibilities  |
|--|--|
|  | <ul> <li>Assisting in the resolution of conflicts;</li> <li>Facilitate training for all personnel on the site – this may range from carrying out the training, to reviewing the training programmes of the Contractor;</li> <li>In case of non-compliances, the ECO must first communicate this to the Senior Site Supervisor, who has the power to ensure this matter is addressed. Should no action or insufficient action be taken, the ECO may report this matter to the authorities as non-compliance;</li> <li>Maintenance, update and review of the EMPr;</li> <li>Communication of all modifications to the EMPr to the relevant stakeholders.</li> </ul>  |
| developer Environmental Officer<br>(dEO) | Role         The dEOs will report to the Project Manager and are responsible for implementation of the EMPr, environmental monitoring and reporting, providing environmental input to the Project Manager and Contractor's Manager, liaising with contractors and the landowners as well as a range of environmental coordination responsibilities.  |
|  | <ul> <li>Responsibilities</li> <li>Be fully conversant with the EMPr;</li> <li>Be familiar with the recommendations and mitigation measures of this EMPr, and implement these measures;</li> <li>Ensure that all stipulations within the EMPr are communicated and adhered to by the Employees, Contractor(s);</li> <li>Confine the development site to the demarcated area;</li> <li>Conduct environmental internal audits with regards to EMPr and authorisation compliance (on cEO);</li> <li>Assist the contractors in addressing environmental challenges on site;</li> <li>Assist in incident management:</li> <li>Reporting environmental incidents to developer and ensuring that corrective action is taken, and lessons learnt shared;</li> <li>Assist the contractor in investigating environmental incidents and compile investigation reports;</li> <li>Follow-up on pre-warnings, defects, non-conformance reports;</li> </ul> |

| Responsible Person(s) | Role and Responsibilities  |
|-----------------------|--|
|                       | <ul> <li>Measure and communicate environmental performance to the Contractor;</li> <li>Conduct environmental awareness training on site together with ECO and cEO;</li> <li>Ensure that the necessary legal permits and / or licenses are in place and up to date;</li> <li>Acting as Developer's Environmental Representative on site and work together with the ECO and contractor;</li> </ul>   |
| Contractor            | Role         The Contractor appoints the cEO and has overall responsibility for ensuring that all work, activities, and actions linked to the delivery of the contract are in line with the EMPr and that Method Statements are implemented as described. External contractors must ensure compliance with this EMPr while performing the onsite activities as per their contract with the Project Developer. The contractors are required, where specified, to provide Method Statements setting out in detail how the impact management actions contained in the EMPr will be implemented during the development or expansion of substation infrastructure for the transmission and distribution of electricity activities.         Responsibilities <ul> <li>project delivery and quality control for the development services as per appointment;</li> <li>employ a suitably qualified person to monitor and report to the Project Developer's appointed person on the daily activities on-site during the construction period;</li> </ul> |
|                       | <ul> <li>ensure that safe, environmentally acceptable working methods and practices are implemented and that equipment is properly operated and maintained, to facilitate proper access and enable any operation to be carried out safely;</li> <li>attend on site meeting(s) prior to the commencement of activities to confirm the procedure and designated activity zones;</li> <li>ensure that contractors' staff repair, at their own cost, any environmental damage as a result of a contravention of the specifications contained in EMPr, to the satisfaction of the ECO.</li> </ul>   |

| Responsible Person(s)                     | Role and Responsibilities  |
|---|--|
| contractor Environmental Officer<br>(cEO) | Role<br>Each Contractor affected by the EMPr should appoint a cEO, who is responsible for the on-site<br>implementation of the EMPr (or relevant sections of the EMPr). The Contractor's representative can be the<br>site agent; site engineer; a dedicated environmental officer; or an independent consultant. The Contractor<br>must ensure that the Contractor's Representative is suitably qualified to perform the necessary tasks and is<br>appointed at a level such that she/he can interact effectively with other site Contractors, labourers, the<br>Environmental Control Officer and the public. As a minimum the cEO shall meet the following criteria:  |
|   | <ul> <li><u>Responsibilities</u></li> <li>Be on site throughout the duration of the project and be dedicated to the project;</li> <li>Ensure all their staff are aware of the environmental requirements, conditions and constraints with respect to all of their activities on site;</li> <li>Implementing the environmental conditions, guidelines and requirements as stipulated within the EA, EMPr and Method Statements;</li> <li>Attend the Environmental Site Meeting;</li> <li>Undertaking corrective actions where non-compliances are registered within the stipulated timeframes;</li> <li>Report back formally on the completion of corrective actions;</li> <li>Assist the ECO in maintaining all the site documentation;</li> <li>Prepare the site inspection reports and corrective action reports for submission to the ECO;</li> <li>Assist the ECO with the preparing of the monthly report; and</li> <li>Where more than one Contractor is undertaking work on site, each company appointed as a Contractor will appoint a cEO representing that company.</li> </ul> |

# 4. ENVIRONMENTAL DOCUMENTATION REPORTING AND COMPLIANCE

To ensure accountable and demonstrated implementation of the EMPr, a number of reporting systems, documentation controls and compliance mechanisms must be in place for all substation infrastructure projects as a minimum requirement.

4.1 Document control/Filing system

The holder of the EA is solely responsible for the upkeep and management of the EMPr file. As a minimum, all documentation detailed below will be stored in the EMPr file. A hard copy of all documentation shall be filed, while an electronic copy may be kept where relevant. A duplicate file will be maintained in the office of the DSS (where applicable). This duplicate file must remain current and up-to-date. The filing system must be updated and relevant documents added as required. The EMPr file must be made available at all times on request by the CA or other relevant authorities. The EMPr file will form part of any environmental audits undertaken as prescribed in the EIA Regulations.

4.2 Documentation to be available

At the outset of the project the following preliminary list of documents shall be placed in the filing system and be accessible at all times:

- Full copy of the signed EA from the CA in terms of NEMA, granting approval for the development or expansion;
- Copy of the generic and site specific EMPr as well as any amendments thereof;
- Copy of declaration of implementing generic EMPr and subsequent approval of site specific EMPr and amendments thereof;
- All method statements;
- Completed environmental checklists;
- Minutes and attendance register of environmental site meetings;
- An up-to-date environmental incident log;
- A copy of all instructions or directives issued;
- A copy of all corrective actions signed off. The corrective actions must be filed in such a way that a clear reference is made to the non-compliance record;
- Complaints register.

#### 4.3 Weekly Environmental Checklist

The ECOs are required to complete a Weekly Environmental Checklist, the format of which is to be agreed prior to commencement of the activity. The ECOs are required to sign and date the checklist, retain a copy in the EMPr file and submit a copy of the completed checklist to the DSS on a weekly basis.

The checklists will form the basis for the Monthly Environmental Reports. Copies of all completed checklists will be attached as Annexures to the Environmental Audit Report as required in terms of the EIA Regulations.

#### 4.4 Environmental site meetings

Minutes of the environmental site meetings shall be kept. The minutes must include an attendance register and will be attached to the Monthly Report that is distributed to attendees. Each set of minutes must clearly record "Matters for Attention" that will be reviewed at the next meeting.

4.5 Required Method Statements

The method statement will be done in such detail that the ECOs are enabled to assess whether the contractor's proposal is in accordance with the EMPr.

The method statement must cover applicable details with regard to:

- development procedures;
- materials and equipment to be used;
- getting the equipment to and from site;
- how the equipment/ material will be moved while on site;
- how and where material will be stored;
- the containment (or action to be taken if containment is not possible) of leaks or spills of any liquid or material that may occur;
- timing and location of activities;
- compliance/ non-compliance with the EMPr; and
- any other information deemed necessary by the ECOs.

Unless indicated otherwise by the Project Manager, the Contractor shall provide the following method statements to the Project Manager no less than 14 days prior to the commencement date of the activity:

- Site establishment Camps, Lay-down or storage areas, satellite camps, infrastructure;
- Batch plants;
- Workshop or plant servicing;
- Handling, transport and storage of Hazardous Chemical Substance's;
- Vegetation management Protected, clearing, aliens, felling;
- Access management Roads, gates, crossings etc.;
- Fire plan;
- Waste management transport, storage, segregation, classification, disposal (all waste streams);
- Social interaction complaints management, compensation claims, access to properties etc.;
- Water use (source, abstraction and disposal), access and all related information, crossings and mitigation;
- Emergency preparedness Spills, training, other environmental emergencies;
- Dust and noise management methodologies;
- Fauna interaction and risk management only if the risk was identified wildlife interaction especially on game farms; and
- Heritage and palaeontology management.

The ECOs shall monitor and ensure that the contractors perform in accordance with these method statements. Completed and agreed method statements between the holder of the EA and the contractor shall be captured in Appendix 1.

4.6 Environmental Incident Log (Diary)

The ECOs are required to maintain an up-to-date and current Environmental Incident Log (environmental diary). The Environmental Incident Log is a means to record all environmental incidents and/or all non-compliance notice would not be issued. An environmental incident is defined as:

- Any deviation from the listed impact management actions (listed in this EMPr) that may be addressed immediately by the ECOs. (For example a contractor's staff member littering or a drip tray that has not been emptied);
- Any environmental impact resulting from an action or activity by a contractor in contravention of the environmental stipulations and guidelines listed in the EMPr which as a single event would have a minor impact but which if cumulative and continuous would have a significant effect (for example no toilet paper available in the ablutions for an afternoon); and
- General environmental information such as road kills or injured wildlife.

The ECOs are to record all environmental incidents in the Environmental Incident Log. All incidents regardless of severity must be reported to the Developer. The Log is to be kept in the EMPr file and at a minimum the following will be recorded for each environmental incident:

- The date and time of the incident;
- Description of the incident;
- The name of the Contractor responsible;
- The incident must be listed as significant or minor;
- If the incident is listed as significant, a non-compliance notice must be issued, and recorded in the log;
- Remedial or corrective action taken to mitigate the incident; and
- Record of repeat minor offences by the same contractor or staff member.

The Environmental Incident Log will be captured in the EAR.

4.7 Non-compliance

A non-compliance notice will be issued to the responsible contractor by the ECOs via the DSS or Project Manager. The non-compliance notice will be issued in writing; a copy filed in the EMPr file and will at a minimum include the following:

- Time and date of the non-compliance;
- Name of the contractor responsible;
- Nature and description of the non-compliance;
- Recommended / required corrective action; and
- Date by which the corrective action to be completed.
- The contractors shall act immediately when a notice of non-compliance is received and correct whatever is the cause for the issuing of the notice. Complaints received regarding activities on the development site pertaining to the environment shall be

recorded in a dedicated register and the response noted with the date and action taken. The ECO should be made aware of any complaints. Any non-compliance with the agreed procedures of the EMPr is a transgression of the various statutes and laws that define the manner by which the environment is managed. Failure to redress the cause shall be reported to the relevant CA for them to deal with the transgression, as it deems fit. The contractor is deemed not to have complied with the EMPr if, inter alia, There is a deviation from the environmental conditions, impact management outcomes and impact management actions activities, as approved in generic and site specific EMPr as relevant as set out in the EMPr, which deviation has, or may cause, an environmental impact.

#### 4.8 Corrective action records

For each non-compliance notice issued, a documented corrective action must be recorded. On receiving a non-compliance notice from the DSS, the contractor's cEO will ensure that the corrective actions required take place within the stipulated timeframe. On completion of the corrective action the cEO is to issue a Corrective Action Report in writing to the ECOs. If satisfied that the corrective action has been completed, the ECOs are to sign-off on the Corrective Action Report, and attach the report to the non-compliance notice in the EMPr file. A corrective action is considered complete once the report has signed off by the ECOs.

#### 4.9 Photographic record

A digital photographic record will be kept. The photographic record will be used to show before, during and post rehabilitation evidence of the project as well used in cases of damages claims if they arise. Each image must be dated and a brief description note attached.

The Contractor shall:

1. Allow the ECOs access to take photographs of all areas, activities and actions.

The ECOs shall keep an electronic database of photographic records which will include:

- 1. Pictures of all areas designated as work areas, camp areas, development sites and storage areas taken before these areas are set up;
- 2. All bunding and fencing;
- 3. Road conditions and road verges;
- 4. Condition of all farm fences;
- 5. Topsoil storage areas;
- 6. All areas to be cordoned off during construction;
- 7. Waste management sites;
- 8. Ablution facilities (inside and out);
- 9. Any non-conformances deemed to be "significant";
- 10. All completed corrective actions for non-compliances;
- 11. All required signage;
- 12. Photographic recordings of incidents;
- 13. All areas before, during and post rehabilitation; and
- 14. Include relevant photographs in the Final Environmental Audit Report.

# 4.10 Complaints register

The ECOs shall keep a current and up-to-date complaints register. The complaints register is to be a record of all complaints received from communities, stakeholders and individuals. The Complaints Record shall:

- 1. Record the name and contact details of the complainant;
- 2. Record the time and date of the complaint;
- 3. Contain a detailed description of the complaint;
- 4. Where relevant and appropriate, contain photographic evidence of the complaint or damage (ECOs to take relevant photographs); and
- 5. Contain a copy of the ECOs written response to each complaint received and keep a record of any further correspondence with the complainant. The ECO's written response will include a description of any corrective action to be taken and must be signed by the Contractor, ECO and affected party. Where a damage claim is issued by the complainant, the ECOs shall respond as described in (section 4.11) below.
- 4.11 Claims for damages

In the event that a Claim for Damages is submitted by a community, landowner or individual, the ECOs shall:

- 1. Record the full detail of the complaint as described in (section 4.10) above;
- 2. The DPM will evaluate the claim and associated damage and submit the evaluation to the Senior Site Representative for approval;
- 3. Following consideration by the DPM, the claim is to be resolved and settled immediately, or the reason for not accepting the claim communicated in writing to the claimant. Should the claimant not accept this, the ECO shall, in writing report the incident to the Developer's negotiator and legal department; and
- 4. A formal record of the response by the ECOs to the claimant as well as the rectification of the method of making payments not amount will be recorded in the EMPr file.
- 4.12 Interactions with affected parties

Open, transparent and good relations with affected landowners, communities and regional staff are an essential aspect to the successful management and mitigation of environmental impacts.

The ECOs shall:

- 1. Ensure that all queries, complaints and claims are dealt within an agreed timeframe;
- 2. Ensure that any or all agreements are documented, signed by all parties and a record of the agreement kept in the EMPr file;
- 3. Ensure that a complaints telephone numbers are made available to all landowners and affected parties; and
- 4. Ensure that contact with affected parties is courteous at all times;

#### 4.13 Environmental audits

Internal environmental audits of the activity and implementation of the EMPr must be undertaken. The findings and outcomes included in the EMPr file and submitted to the CA at intervals as indicated in the EA.

The ECOs must prepare a monthly EAR. The report will be tabled as the key point on the agenda of the Environmental Site Meeting. The Report is submitted for acceptance at the meeting and the final report will be circulated to the Project Manager and filed in the EMPr file. At a frequency determined by the EA, the ECOs shall submit the monthly reports to the CA. At a minimum the monthly report is to cover the following:

- Weekly Environmental Checklists;
- Deviations and non-compliances with the checklists;
- Non-compliances issued;
- Completed and reported corrective actions;
- Environmental Monitoring;
- General environmental findings and actions; and
- Minutes of the Bi-monthly Environmental Site Meetings.

#### 4.14 Final environmental audits

On final completion of the rehabilitation and/or requirements of the EA a final EAR is to be prepared and submitted to the CA. The EAR must comply with Appendix 7 of the EIA Regulations.

# PART B: SECTION 1: Pre-approved generic EMPr template

#### 5. IMPACT MANAGEMENT OUTCOMES AND IMPACT MANAGEMENT ACTIONS

This section provides a pre-approved generic EMPr template with aspects that are common to the development of substation infrastructure for the transmission and distribution of electricity. There is a list of aspects identified for the development or expansion of substation infrastructure for the transmission and distribution of electricity, and for each aspect a set of prescribed impact management outcomes and associated impact management actions have been identified. Holders of EAs are responsible to ensure the implementation of these outcomes and actions for all projects as a minimum requirement, in order to mitigate the impact of such aspects identified for the development or expansion of substation infrastructure for the transmission and distribution of electricity.

The template provided below is to be completed by providing the information under each heading for each environmental impact management action.

The completed template must be signed and dated on each page by both the contractor and the holder of the EA prior to commencement of the activity. The method statements prepared and agreed to by the holder of the EA must be appended to the template as Appendix 1. Each method statement must also be duly signed and dated on each page by the contactor and the holder of the EA. This template, once signed and dated, is legally binding. The holder of the EA will remain responsible for its implementation.

# 5.1 Environmental awareness training

Impact management outcome: All onsite staff are aware and understands the individual responsibilities in terms of this EMPr.

| Impact Management Actions   | Implementation                               | n  |  | Monitoring            |   |  |
|---|--|--|--|-----------------------|---|--|
|   | Responsible<br>person                        | Method of implementation   | Timeframe for implementation                       | Responsible<br>person | Frequency                                 | Evidence of compliance   |
| <ul> <li>All staff must receive environmental awareness training<br/>prior to commencement of the activities;</li> </ul>  | ECO / cEO /<br>dEO                           | Hold<br>environmental<br>awareness training<br>workshops                                       | Pre-construction<br>Construction and<br>Operations | ECO<br>dEO            | Monthly<br>and as and<br>when<br>required | Attendance<br>register and<br>training<br>minutes /<br>notes for the<br>record |
| <ul> <li>The Contractor must allow for sufficient sessions to train<br/>all personnel with no more than 20 personnel attending<br/>each course;</li> </ul>  | Contractor                                   | Scheduling of<br>sufficient sessions<br>through<br>consultation with<br>the ECO / cEO /<br>dEO | Pre-construction<br>Construction                   | ECO<br>dEO            | Monthly<br>and as and<br>when<br>required | Attendance<br>register and<br>training<br>minutes /<br>notes for the<br>record |
| <ul> <li>Refresher environmental awareness training is available<br/>as and when required;</li> </ul>   | cEO / dEO in<br>consultation<br>with the ECO | Hold refresher<br>environmental<br>awareness training<br>workshops                             | During the<br>construction<br>phase                | ECO<br>dEO            | Monthly<br>and as and<br>when<br>required | Attendance<br>register and<br>training<br>minutes /<br>notes for the<br>record |
| <ul> <li>All staff are aware of the conditions and controls linked<br/>to the EA and within the EMPr and made aware of their<br/>individual roles and responsibilities in achieving<br/>compliance with the EA and EMPr;</li> </ul> | cEO / dEO                                    | Hold training<br>workshops and<br>ensure that the EA<br>and EMPr is readily<br>available       | During the<br>construction<br>phase                | ECO<br>dEO            | Monthly<br>and as and<br>when<br>required | Attendance<br>register and<br>training<br>minutes /<br>notes for the<br>record |

#### 5.9 Protection of watercourses and estuaries

Impact management outcome: Pollution and contamination of the watercourse environment and or estuary erosion are prevented.

| Impact Management Actions                                  | Implementatio | n                   | Monitoring     | Monitoring  |           |              |

### 5.35 Landscaping and rehabilitation

Impact management outcome: Areas disturbed during the development phase are returned to a state that approximates the original condition.

| Impact Management Actions   | Implementation        |   |                                      | Monitoring            |           |   |

#### 6 ACCESS TO THE GENERIC EMPr

Once completed and signed, to allow the public access to the generic EMPr, the holder of the EA must make the EMPr available to the public in accordance with the requirements of Regulation 26(h) of the EIA Regulations.

#### PART B: SECTION 2

#### 7 SITE SPECIFIC INFORMATION AND DECLARATION

#### 7.1 Sub-section 1: contact details and description of the project

#### 7.1.1 Details of the applicant:

Name of applicant: Voltalia South Africa (Pty) Ltd Contact person: Armandt Andre Joubert Tel No: n/a Postal Address: 30th Floor, The Box. 9 Riebeek Street, Cape Town, Physical Address: 30th Floor, The Box. 9 Riebeek Street, Cape Town,

#### 7.1.2 Details and expertise of the EAP:

Name of EAP: Jo-Anne Thomas Tel No: 011-656-3237 Fax No: 086-684-0547 E-mail address: joanne@savannahsa.com Expertise of the EAP (Curriculum Vitae included): Refer to Appendix 2 of this EMPr for a CV of the EAP

7.1.3 Project name: Kiara PV4 Facility and Associated Infrastructure, North West Province

## 7.1.4 Description of the project:

Voltalia South Africa (Pty) Ltd is proposing the development of a commercial photovoltaic (PV) solar energy facility and associated infrastructure on a site located approximately 16km north-east of the town of Lichtenburg, within the Ditsobotla Local Municipality and the Ngaka Modiri Molema District Municipality in the North West The facility will have a contracted capacity of up to 120MW and will be known as the Kiara PV4 Facility. The project is planned as part of a larger cluster of renewable energy projects, which include six (6) additional PV facilities, each up to 130MW (known as the Kiara PV1, Kiara PV2, Kiara PV3, Kiara PV5 and Kiara PV6 and Kiara PV7) and grid connection infrastructure connecting the facilities to the existing Watershed Substation (refer to These projects are proposed by separate Specialist Purpose Vehicles (SPVs)<sup>1</sup>, and are assessed through separate Environmental Impact Assessment (EIA) processes.

The project site (~856.5ha in extent) has been identified by the applicant as a technically feasible site which has the potential for the development of the Kiara PV4 Facility, including a Battery Energy Storage System (BESS).

Infrastructure associated with the solar PV facility will include:

<sup>&</sup>lt;sup>1</sup> The development of the various projects under separate SPVs is in accordance with the DMRE's requirements under the REIPPPP.

- » PV modules and mounting structures
- » Inverters and transformers
- » Cabling between the panels.
- » Cabling from the onsite substation to the collector substation (either underground or overhead).
- » 132kV onsite facility substation.
- » Electrical and auxiliary equipment required at the collector substation that serves the solar energy facility, including switchyard/bay, control building, fences, etc.
- » Battery Energy Storage System (BESS)
- » Site and internal access roads (up to 8m wide)
- » Site offices and maintenance buildings, including workshop areas for maintenance and storage.
- » Temporary and permanent laydown area
- » Grid connection solution will include:
  - Facility Substation
  - Eskom Switching Station
  - A 275kV powerline (16.6km in length) (either single or double circuit), to connect the PV facility to the Watershed MTS

#### 7.2 Sub-section 2: Development footprint site map

This sub-section must include a map of the site sensitivity overlaid with the preliminary infrastructure layout. The sensitivity map must be prepared from the national web based environmental screening tool, when available for compulsory use at: <a href="https://screening.environment.gov.za/screeningtool">https://screening.environment.gov.za/screeningtool</a>. The sensitivity map shall identify the nature of each sensitive feature e.g. threatened plant species, archaeological site, etc. Sensitivity maps shall identify features both within the planned working area and any known sensitive features within 50 m from the development footprint.

It must be noted that the maps provided below relate to the larger PV facility which the power line is associated with.

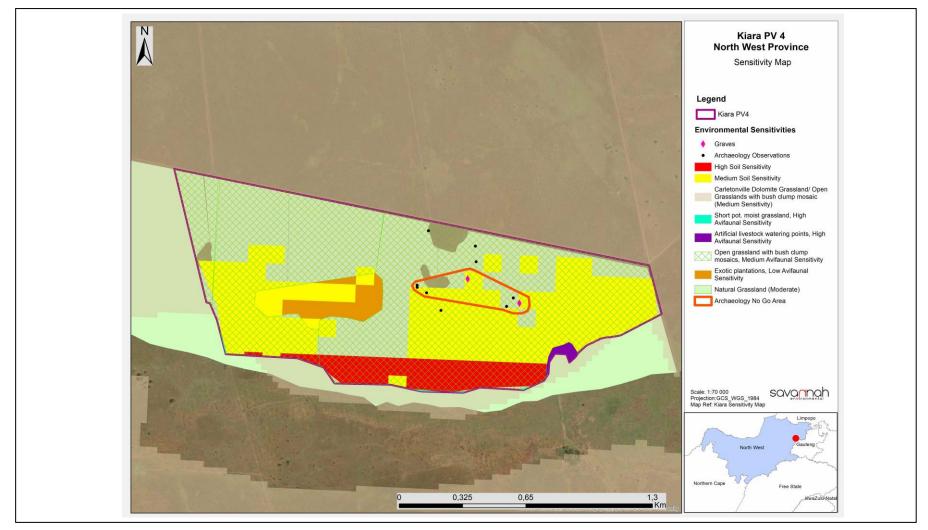

Figure 1: Sensitivity map of the development footprint of the Kiara PV4 Facility

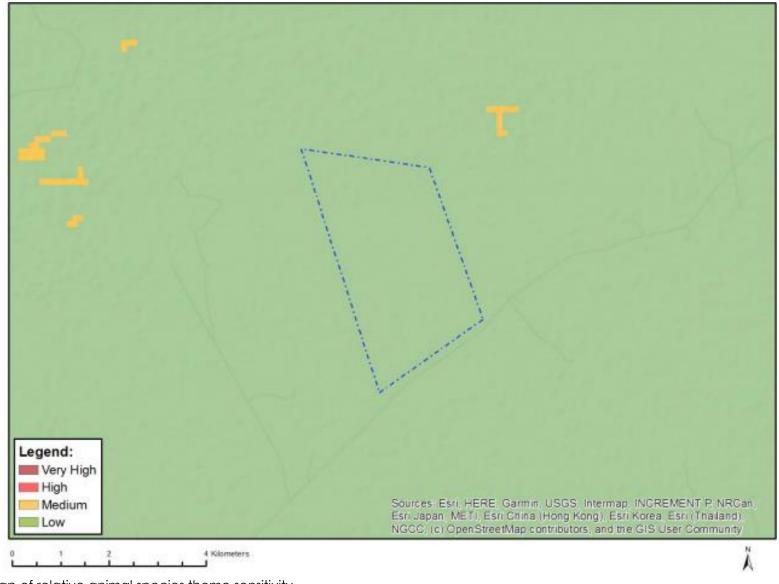

Figure 3: Map of relative animal species theme sensitivity

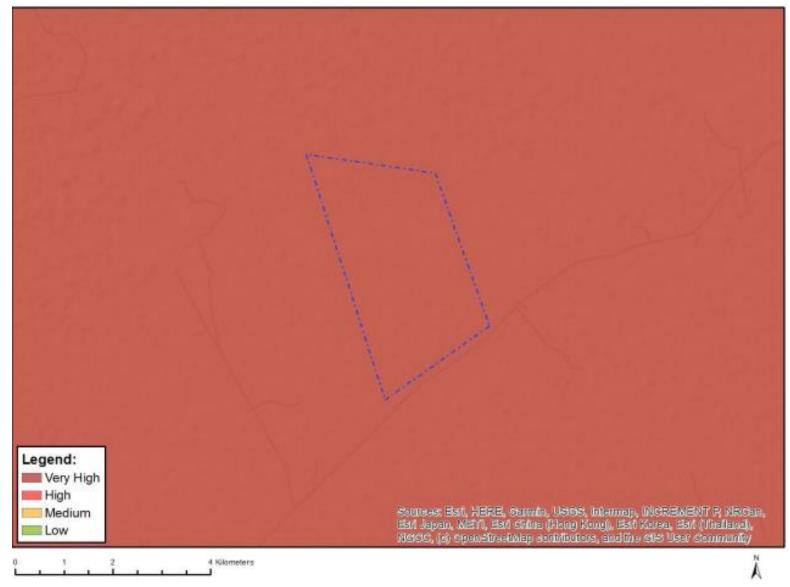

Figure 4: Map of relative aquatic biodiversity theme sensitivity

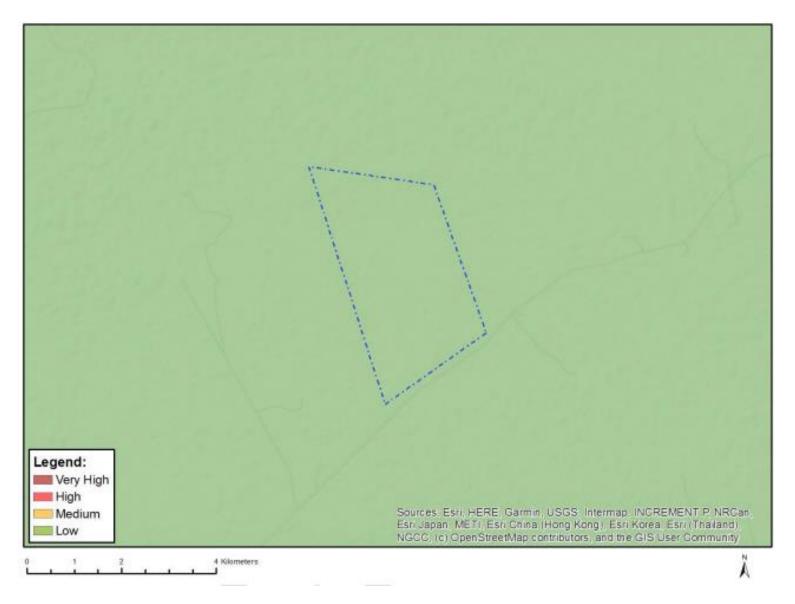

Figure 5: Map of relative archaeological and cultural heritage theme sensitivity.

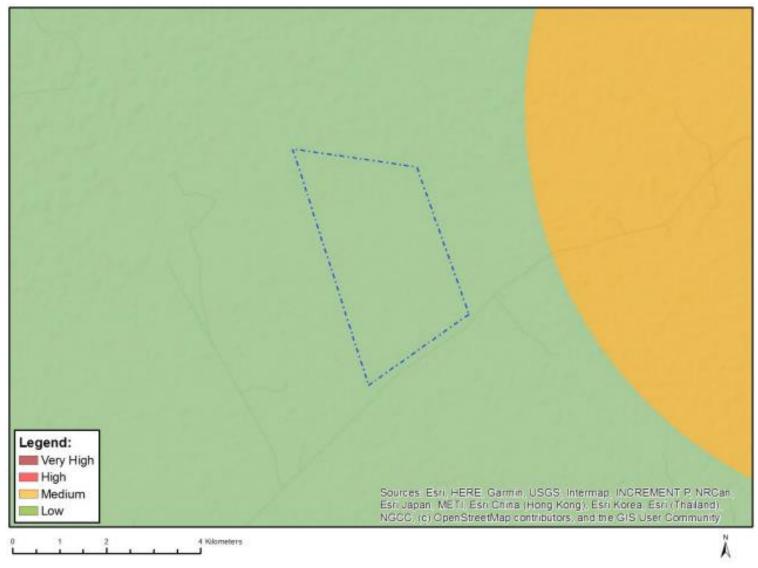

Figure 7: Map of relative civil aviation theme sensitivity

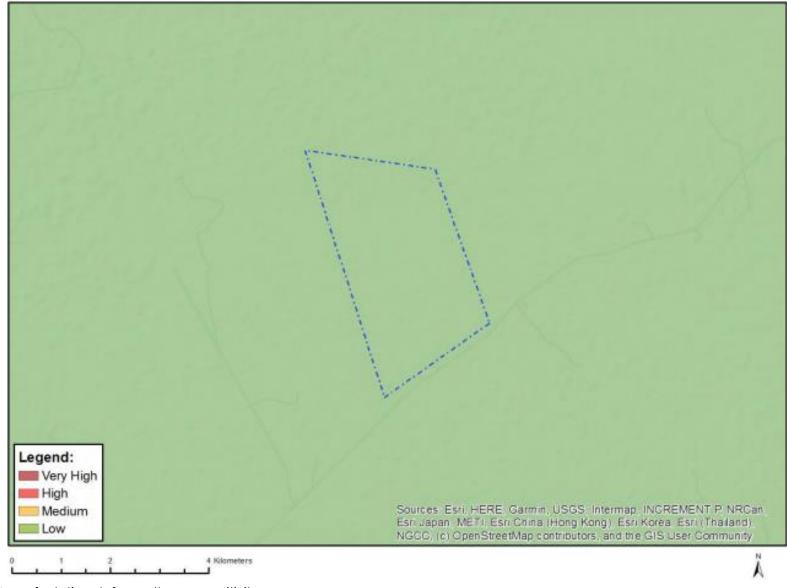

Figure 8: Map of relative defence theme sensitivity

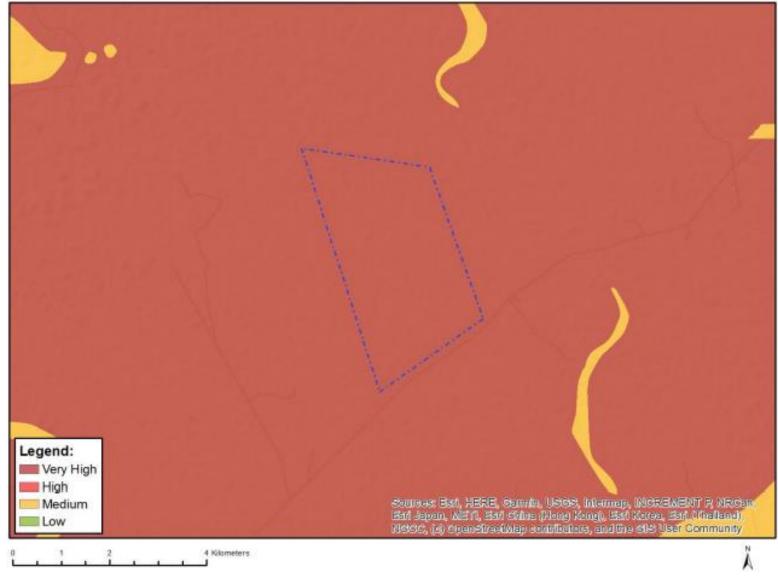

Figure 9: Map of relative palaeontology theme sensitivity

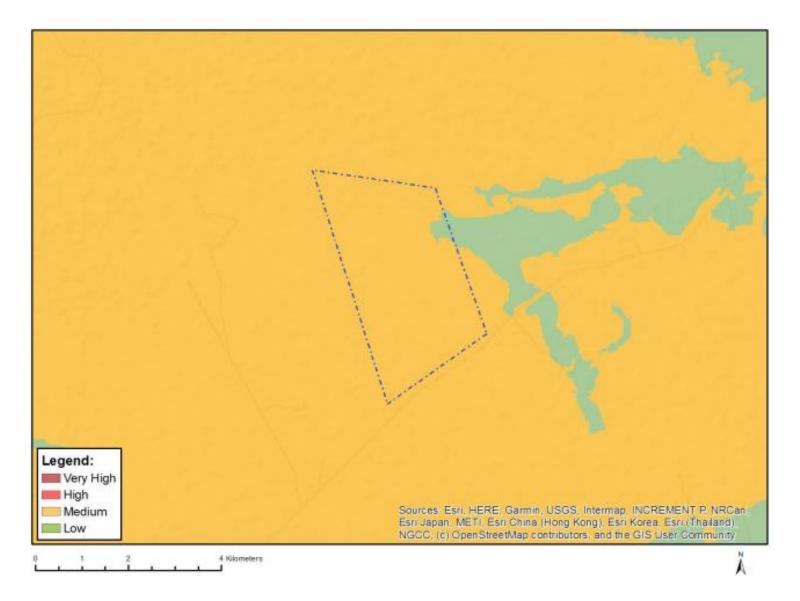

Figure 10: Map of relative plant species theme sensitivity

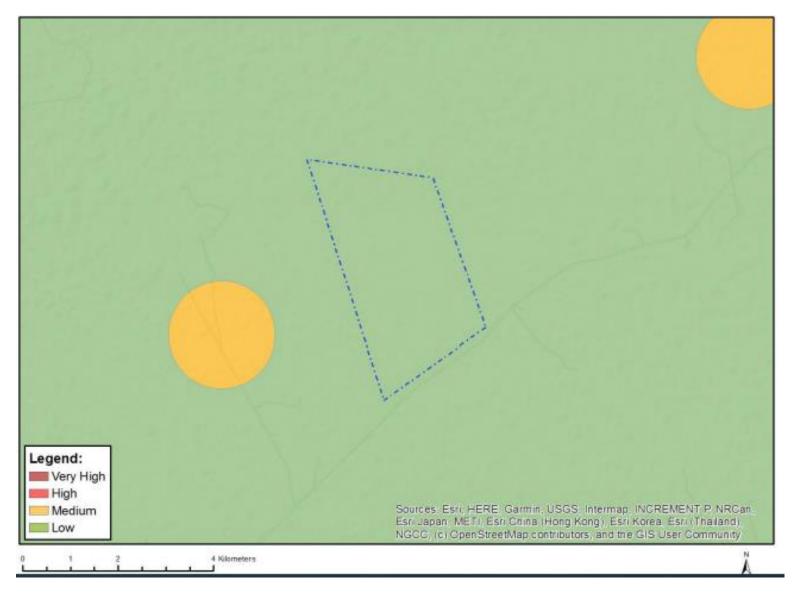

Figure 11: Map of relative RFI theme sensitivity

Figure 12: Map of relative terrestrial biodiversity theme sensitivity

#### 7.3 Sub-section 3: Declaration

The proponent/applicant or holder of the EA affirms that he/she will abide and comply with the prescribed impact management outcomes and impact management actions as stipulated in part B: section 1 of the generic EMPr and have the understanding that the impact management outcomes and impact management actions are legally binding. The proponent/applicant or holder of the EA affirms that he/she will provide written notice to the CA 14 day prior to the date on which the activity will commence of commencement of construction to facilitate compliance inspections.

Signature Proponent/applicant/ holder of EA Date:

#### 7.4 Sub-section 4: amendments to site specific information (Part B; section 2)

Should the EA be transferred to a new holder, Part B: Section 2 must be completed by the new holder and submitted with the application for an amendment of the EA in terms of Regulations 29 or 31 of the EIA Regulations, whichever applies. The information submitted for an amendment to an environmental authorisation will be considered to be incomplete should a signed copy of Part B: Section 2 not be submitted. Once approved, Part B: Section 2 forms part of the EMPr for the development and the EMPr becomes legally binding to the new EA holder.

## PART C

#### 8 SITE SPECIFIC ENVIRONMENTAL ATTRIBUTES

If any specific environmental sensitivities/attributes are present on the site which require more specific impact management outcomes and actions, not included in the pre-approved generic EMPr template, to manage impacts, those impact management outcomes and impact management actions must be included in this section. These specific management controls must be referenced spatially and must include impact management outcomes and impact management actions. The management controls including impact management outcomes and impact management actions must be presented in the format of the preapproved generic EMPr template. This applies only to additional impact management outcomes and impact management actions that are necessary.

If <u>Part C</u> is applicable to the development as authorised in the EA, it is required to be submitted to the CA together with the BAR or EIAR, for consideration of, and decision on, the application for EA. The information in this section must be prepared by an EAP and the name and expertise of the EAP, including the curriculum vitae are to be included. Once approved, <u>Part C</u> forms part of the EMPr for the site and is legally binding.

This section will **not be required** should the site contain no specific environmental sensitivities or attributes.

# **CONSTRUCTION AND DECOMMISSIONING OUTCOMES AND ACTIONS**

#### 7.1 Ecology (Fauna and Flora)

Impact management outcome: Direct loss of vegetation, including listed and protected species is reduced.

| Impact Management Actions   | Implementation        |  |   | Monitoring            |  |   |  |
|---|-----------------------|--|---|-----------------------|--|---|--|
|   | Responsible<br>person | Method of<br>implementation  | Timeframe for<br>implementati   | Responsible<br>person | Timeframe  | Evidence of compliance  |  |

# **OPERATIONAL PHASE OUTCOMES AND ACTIONS**

### 7.5 Ecology (Fauna and Flora)

**Impact management outcome:** Direct loss of vegetation, including listed and protected species is reduced.
