DEVELOPMENT DETAILS

Project Title: **Application for a stockpiling area over a portion of the Remaining Extent of the farm Elands Spruit No 5523, uThukela Magisterial District of KwaZulu-Natal Province.**

Project Description:

Background Information:

Raubex KZN (Pty) Ltd (hereafter referred to as RBX-KZN) holds a mining permit (DMRE ref no: KZN 30/5/1/3/2/10518 MP) to mine aggregate from a 4.9 ha area on the Remaining Extent of the farm Elands Spruit No 5523, uThukela District. The RBX-KZN permit will be valid until February 2023 (upon renewal).

Subsequently, Raubex Construction (Pty) Ltd (hereafter referred to as the "Applicant") identified the need for a mining permit for dolerite from the above mentioned 4.9 ha area, to secure the resource for a SANRAL tender for the upgrade of the N11 that borders the farm to the east. The Applicant entered into an agreement with RBX-KZN to apply for the proposed mining permit over the current mining permit area of RBX-KZN. The mining permit application will be submitted to the Department of Mineral Resources and Energy (DMRE) for their consideration.

Project Description:

In addition to the mining permit application that will be submitted to the DMRE, the Applicant also proposes to establish an area for stockpiling and crushing (if needed) of the material that is mined at the quarry, on 10 hectares of the abovementioned property. The establishment of the stockpiling area needs a (separate) environmental authorization to be approved by the Department of Economic Development, Tourism and Environmental Affairs (EDTEA) (separate application than the DMRE one).

The infrastructure to be used on site will all be of temporary and mobile nature. Containers will be used for office and storage purposes, a weigh bridge will be established (temporary), and the existing farm roads will be used to gain access to the site. The storage of fuel (if any) will be below the threshold of the NEMA EIA listed activities. No water will be abstracted from the proposed stockpile area, and the plant will be powered with generators. The ablution facilities will be chemical toilets that will be serviced by registered suppliers. The office and storage containers, weigh bridge and ablution facilities will most likely be placed at the entrance to the site, while the crushing equipment will be of mobile nature, moving around the site as needed.

During the site establishment phase the applicant will clear the topsoil from the stockpiling area to allow the stockpiling of the material. Upon stripping, the topsoil will be stockpiled along the boundaries of the area to be used during the rehabilitation phase. The material will then be transported from the quarry into the stockpile area where it will be screened/crushed if needed and stockpiled until removed from site. It is anticipated that the material will be used as fill material at a SANRAL road rehabilitation project of the N11 national road. The landowner currently uses the earmarked area for grazing purposes.

An Eskom power line passes the earmarked area to the west. The nearest pylon of the power line is ± 175 m from the stockpile area. The Collings pass road (± 680 m) and the N11 national road (± 20 m) passes the proposed site respectively on the western and eastern sides. The proposed stockpiling site is ± 110 m from a residential dwelling to the southwest and ± 800 m from an earthen dam of the landowner (north-west). A drainage line with associated wetland area was identified within 500 m of the proposed area.

In summary, this application is for a stockpiling area for dolerite material on a 10 ha portion of the abovementioned property.
