

SEPTEMBER 2020

BASIC ASSESSMENT REPORT & ENVIRONMENTAL MANAGEMENT PROGRAMME REPORT

PROSPECTING RIGHT APPLICATION FOR COAL, PSEUDO COAL,
CLAY & SHALE ON ALL PORTIONS (EXCLUDING PORTION 07) OF THE
FARM WELGELEGEN 221 IR MAGISTERIAL DISTRICT DELMAS PROVINCE
MPUMALANGA

PREPARED BY:

Office No. 16, First Floor (South Block)
Corridor Hill Crossing, 09 Langa
Crescent,
Corridor Hill, eMalahleni
Tel: +27 13 692 0041

PREPARED ON BEHALF OF:

47 Manzini Street,
Siyathuthuka, Belfast,
Mpumalanga 1102
Cell No.: +27 72 496 4087
Email: Dumisani@rdh.com

PREPARED FOR:

Department of Minerals and Resources

Department:
Mineral Resources
REPUBLIC OF SOUTH AFRICA

BASIC ASSESSMENT REPORT and ENVIRONMENTAL MANAGEMENT PROGRAMME REPORT

SUBMITTED FOR ENVIRONMENTAL AUTHORIZATIONS IN TERMS OF THE NATIONAL ENVIRONMENTAL MANAGEMENT ACT, 1998 AND THE NATIONAL ENVIRONMENTAL MANAGEMENT WASTE ACT, 2008 IN RESPECT OF LISTED ACTIVITIES THAT HAVE BEEN TRIGGERED BY APPLICATIONS IN TERMS OF THE MINERAL AND PETROLEUM RESOURCES DEVELOPMENT ACT, 2002 (MPRDA) (AS AMENDED).

NAME OF APPLICANT	:	RDH HOLDINGS (PTY) LTD (2019/ 263915 / 07)
TEL NO	:	+27 72 469 4087
FAX NO	:	+27 86 5144 103
POSTAL ADDRESS	:	47 Manzini Street Siyathuthuka 1102
PHYSICAL ADDRESS	:	47 Manzini Street Siyathuthuka 1102

FILE REFERENCE NUMBER SAMRAD: MP 30/5/1/1/2/ (16307 PR)

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

1. IMPORTANT NOTICE

In terms of the Mineral and Petroleum Resources Development Act (Act 28 of 2002 as amended), the Minister must grant a prospecting or mining right if among others the mining “will not result in unacceptable pollution, ecological degradation or damage to the environment”.

Unless an Environmental Authorisation can be granted following the evaluation of an Environmental Impact Assessment and an Environmental Management Programme report in terms of the National Environmental Management Act (Act 107 of 1998) (NEMA), it cannot be concluded that the said activities will not result in unacceptable pollution, ecological degradation or damage to the environment.

In terms of section 16(3)(b) of the EIA Regulations, 2014, any report submitted as part of an application must be prepared in a format that may be determined by the Competent Authority and in terms of section 17 (1) (c) the competent Authority must check whether the application has taken into account any minimum requirements applicable or instructions or guidance provided by the competent authority to the submission of applications.

It is therefore an instruction that the prescribed reports required in respect of applications for an environmental authorisation for listed activities triggered by an application for a right or a permit are submitted in the exact format of, and provide all the information required in terms of, this template. Furthermore, please be advised that failure to submit the information required in the format provided in this template will be regarded as a failure to meet the requirements of the Regulation and will lead to the Environmental Authorisation being refused.

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

It is furthermore an instruction that the Environmental Assessment Practitioner must process and interpret his/her research and analysis and use the findings thereof to compile the information required herein. (Unprocessed supporting information may be attached as appendices). The EAP must ensure that the information required is placed correctly in the relevant sections of the Report, in the order, and under the provided headings as set out below, and ensure that the report is not cluttered with un- interpreted information and that it unambiguously represents the interpretation of the applicant.

2. Objective of the basic assessment process

The objective of the basic assessment process is to, through a consultative process—

- (a) determine the policy and legislative context within which the proposed activity is located and how the activity complies with and responds to the policy and legislative context;
- (b) identify the alternatives considered, including the activity, location, and technology alternatives;
- (c) describe the need and desirability of the proposed alternatives,
- (d) through the undertaking of an impact and risk assessment process inclusive of cumulative impacts which focused on determining the geographical, physical, biological, social, economic, heritage , and cultural sensitivity of the sites and locations within sites and the risk of impact of the proposed activity and technology alternatives on the these aspects to determine:
 - (i) the nature, significance, consequence, extent, duration, and probability of the impacts occurring to; and
 - (ii) the degree to which these impacts—

- (a) can be reversed;
- (b) may cause irreplaceable loss of resources; and
- (c) can be managed, avoided or mitigated.
- (e) through a ranking of the site sensitivities and possible impacts the activity and technology alternatives will impose on the sites and location identified through the life of the activity to—
 - (i) identify and motivate a preferred site, activity and technology alternative.
 - (ii) identify suitable measures to manage, avoid or mitigate identified impacts; and (iii) identify residual risks that need to be managed and monitored.

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103; kenneth@singoconsulting.co.za

PART A

SCOPE OF ASSESSMENT AND BASIC ASSESSMENT REPORT

Singo Consulting (Pty) Ltd has been appointed as an independent Environmental Assessment Practitioner (EAP) to manage the Environmental Authorisation process by conducting an Environmental Impact Assessment, Public Participation for the proposed project and compile an Environmental Management Programme report.

3.Contact Person and correspondence address

a) Details of the EAP

Details of the EAP that prepared the report

Name of the Practitioner:	Takalani Rakuambo
Designation	Junior Consultant
Tel No	(013) 692 0041
Cell No	.+27 82 767 4011
Fax No	+27 86 515 4103
Email	takalani@singoconsulting.co.za

Details of the EAP who reviewed the report

Name of the Practitioner:	Mr Ndinanyi Kenneth Singo
Designation	Principal EAP
Tel No	(013) 692 0041
Cell No	.+27 78 272 7839
Fax No	+27 86 515 4103
Email	Kenneth@singoconsulting.co.za

b) Expertise of the EAP

The qualifications of the EAP who reviewed the report

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalahleni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

(with evidence)

Please refer to Annexure B for the Curriculum Vitae.

Education

PhD (Candidate) Environmental Geology, MSc Environmental Management, BSc (Hons) Mining & Environmental Geology.

Professional Affiliations

MR. N.K Singo is a registered competent person with the South African Council of Natural Science Professions (SACNASP: Earth Science Reg. No: 400069/16), Geological Society of South Africa (GSSA), the Land Rehabilitation Society of Southern Africa (LaRSSA) and South African Affiliates of the International Association for Impact Assessment. Kenneth holds an MSc in Environmental Management (University of South Africa (UNISA)) and a BSc (Hons) in Mining and Environmental Geology (the University of Venda). He is a final year Ph.D. (Geology, Applied Environmental Mineralogy and Geochemistry) candidate at the University of Johannesburg.

Kenneth has knowledge of Mine Water and Mine Environmental Management (acid mine drainage, heavy metal assessments and tailings management) in various commodities including coal, gold, magnesite and base metals (Cu, Pb, Zn). He has extensive knowledge of defunct mining waste and waste water impact assessments in communities residing in the vicinity of those mines. This knowledge was gained through MSc. Kenneth has sound knowledge of risk assessment, both in terms of human health and the environment. He is experienced in the appraisal of potential constraints, as well as devising means of mitigation through remedial strategy development, feasibility and validation.

During his PhD studies, Kenneth learned how to operate within contaminated lands. His PhD largely focused on disused mines (gold, copper and magnesite) ranging from Phase I and Phase II investigations to development of remedial strategies (i.e. Phase III). His PhD further equipped him to intensively understand the waste classification, profiling and understanding of the implications associated with the management of waste, landfill disposal profiling and development of beneficiation strategies.

c) Summary of the EAP's past experience

(In carrying out the Environmental Impact Assessment Procedure)

Please refer to Annexure C: Singo Consulting profile

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103; kenneth@singoconsulting.co.za

d) Location of the overall Activity

The following table presents the location and associated cadastral details associated with the area in question.

Table 1: Location Details

Farm Name:	Welgelegen 221 IR
Application area (Ha)	3 538, 38
Magisterial district:	Delmas
Distance and direction from nearest town	Located approximately 10.19 km south west of Kendal, 20.70km north East of Ogies, and about 17.97 km southwest of Delmas.
21-digit Surveyor General Code for each farm portion	TOIR00000000022100007 TOIR00000000022100008 TOIR00000000022100009 TOIR00000000022100010 TOIR00000000022100012 TOIR00000000022100015 TOIR00000000022100017 TOIR00000000022100018 TOIR00000000022100020 TOIR00000000022100022 TOIR00000000022100019 TOIR00000000022100000 TOIR00000000022100001 TOIR00000000022100004 TOIR00000000022100013 TOIR00000000022100014 TOIR00000000022100011 TOIR00000000022100023 TOIR00000000022100003 TOIR00000000022100006 TOIR00000000022100016 TOIR00000000022100005 TOIR00000000022100026 TOIR00000000022100024 TOIR00000000022100026

e) Locality map (show nearest town, scale not smaller than 1:250,000)

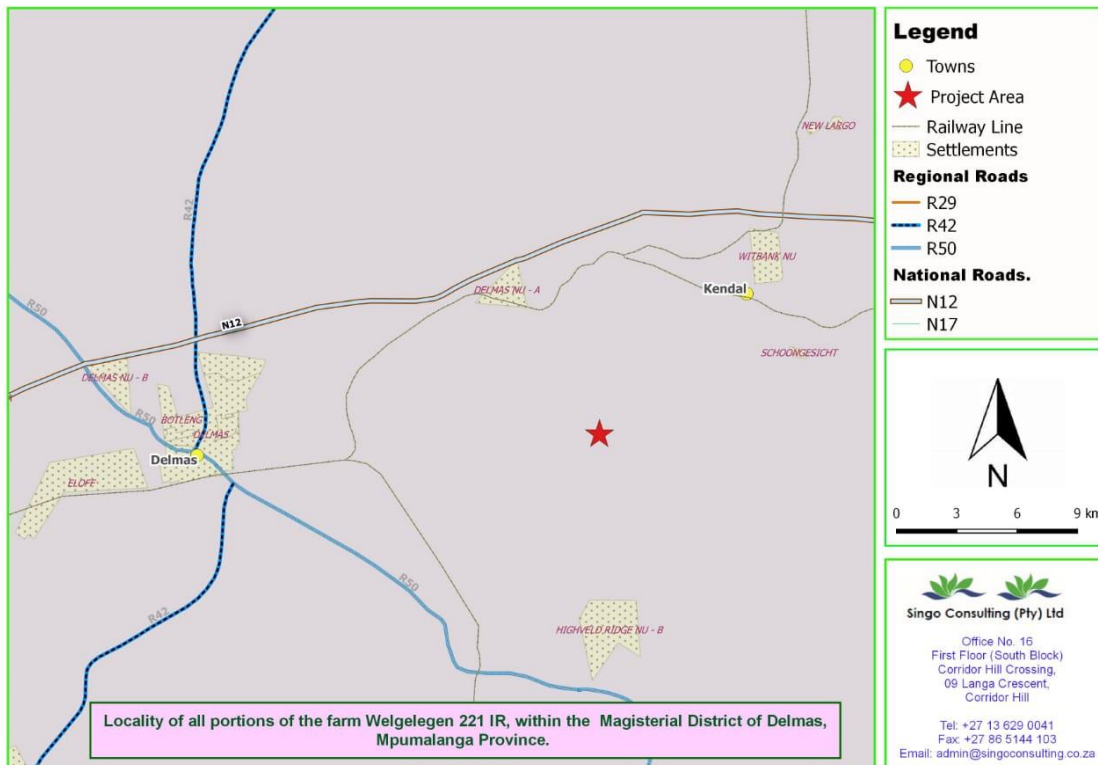

Figure 1: Locality of proposed site project (proposed properties are mapped in red).

The Proposed Prospecting Right area is situated within magisterial District of Delmas under jurisdiction of Victor Kanye Local Municipality in Nkangala District Municipality, Mpumalanga province.

The proposed site for RDH Holdings (Pty)Ltd 's prospecting Right application is located on Farm Welgelegen 221 IR within all Portions (excluding portion 07) . The site is located approximately 10.19 km south west of Kendal, 20.70 km north east of Ogies and approximately 17.97 km south west of Delmas. The proposed prospecting right area is accessed via N12.

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalahleni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103; kenneth@singoconsulting.co.za

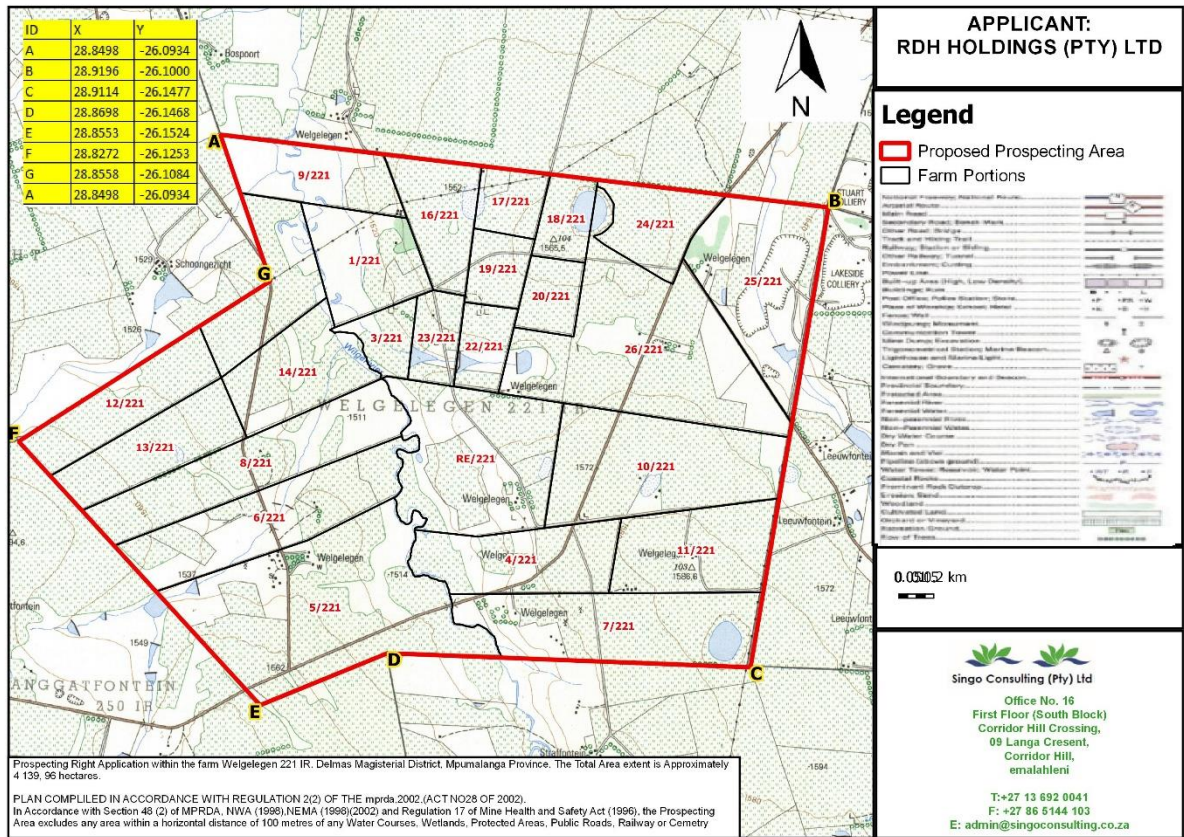

Figure 2: Regulation map of the proposed project (indicated by Red).

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalahlani, 1035, Mpumalanga Province, ZA
 T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103; kenneth@singoconsulting.co.za

f) Description of the scope of the proposed overall activity

(Provide a plan drawn to a scale acceptable to the competent authority but not less than 1: 10,000 that shows the location, and area (hectares) of all the aforesaid main and listed activities, and infrastructure to be placed on site)

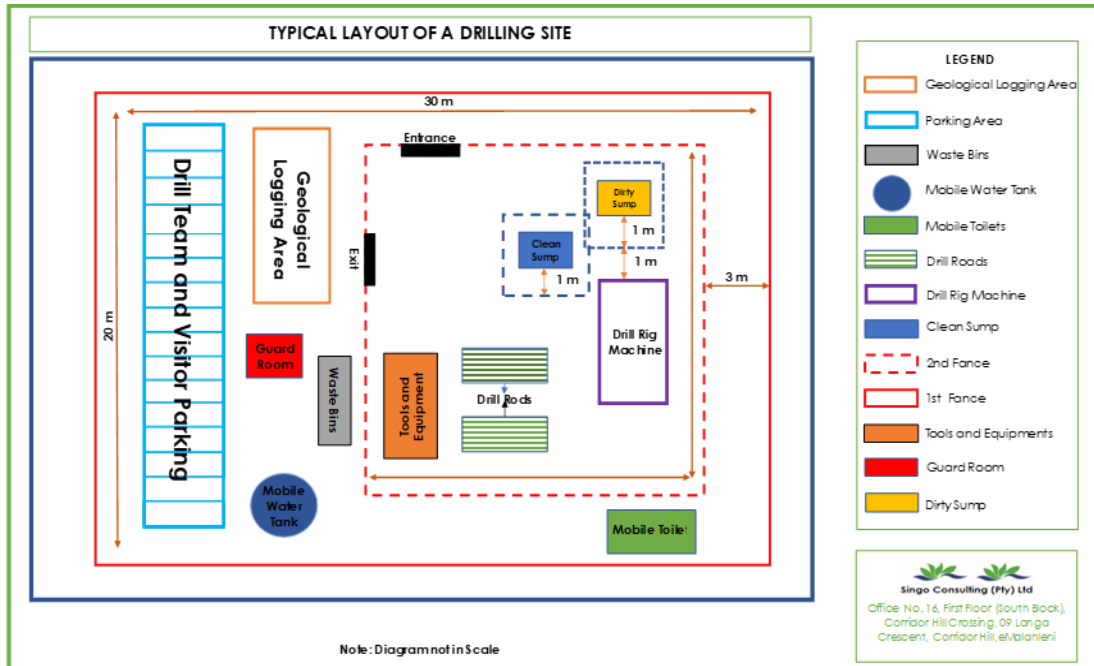

Figure 3: The drill site layout plan showing areas where specific activities will take place in the project area.

T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103; kenneth@singoconsulting.co.za

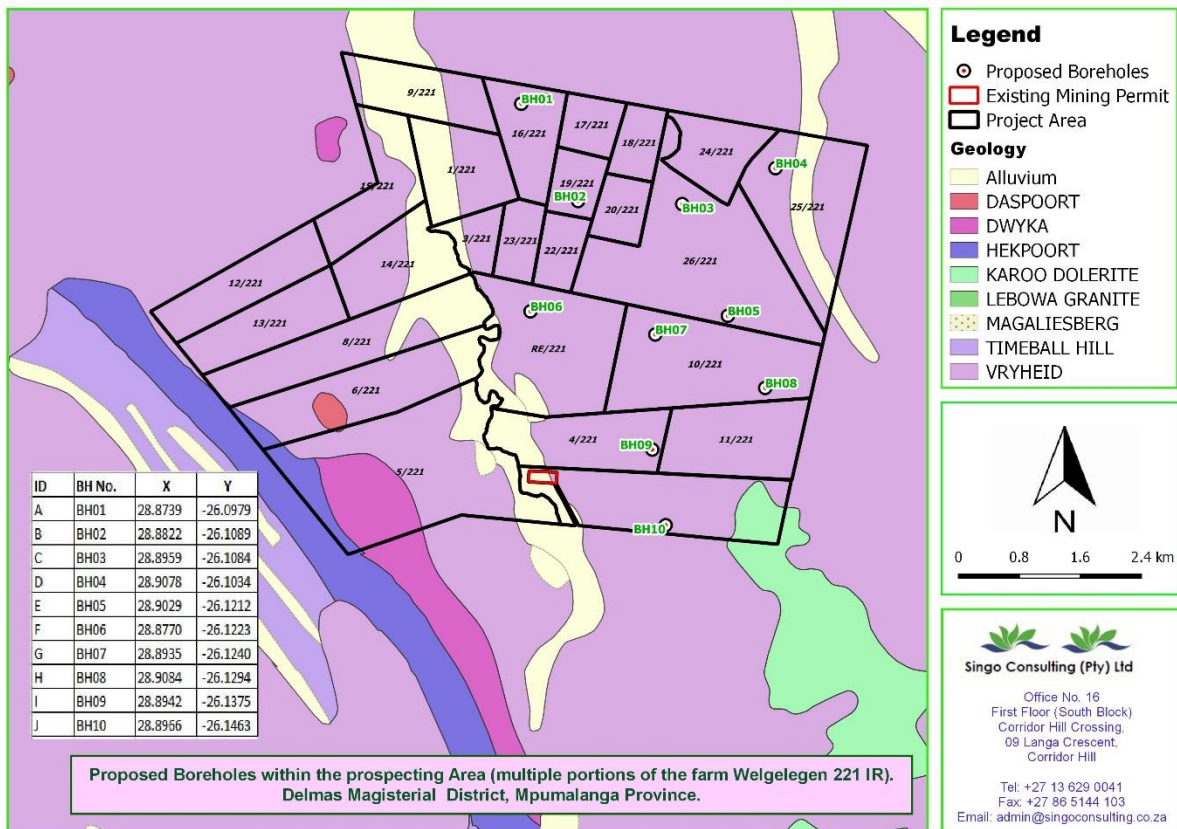

Figure 4: Proposed boreholes map of the anticipated project area.

Detailed geology and coal potential of the area is relatively known, and as such exploration work will commence from a very advanced level. The Prospecting Work Programme was therefore designed in phases, each phase conditional on the success of the previous phase and will include:

Phase 1: Data acquisition and a Desktop study

A desktop study of all available data for the area will be undertaken to accumulate as much regional and historical data around the area as possible. This includes published geological reports, infrastructure mapping, satellite imagery and existing geophysical information (if available).

Phase 2: Drilling

Targets that have been prioritised through detailed desktops will be tested by initial diamond or percussion drilling.

It should be noted that no bulk sampling will be undertaken as part of this Prospecting Works Programme. Should the initial evaluation of the deposit indicate a sufficient size and grade, bulk sampling may be required. In this event, the Prospecting Works Programme will be amended, and a new Environmental Authorisation Process will be required for submission to the DMR. The activities associated with the Prospecting Work Programme will be scheduled over a period of five years as is detailed in the following table:

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalahleni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

Table 2: Proposed Prospecting Phases and Time Frames

Phase	Activity	Skill(s) required	Timeframe	Outcome	Timeframe for outcome	What technical expert will sign off on the outcome?
Phase 1: Invasive Prospecting						
	Diamond drilling (5 boreholes)	Exploration Geologist	Month 1 (30 days)	Borehole core data Coal, Pseudo coal, Shale and Clay core samples Rock core samples	Month 1	Exploration Geologist
	Sampling	Exploration Geologist		Core analyses Rock core analyses	Month 2 – 3	Laboratory analyst
Phase 1: Non-invasive Prospecting						
	Consultations with landowners	Land Tenure Specialist	Month 1	Legal Access Agreement	Month 1	Land Tenure Specialist
	Data processing and validation	Exploration Geologist	Month 7-8	Stratigraphic correct borehole data Analytical correct borehole data	Month 8 – 10 Month 8 - 10	Exploration Geologist /Database administrator Exploration Geologist /Database administrator
	Lithofacies and Coal, Pseudo coal, Shale and Clay quality modelling	Exploration Geologist	Month 10-12	Contour maps Reserve breakdown	Month 10-12	Exploration Geologist /Modeller
	Inspection/Consultation with landowners	Land Tenure Specialist /Drilling contractor	Month 5-6	Rehabilitation clearance certificate	Month 5 - 6	Land Tenure Specialist / Environmental officer
Phase 2: Invasive Prospecting						
	Diamond drilling (3 boreholes)	Exploration Geologist	Month 13	Borehole core data Coal, Pseudo coal, Shale and Clay core samples Rock core samples Core analyses Rock core analyses	Month 13 Month 13-14	Exploration Geologist Laboratory analyst
	Geophysical survey (Optional)	Geophysicist Exploration Geologist	Month 13-15	Lithology data Structural data	Month 13-14	Geophysicist

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA

	Geohydrological survey (Optional)	Geohydrologist Exploration Geologist	Month 13-14	Borehole water yield Water samples	Month 17-20	Geohydrologist
Phase 2: Non-invasive Prospecting						
	Consultation with landowners	Mining Rights officer	Month 12	Legal Access Agreement	Month 12	Land Tenure Specialist

Phase	Activity	Skill(s) required	Timeframe	Outcome	Timeframe for outcome	What technical expert will sign off on the outcome?
	Data processing and validation	Exploration Geologist	Month 17-18	Stratigraphic correct borehole data Analytical correct borehole data	Month 20 – 22 Month 20 - 22	Exploration Geologist /Database administrator Exploration Geologist /Database administrator
	Lithofacies and Coal, Pseudo coal, Shale and Clay /mineral grade quality modelling	Exploration Geologist	Month 22-24	Contour maps Reserve breakdown	Month 22-24	Exploration Geologist /Modeller
	Inspection/Consultation with landowners	Mining Rights officer	Month 16-17	Rehabilitation clearance certificate	Month 16 - 17	Land Tenure Specialist / Environmental officer
Phase 3: Invasive Prospecting						
	Diamond drilling (2 boreholes)	Exploration Geologist	Month 25	Borehole core data Coal, Pseudo coal, Shale and Clay core samples Rock core samples Coal, Pseudo coal, Shale and Clay core analyses Rock core analyses	Month 25 Month 25-60	Exploration Geologist Laboratory analyst
	Directional drilling (Optional)	Exploration Geologist	Month 24-30	Lithological data	Month 24-60	Exploration Geologist
	Geophysical survey (Optional)	Geophysicist Exploration Geologist	Month 25-27	Lithology data Structural data	Month 25-60	Geophysicist

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

	Geohydrological survey (Optional)	Geohydrologist Exploration Geologist	Month 25-26	Borehole water yield Water samples	Month 29-60	Geohydrologist
Phase 3: Non-invasive Prospecting						
	Consultation with landowners	Mining Rights officer	Month 24	Legal agreement	Month 24	Land Tenure Specialist
	Data processing and validation	Exploration Geologist	Month 29-30	Stratigraphic correct borehole data Analytical correct borehole data	Month 32 – 60 Month 32 - 60	Exploration Geologist /Database administrator Exploration Geologist /Database administrator
	Lithofacies and Coal, Pseudo coal, Shale and Clay /mineral quality modelling	Exploration Geologist	Month 34-36	Contour maps Reserve breakdown	Month 34-60	Exploration Geologist /Modeller
	Inspection/consultation with landowners	Land Tenure Specialist	Month 28-29	Rehabilitation clearance certificate	Month 28 - 60	Land Tenure Specialist / Environmental officer

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

As is clear from the information provided above, each of the phases is dependent on the results of the preceding phase. The location and extent of drill sites, and possible diamond drilling can therefore not be determined at this stage. Mapping of the prospecting activities could thus not be undertaken. In the subsequent sections (Section ii) more details are provided in terms of each of the prospecting activities.

The applicant must submit a plan indicating the location of drilling activities, once these areas have been finalized to at least all landowners, as well as the Department of Mineral Resources and the Department of Water and Sanitation.

g) Listed and specified activities

Section 16 of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002) requires, upon request by the Minister that an Environmental Management Plan be submitted and that the applicant must notify and consult with Interested and Affected Parties (I&APs). Section 24 of the NEMA requires that activities, which may impact on the environment must obtain an environmental authorisation from a relevant authority before commencing with the activities. Such activities are listed under Regulations Listing Notice 1 Government Notice (GN) 983, Listing Notice 2 GN 984 and Listing Notice GN 985 (dated 4 December 2014) of NEMA. The proposed prospecting activity triggers:

NEMA Government Notice 983: Listing Notice 1:

Activity 20: "Any activity including the operation of that activity which requires a prospecting right in terms of section 16 of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002), including associated infrastructure, structures and earthworks, directly related to prospecting of a mineral resource..."

Activity 27: "The clearance of an area of 1 hectares or more, but less than 20 hectares of indigenous vegetation..."

Please refer to the following table for the details in terms of the listed activities.

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalaheni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

Table 3:Listed and specified activities

NAME OF ACTIVITY (E.g. For prospecting - drill site, site camp, ablution facility, accommodation, equipment storage, sample storage, site office, access route etc...etc...etc E.g. for mining, - excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc...etc...etc.)	Aerial extent of the Activity Ha or m²	LISTED ACTIVITY (Mark with an X where applicable or affected).	APPLICABLE LISTING NOTICE (GNR 983, GNR 984 or GNR 985)	WASTE MANAGEMENT AUTHORISATION (Indicate whether an authorisation is required in terms of the Waste Management Act). (Mark with an X)
Prospecting Area	4 134.95 ha	X	GNR 327 Listing Notice 1, Activity 20.	Not required
Vegetation clearing	0.6 ha / 4 134.95 ha $30*20=600m^2*10$ boreholes=6000 m ² $6000m^2\div 10000=$ 0.6 ha		Not Listed	
Drilling	0.6 ha		Not Listed	

Table 4:Summary of the drilling activities

Drilling method	Diamond drilling
Number of boreholes	10
Depth of boreholes	100m
Duration of drilling	A borehole takes about 2 days to complete; 10 will take at least 20 days.
Demarcated working area	0.6 ha for all 10 drilling sites

Total area to be disturbed	$30 \times 20 = 600 \text{m}^2$ 10 boreholes* $600 \text{m}^2 = 6000 \text{m}^2$ 6000 $10000 = 0.6 \text{ha}$

Office No: 16 , First Floor Corridor Hill Crossing ,09 Langa Crescent ,P/Bag X7214, Postnet Suite 125, eMalahleni, 1035, Mpumalanga Province, ZA
T: 013 692 0041/+27 78 2727 839/072 081 6682 F: +27 86 5144 103; kenneth@singoconsulting.co.za

h) Description of the activities to be undertaken

(Describe Methodology or technology to be employed, including the type of commodity to be prospected / mined and for a linear activity, a description of the route of the activity)

The following section presents a detailed description of all the activities associated with the proposed Prospecting Application. Due to the nature of the Prospecting Works Programme, and the fact that the specific prospecting activities required are dependent on the preceding phase, assumptions are presented where required. These assumptions are based on similar projects undertaken by the Applicant and therefore be regarded as indicative of what will be undertaken.

Access Roads

Access to the site will be required during pegging of holes, and drilling activities (Phase 2 and 3). Access requirements can only be determined after Phase 1 has been concluded. Several existing roads and tracks already traverse the proposed prospecting site and where practicable, these roads will be used. During pegging activities, vehicle access will have gained to site through the veld and the establishment of a track to gain repeated access to a borehole site will not be required. Once drill sites have been identified, temporary access roads may be established for repeated access to the drill site if the identified drill site cannot be access via existing roads and tracks.

Water Supply

There are boreholes located on the site. However due to lack of sufficient rainfall (drought) water will not be given for drilling purpose. Hence, air flush is preferred by the client. In case, where the water will be given, it is anticipated that water brought onto the site, will be sourced from the water body located in the farm.

In case of water flush boreholes are chosen, continuous water supply will be required during drilling, at an estimated rate of 5,000 litres per hour. Additional water requirements relate to the potable water supply for employees and workers.

A temporary 260 litre on-site vertical water storage tank for drinking water and widespread use by persons will be provided at the drill site.

Ablution

Ablution facilities at the drill site will involve the installation of drum or tank type portable toilets.

Temporary Office Area

A temporary site office shaded area will be erected at the drill sites. No on-site electricity generation using generators will be undertaken. Meals will be provided to the staff and workers as no heating and / or cold storage facilities will be available. A shaded eating area will be provided.

Accommodation

No accommodation for staff and workers will be provided on-site and all persons will be accommodated in nearby towns (i.e. Delmas). Workers will be transported to and from the prospecting site daily. Night security staff will be employed once equipment has been established on site.

Blasting

As the Prospecting Works Programme does not allow for bulk sampling, no blasting will take place.

Storage of Dangerous Goods

During the drilling activities limited quantities of diesel fuel, oil and lubricants will be stored on site. The only dangerous good that will be stored in any significant quantity is diesel fuel. A maximum amount of 60 m³ will be stored in above ground diesel storage tanks.

Detailed Prospecting Activities

Phase 1: Data acquisition and a Desktop study

A desktop study of all available data for the area will be undertaken to accumulate as much regional and historical data around the area as possible. This includes published geological reports, infrastructure mapping, satellite imagery and existing geophysical information will be targeted.

Phase 2: Drilling

Targets generated during the desktop study will be investigated on the ground and tested by initial diamond or percussion drilling. A drilling program will be undertaken to delineate and give a preliminary assessment of the coal potential of the deposit identified. Should delineation and initial evaluation of the deposit indicate a sufficient size and grade to warrant further evaluation, an appropriate bulk sampling program will be undertaken to establish grade and confirm its viability for mining.

Figure 5: Typical example of drilling equipment and site setting

i) Policy and Legislative Context

Table 5: Policy and Legislative Context

Applicable legislation and guidelines used to compile the report	Reference where applied	How does this development comply with and respond to the policy and legislative context
<p>A description of the policy and legislative context within which the development is proposed, including an identification of all legislation, policies, plans, guidelines, spatial tools, municipal development planning frameworks and instruments that are applicable to this activity and are to be considered in the assessment process.</p>		<p>E.g. In terms of the National Water Act a Water Use License has/ has not been applied for.</p>
Legislation		
<p>NEMA, No. 107 of 1998 (as amended) Listing Activity 20 of Listing Notice 1 in terms of Regulation 983 of 2014</p>	<p>Prospecting activities</p>	<p>In terms of the NEMA, No. 107 of 1998 (as amended), an application for Environmental Authorization was submitted to the DMR. The application was acknowledged by the DMR Ref: (MP 30/5/1/1/2/16307 PR). The DMR, as the administrator, requests the submission of the Basic Assessment Report and EMPr within 90 days of the acknowledgement letter. RDH Holdings (Pty) Ltd appointed Singo Consulting as an independent EAP to undertake the Basic Assessment Process associated with the Prospecting Right Application. All potential impacts of the proposed prospecting activities have been assessed. The EMPr includes mitigation measure implementation, which will apply throughout prospecting.</p>
<p>As per the Constitution of South Africa, specifically, everyone has a right to:</p>	<p>Prospecting activities</p>	<p>An EMPr for proposed prospecting activities has been drafted to ensure that prospecting activities are conducted in such a manner</p>

Applicable legislation and guidelines used to compile the report	Reference where applied	How does this development comply with and respond to the policy and legislative context
<p>an environment that is not harmful to their health or wellbeing; and have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that: prevent pollution and ecological degradation promote conservation secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development.</p>		<p>that significant environmental impacts are avoided. Where significant impacts cannot be avoided, they will be minimized and mitigated to protect the environmental right of South Africans.</p>
<p>MPRDA, No. 28 of 2002 Section 16 (as amended)</p>	<p>Prospecting activities</p>	<p>The applicant submitted a Prospecting Right Application to the DMR, which the DMR accepted Ref: (MP 30/5/1/1/2/16307PR). The conditions and requirements attached to the granting of the prospecting right will apply to the prospecting activities.</p>
<p>NEMA Biodiversity Act, 2004</p>		<p>The EMPr will regulate the applicant's implementation of biodiversity management measures. This is particularly relevant to all species of Mpumalanga Bushveld Complex and other Natural Area in which the project area falls.</p>
<p>National Water Act (NWA), Act 36 of 1998</p>	<p>N/A</p>	<p>No water use license is required for this application. Water required for drilling activities will be obtained from a legal source in the area or brought in via a mobile water tanker. Appropriate dust extraction/suppression equipment will be a condition imposed on the drill contractor for drill rigs.</p>
<p>National Environmental Management: Waste Act, Act 59 of</p>	<p>Management measures environmental</p>	<p>Waste generation will be minimized by ensuring employees of the drilling contractor are subjected to the appropriate</p>

Applicable legislation and guidelines used to compile the report	Reference where applied	How does this development comply with and respond to the policy and legislative context
2008 (NEMWA) (as amended)	awareness plan	environmental awareness campaign before drilling commences. All waste generated during the drilling activities will be disposed of in a responsible legal manner. Proof of legal disposal will be maintained on site.
National Heritage Resources Act (NHRA), 25 of 1999	Management measures	Should archaeological artefacts or skeletal material be discovered in the area during development activities, activities will be stopped, and the South African Heritage Resource Agency (SAHRA) will be notified for an investigation and evaluation of the discoveries.
Municipal plans and policies		
Local Municipality Integrated Development Plan (IDP) 2015-2016	N/A	The prospecting and mining of key minerals like Coal are highlighted in the IDP. It also highlights the need to preserve the natural environment in the area by conducting mineral exploration that is minimally invasive to the environment.
Municipality 2014-2034 Spatial Development Framework (SDF)		The applicant acknowledges the need to maximize economic benefit from mining, industrial, business, agricultural and tourism development in the area and promote a climate for economic development in line with the municipal development frameworks.
Standards, guidance and spatial tools		
South African National Biodiversity Institute (SANBI) Biodiversity GIS (bgis.sanbi.org)	Baseline environmental description.	Used during desktop research to identify sensitive environments in the prospecting rights area.
QGIS Desktop: Version 2.18.10.	Baseline environmental description	Used during desktop research to map the locality and sensitive environments in the prospecting rights area.

Applicable legislation and guidelines used to compile the report	Reference where applied	How does this development comply with and respond to the policy and legislative context
	and mapping.	

j) Need and desirability of the proposed activities

(Motivate the need and desirability of the proposed development including the need and desirability of the activity in the context of the preferred location).

k) Motivation for the overall preferred site, activities and technology alternative

Preferred Site

As discussed in the previous section, **RDH HOLDINGS COMPANY(PTY) LTD (2019/ 263915 / 07)** applied for prospecting rights over the area. Based on the outcomes of that competitor study, the possibility to encounter further coal, Pseudo coal, clay and shale Reserves was identified. The site is therefore regarded as the preferred site and alternative sites are not considered.

The Mpumalanga province is rich in coal resources, which can provide major employment opportunities in the area. Coal, Pseudo Coal, Shale and Clay Mine around Mpumalanga contribute employment Opportunity around the province and contribute to the growth of the economy. Part of Coal dominant in Mpumalanga province Delmas, Ermelo, Emalahleni, Middleburg and Bethal. Mpumalanga province contribute to growth of the economy.

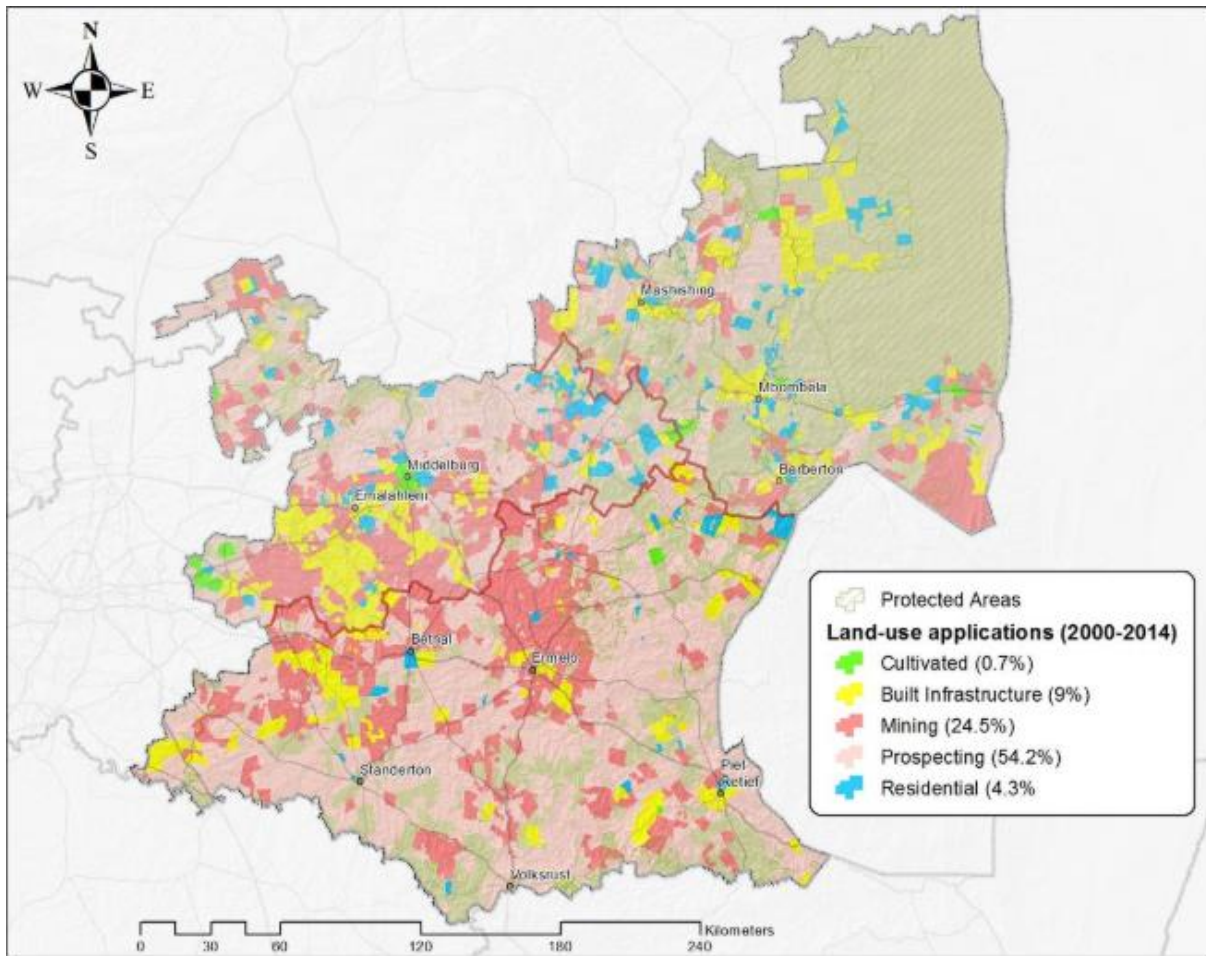

Figure 5: Potential mining projects in Mpumalanga.

Technological and Site Activity Alternatives

Due to the nature of the proposed prospecting activities future land use alternatives will not be compromised. Once a viable reserve has been confirmed a comprehensive social and environmental impact assessment will be required (in accordance with legislation), during which time alternative land use to mining would be investigated.

In terms of the technologies proposed, these have been chosen based on the long-term success of the company in terms of their prospecting history. The prospecting activities proposed in the Prospecting Works Programme is dependent on the preceding phase as previously discussed, therefore no alternatives are indicated, but rather a phased approach of trusted prospecting techniques.

The location of intrusive drilling activities will be determined during Phase 1 of the Prospecting Works Programme. All infrastructure will be temporary and/or mobile.

l) Full description of the process followed to reach the proposed preferred alternatives within the site

(NB!! – This section is about the determination of the specific site layout and the location of infrastructure and activities on site, having taken into consideration the issues raised by interested and affected parties, and the consideration of alternatives to the initially proposed site layout)

Each of the phases are dependent on the results of the preceding phase. The location and extent of coal sampling, and possible core drilling can therefore not be determined at this stage. Mapping of the prospecting activities could thus not be undertaken.

The stakeholder consultation phase has been completed at this time, and therefore the comments raised by I&APs have been incorporated in this section.

m) Details of the development footprint alternatives considered

(With reference to the site plan provided as Appendix 4 and the location of the individual activities on site, provide details of the alternatives considered with respect to:

- (a) the property on which or location where it is proposed to undertake the activity;
- (b) the type of activity to be undertaken;
- (c) the design or layout of the activity;
- (d) the technology to be used in the activity;
- (e) the operational aspects of the activity; and
- (f) the option of not implementing the activity)

n) The property on which or location where it is proposed to undertake the activity

The **RDH HOLDINGS COMPANY(PTY) LTD (2019/ 263915 / 07)** company therefore applied for prospecting on the properties as discussed in this report to determine the presence of coal, pseudo coal, clay and shale and whether these are feasible to enter into further studies towards a Mining Right.

(a) The type of activity to be undertaken

In terms of the technologies proposed, these have been chosen based on the long-term success of the company in terms of their prospecting history. The prospecting activities proposed in the Prospecting Works Programme is dependent on the preceding phase as

previously discussed, therefore no alternatives are indicated, but rather a phased approach of trusted prospecting techniques.

(b) The design or layout of the activity

The location of activities will be determined based on the location of the prospecting activities, which will only be determined during Phase 1 of the Prospecting Works Programme. All infrastructure will be temporary and/or mobile [refer to Section d (ii) of the report for which includes a typical layout of drill sites to be established].

(c) The technology to be used in the activity

In terms of the technologies proposed, these have been chosen based on the long-term success of the company in terms of their prospecting history. The prospecting activities proposed in the Prospecting Works Programme is dependent on the preceding phase as previously discussed, therefore no alternatives are indicated, but rather a phased approach of trusted prospecting techniques.

(d) The operational aspects of the activity

Due to the nature of the prospecting activities, no permanent services in terms of water supply, electricity, or sewerage facilities are required.

The activities will commence with desktop study (as previously discussed), which will comprise of literature search. This manner of survey will ensure that the client can clearly delineate areas which are regarded as suitable for further investigation and no unnecessary surface disturbance will be undertaken.

Based on the outcomes of the desktop study, drilling and coal sampling will be undertaken for target areas only. Drilling and sampling is a minimal impact exploration method in terms of environmental disturbance. After the preliminary exploration work, the anomalies identified will be ranked for exploratory drilling. Site activities as it relates to exploratory drilling will comprise the establishment of the drill pad (drill pad clearing and compaction), drilling operations (drill maintenance, refuelling, core extraction and core storage) and rehabilitation activities (drill pad ripping and re-vegetation). No feasible alternative to the proposed exploratory drill methods currently exists. Impact associated with the drilling operations will be managed through the implementation of a management plan, developed as part of the application for authorisation.

(e) The option of not implementing the activity.

The option of not approving the activities will result in a significant loss to valuable information regarding the mineral status (in terms of coal) present on these properties. In addition to this, should economical reserves be present, and the applicant does not have the opportunity to prospect, the opportunity to utilize these reserves for future phases will be lost.

In addition to the above, the SDF of the Victor Kanye local municipality, states that various strategies and associated policies should be adopted to ensure effective spatial development. In terms of Section 5.1 of the SDF the municipality must provide alternative means of support for rural/informal population to decrease dependence on the environment and subsistence agriculture. For this purpose, the following policies are adopted:

- ❖ Maximise economic benefit from mining industrial, business, agricultural and tourism development within the area; and
- ❖ Promote a climate for economic development. Improve public and investor confidence in the region through crime reduction and infrastructure development.

3.1 Details of the Public Participation Process Followed

(Describe the process undertaken to consult interested and affected parties including public meetings and one on one consultation. NB the affected parties must be specifically consulted regardless of whether or not they attended public meetings. (Information to be provided to affected parties must include sufficient detail of the intended operation to enable them to assess what impact the activities will have on them or on the use of their land)

Identification of Interested and Affected Parties

The Public Participation Process (PPP) seeks to provide all stakeholders including potential players and all applicable I&APs, state departments, state bodies and the competent authority (CA) with an opportunity to obtain accurate, reliable and understandable information on the environmental impacts of the proposed activity and to provide all of the aforementioned to communicate their approval, concerns, objections and questions regarding the proposed project. The above helps compile a well-detailed report on the Basic Assessment Report & the Environmental Management Programme report. The PPP was carried out in accordance with the criteria of the EIA Regulations, 2014 (as amended, 07 April 2017) particularly Chapter 6 of this Regulation.

Settlements were search using the 1:50 000 topographical maps, aerial imagery, title deed searches and through consultation. There are no communities located on the said property,

however, few informal houses were observed. All the affected portions are not state owned but rather privately owned. Other I&APs identified, include Organs of State, who have jurisdiction over, or might have an interest in the proposed protecting activities, adjacent and other landowners, non-governmental organisations and other organisations and / private persons.

The announcement of the proposed project was first made public on 27 March 2020 in the Highvelder Newspaper which was circulated covering the project area proposed. The respective landowners of all portions (excluding portion 07) within Welgelegen 221 IR were found via Windeed Search and consulted with the Background Information Document(BID) through phone calls and emails. Stakeholders have since been consulted from the 17 June 2020 to review and comment on the BID for the first 30 days of consultation. Site notices were plugged around the site during site visit on the 23 June 2020, which is also a notification form for landowners and adjacent landowners. The various portions within the Farm Welgelegen 221 IR. Singo Consulting Limited obtained the details for each landowner from the Title Deed search done. Landowner/s were contacted and informed of the said application via email .

AfriForum steun plaaslike skole met hulppakkette

Die burgerregteorganisasie AfriForum het in samewerking met AfriForum Jeug en AfriForum se takstrukture 'n skolehulppakketprojek van stapel gestuur om kwintiel 4- en 5-skole landwyd by te staan.

Die hulppakket het hierdie skole van die volgende voorsien: inligtingsstukke; plakkaat oor 'n veilige klaskamer en higiëne; 'n hulprongids vir ouers, onderwysers en leerders; elektroniese koorsmeters en handreiners. Dié behoefte by hierdie skole het ontstaan nadat Angie Motshekga, Minister van Basiese Onderwys, aankondig het dat die staat net kwintiel 1- tot 3-skole sal bystaan met die nodige hulpbronne en maatreëls wanneer dié skole heropen.

"AfriForum beskou hierdie hulppakket aan kwintiel 4- en

5-skole as 'n noodsaaklikheid. Hierdie is maar net nog 'n manier van die staat om teen skole wat gehalteoënderrig lewer, te diskrimineer. Hierdie skole ervaar ook finansiële druk en is nie in 'n posisie om al hierdie benodigdhede self te finansier nie. Hulp van die staat moet aan alle skole verleen word en nie net aan sekere skole nie," sê Carien Bloem, bestuurder vir onderwys by AfriForum.

"Die verspreiding van hierdie pakkette het in die laaste week van Mei geskied sodat skole gereed kan wees vir heropening. Talle versoekes is van skole ontvang wat hierdie pakkette benodig," voeg Bloem by. Ook in Streeknuus se omgewing is hierdie pakkette aan onder andere Laerskool Suidra en Laerskool Eloff gelewer.

Carel Botha oorhandig die skolehulppakket aan mevrou Louise van Niekerk, hoof van Laerskool Eloff

BO: COVID-19-plakkette met higiëne-aanwysings vir klaskamers. Hulprongids vir leerders, ouers en onderwysers is deel van die pakket.

Carel Botha en Anton du Plessis van Laerskool Suidra.

NOTICE OF PUBLIC PARTICIPATION FOR PROSPECTING RIGHT AND ENVIRONMENTAL AUTHORIZATION APPLICATION

ISIZULU
Isaziso senqubo yokulindlela ilungelo Lesicelo ngokomthetho Wezokulumbiwa kanye Nezimbilwa (i-MPRDA) (Umthetho 28 ka 2002) ngokuthola Amalahle ku NXENYE u-3, 4, 7, 14 & 18 we Fomu I- Middelburg Alias Mat Jesgodkuil 266 IR, esendaweni iMagisterial District Witbank, eSifundazweni sase Mpumalanga.

Email: kkelanamed@esgmail.com

The Proposed application directly affects portions owned by VANGGATFONTEIN BELEGGINGS PTY LTD (PTN 3 & 4), CYGNUS FARMING PTY LTD (PTN 7), KALLIE MADEE TRUST (PTN 14), RALETMONGQANE TRUST INV PTY LTD (PTN 18). Kindly contact us immediately so that a formal meeting can be arranged with you, to formally notify, discuss activity to be undertaken & conditions of accessing your land. Your assistance will be highly appreciated.

ENGLISH
Notice of the Prospecting Right Application Process as per the Minerals and Petroleum Resources Development Act (MPRDA) (Act 28 of 2002) for the prospecting of Coal On portion: 3, 4, 7, 14 & 18 of the Farm Middelburg Alias Mat Jesgodkuil 266 IR situated in the Magisterial District of Delmas, Mpumalanga Province.

INVITATION TO COMMENT

Notice is hereby given in terms of the Mineral and Petroleum Development Act (MPRDA) (Act 28 of 2002) and EIA regulations 2014, published under Government Notice No. 982 in Gazette No. 3822 of 4 December 2014, amended on 7 April 2017 that Aartoon Mining (Pty) Ltd has applied for a Prospecting Right for the above-mentioned mineral with DMR Ref: MP 305/11/2/15628 PR.

As part of the EIA process, more especially the public participation process for this proposed project, Interested and Affected Parties (I&APs) are invited to register and kindly submit any comments or concerns to reach Miss Nokuthula Nkosi by no later than the 03 of July 2020, using the contact details provided below. The public is also invited to review and comment on the Draft Basic Assessment Report and EMPR which will be available for review for a 30 days calendar period from 04 July 2020 - 02 August 2020. This report will be available at Delmas Library [Cnr. Sarel Cilliers & Van Riebeeck St, Delmas, 2210 (-26.150900, 28.683701)] & Leandra Public Library [Pretorius St, Gert Sibande, 2266(-26.382311, 28.883400)]. NOTICE OF PUBLIC PARTICIPATION FOR PROSPECTING RIGHT AND ENVIRONMENTAL AUTHORIZATION APPLICATION

Prospecting Right Application Process Notice in compliance with the Minerals and Petroleum Resources Development Act (Act 28 of 2002) for the proposed prospecting of Coal, Pseudo Coal, Clay & Shale on all portions (excluding portion 07) of the Farm Welgelegen 221 IR, situated under the Magisterial District of Delmas, Mpumalanga Province.

Notice is given as per the Mineral and Petroleum Development Act (MPRDA) (Act 28 of 2002) and EIA regulations 2017 (as amended), that RDH Holdings (Pty) Ltd applied for a Prospecting Right to prospect for the above mentioned minerals (DMR Ref: MP 305/11/2/(16307) PR).

INVITATION TO COMMENT

The I&APs are invited as part of the EIA process, in particular, the public participation process for this proposed project to register and kindly send any feedback or concerns to reach Ms Takalani Rakuambo by latest Sunday, the 12 July 2020 by making use of the contact details that are provided below. The public is also invited to review and comment on DBAR and EMPR. The draft EMPR report will be available for review for 30 calendar days from 13 July 2020 to 13 August 2020. This report will be available at Delmas Public Library [Cnr Sarel Cilliers & Van Riebeeck Street, Delmas, 2210] and a soft copy upon request from Singo Consulting (Pty) Ltd, using the details of the respective EAP below.

4 The Environmental attributes associated with the alternatives

(The environmental attributed described must include socio-economic, social, heritage, cultural, geographical, physical and biological aspects)

As discussed in the previous section, RDH Holdings applied for prospecting rights over the area interest in the close vicinity of the coal mines. Based on the outcomes of that study, the possibility to encounter further coal Reserves on the properties subject to this Prospecting Right Application was identified.

The company therefore applied for prospecting on the properties as discussed in this report to determine the presence of coal, pseudo coal ,clay and shale and whether these are feasible to enter into further studies towards a Mining Right. No alternative is available that will have an impact on a different setting than the environment discussion provided for below.

4.1 Baseline Environment

(a) Type of environment affected by the proposed activity

(Its current geographical, physical, biological, socio- economic, and cultural character).

4.2 Topography

The proposed prospecting area has flat to gentle elevation varies approximately 1585 metres above sea level (masl) as seen in the topology and hydrology map below. The topography is classed as relatively flat to gently undulating plains.

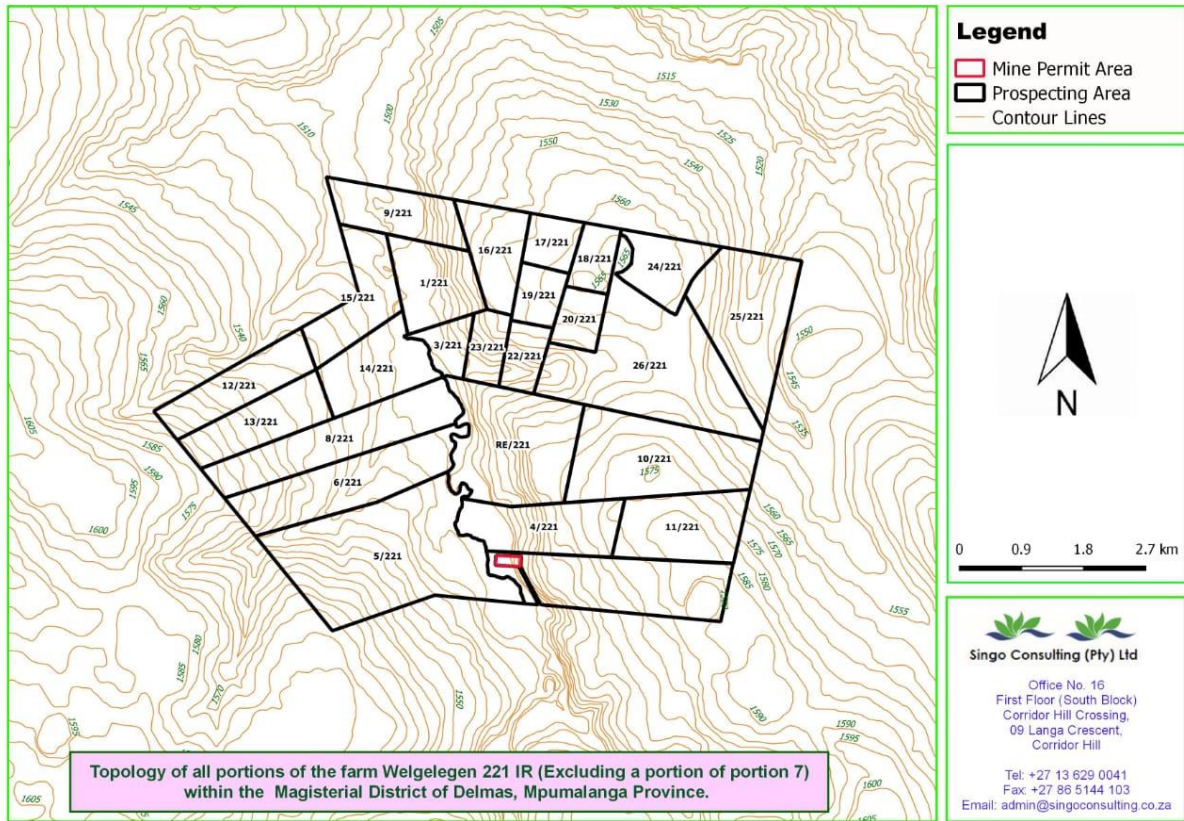

Figure 6: Topographical map

4.3 Climate

(i) Regional Climate

The study area is situated in the Mpumalanga Highveld Region climate with dry cold winters and warm summers with thunderstorms. Frost and hail occur frequently during winter and summer respectively.

(ii) Rainfall and Precipitation

The climate is typical Highveld with a mean annual rainfall of between 600 mm and 800 mm. Average maximum temperature ranges between 25°C and 29°C and the mean minimal temperature between -1.9°C and 2.0°C.

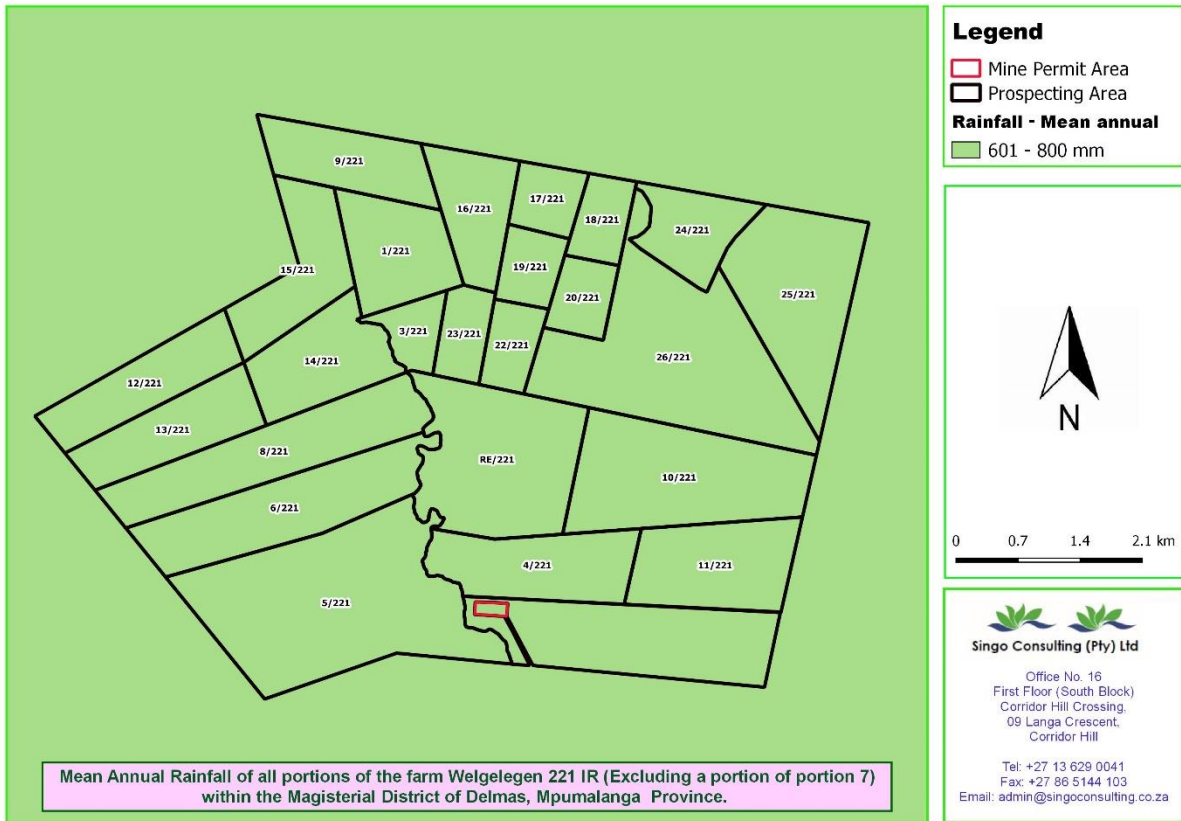

Figure 6: Annual Rainfall map

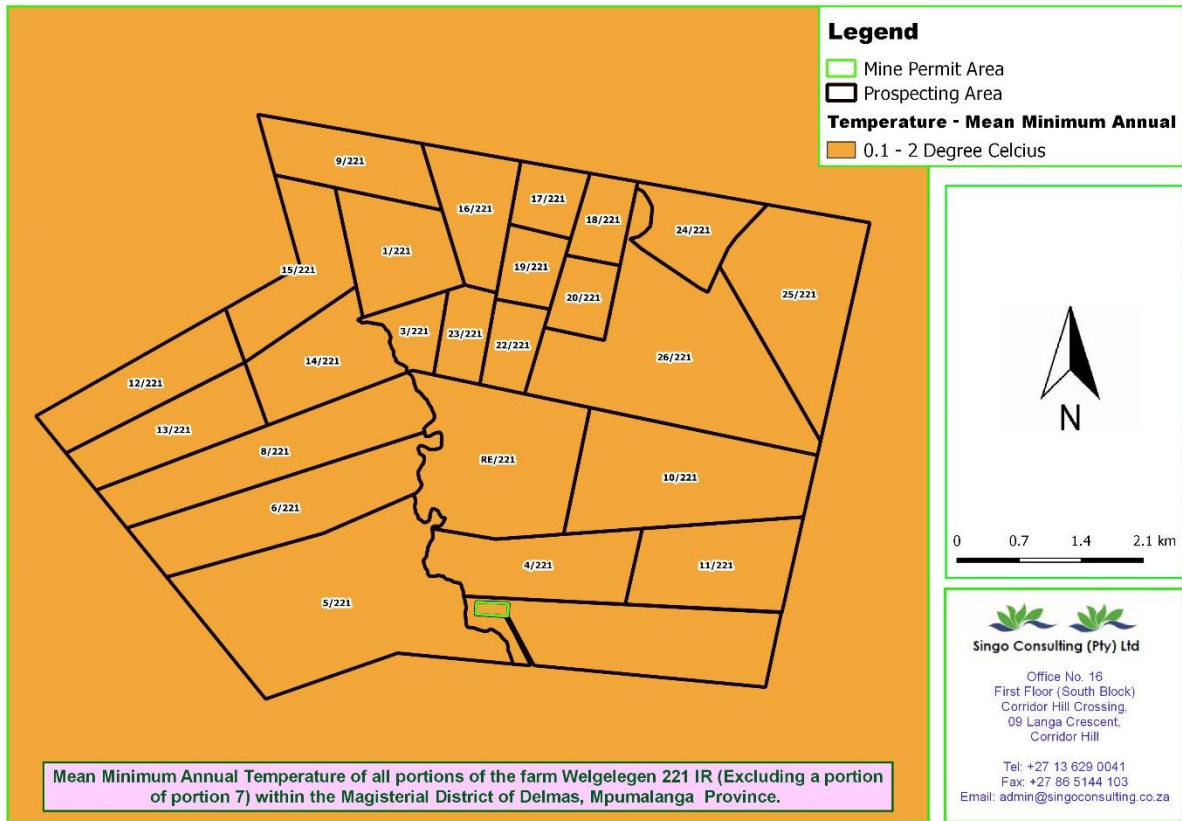

Figure 7: Annual Temperature map

4.4 Geology

The proposed project is aimed at exploring in-situ Coal, Pseudo coal, Shale and Clay seams and the majority of South Africa's Coal, Pseudo coal, Shale and Clay resources are found within the Eccca group belonging to the Karoo Super Group. The project is located within Karoo Super Group; this facilitates the process of Prospecting Right application.

The geology of the area south and southeast of Middelburg is mainly underlain by sediments of the Eccca Formation of the Karoo Supergroup. The lithology of the Eccca Formation consists of shale, shaly sandstone, griff, sandstone, conglomerate, Coal, Pseudo coal, Shale and Clay (in places near base and top). The area located south of Middelburg falls within the so-called Springs Witbank Coal, Pseudo coal, Shale and Clay field, which extends over a distance of some 180km from the Brakpan and Springs areas in the west, to Belfast in the east and about 40km in a north south direction. The irregular northern margin of the Coal, Pseudo coal, Shale and Clay field is defined by the sub-outcrop of the Vryheid Formation against the Pre-Karoo rocks of the Transvaal sequence, the Waterberg Group and volcanics associated with the Bushveld Igneous Complex. North of this margin there are few Coal, Pseudo coal, Shale and Clay bearing outliers of Karoo sediments. The southern margin of the Coal, Pseudo coal, Shale and Clay field is clearly defined over the central portion of the

area by pre-Karoo granite and felsite hills, which separate the Witbank Coal, Pseudo coal, Shale and Clay field from the Highveld Coal, Pseudo coal, Shale and Clay field from the Highveld Coal, Pseudo coal, Shale and Clay field. To the east and the west of the central portion, the southern boundary is poorly defined and the demarcation in the vicinity of Delmas, Leslie and Hendrina is rather arbitrary. The Selons River Formation of the Rooiberg Group, Transvaal Supergroup, is indicated to be present within the area south and southeast of Middelburg. It consists of a bed of sandstone or quartzite at the base as well as massive, red rhyolite of which the top shows flow bedding. It contains a few intercalations of sandstone, tuff, black rhyolite and breccia. A bed of dark, fine grained mudstone is present approximately in the middle of the sequence.

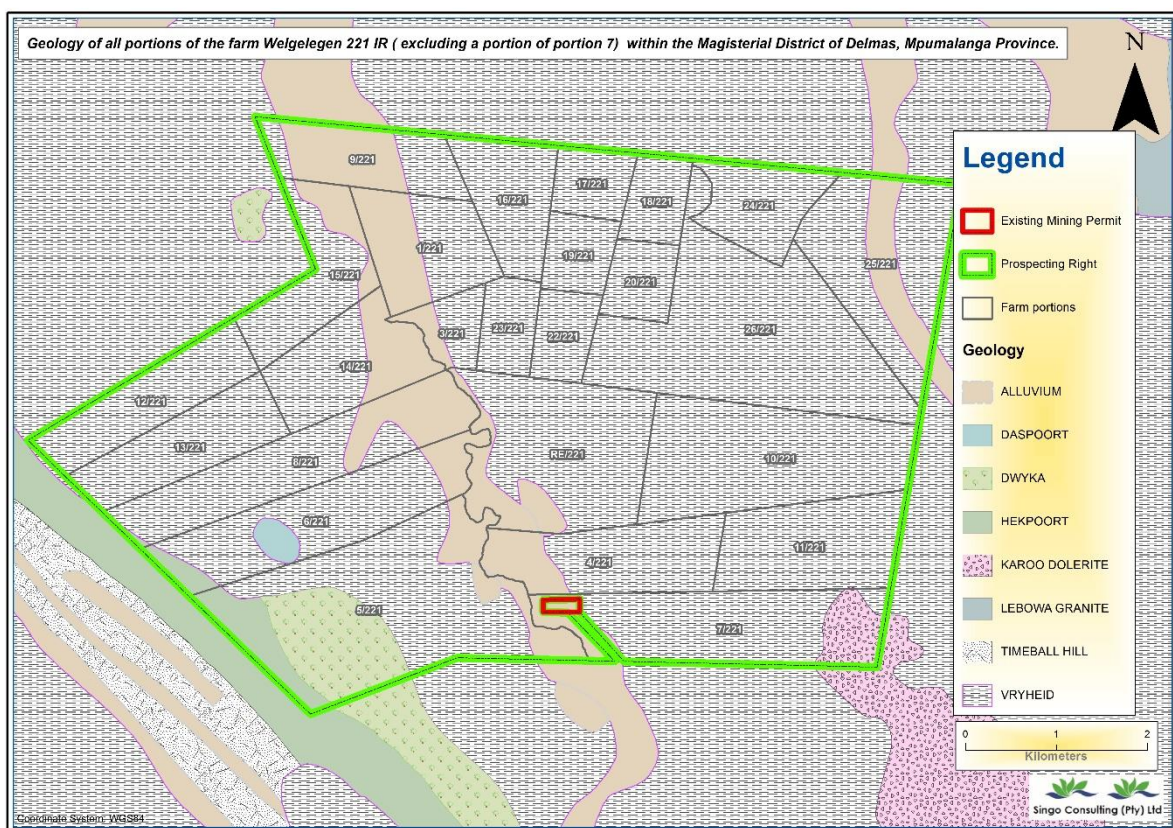

Figure 8: Geological map confirming the project falling within Karoo

Coal, Pseudo coal, Shale and Clay Seam Characteristics

The Vryheid Formation in the Ecca Group contains five bituminous Coal, Pseudo coal, Shale and Clay seams, numbered as No. 1 to No. 5 from bottom to top. The distribution of the No. 1 and 2 Seams is determined by the pre-Karoo topography, while the Nos. 4 and 5 Seams extent is controlled by the present-day surface. In some areas of the Witbank Coal, Pseudo

coal, Shale and Clay field, the No. 1 Seam is a source of high-grade steam Coal, Pseudo coal, Shale and Clay suitable for export after beneficiation. The No. 1 Seam frequently has very low phosphorus content and in such cases, it is usually mined separately as metallurgical feedstock.

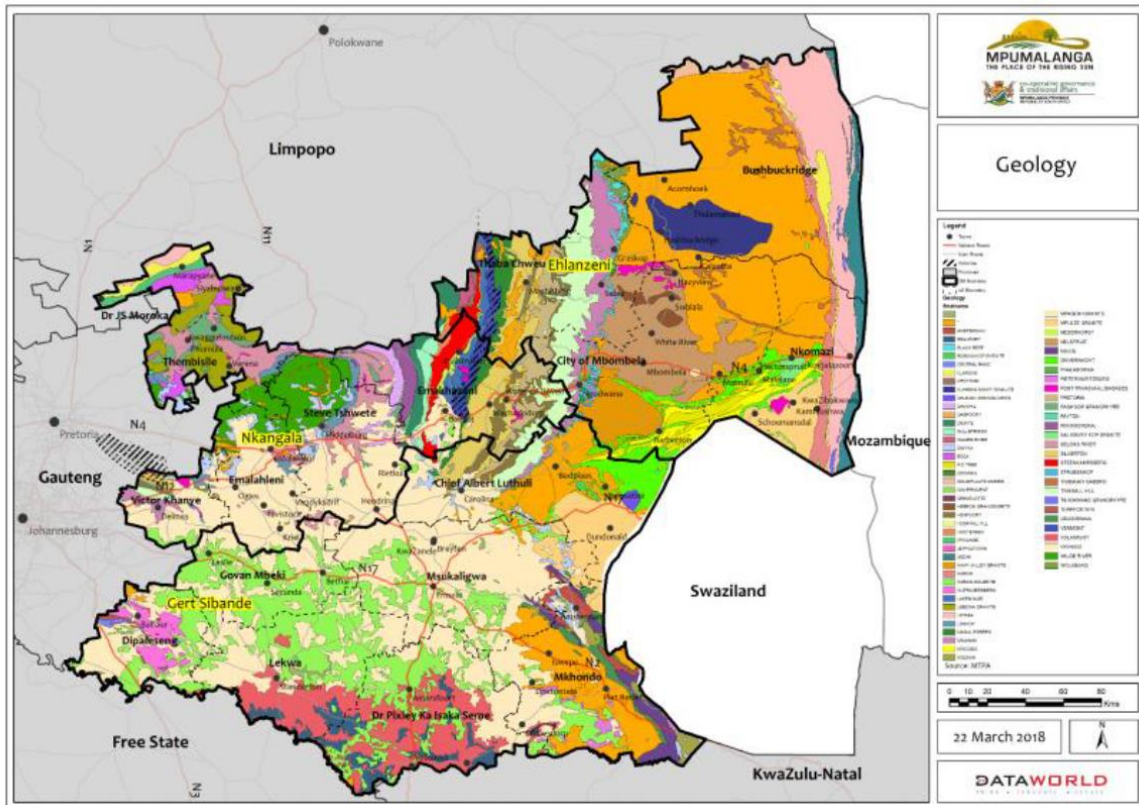

Figure 9: Geology of Mpumalanga Province

Figure 10: typical Coal, Pseudo coal, Shale and Clay seam of the area.

Jordan (1986) outlined that the No. 2 seam has 14.3 % ash content and Calorific value (CV) of 26.31 Mj/Kg. He further noted that the No. 2 seam qualities are not normally this good. It usually varies between 22-35 % ash content and CV 20-25 Mj/Kg. The No. 3 seam where mined is an export quality thermal Coal, Pseudo coal, Shale and Clay . It has a general CV of 28.1 Mj/Kg. According to Dekker and Van Wyk (2008), the No 4L seam is a low-grade bituminous Coal, Pseudo coal, Shale and Clay with raw ash content of 20-40% and 9

CV of 18-25 Mj/Kg. This Coal, Pseudo coal, Shale and Clay is suitable for local power generation but once beneficiated it can produce an export quality prime product. Hagelskamp et al (1988) noted that the No. 4U seam quality is extremely variable but is generally a low-grade bituminous Coal, Pseudo coal, Shale and Clay with ash content of 25% and CV of 25 Mj/Kg.

The project is underlain by rocks of varying age. The oldest rocks of the Waterberg Group are overlain by Karoo sediments (Mahanyele 2001). The target area is located within the Karoo Supergroup, a sequence of sediments. The target area is located in the Dwyka Group. The unit that will be explored is hosted within a sedimentary sequence of sandstone, arenite and shale. The Karoo Supergroup is a sedimentary sequence known for its Coal, Pseudo coal, Shale and Clay content and has been explored extensively in the KwaZulu-Natal and Mpumalanga provinces. There are still resources of Coal, Pseudo coal, Shale and Clay and other minerals in this rock sequence .

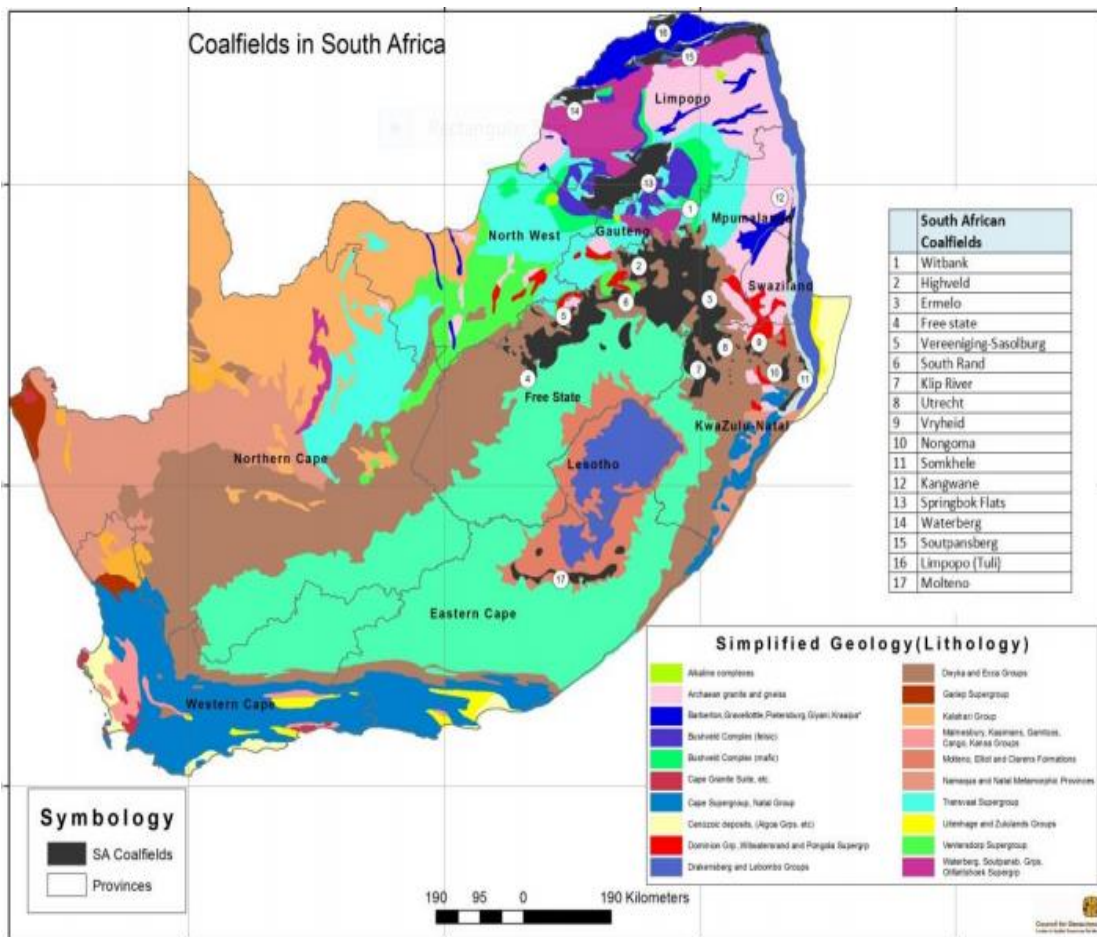

Figure 11: South African Coal, Pseudo coal, Shale and Clay fields

Land Capability and Land Use

The determination of the existing site specific and surrounding land use provides input into the process of impact identification and the establishment of closure objectives. Site specific land use has been confirmed as cattle farming and prospecting activities may present a disturbance to the cattle within the fenced property. Rehabilitation objectives to restore the site to pre-prospecting state must consider safety matters and an effective re-vegetation effort to reverse the impacts as far as is practicable.

Land Capability and Land use

Mainly extensive game grazing due to climatic constraints for crop production. Crop production limited to areas of homogenous deep soils with irrigation. Irrigation land uses are limited due to the lack of large volumes of water. Predominantly extensive grazing due to climatic constraints in terms of dryland crop production. Due to the level terrain water related soil erosion is not a major factor. Game lodge business is central in the area.

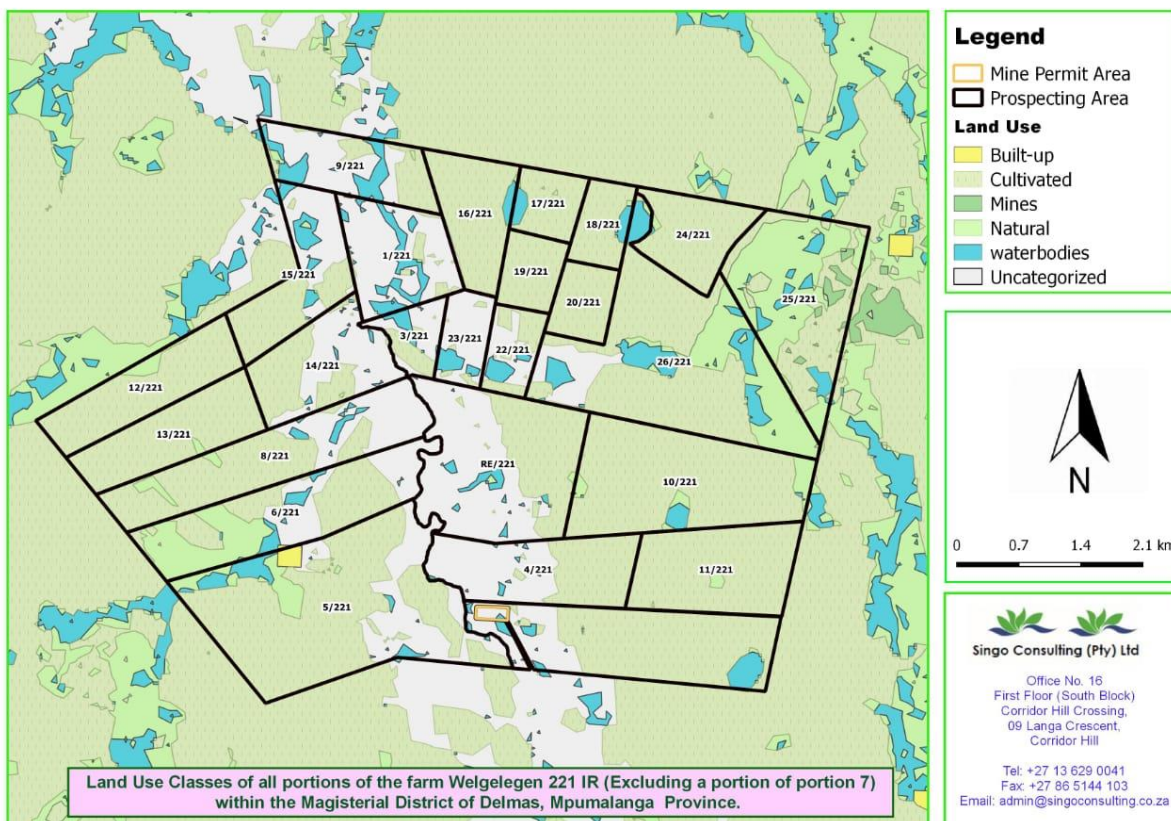

Figure 12: Land use map

Soil

Predominantly deep sandy to sandy loam soils that are eutrophic. Soil colours vary from red through yellow brown to bleached indicating a potential wetness gradient. Soils in higher lying areas lack signs of clay movement whereas soils in lower lying landscape positions often have varied cutanic character indicating signs of incipient soil formation. Shallow and rocky areas occur (not widespread) and are associated with incised drainage channels or stream beds.

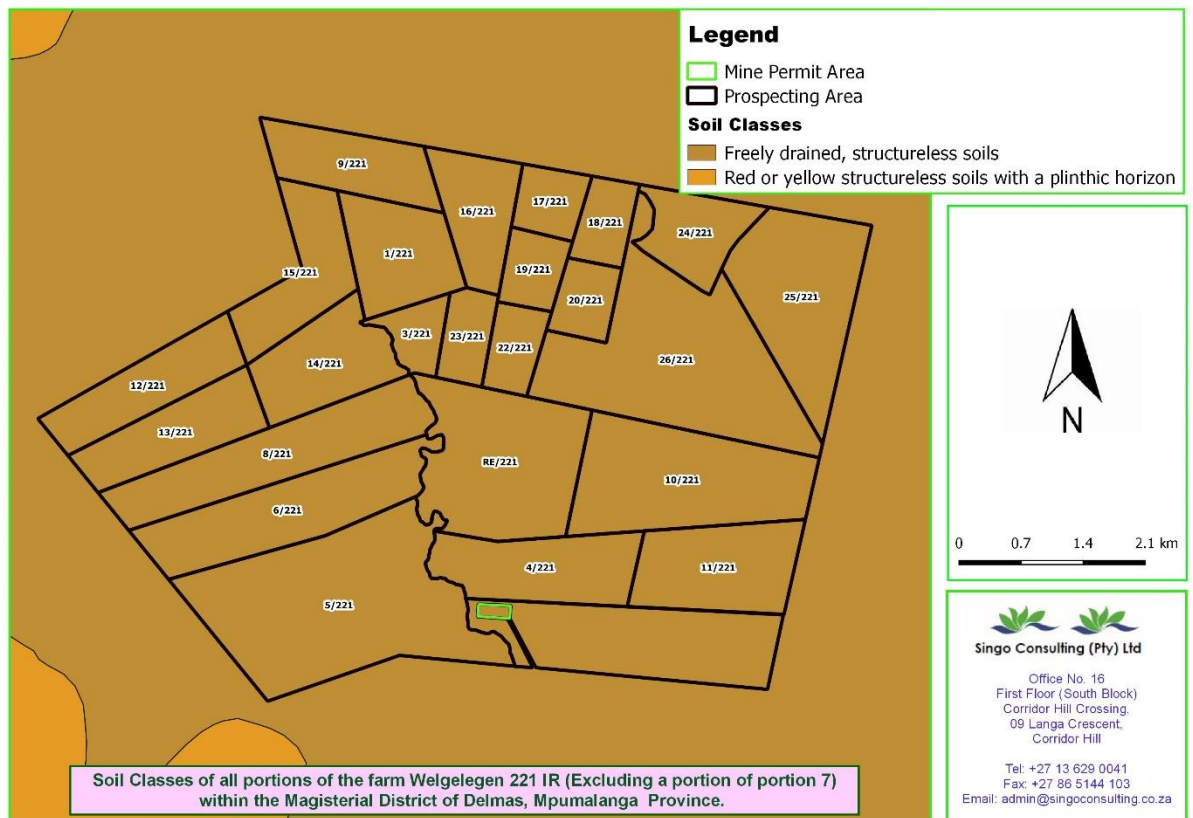

Figure 13: Soil map

Figure 14: Type of soil found within the proposed project area

Surface Water and Ground Water

Welgelegen 221 IR falls within the Olifants River Catchment (quaternary catchment B20E) and is situated in the headwaters of the Brugspruit and a tributary (known as the western tributary). This drainage line is a tributary of the Klipspruit north of the project site which conjoins with the Klip River in a northerly direction to ultimately feed into the Olifants River. To the south of the project site on the Farm Welgelegen 221 IR, the Grootspuit and its tributaries flow towards the Saalklapspruit which flows west of the farm. It is not foreseen that the proposed mine will have any impact on this tributary since it will be effectively outside the 1:100-year flood-line of this specific water course.

There are several wetlands surrounding the prospecting area which are as follows: channelled valley-bottom wetland, unchanneled valley-bottom wetland, flat, seep, perennial and non-perennial river. The channelled valley-bottom wetland and unchanneled valley-bottom wetland are approximately 100m- 200m in vicinity of the prospecting area. However, there are streams/ rivers observed within the prospecting area.

The rock types underlying the study site can be divided into two distinct aquifers, namely a shallow weathered aquifer and a deeper fractured aquifer (source: Trans alloys Groundwater Model – MVB Groundwater Consulting).

Shallow aquifer: This aquifer mainly comprises unconsolidated sand and clay. The depth of weathering based on the geological borehole logs and some field investigations varies

between 0m to 12m in depth. Recharge to this aquifer occurs from rainfall as well as from surface water sources. (source: Trans alloys Groundwater Model – MVB Groundwater Consulting).

Deep fractured aquifer: A deeper fractured aquifer also underlies the study area in the fresh shale, sandstone and coal seams underlying the weathered material. The primary porosity of the Ecca Group rocks does not allow significant groundwater flow, except where the porosity has been increased by subsequent secondary structures, such as faults and dykes. No dykes were however, detected in the study area.

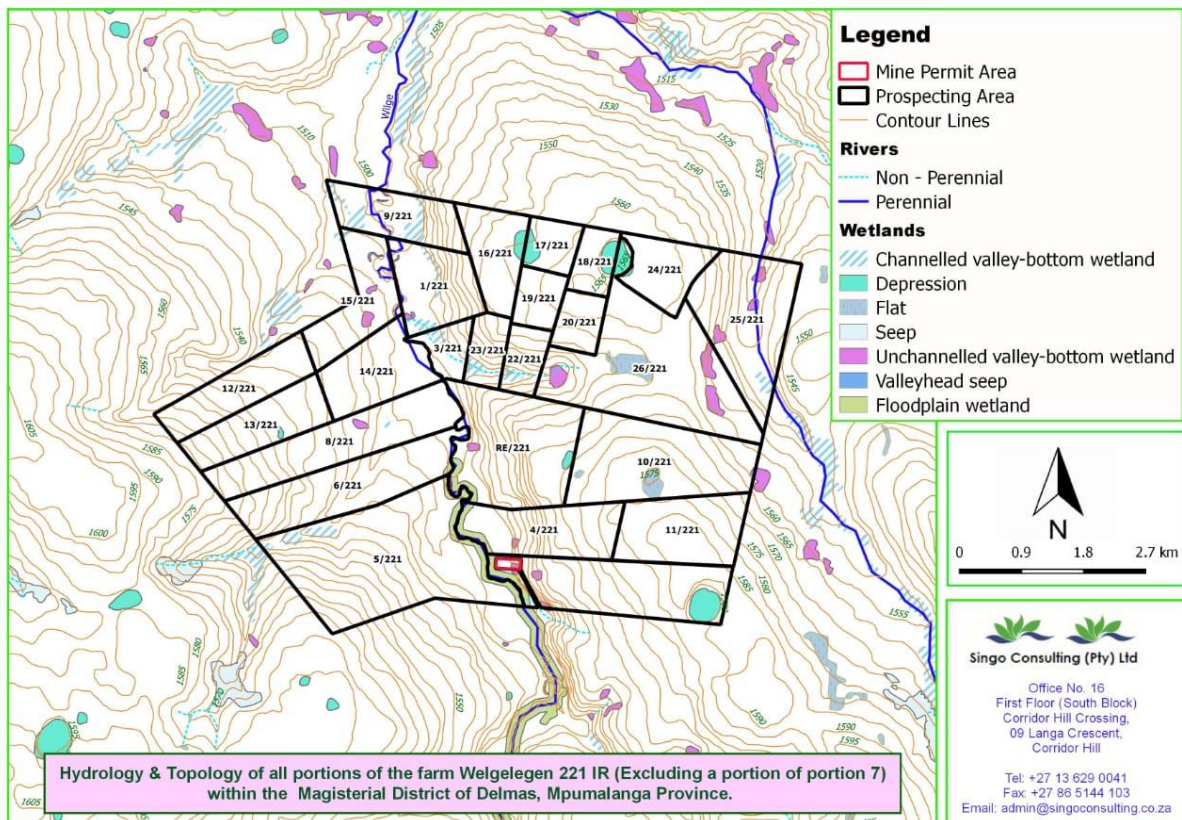

Figure 15: Surface water conditions

During the desktop study, hydrological map in figure above was produced. The hydrological map illustrates that the project is under water management area of Olifants . The project area has perennial or non-perennial river flowing through the area. There is a perennial river flowing on the southern part of the project area.

The hydrological map above illustrates channelled valley-bottom wetlands. This project falls within Quaternary catchment boundary B20E. The wetlands show where the water shows settlement. Wetlands are like giant sponges. They store water collected through wet periods, reduce flooding. In addition, wetlands provide habitat for wildlife and healthy wetlands naturally attract wildlife. Runoff for the catchment is 21.00 mcm within an area of 611.9 km².

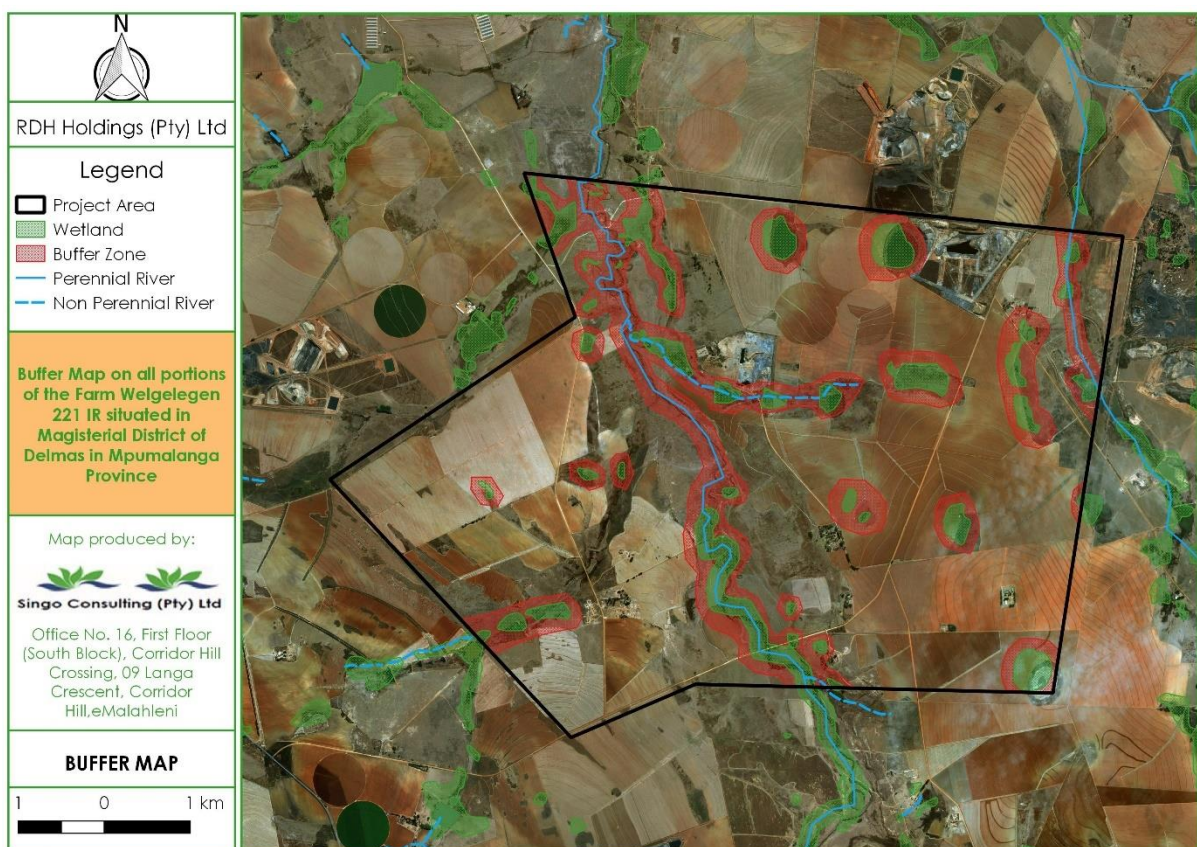

Figure 16: Buffer map of the project area

Biodiversity

The map below in figure presenting critical biodiversity of the area, it is confirmed that the permit is situated in heavily modified, Moderately Modified-Old lands and other natural areas. There are no critical species will be affected by the proposed project as there are no critical plants and sensitivity within and around the proposed prospecting area. Therefore, no critical species will be harmed even though identified during the operation of proposed project as Eco will be onsite every day to monitor the operation. Although the area is characterised by Moist Cool Highveld Grassland moist Cool Highveld grassland according to the GIS specialist, the area is heavily modified by other activities which leads to vanished of these Moist Cool Highveld grassland mentioned on the vegetation type section.

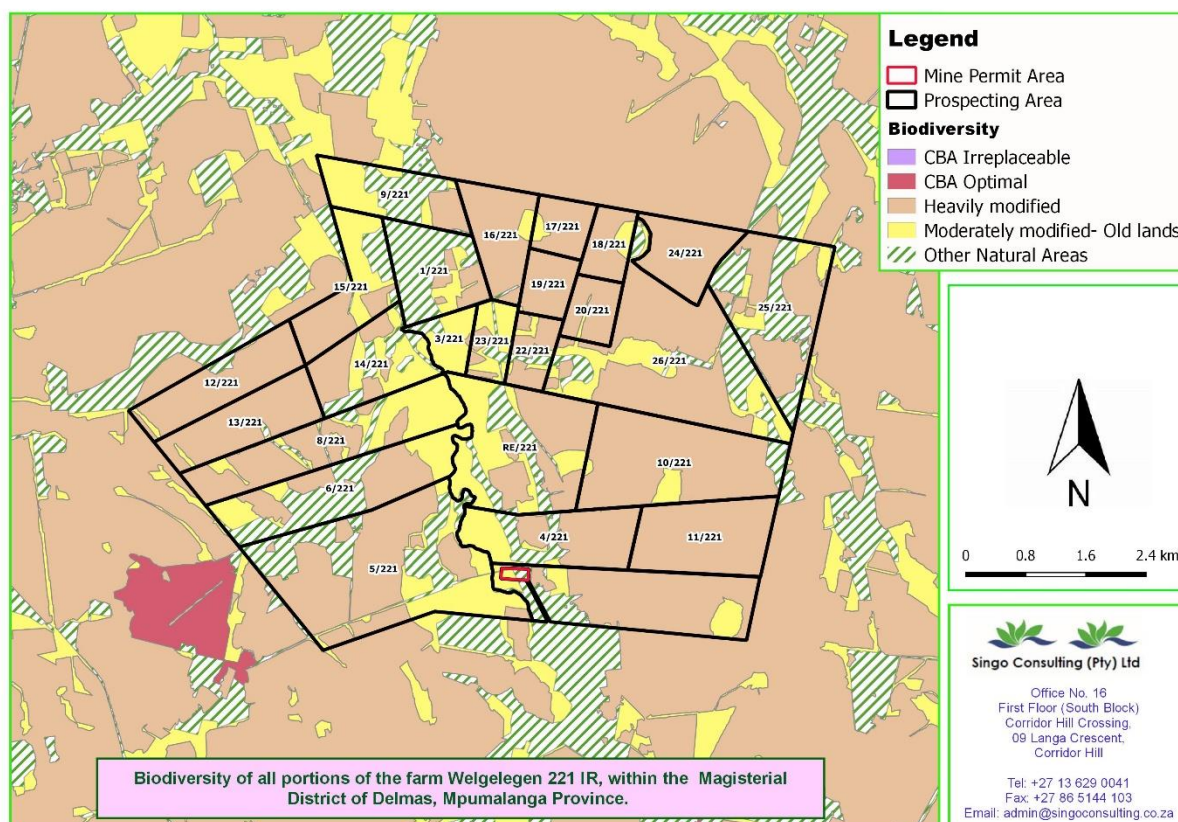

Figure 17: Critical Biodiversity area

Natural Vegetation

Although no sensitive, protected or endangered species were identified during the site inspection and it is also confirmed that no critical species within the proposed applied area, it is proposed that the applicant remove as little vegetation as possible. This will lessen the area

to be managed for erosion and weed invasion purposes. Neither Mucina, Rutherford & Powrie (2005) nor van Rooyen & Bredenkamp (1996) in their literature highlight any species of concern. Van Rooyen & Bredenkamp (1996) describes the moist sandy highveld grassland and moist Cool Highveld grassland vegetation sort in its pristine condition as dominated by entire stands of Redgrass Themeda triandra. Though the likelihood cannot be dominated out, no species of concern was found throughout field surveys since the area has heavily modified, moderately modified and other activities.

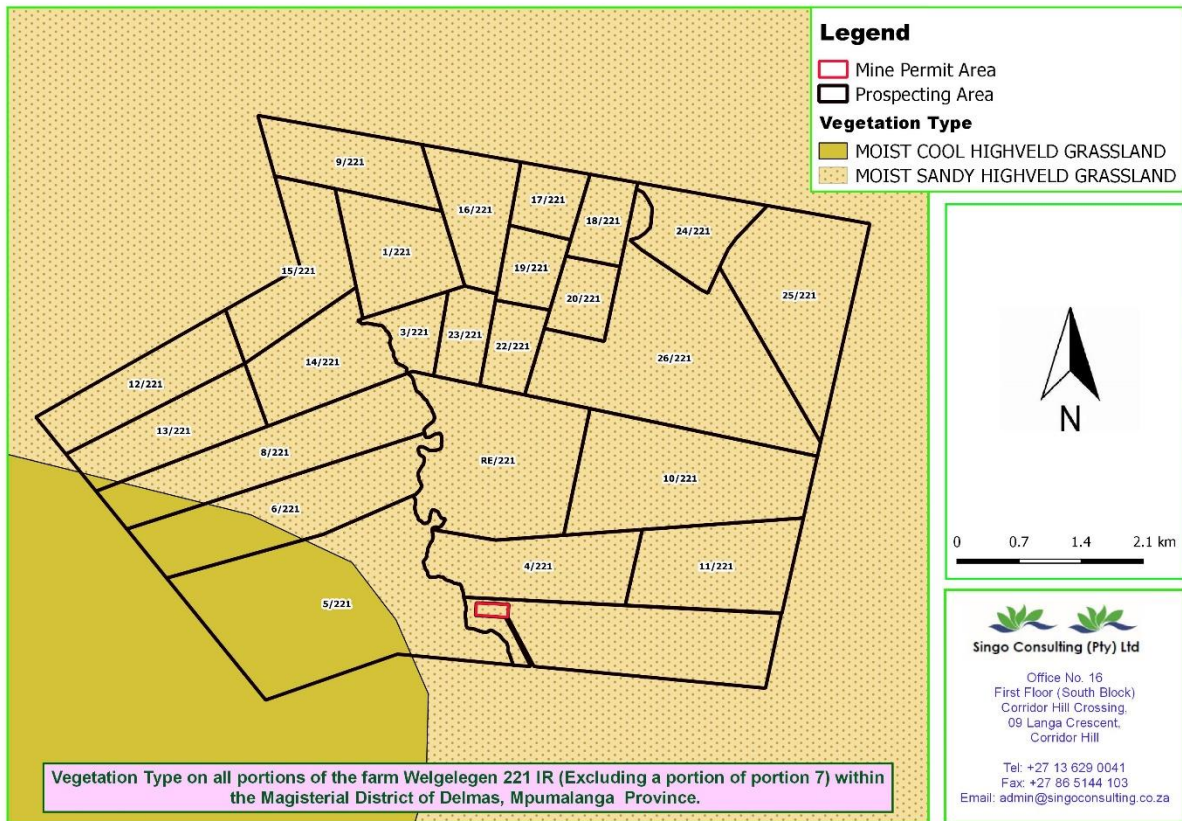

Figure 18: Vegetation map (project falls within Savanna).

Figure 19: *Type of vegetation in and around the prospecting area*

Figure 20: Type of animals found on site during assessment.

Fauna

Domestic fauna was observed during site assessment such as cows and birds like doves although no wild fauna was observed at the time of the site inspection. Should any wild fauna enter the mining area there will be no impact on the proposed mining activity as they will be able to move away or through the site, without being harmed.

No protected or red data species could be identified within the footprint area of the proposed processing area. The fauna at the site will not be impacted by the proposed processing activity, as they will be able to move away from or through the site unharmed. Workers must be educated and managed to ensure that no fauna at the site is harmed. Upon commencement of the proposed processing activities, the processing area will be fenced off to prevent livestock, such as cattle, goats and sheep, from wandering into the work areas.

Heritage Resources

Heritage resources such as Stone Age sites, rock paintings and engravings; stone tools; small, inconspicuous stone walled sites from the Late Iron Age farming communities; formal and informal graveyards, etc may occur in the study area.

However, no heritage sites or artefacts were discovered within or near the prospecting area during site assessment. Should any heritage resources of significance be exposed during the

construction or rather operational phase of the project, the South African Heritage Resources Agency (SAHRA) should be notified immediately, all development activities should be stopped, and an archaeologist accredited with the Association for Southern African Professional Archaeologist (ASAPA) should be notified to determine appropriate mitigation measures for the discovered finds. This may include obtaining the necessary authorisation (prospecting) from SAHRA to conduct the required mitigation measures.

Socio-Economic Environment

The Victor Khanye Local Municipality Gross Domestic Product (GDP) is forecast to grow by 3.4% per annum over up to and including 2016, although this is lower than the District and Province projections. The forecast is very optimistic if we consider that the historic growth rate in the period 1996-2011 remained relatively low at 2.0% per annum.

Figure 21: Forecasted GDP growth for 2011-2016. Source 2011

Agriculture, transport, community services, finance and mining will be the main contributors to the Victor Khanye Local Municipality economic growth in the period up to 2016. The municipality is a major maize producing area. Annual maize production is calculated at between 230 000 and 250 000 metric tons.⁴ Mining activities are concentrated on coal and silica. About 3 million metric tons of coal and 2 million metric tons of silica are mined annually in the municipal area. With respect to Gross Value Added (GVA) - a measure in economic terms of the value of goods and services produced in an area, industry or sector of an economy - the Victor Khanye Local Municipality contribution to the Mpumalanga province is reflected at 2.0% in 2011 at an estimated value of 3.4 billion.

The projection going forward is a GVA index of 1, 7% reflecting a reduction in the value of economic growth which is contrary to the GDP index projections. With respect to the GVA contribution to the overall Nkangala District's economic basket the municipalities input of 4, 5% is relatively small compared to Emalahleni and Steve Tshwete, which contribute a collective 83, 9% on a 54:46 ratio basis. The major economic breadbasket for the municipality with regards to value added goods are Mining and associated Transport, and Manufacturing playing a significant role. The regeneration of power stations, as well as the new Kusile power station in the Victor Khanye area, could serve as a catalyst to increased demand for coal reserves in the Nkangala area. The industrial potential of agro-processing should also be promoted to capitalise on its strategic location in relation to the major transport network.

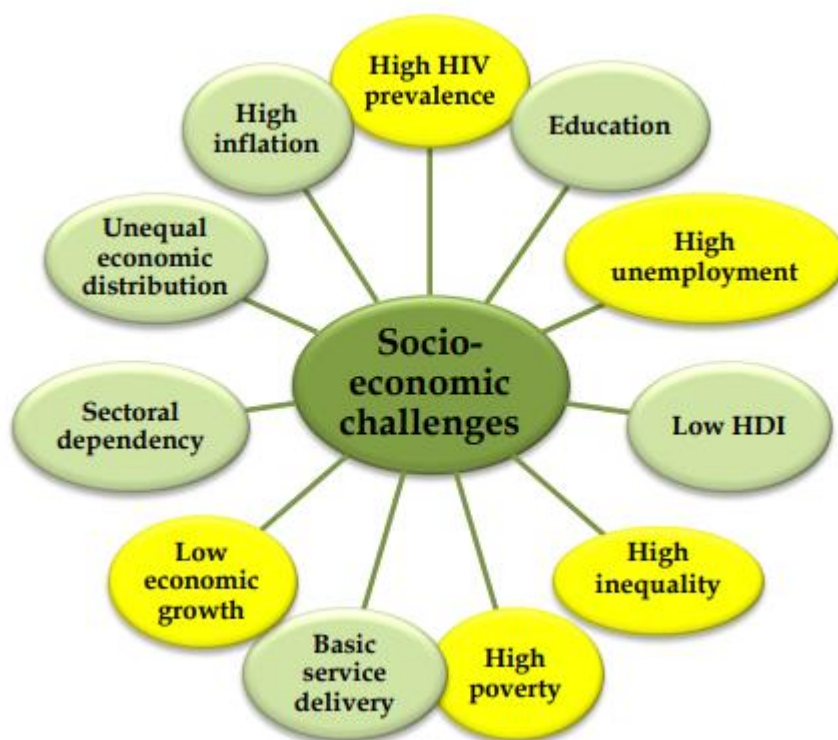

Figure 22: Socio-economic challenges in Mpumalanga Province

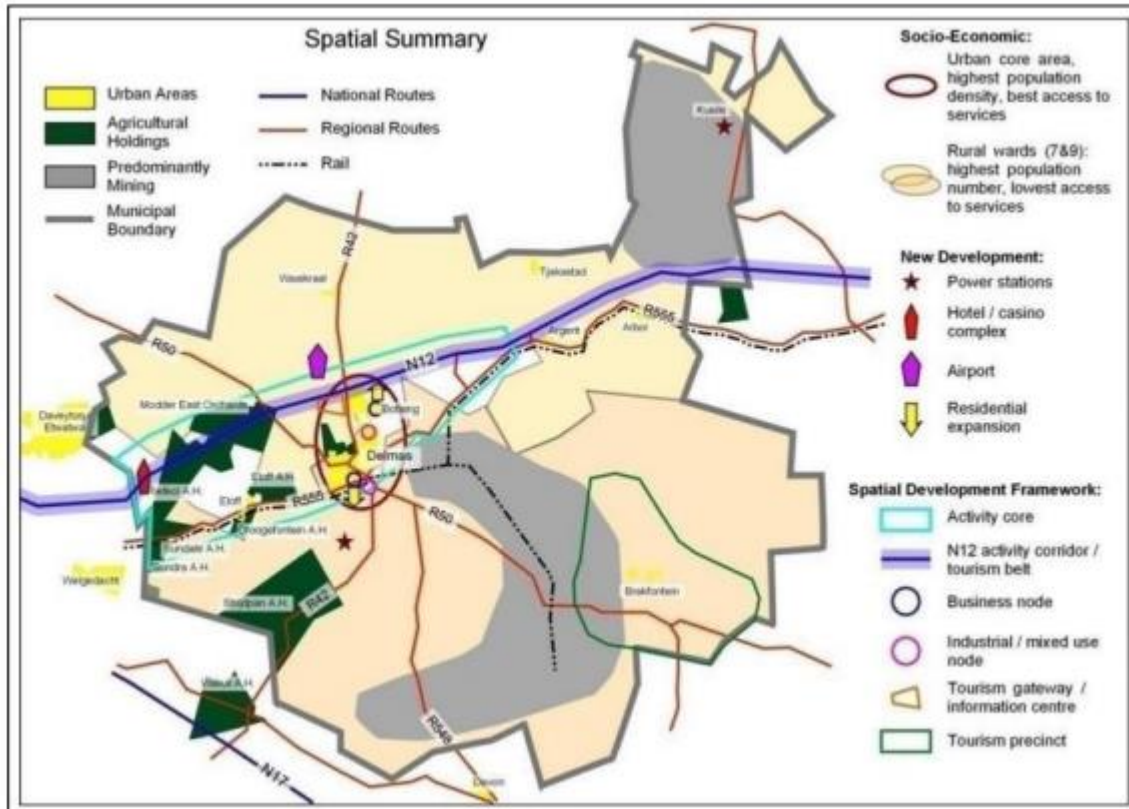

Figure 23: Locality map of Victor Kanye Local Municipality. Source: VLKM IDP 2017-2022

a) Population demographics

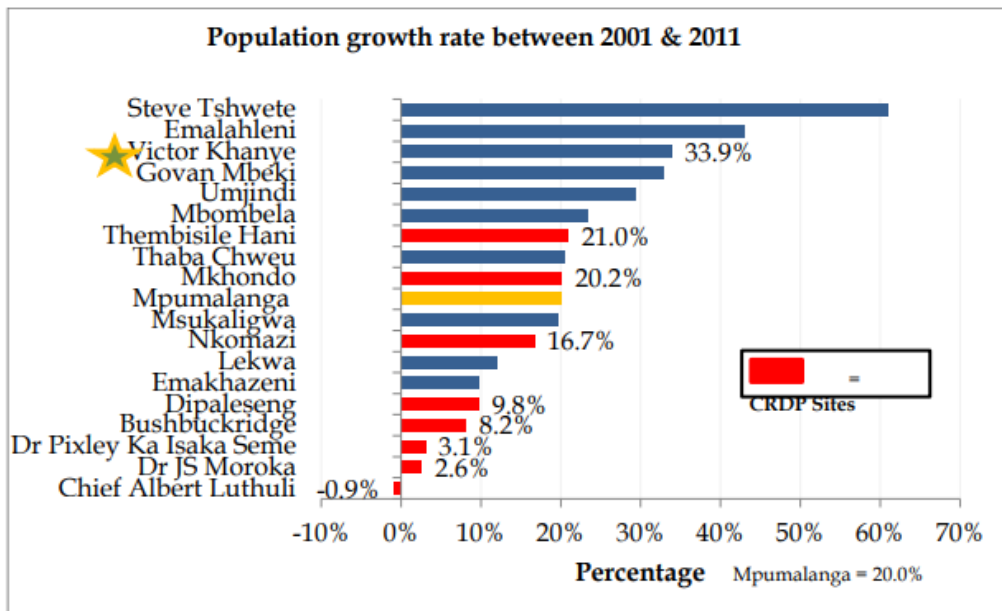

Figure 24: Population growth Source: IDP 2011

The Victor Khanye Local Municipality reflects the third largest population growth in Mpumalanga province, indicative of the migration of labour attracted to the area as a result of the potential for economic growth and resultant job opportunity.

(b) Education

The Victor Khanye Local Municipality has an inherited problem namely that the low-income levels per household in the community correlate to the low education levels in the area. Statistics show that 25% of the population above 15 years of age has had no schooling or did not complete primary school. Of this number 5,528 are basically illiterate and therefore future meaningful employment prospects are virtually impossible. A further 41% of the population did not complete the schooling curriculum and therefore did not reach the level of matric.

Highest level of education obtained in Victor Khanye Local Municipality	
No schooling	5 528
Less than Grade 7	6 164
Grade 7	2 234
Less than Grade 12	16 610
Matric/ Grade 12	12 719
Matric plus	3 348
Total	46 603

Table 6: Levels of education Source: Stats SA

(c) Employment and income

The latest statistic reflects that the employment level in the Victor Khanye Local Municipality is currently at 28, 9%. Based on the 2011 definition of Economically Active Population (EAP) of 30,415 the unemployment rate is reflected at 28, 2%, this represents an overall gain in employment compared to 2001.

Leading industries in employment comprise of Trade (18, 7%), Agriculture (18, 2%) and Community Services contributing (14, 3%). However, the former two sectors are experiencing a decline in employment in the last few years whilst Community Services has increased and Mining as an employer has grown and now contributes 12, 7%.

Figure 25: Unemployment rate by Local Municipal Area. Source 2011

(d) HIV, health and wellbeing

Mpumalanga is one of the three (3) Provinces with the highest infection rates of HIV/AIDS. Latest statistics for the Province reveal that Victor Khanye Local Municipality has 27 increased infection rates as measured in pregnant women tested, of 55%, the 3rd highest in the province. With respect to HIV prevalence, excluding pregnant women the trend reflected a decrease to 23.0%.

Figure 26: HIV/AIDS prevalence. Source: IDP 2011

4.5 Description of the current land uses

Based on the site visits conducted it can now be confirmed that the land portion included in the prospecting right application is currently utilized for cattle, Goats, Sheep and wood harvesting. The site has bare land, and there is little evidence of surrounding land use practices. Consequently, the site vegetation has recovered well, and the tree component. This was confirmed during a site visit and stakeholder investigation process conducted on the 23 June 2020.

4.6 Description of specific environmental features and infrastructure on the site

Several water courses have been identified to occur within the boundaries of the proposed prospecting site. These should be avoided and where avoidance is not possible, impacts must be appropriately managed and remedied.

Based on the outcomes of the initial prospecting phases (non-site disturbing activities), the location of any on-site drilling will be determined (site disturbing activities) and the impacts on the identified water courses will subsequently be determined.

The Basic Assessment and Environmental Management Plan must be amended to include direct and indirect impacts on any water courses if any prospecting activities are undertaken within such areas or within 500 m of any water course.

4.7 Environmental and current land use map

(Show all environmental, and current land use features)

Please refer to topography and water resources and vegetation types), indicating the environmental and land use features associated with the proposed prospecting area.

5. Impacts and risks identified including the nature, significance, consequence, extent, duration and probability of the impacts, including the degree to which these impacts can be reversed

(Provide a list of the potential impacts identified of the activities described in the initial site layout that will be undertaken, as informed by both the typical known impacts of such activities, and as informed by the consultations with affected parties together with the significance, probability, and duration of the impacts. Please indicate the extent to which they can be reversed, the extent to which they may cause irreplaceable loss of resources, and can be avoided, managed or mitigated).

The following table illustrates the potential impacts associated with each activity.

Table 7: Potential impacts per activity and listed activities

Phase		Activities	Potential Impacts	Reversible	Irreplaceable Damage	Can impact be avoided
Phase 1: Data Acquisition and Desktop Study						
Phase 1: Data Acquisition	N/A	Data collection and assessment (desktop only)	1. None identified.	N/A	N/A	N/A

5.1 Methodology used in determining and ranking the nature, significance, consequences, extent, duration and probability of potential environmental impacts and risks

(Describe how the significance, probability, and duration of the aforesaid identified impacts that were identified through the consultation process was determined in order to decide the extent to which the initial site layout needs revision).

Criteria of assigning significance to potential impacts

The evaluation of impacts is conducted in terms of the criteria detailed in Table 15 to Table 20. The various environmental impacts and benefits of this project are discussed in terms of impact status, extent, duration, probability, and intensity. Impact significance is regarded as the sum of the impact extent, duration, probability and intensity and a numerical rating system has been applied to evaluate impact significance; therefore, an impact magnitude and significance rating is applied to rate each identified impact in terms of its overall magnitude and significance.

To adequately assess and evaluate the impacts and benefits associated with the project it was necessary to develop a methodology that would scientifically achieve this and to reduce the subjectivity involved in making such evaluations. To enable informed decision-making, it is necessary to assess all legal requirements and clearly defined criteria in order to accurately determine the significance of the predicted impact or benefit on the surrounding natural and social environment.

Impact Status

The nature or status of the impact is determined by the conditions of the environment prior to construction and operation. A discussion on the nature of the impact will include a description of what causes the effect, what will be affected and how it will be affected. The nature of the impact can be described as negative, positive or neutral.

Table 8: Status of Impact

RATING	DESCRIPTION	QUANTITATIVE RATING
Positive	A benefit to the receiving environment.	P
Neutral	No cost or benefit to the receiving environment.	-
Negative	A cost to the receiving environment.	N

Impact Extent

The extent of an impact is considered as to whether impacts are either limited in extent or if it affects a wide area or group of people. Impact extent can be site specific (within the boundaries of the development area), local, regional or national and/or international.

Table 9: Extent of Impact

RATING	DESCRIPTION	QUANTITATIVE RATING
Low	Site Specific; Occurs within the site boundary.	1
Medium	Local; Extends beyond the site boundary; Affects the immediate surrounding environment (i.e. up to 5 km from the Project Site boundary).	2
High	Regional; Extends far beyond the site boundary; Widespread effect (i.e. 5 km and more from the Project Site boundary).	3
Very High	National and/or international; Extends far beyond the site boundary; Widespread effect.	4

Impact Duration

The duration of the impact refers to the time scale of the impact or benefit.

Table 10 : Duration of Impact

RATING	DESCRIPTION	QUANTITATIVE RATING
Low	Short term; Quickly reversible; Less than the project lifespan; 0 – 5 years.	1
Medium	Medium term; Reversible over time; Approximate lifespan of the project; 5 – 17 years.	2
High	Long term; Permanent; Extends beyond the decommissioning phase; >17 years.	3

Impact Probability

The probability of the impact describes the likelihood of the impact actually occurring.

Table 11: Probability of Impact

RATING	DESCRIPTION	QUANTITATIVE RATING
Improbable	Possibility of the impact materialising is negligible; Chance of occurrence <10%.	1
Probable	Possibility that the impact will materialise is likely; Chance of occurrence 10 – 49.9%.	2
Highly Probable	It is expected that the impact will occur; Chance of occurrence 50 – 90%.	3
Definite	Impact will occur regardless of any prevention measures; Chance of occurrence >90%.	4
Definite and Cumulative	Impact will occur regardless of any prevention measures; Chance of occurrence >90% and is likely to result in in cumulative impacts	5

Impact Intensity

The intensity of the impact is determined to quantify the magnitude of the impacts and benefits associated with the proposed project.

Table 12: Intensity of Impact

RATING	DESCRIPTION	QUANTITATIVE RATING
Maximum Benefit	Where natural, cultural and / or social functions or processes are positively affected resulting in the maximum possible and permanent benefit.	+ 5
Significant Benefit	Where natural, cultural and / or social functions or processes are altered to the extent that it will result in temporary but significant benefit.	+ 4
Beneficial	Where the affected environment is altered but natural, cultural and / or social functions or processes continue, albeit in a modified, beneficial way.	+ 3
Minor Benefit	Where the impact affects the environment in such a way that natural, cultural and / or social functions or processes are only marginally benefited.	+ 2

Negligible Benefit	Where the impact affects the environment in such a way that natural, cultural and / or social functions or processes are negligibly benefited.	+ 1
RATING	DESCRIPTION	QUANTITATIVE RATING
Neutral	Where the impact affects the environment in such a way that natural, cultural and / or social functions or processes are not affected.	0
Negligible	Where the impact affects the environment in such a way that natural, cultural and / or social functions or processes are negligibly affected	- 1
Minor	Where the impact affects the environment in such a way that natural, cultural and / or social functions or processes are only marginally affected.	- 2
Average	Where the affected environment is altered but natural, cultural and / or social functions or processes continue, albeit in a modified way.	- 3
Severe	Where natural, cultural and / or social functions or processes are altered to the extent that it will temporarily cease.	- 4
Very Severe	Where natural, cultural and / or social functions or processes are altered to the extent that it will permanently cease.	- 5

Impact Significance

The impact magnitude and significance rating are utilised to rate each identified impact in terms of its overall magnitude and significance.

Table 13: Impact Magnitude and Significance Rating

IMPACT	RATING	DESCRIPTION	QUANTITATIVE RATING
Positive	High	Of the highest positive order possible within the bounds of impacts that could occur.	+ 12 – 16
	Medium	Impact is real, but not substantial in relation to other impacts that might take effect within the bounds of those that could occur. Other means of achieving this benefit are approximately equal in time, cost and effort.	+ 6 – 11

IMPACT	RATING	DESCRIPTION	QUANTITATIVE RATING
	Low	Impacts is of a low order and therefore likely to have a limited effect. Alternative means of achieving this benefit are likely to be easier, cheaper, more effective and less time consuming.	+ 1 – 5
No Impact	No Impact	Zero impact.	0
Negative	Low	Impact is of a low order and therefore likely to have little real effect. In the case of adverse impacts, mitigation is either easily achieved or little will be required, or both. Social, cultural, and economic activities of communities can continue unchanged.	- 1 – 5
	Medium	Impact is real, but not substantial in relation to other impacts that might take effect within the bounds of those that could occur. In the case of adverse impacts, mitigation is both feasible and fairly possible. Social cultural and economic activities of communities are changed but can be continued (albeit in a different form). Modification of the project design or alternative action may be required.	- 6 – 11
	High	Of the highest order possible within the bounds of impacts that could occur. In the case of adverse impacts, there is no possible mitigation that could offset the impact, or mitigation is difficult, expensive, time-consuming or a combination of these. Social, cultural and economic activities of communities are disrupted to such an extent that these come to a halt.	- 12 - 16

5.2 The positive and negative impacts that the proposed activity (in terms of the initial site layout) and alternatives will have on the environment and the community that may be affected

(Provide a discussion in terms of advantages and disadvantages of the initial site layout compared to alternative layout options to accommodate concerns raised by affected parties)

The property provides the ideal geological formation for the presence of the minerals applied for thus is regarded as the preferred site and alternative sites are not considered.

Positive Impacts associated with the proposed prospecting

Discovery of an economically viable mineral resources

Employment contributing to the economy.

Positive contribution to the South African Gross Domestic Product

Negative Impacts associated with the proposed prospecting

Clearance of Vegetation

Generation and disposal of waste

Contamination of surface and ground water

Noise

Pollution of Soil

Erosion due to vegetation clearance.

Compacting of soil

Potential impact on heritage resources

No graves have been identified through desktop investigations. However, one local said they are there. Though a Heritage Impact Assessment was not undertaken as part of the development of the Environmental Management Plan, these will be of heritage and/or archaeological value.

There is no potential for the presence of stone kraals are also likely based on the past studies in the surrounding areas. It is anticipated that these features might not have heritage and / or archaeological value.

Potential heritage impact will only occur once drill sites have been identified and on-site activities commences, and it is therefore recommended that the Heritage Impact Assessment only be undertaken prior to these planned activities.

The Heritage Impact Assessment will be conducted over identified localised drill sites to identify any cultural, heritage and or archaeological features which may be impacted on.

The fact that the prospecting activities will be undertaken in a phased approach will provide the opportunity to the prospecting team to demarcate areas of cultural and/or heritage significance (such as graves and stone kraals). With the early identification of these the impact on these will be avoided.

Potential impacts on communities, individuals or competing land uses in close proximity

The following impacts are regarded as community impacts:

- Potential water and soil pollution resulting from chemical spills and soil erosion;
- Noise due to the undertaking drilling machines;
- Poor access control resulting in impacts on cattle movement, breeding and grazing practices;
- Influx of persons (job seekers) to site because of increased activity and the possible resultant increase in opportunistic crime; and
- Visual Impact

Prospecting will be undertaken by specialist sub-contractors and it is not anticipated that employment opportunities for local and / or regional communities will result from the prospecting activities.

Water quality and availability

There is perennial rivers and non-perennial rivers on site. Possible pollution sources include stockpiled soil and all areas cleared of vegetation. The eroded soil particles may be carried by stormwater to these rivers which will result in an increase in the Total Suspended Solids (TSS) and Total Dissolved Solids (TDS) of the water courses. The storage of dangerous goods, temporary ablution facilities and discharge of drill fluids may also lead to surface water pollution if not managed appropriately.

Limited quantities of dangerous goods (fuel, oil and lubricants) will be stored on site. The transportation, handling and storage of such materials may result in spills and further water quality impacts in the events of spills when carried by stormwater to the water courses.

This impact is also regarded as a cumulative impact due to the potential contribution to water quality deterioration of the river systems if not managed appropriately.

Influx of persons resulting in increased crime rates

The potential impacts of an increase in crime rates associated with an influx of unemployed persons travelling to mine sites seeking employment may occur.

Visual impact

The general characteristics of the site and that of the surrounding area are regarded to be that of "wilderness" and prospecting activities may result in localised visual impacts.

Positive Impacts (Advantage)

While no significant short term positive impacts are associated with the prospecting activities, in the event that a viable coal reserve is confirmed and pending the outcome of a detailed social & environmental impact assessment process, positive socio-economic benefits must be investigated and optimized.

5.3 The possible mitigation measures that could be applied and the level of risk

(With regard to the issues and concerns raised by affected parties provide a list of the issues raised and an assessment/ discussion of the mitigations or site layout alternatives available to accommodate or address their concerns, together with an assessment of the impacts or risks associated with the mitigation or alternatives considered).

The section below provides a summary of the key management measures associated with the impacts identified in the previous section. The detailed rating and management plan is presented in Section J.

Measures to manage the potential impact on heritage resources

The fact that the prospecting activities will be undertaken in a phased approach will provide the opportunity to the prospecting team to demarcate areas of cultural and/or heritage

significance (such as graves and stone kraals). With the early identification of these the impact on these will be avoided.

A Heritage Impact Assessment will be undertaken on each identified area where drilling activities are planned.

Prior to the establishment of new access roads, a heritage impact assessment must be undertaken and mitigation and / or management measures for the protection of such resources must be implemented.

Should any unknown heritage sites be identified during the drilling activities, all activities will cease immediately and the SAHRA will be contacted and an appropriate Heritage Impact Assessment will be undertaken on the site identified.

Measures to manage the potential impacts on communities, individuals or competing land uses in close proximity

- Pollution Prevention
 - Mitigation and management measures must be implemented to prevent environmental pollution which may impact on environmental resources utilized by communities, landowners and other stakeholders. These mitigation and management measures are discussed in the following section.
- Noise due to drilling and prospecting activities;
 - Directly affected, adjacent landowners and game farms in proximity to the site will be informed of the planned drilling and a grievance mechanism will be made available.
 - Site activities will be conducted during daytime hours 07h00 – 17h00 to avoid night time noise disturbances and night time collisions with fauna.
- Poor access control resulting in impacts on cattle movement, breeding and grazing practices;
 - Access control procedures must be agreed on with farm owners and all staff trained on these procedures.
- Influx of persons (job seekers) to site because of increased activity and the possible resultant increase in opportunistic crime;
 - Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment.
 - The landowner (all private and state land owners) will be notified of unauthorised persons encountered on site.

- If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.
- Visual Impact
 - Based on visual observation, wet dust suppression will be undertaken to manage dust emissions from vehicle movement and other construction activities as and when needed. Depending on the need and quantity of water used for wet suppression, a suitable, low environmental impact chemical suppression alternative must be considered to conserve water resources.
 - The portable ablution facilities, vertical water tanks and any other infrastructure should be acquired with a consideration for colour. Natural earth, green and mat black options which will blend in with the surrounding area must be favoured.
 - A waste management system will be implemented, and sufficient waste bins will be provided for on-site. A fine system will be implemented to further prohibit littering and poor housekeeping practices.

Prospecting will be undertaken by specialist sub-contractors and it is not anticipated that employment opportunities for local and / or regional communities will result from the prospecting activities.

Measures to manage the potential impact on Water quality and availability

- Potential water and soil pollution impacts resulting from hydrocarbon spills and soil erosion will be mitigated and managed as follows;
 - Existing tracks and roads must be used as far as is practicable to minimize the potential for soil erosion. In instances where access to drill sites are to be established, and if required, raised blade clearing will be undertaken with a view to maintain vegetation cover to limit soil erosion potential.
 - Soil disturbances are to be limited as far as is practicable to minimize the potential for soil erosion.
 - When establishing the drill pad, topsoil including the remaining vegetation, will be stripped and stockpiled up-slope of the pad. The stockpile will be shaped to divert stormwater around the drill pad to minimise soil erosion of the pad. Stockpiled topsoil will be used during rehabilitation efforts.
 - Where practicable topsoil will be stripped to a depth of 10 cm.
 - Topsoil will be stockpiles to a maximum height of 1.5 m with a side slope of not more than 1:3.

- Mechanical erosion control methods will be implemented if required. This may include the use of geotextiles to stabilise slopes.
- To reduce the potential for water pollution during the drilling activities, a sump will be constructed with a sufficient capacity to receive drill fluids and allow for evaporation.
- The sump will be constructed to divert storm water away and / or around the sump to avoid clean storm water inflow.
- Oils and lubricant will be stored within secondary containment structures.
- Where practicable, vehicle maintenance will be undertaken off -site.
- If vehicle maintenance is undertaken on-site (i.e. such as breakdown maintenance), drip trays and / or UPVC sheets will be used to prevent spills and leaks onto the soil.
- A waste management system will be implemented, and sufficient waste bins will be provided for onsite. A fine system will be implemented to further prohibit littering and poor housekeeping practices.
- Waste separation will be undertaken at source and separate receptacles will be provided (i.e. general waste, recyclables and hazardous waste).
- Receptacles will be closed (i.e. fitted with a lockable lid) to eliminate the possibility of access by animals overnight.
- Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.
- Drill holes must be temporarily plugged immediately after drilling is completed and remain plugged until they are permanently plugged below ground to eliminate the risk posed to fauna by open drill holes.
- Drill holes must be permanently capped as soon as is practicable.

5.4 Motivation where no alternative sites were considered

The proposed prospecting area is targeted as, historically, several coal occurrences are known in the area, and number of these have been exploited for coal in the past. The site is therefore regarded as the preferred site and alternative sites are not considered.

5.5 Statement motivating the alternative development location within the overall site

(Provide a statement motivating the final site layout that is proposed)

Office No: 6 Springbok Park Tasbet Park Ext 17 Witbank, 1040 P/Bag X7214, Postnet Suite 125, Witbank, 1035, Mpumalanga Province, ZA
T: +27 78 2727 839/072 081 6682 F: +27 86 5144 103: kenneth@singoconsulting.co.za

As is clear from the information provided, each of the phases is dependent on the results of the preceding phase. The location and extent of possible drilling will be determined based on information derived from the desktop study. Drill sites will be selected to avoid known heritage features and water courses where practicable.

5.6 Full description of the process undertaken to identify, assess and rank the impacts and risks the activity will impose on the preferred site (In respect of the final site layout plan) through the life of the activity

(Including (i) a description of all environmental issues and risks that were identified during the environmental impact assessment process and (ii) an assessment of the significance of each issue and risk and an indication of the extent to which the issue and risk could be avoided or addressed by the adoption of mitigation measures.)

To identify the potential impacts associated with the proposed prospecting activities the following steps were undertaken:

The stakeholder consultation process is currently undertaken in a manner to be interactive, providing landowners and identified stakeholders with the opportunity to provide input into the project. This is a key focus, as the local residence have capabilities of providing site specific information, which may not be available in desktop research material. Stakeholders are requested (as part of the BID) to provide their views on the project and any potential concerns which they may have. All comments and concerns will be captured and formulated into the impact assessment.

A detailed desktop investigation was undertaken to determine the environmental setting in which the project is located. Based on the desktop investigations various resources were used to determine the significance and sensitivity of the various environmental considerations. The desktop investigation involved the use of:

- ❖ South African National Biodiversity Institute (SANBI) Biodiversity Geographic Database LUDS system;
- ❖ Geographic Information System base maps;
- ❖ Department of Water Affairs information documents such as the (ISP and Groundwater Vulnerability Reports);
- ❖ Municipal Integrated Development Plan;
- ❖ Municipal Strategic Development Framework; etc.

A site visit was undertaken on June 2020. This site visit was utilized to ensure that the information gathered as part of the desktop investigation reflects the status of the land.

The rating of the identified impacts was undertaken in a quantitative manner as provided from p80 (Impact Ratings). The ratings are undertaken in a manner to calculate the significance of each of the impacts. The EAP also assesses the outcomes of the calculation to determine whether the outcome reflects the perceived and actual views.

The identification of management measures is done based on the significance of the impacts and measures that have been considered appropriate and successful, specifically as Best Practical and Economical Options.

5.7 Assessment of each identified potentially significant impact and risk

(This section of the report must consider all the known typical impacts of each of the activities (including those that could or should have been identified by knowledgeable persons) and not only those that were raised by registered interested and affected parties).

Table 14: Impact Assessment and Management Type

NAME OF ACTIVITY (E.g. For prospecting - drill site, site camp, ablution facility, accommodation, equipment storage, sample storage, site office, access route etc.	POTENTIAL IMPACT (Including the potential impacts for cumulative impacts) (e.g. dust, noise, drainage, surface disturbance, fly rock, surface water contamination,	ASPECTS AFFECTE D	PHASE In which impact is anticipated (e.g. Construction, commissioning, operational Decommissioning, closure, postclosure)	SIGNIFICANCE if not mitigated	MITIGATION TYPE (modify, remedy, control, or stop) through (e.g. noise control measures, storm- water control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc. etc)	SIGNIFICANCE if mitigated
Phase 1: Data Acquisition and Desktop Study						
Data collection and assessment (desktop only)	1. None identified.	N/A	Planning	N/A	1. No mitigation proposed	N/A
Data Assessment	2. None identified.	N/A	Planning	N/A	2. No mitigation proposed	N/A

Phase 3: Drilling						
Site Access	3. Destruction and / or disturbance of onsite fauna and flora.	Loss of Fauna and Flora	Construction Phase	10	<p>3. Map indicating the location of each of the drilling sites must be submitted to the relevant landowners, as well as to the DMR and DWS. Upon agreement of the location of the activities can the applicant proceed.</p> <p>4. Use existing track and roads in all instances as far as is practicable.</p> <p>5. Where track clearing is necessary, raised blade clearing will be conducted to minimise disturbance and aid rehabilitation efforts and significant vegetation such as trees and large shrubs will be avoided.</p>	6

					<p>6. Site activities will be conducted during daytime hours 07h00 – 17h00 to avoid night time noise disturbances and night time collisions with fauna.</p> <p>7. Vehicle speed will be reduced, particularly in highly vegetated areas is one way to avoid deaths by vehicle impacts.</p>	
	4. Soil compaction resulting from repeated use of access roads to drill sites.	Loss of soil resources	Construction Phase	8	<p>8. Where track clearing is necessary, raised blade clearing be conducted to minimise disturbance and aid rehabilitation efforts.</p> <p>9. As part of rehabilitation, all compacted roads and drill pads will be ripped and re-vegetated.</p>	5
	5. Vehicle traffic noise impact affecting cattle and / or wildlife.	Loss of fauna	Construction Phase	6	<p>10. Site activities will be conducted during daytime hours 07h00 – 17h30 to avoid night time noise disturbances.</p>	4

	6. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.	Loss of fauna	Construction Phase	10	11. Access control procedures must be agreed on with farm owners and staff trained.	8
	7. Potential destruction of heritage resources.	Loss of Cultural and/or Heritage Significance	Construction Phase		12. Prior to the establishment of new access roads, a heritage impact assessment must be undertaken and mitigation and / or management measure for the protection of such resources must be implemented	
Site establishment activities including: (a) <i>Vegetation clearing of drill pad area</i> (b) <i>Topsoil stripping and stockpiling</i> (c) <i>Drill pad compaction</i> (d) <i>Excavation and lining of drill water sump</i> (e) <i>Erection of temporary site office</i>	8. Destruction and / or disturbance of onsite fauna and flora.	Loss of Fauna and Flora	Construction Phase	10	13. The removal of vegetation within the drill pad area will be minimized. 14. If practicable, raised blade clearing be conducted for the entire drill pad to minimise disturbance and aid rehabilitation efforts. 15. The design of the drill fluid sump must incorporate effective fauna egress to avoid entrapment. 16. A fire emergency procedure will be developed to contain and minimise the destruction of flora and faunal habitat which may result from fire.	7

<p>shaded area, potable ablution facilities and water storage tanks and core bay</p> <p>(f) Erection of fuel storage tank</p> <p>(g) Erection of safety barrier</p>	<p>9. Soil disturbance and topsoil stockpiling</p>	<p>Loss of soil resources</p>	<p>Construction Phase</p>	<p>11</p>	<p>17. In the event that the drill pad is cleared of all vegetation, lower</p>	<p>7</p>
---	--	-------------------------------	---------------------------	-----------	--	----------

<p>(h) <i>Waste generation and management</i></p>	<p>resulting in soil compaction and erosion.</p>			<p>blade clearing will be undertaken prior to the stripping of topsoil.</p> <p>18. Topsoil including the remaining vegetation, will be stripped and stockpiled up-slope of the pad. The stockpile will be shaped to divert stormwater around the drill pad to minimise soil erosion of the pad.</p> <p>19. Where practicable topsoil will be stripped to a depth of 10cm.</p> <p>20. Vegetation removed through lower blade clearing will be mixed with topsoil to increase organic content and to preserve the seed bank in order to aid rehabilitation efforts.</p> <p>21. Topsoil will be stockpiles to a maximum height of 1.5m with a side slope of not more than 1:3.</p> <p>22. Mechanical erosion control methods will be implemented if required. This may include the use of geotextiles to stabilise slopes.</p>	
---	--	--	--	---	--

	10. Dust emission resulting from site clearing, soil stripping and construction activities (including	Dust emissions	Construction Phase	10	23. Based on visual observation, wet dust suppression will be undertaken to manage dust emissions from vehicle movement and other construction activities as	6
	vehicle entrained dust).				and when needed. 24. Depending on the need and quantity of water used for wet suppression, a suitable, low environmental impact chemical suppression alternative must be considered in order to conserve water resources.	
	11. Visual Impact affecting visual character and "sense of place".	Loss in aesthetics	Construction Phase	6	25. The shaded office area, portable ablution facilities, vertical water tanks and any other infrastructure should be acquired with a consideration for colour. Natural earth, green and mat black options which will blend in with the surrounding area must be favoured.	5

	12. Influx of persons (job seekers) to site as a result of increased activity resulting in increased incidents of theft and opportunistic crime.	Increase in petty crimes	Construction Phase	8	<p>26. Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment.</p> <p>27. The landowner (all private and state land owners) will be notified of unauthorised persons encountered on site.</p> <p>28. If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.</p>	7
--	--	--------------------------	--------------------	---	--	---

	13. Potential destruction of heritage resources.	Loss of Cultural and/or Heritage Significance	Construction Phase		29. Prior to the site establishment, a heritage impact assessment must be undertaken and mitigation and / or management measure for the protection of such resources must be implemented	
Exploration drilling and core sample collection and storage including: (a) Scout and delineation drilling	14. Water and soil pollution resulting from disposal of drill fluids.	Loss of water resources, loss of soil resources	Operational Phase	12	<p>30. A sump will be constructed with a sufficient capacity to receive drill fluids and allow for evaporation.</p> <p>31. The sump will be constructed to divert stormwater away and / or around the sump to avoid clean stormwater inflow.</p>	5

<p>(b) Drill maintenance and re-fuelling</p> <p>(c) Core sample collection and storage</p> <p>(d) Drill fluid collection, storage and evaporation</p> <p>(e) Waste generation and management</p>	<p>15. Continued soil erosion from topsoil stockpile and soil compaction from drill pad platform.</p>	<p>Loss of soil resources</p>	<p>Operational Phase</p>	<p>32. In the event that raise blade clearing is not undertaken, and the drill pad is cleared, topsoil will be stockpiles to a maximum height of 1.5m with a side slope of not more than 1:3.</p> <p>33. The topsoil stockpile will be shaped to divert stormwater around the drill pad to minimise soil erosion of the pad.</p> <p>34. Management efforts through the use of mechanical erosion control methods will be implemented if required. This may include the use of geotextiles.</p>	<p>7</p>
--	---	-------------------------------	--------------------------	--	----------

	<p>16. Potential water and soil pollution resulting from hydrocarbon spills and drill maintenance activities.</p>	<p>Loss of water resources, loss of soil resources</p>	<p>Operational Phase</p>	<p>35. Fuel storage tanks will have a secondary containment structure with a capacity of 110% of the total tank capacity.</p> <p>36. Oils and lubricant will be stored within secondary containment structures.</p> <p>37. Where practicable, vehicle maintenance will be undertaken off-site.</p> <p>38. In the event that vehicle maintenance is undertaken on-site (i.e. such as breakdown maintenance), drip trays and / or UPVC sheets will be used to prevent spills and leaks onto the soil.</p> <p>39. Unused machinery must be completely drained of oil and other hydrocarbons to ensure that leaks do not develop.</p> <p>40. Regular inspections of all vehicles must be carried out to ensure that all leaks are identified early and rectified.</p> <p>41. A sufficient number of waste receptacles will be provided.</p> <p>42. Waste separation will be</p>	<p>5</p>
--	---	--	--------------------------	---	----------

					<p>undertaken at source and separate receptacles will be provided (i.e. general waste, recyclables and hazardous waste).</p> <p>43. Receptacles will be closed (i.e. fitted with a lockable lid) to eliminate the possibility of access by animals overnight.</p> <p>44. Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.</p>	
	17. Dust emissions from drilling and general site activities (including vehicle entrained dust)	Increase in dust emissions	Operational Phase	10	<p>45. Based on visual observation wet dust suppression will be undertaken as and when required to manage dust emissions from vehicle movement.</p> <p>46. Depending on the need and quantity of water used for wet suppression, chemical suppression alternatives must be considered in order to conserve water resources.</p>	6
	18. Visual Impact affecting visual character and "sense of place"	Loss in aesthetic value	Operational Phase	6	<p>47. Visual impact of structures will be mitigated through measures as included in Item 35.</p> <p>48. Visual dust dispersion will be mitigated through measures as included in Item 33.</p>	5

19. Vehicle traffic and drill noise impact affecting wildlife game farm animals.	Loss of fauna	Operational Phase	6	49. Site activities will be conducted during daytime hours 07h00 – 17h30 to avoid night time noise disturbances.	4
20. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.	Loss of cattle	Operational Phase	10	50. Access control procedures must be agreed on with farm owners.	8
21. Influx of persons (job seekers) to site as a result of increased activity resulting in increased incidents of theft and opportunistic crime.	Increase in petty crimes	Operational Phase	8	51. Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment. 52. The landowner (the Department of Rural Development and Land Reform) will be notified of unauthorised persons encountered on site. 53. If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.	7
22. Impact on the pans and associated ecosystems in the area.	Loss of sensitive environments,	Operational Phase	12	54. The prospecting areas must be clearly demarcated. 55. No prospecting activities may be undertaken within the pan areas.	5
	loss of fauna, loss of flora			56. All site plans must indicate the presence of pans.	

<p>Removal of temporary infrastructure including:</p> <p>(a) <i>Removal of temporary site office shaded area, potable ablution facilities, water storage tanks and core bay</i></p> <p>(b) <i>Borehole capping</i></p> <p>Drill pad rehabilitation including:</p> <p>(a) <i>Ripping of drill pad and access road</i></p> <p>(b) <i>Re-spreading of stockpiled topsoil</i></p> <p>(c) <i>Re-vegetation</i></p>	<p>23. Destruction and / or disturbance of onsite fauna.</p>	<p>Loss of sensitive environments, loss of fauna, loss of flora</p>	<p>Decommissioning</p>	<p>10</p>	<p>57. Drill holes must be temporarily plugged immediately after drilling is completed and remain plugged until they are permanently plugged below ground to eliminate the risk posed to fauna by open drill holes.</p> <p>58. Drill holes must be permanently capped as soon as is practicable</p>	<p>7</p>
	<p>24. Dust emissions from decommissioning activities (including vehicle entrained dust).</p>	<p>Increase in dust emissions</p>	<p>Decommissioning</p>	<p>9</p>	<p>59. Based on visual observation wet dust suppression will be undertaken to manage dust emissions from vehicle movement.</p> <p>60. Depending on the need and quantity of water used for wet suppression, chemical suppression alternatives must be considered in order to conserve water resources.</p>	<p>6</p>
	<p>25. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.</p>	<p>Loss of cattle</p>	<p>Decommissioning</p>	<p>10</p>	<p>61. Access control procedures must be agreed on with farm owners and all staff trained.</p>	<p>8</p>

	26. Potential water and soil pollution resulting from hydrocarbon spills	Loss of water resources, loss of soil resources	Decommissioning	12	62. All fuel storage tanks will be emptied prior to removal.	7
					63. Drill holes must be permanently capped as soon as is practicable to eliminate the risk of groundwater contamination. 64. Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.	

	<p>27. Soil erosion resulting from the respreading of topsoil before vegetation is re-established.</p>	<p>Loss of soil resources</p>	<p>Decommissioning</p>	<p>11</p> <p>65. Mechanical erosion control methods will be implemented if required. This may include the use of geotextiles.</p> <p>66. Re-vegetation will be conducted through hand seeding exposed areas using indigenous grass species as determined by a suitably qualified ecologist.</p> <p>67. Re-vegetation efforts will be monitored every second month for a period of six months after initial seeding.</p> <p>68. An effective vegetation cover of 45% must be achieved. Re-seeding will be undertaken if this cover has not been achieved after six months.</p>	<p>7</p>
--	--	-------------------------------	------------------------	---	----------

The supporting impact assessment conducted by the EAP must be attached as an appendix, marked **Appendix F**.

5.8 Summary of specialist reports.

(This summary must be completed if any specialist reports informed the impact assessment and final site layout process and must be in the following tabular form):-

LIST OF STUDIES UNDERTAKEN	RECOMMENDATIONS OF SPECIALIST REPORTS	SPECIALIST RECOMMENDATIONS THAT HAVE BEEN INCLUDED IN THE EIA REPORT (Mark with an X where applicable)	REFERENCE TO APPLICABLE SECTION OF REPORT WHERE SPECIALIST RECOMMENDATIONS HAVE BEEN INCLUDED.
No specialist studies have been undertaken.	N/A	N/A	N/A

Attach copies of Specialist Reports as appendices (N/A).

6. Environmental impact statement

6.1 Summary of the key findings of the environmental impact assessment

The area under investigation is flat to gentle elevation varies approximately 1585 meters above sea level. The site falls within a rainfall region with relative high rainfall which slightly reduced the potential impacts associated with soil erosion.

The predominant wind direction as measured at the Delmas Weather Station, is from the north-north-west and wind speeds are higher during the spring and summer months. Any emissions which might emanate from the prospecting activities are therefore likely to disperse in this direction and the impact will be more significant during the spring and summer months.

The proposed prospecting site is classified as non-arable land with a moderate to low grazing capacity with cattle and farming is the predominant land use in the area.

It currently known there are any land claims have been lodged for any of the farm portion for which prospecting rights are applied for, and an enquiry was submitted to Mpumalanga: Department of Rural Development and Land Reform for additional information regarding the claimants.

The protection of water quality and availability has been identified as aspects of key importance within the municipality and the general region. A high dependency on ground water resources has been identified and this will be confirmed during stakeholder consultation. According to the Department of Water Affairs Aquifer Vulnerability of South Africa Report, the area in which the project is located is associated with aquifers with the most vulnerability ratings.

There is major perennial river, non-perennial rivers, unnamed tributaries of the located within the boundaries of the proposed prospecting area. The identified water courses (including rivers, streams and pans) may be regarded as unique habitats which support regional ecological functioning.

The conservation status of the area is least threatened and only about 1% of the vegetation type has already been transformed.

Graves were not identified within the prospecting area.

Final Site Map

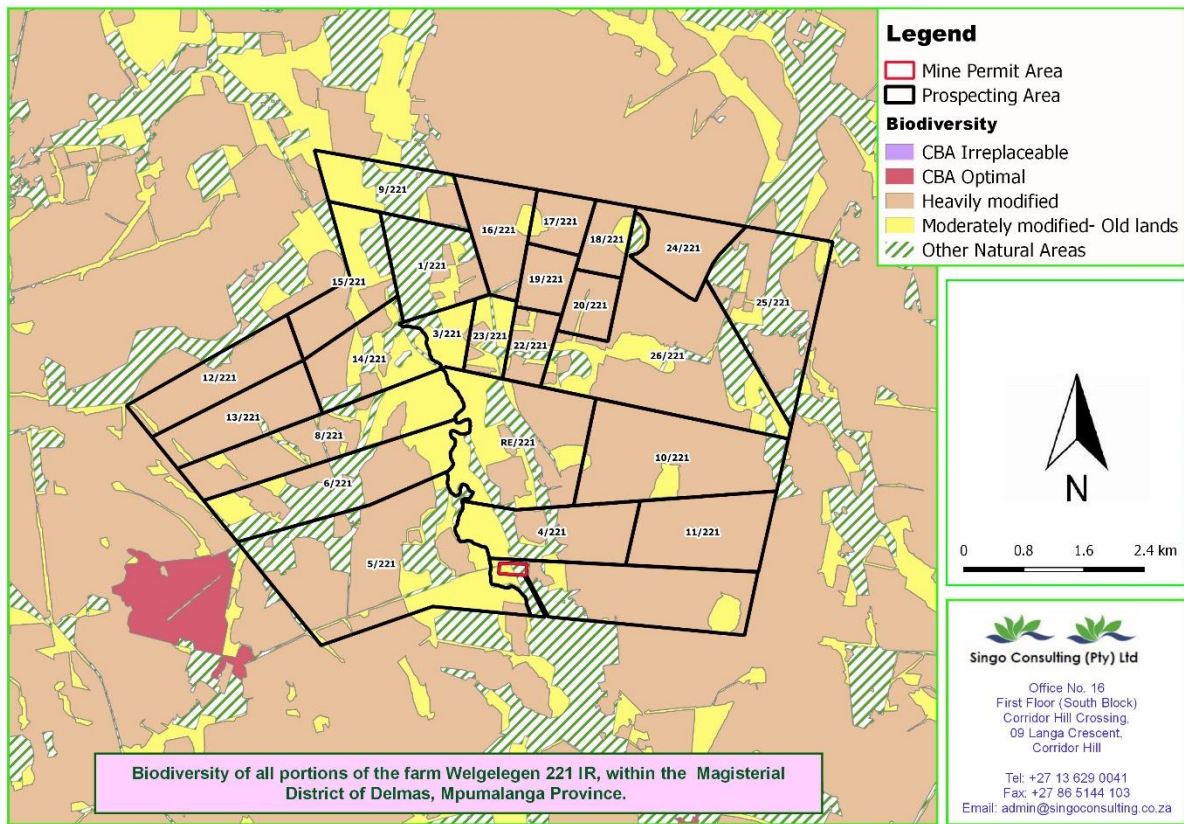

Figure 27: Biodiversity map

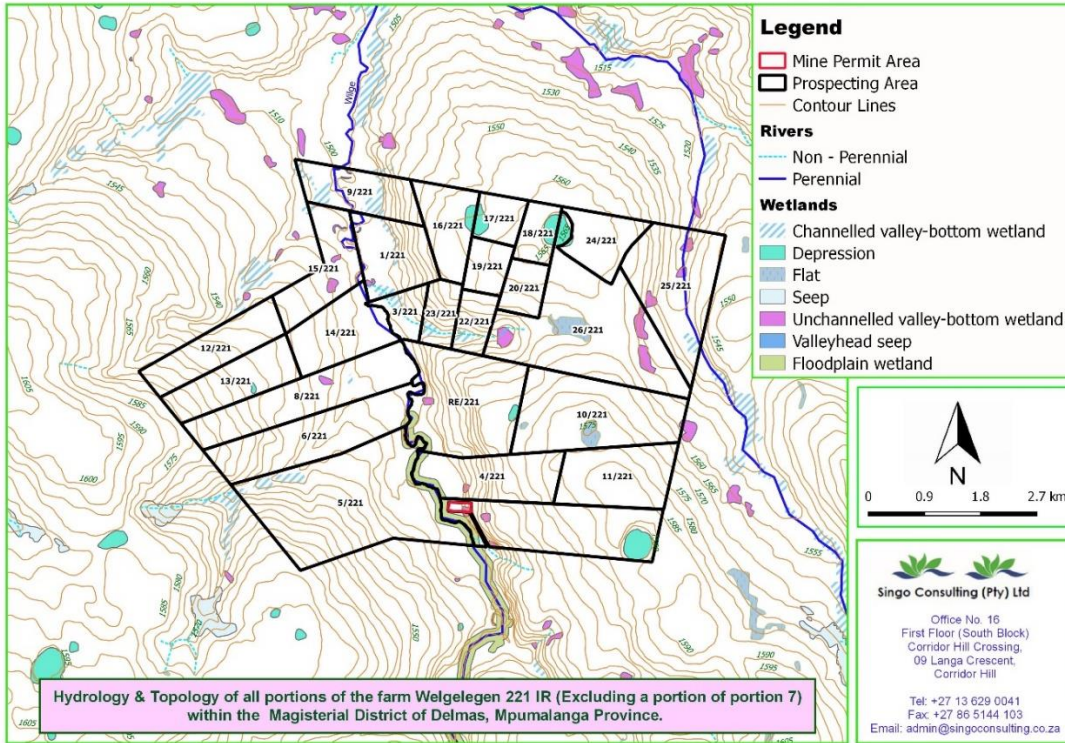

Figure 28: Wetlands

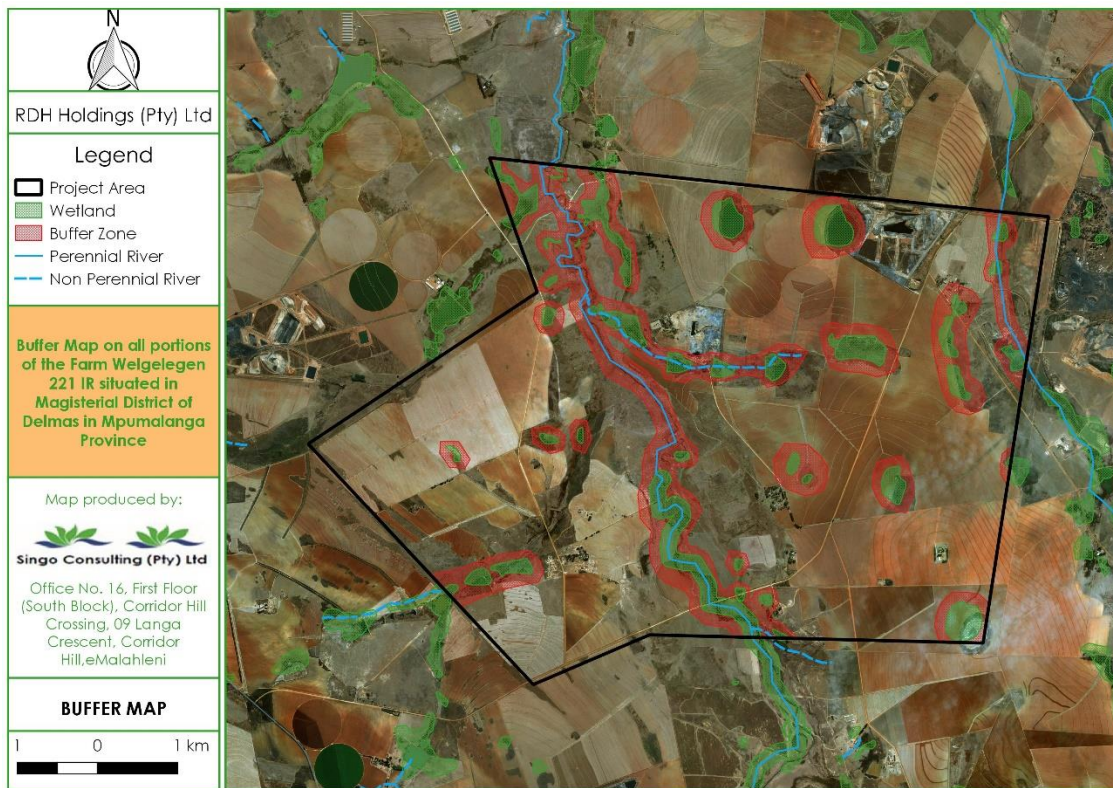

Figure 29: Buffer Map

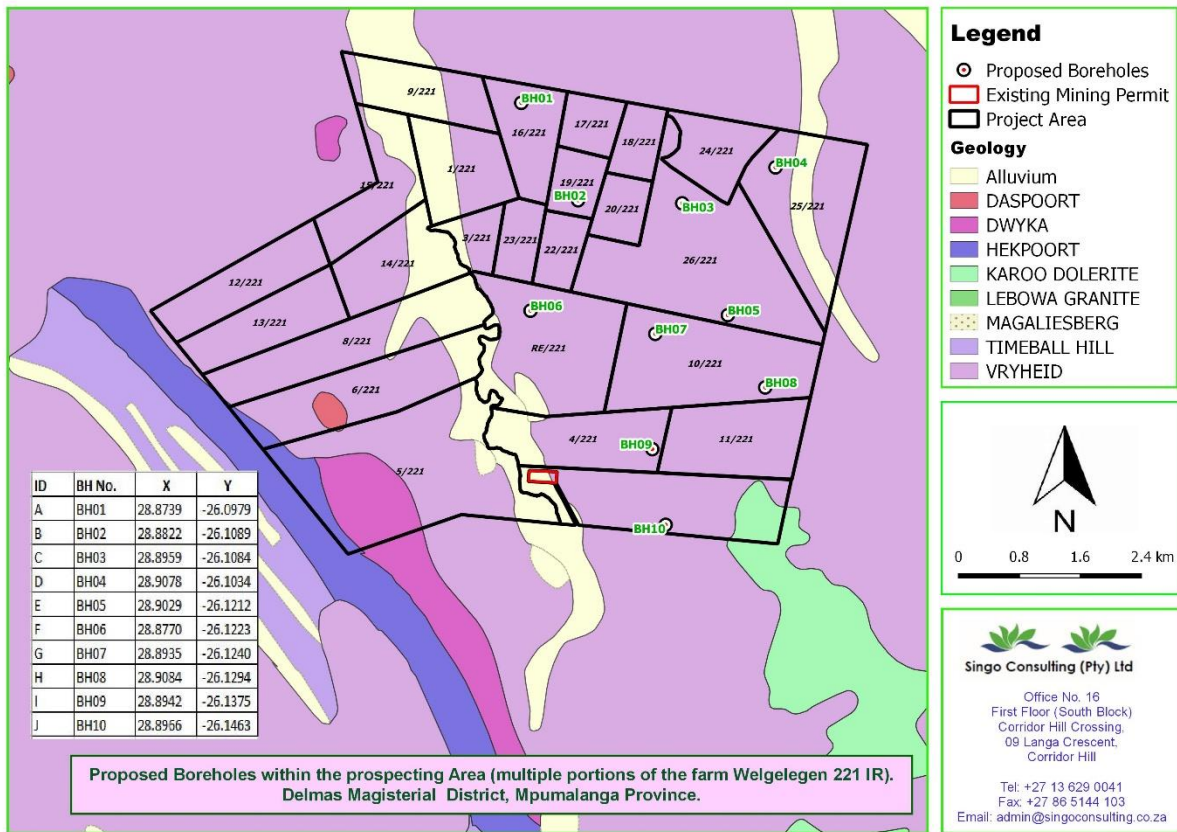

Figure 30: Proposed Borehole positions upon the site

6.2 Summary of the positive and negative impacts and risks of the proposed activity and identified alternatives

- Increased ambient noise levels resulting from drilling and increased traffic movement during all prospecting phases as well as drilling activities.
- Potential water and soil pollution impacts resulting from chemical (oil, diesel, hydraulic and drilling fluid) spills and soil erosion which may impact on environmental resources utilized by landowners.
- Potential water and soil pollution impacts resulting from chemical (oil, diesel, hydraulic and drilling fluid) spills and soil erosion which may impact on ecosystem functioning.
- Increased vehicle activity within the area resulting in the possible destruction and disturbance of fauna and flora.
- Poor access control to farms which may impact on cattle movement, breeding and grazing practices.
- Influx of persons (job seekers) to site as a result of increased activity and the possible resultant increase in opportunistic crime.
- Potential visual impacts caused by drilling activities.

- Prospecting will be undertaken by specialist sub-contractors and it is not anticipated that employment opportunities for local and / or regional communities will result from the prospecting activities.

6.3 Proposed impact management objectives and the impact management outcomes for inclusion in the EMPr.

(Based on the assessment and where applicable the recommendations from specialist reports, the recording of proposed impact management objectives, and the impact management outcomes for the development for inclusion in the EMPr as well as for inclusion as conditions of authorization)

The objectives of the EMPr will be to:

Provide sufficient information to strategically plan the prospecting activities as to avoid unnecessary social and environmental impacts.

Provide sufficient information and guidance to plan prospecting activities in a manner that would reduce impacts (both social and environmental) as far as practically possible.

Ensure an approach that will provide the necessary confidence in terms of environmental compliance.

Provide a management plan that is effective and practical for implementation.

Through the implementation of the proposed mitigation measures, it is anticipated that the identified social & environmental Impacts can be managed and mitigated effectively.

Through the implementation of the mitigation and management measures it is expected that:

Noise impacts can be managed through consultation and through the restriction of operating hours.

The pollution of soil and water resources can be effectively managed through containment.

Ecological impact can be managed through the implementation of pollution prevention measures, minimizing land clearing, restricting working hours (faunal disturbance) and rehabilitation.

Concerns regarding access control to farms can be managed through the development and ensuring compliance to an appropriate access control procedure.

Risks associated with crime can be mitigated through avoiding recruitment activities on site, as well as monitoring and reporting.

Visual impact can be minimized through giving consideration to drill site infrastructure placement and materials used.

6.4 Aspects for inclusion as conditions of Authorisation.

(Any aspects which must be made conditions of the Environmental Authorisation)

The following conditions should be included into the Authorisation:

A map detailing the drilling locations should be submitted to the relevant landowners and the DWS and DMR prior to the commencement of these activities.

No activities may be undertaken in the pans;

Heritage Impact Assessment must be undertaken where roads will be cleared and where drilling sites will be established, prior to the commencement of these activities; and

No activities, with the exception of the driving to fetch, may take place within 100 m from any river.

6.5 Description of any assumptions, uncertainties and gaps in knowledge.

(Which relate to the assessment and mitigation measures proposed)

The following assumptions, uncertainties and gaps are applicable to this project:

Due to considerable time constraints allowed for the assessment of the impacts, and at the time of compiling the draft Basic Assessment Report and EMPr:

- The Stakeholder Consultation is not yet complete.
- Not all landowners were consulted with in person.
- Details from the DWS regarding Water Use Licensing requirements is not yet available.
- Feedback from the SAHRA is not yet available.
- Details regarding the presence and status of land claims are not available.
- No Heritage Impact Assessment was undertaken.
- No detailed site layout is available due to the nature of the prospecting activities. The study is therefore undertaken as a holistic assessment of the overall site.
- The detailed site visit by the EAP was to be undertaken, this was scheduled for 23 June 2020.

6.6 Reasoned opinion as to whether the proposed activity should or should not be authorised

6.7 Reasons why the activity should be authorized or not

It is the opinion of the EAP that the activity may be authorized.

The proposed prospecting area is targeted as, historically, coal occurrences are known in the area, and number of these have been exploited for coal in the past.

The site is therefore regarded as the preferred site and alternative sites are not considered.

The option of not approving the activities will result in a significant loss to valuable information regarding the mineral status (in terms of coal seams) present on these properties. In addition to this, should economical reserves be present, and the applicant does not have the opportunity to prospect, the opportunity to utilize these reserves for future phases will be lost.

6.8 Conditions that must be included in the authorisation

The following conditions should be included into the authorisation:

A map detailing the drilling locations should be submitted to the relevant landowners and the DWS and DMR prior to the commencement of these activities;

No activities may be undertaken in the pans;

Heritage Impact Assessment must be undertaken where roads will be cleared and where drilling sites will be established, prior to the commencement of these activities; and

No activities, except for the driving to fetch water, may take place within 100 m from any river.

6.9 Period for which the Environmental Authorisation is required.

6.10 Undertaking

(Confirm that the undertaking required to meet the requirements of this section is provided at the end of the EMPr and is applicable to both the Basic assessment report and the Environmental Management Programme report)

An undertaken by the EAP and the client is provided for in Section 2 of the EMPr.

7. Financial Provision

(State the amount that is required to both manage and rehabilitate the environment in respect of rehabilitation)

The financial provision for the environmental rehabilitation and closure of any mine/prospecting and its associated operations forms an integral part of the MPRDA. Sections 41(1), 41(2), 41(3) and 45 of the MPRDA deal with the financial provision for rehabilitation and closure. During 2012 the DMR made updated rates available for the calculation of the closure costs, where contractor's costs are not available these are used in assessments.

The "Guideline Document for the Evaluation of Financial Provision made by the Mining Industry" was developed by the DMR in January 2005, in order to empower the personnel at

Regional DMR offices to review the quantum determination for the rehabilitation and closure of mining sites.

With the determination of the quantum for closure it must be assumed that the infrastructure has no salvage value (clean closure). The closure cost estimate (clean closure) was determined in accordance with the DMR guidelines and is based, where possible, on actual costs provided by a third-party contractor. The closure costs are as follows:

Sub-Total 1:	R 378 177 (excluding VAT)
Sub-Total 2:	R 461 3759(excluding VAT)
Sub-Total 3 (clean closure cost):	R 476 38(including VAT)

The following sections presents the methodology for the determination of the financial provision.

7.1 Explain how the aforesaid amount was derived.

(The following section details the methodologies adopted to calculate the quantities, associated rehabilitation (clean closure) rates and eventually the final (clean) closure cost estimate)

Most important to note is that the prescribed method for estimating a closure costs, as provided for by the DMR in the form of the Guideline Document for the Evaluation of Financial Provisions, only acts as a guideline, and therefore indicates the minimum requirements for assessing and reporting on a closure cost estimate.

Method of Assessment

As mentioned before, Singo Consulting (Pty) Ltd made use of the Guideline Document for the Evaluation of Financial Provisions made by the Mining Industry. The following table presents the step-by-step details on how the financial provision has been derived. For the purposes of determining the quantum for closures, it is assumed that the infrastructure will have no salvage value.

Table 15: DMR Financial Provision Methodology

Step	Description	DMR Applicable Table	Outcomes
1	Determine primary mineral and saleable mineral by-products	Table B.12	Mineral: Coal , Pseudo Coal, Clay & Shale.

2	Determine Risk Class	Table B.12	Primary Risk Class: C (Small operation, no waste, no processing). Risk Class C is considered a low risk with a low probability of occurrence of the impact with a negligible consequence.
3	Determine the Area Sensitivity	Table B.4	Medium to High Sensitivity. The area is largely is disturbed through cattle farming, however the natural state is still present in good condition. The river systems in this area, although non-perennial is a tributary of the Harts River, which in turn feeds the Vaal River. The landowners are in close proximity to the proposed prospecting activities, although the area is not densely inhabited, and no well-established communities are present. The land in question is used for cattle farming and therefore the local communities (in this case the farmers) drive the bulk of their income directly from the area. The area can therefore be considered sensitive to further development past the prospecting application, should the prospecting activities prove that the area is economically viable for the purposes of a mining right application, which will compromise the existing economic activity.
4.1	Determine the level of information	N/A	Limited information is available which is based on desktop investigations and consultation with stakeholders.

Step	Description	DMR Applicable Table	Outcomes
4.2	Determine the closure components	Table B.5	See Table 23 of this report.

4.3	Determine the unit rates for closure components	Table B.6	See Table 23 of this report. The multiplication factor for all components is 1.00.
4.4	Determine and apply the weighting factors	Table B.7 Table B.8	Weighting factor 1 (Nature of the terrain): 1 (generally flat terrain) Weighting factor 2 (Peri-urban, less than 150km from a developed urban area): 1.05(Rural/Urban).
4.5	Identify areas of disturbance	N/A	No areas of disturbance are considered in this assessment. The area in which the prospecting activities are planned is considered to be undisturbed.
4.6	Identify closure costs from specialist studies	Table B.9	Due to the fact that the operation in question is only a prospecting operation, no residual impacts should take place. During the Life of Prospecting and ongoing rehabilitation, the self-succession results should be assessed and monitored. If self-succession does not take place satisfactorily the client may be subjected to additional specialist investigations (ecological and pedology) to determine seeding and re-vegetation requirements.
4.7	Calculate Closure Costs	Table B.10	See the following section.

Quantity Estimation

For the purposes of this assessment, Singo Consulting can confirm that the method adopted to obtain and compile the schedule of quantities is sound, correct, and provides detail that is required by the DMR. The information will allow for continued monitoring and updating of quantities and provides the ideal platform to manage and monitor the actual on-site rehabilitation measures and costs incurred.

Determination of Rates

The method of determining the applicable rehabilitation rates is based on practical experience and information by third party contractors.

The following table summarises the unit rates for closure components as specified in the DMR Guideline Document and indicates which rates were used by Singo Consulting in this assessment.

Preliminary Cost Estimation

The following table presents the closure cost rehabilitation undertaken in terms of the DMR Guideline Document.

		CALCULATION OF THE QUANTUM

Financial Provision

The financial provision required by the holder of the mining right must be provided for by one or more of the following methods in order to achieve the total quantum of rehabilitation and remediation of environmental impacts and damage as well as final closure:

- o Approved dedicated trust fund.
- o Financial guarantee from a South African registered bank or any other approved financial institution.

- Cash deposit to be deposited at the office of the Regional Manager; or
- Any other manner determined by the Minister.

The client is required to annually assess the total quantum of environmental liability for the operation and ensure that financial provision is sufficient to cover the current liability (in the event of premature closure), as well as the end of life liability.

As per Government Legislature, the client is required to ensure full financial cover for the current liability at any point in the life of the operation. Pecuniary provision must be made for the shortfall between the existing trust fund balance and the premature closure or current environmental rehabilitation liability if applicable.

7.2 Confirm that this amount can be provided for from operating expenditure.

(Confirm that the amount, is anticipated to be an operating cost and is provided for as such in the Mining work programme, Financial and Technical Competence Report or Prospecting Work Programme as the case may be).

The amount the finance the prospecting activities will amount R 47638. Financing will be sourced from the capital expenditure as planned by the company; this capital will come from the treasury of the company. The company's annual financial statement for 2017/2018 was also submitted to the DMR for confirmation that the company has available funding to implement this proposed project.

It should be noted that the current expenditure provided for in the Prospecting Works Programme does not included the calculated Financial Provision as included into this Basic Assessment, as these values were not available at the time of the submission of the Prospecting Works Programme.

The provision for closure, should be updated into the Prospecting Works Programme prior the decision by the DMR should this decision be positive.

7.3 Specific Information required by the competent Authority

7.4 Compliance with the provisions of sections 24(4)(a) and (b) read with section

24 (3) (a) and (7) of the National Environmental Management Act (Act 107 of 1998). the EIA report must include the:-

7.4 Impact on the socio-economic conditions of any directly affected person.

(Provide the results of Investigation, assessment, and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any directly affected person including the landowner, lawful occupier, or, where applicable, potential beneficiaries of any land restitution claim, attach the investigation report as an **Appendix**)

No specific report was generated for the purposes of the socio-economic conditions. All findings are presented hereafter:

Potential impacts on communities, individuals or competing land uses in close proximity

The following impacts are regarded as community impacts:

- Potential water and soil pollution resulting from spills and soil erosion;
- Noise due to the undertaking of the drilling;
- Poor access control resulting in impacts on cattle movement, breeding and grazing practices;
- Influx of persons (job seekers) to site because of increased activity and the possible resultant increase in opportunistic crime; and
- Visual Impact

- Prospecting will be undertaken by specialist sub-contractors and it is not anticipated that employment opportunities for local and / or regional communities will result from the prospecting activities.

Measures to manage the potential impacts on communities, individuals or competing land uses in close proximity

- Pollution Prevention
- Mitigation and management measures must be implemented to prevent environmental pollution which may impact on environmental resources utilized by communities, landowners and other stakeholders. These mitigation and management measures are discussed in the following section.
- Noise due to the undertaking of the prospecting activities;

- Directly affected, adjacent landowners and farms in proximity to the site will be informed of the planned dates of drilling. Mitigation alternatives are limited to timing of the drilling which may affect aspects such as hunting activities on game farms.
 - Farms owners must be consulted and informed of activities which may affect cattle being held in restricted holding pens, with a view to prevent possible injury or damage because of animals being startled by the noise.
 - Site activities will be conducted during daytime hours 07h00 – 17h00 to avoid night time noise disturbances and night time collisions with fauna.
- o Poor access control resulting in impacts on cattle movement, breeding and grazing practices;
- Access control procedures must be agreed on with farm owners and all staff trained on these procedures.
- o Influx of persons (job seekers) to site because of increased activity and the possible resultant increase in opportunistic crime;
- Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment.
 - The landowner (all private and state land owners) will be notified of unauthorised persons encountered on site.
 - If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.
- o Visual Impact
- Based on visual observation, wet dust suppression will be undertaken to manage dust emissions from vehicle movement and other construction activities as and when needed. Depending on the need and quantity of water used for wet suppression, a suitable, low environmental impact chemical suppression alternative must be considered to conserve water resources.
 - The portable ablution facilities, vertical water tanks and any other infrastructure should be acquired with a consideration for colour. Natural earth, green and mat black options which will blend in with the surrounding area must be favoured.
 - A waste management system will be implemented, and sufficient waste bins will be provided for on-site. A fine system will be implemented to further prohibit littering and poor housekeeping practices.

- o Prospecting will be undertaken by specialist sub-contractors and it is not anticipated that employment opportunities for local and / or regional communities will result from the prospecting activities.

7.5 Impact on any national estate referred to in section 3(2) of the National Heritage Resources Act.

(Provide the results of Investigation, assessment, and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any national estate referred to in section 3(2) of the National Heritage Resources Act, 1999 (Act No. 25 of 1999) with the exception of the national estate contemplated in section 3(2)(i)(vi) and (vii) of that Act, attach the investigation report as Appendix 2.19.2 and confirm that the applicable mitigation is reflected in 2.5.3; 2.11.6.and 2.12.herein).

As outlined in Section d)ii), page 15 of this report, prospecting will be undertaken in phases; the first phase being a desktop assessment, followed drilling.

Based on the outcome of these activities, desktop study and potential drill sites will be determined. Potential heritage impact will only occur once desktop study have been used to identify sites for drilling, and it is therefore recommended that the Heritage Impact Assessment be undertaken prior to drilling activities, and that the Heritage Impact Assessment be conducted over identified localised drill sites and access routes, as opposed to the entire exploration area.

This recommendation will be submitted to the South African Heritage Resource Agency (SAHRA) for approval.

7.6 Other matters required in terms of sections 24(4)(a) and (b) of the Act.

(The EAP managing the application must provide the competent authority with detailed, written proof of an investigation as required by section 24(4)(b)(i) of the Act and motivation if no reasonable or feasible alternatives, as contemplated in sub-regulation 22(2)(h), exist.

Please refer to Appendix **G** for the motivation of not investigating for reasonable or feasible alternatives.

PART B

ENVIRONMENTAL MANAGEMENT PROGRAMME REPORT

7. Environmental management programme

7.1 Details of the EAP

(Confirm that the requirement for the provision of the details and expertise of the EAP are already included in PART A, section 1 (a) herein as required).

The requirement for the provision of the details and expertise of the EAP are included in PART A, section 1 (a).

7.2 Description of the Aspects of the Activity

(Confirm that the requirement to describe the aspects of the activity that are covered by the draft environmental management programme is already included in PART A, section (1)(h) herein as required).

The requirement to describe the aspects of the activity that are covered by the draft environmental management programme is already included in PART A, section (1)(h).

7.3 Composite Map

(Provide a map (**Attached as an Appendix J**) at an appropriate scale which superimposes the proposed activity, its associated structures, and infrastructure on the environmental sensitivities of the preferred site, indicating any areas that any areas that should be avoided, including buffers)

Please refer to Appendix H for the Composite Map.

c) Description of Impact management objectives including management statements

i) Determination of closure objectives.

(ensure that the closure objectives are informed by the type of environment described)

As previously mentioned, each phase of the prospecting activities is dependent on the success of the previous. Depending on the outcome of the Phase 1 assessment, drilling programme will be initiated. The location and extent of drill sites can therefore not be determined at this stage.

The rehabilitation plan is developed on the basis that the rehabilitated areas are safe, stable, non-polluting and can support a self-sustaining ecosystem similar to surrounding natural environment. To ensure that the rehabilitation plan is aligned with the closure objective, a high-level risk assessment of the prospecting components has been undertaken to establish the potential risks associated therewith.

The closure objectives are to:

Eliminate any safety risk associated with drill holes and sumps through adequate drill hole capping and backfilling.

Remove and / or rehabilitate all pollution and pollution sources such as waste materials and spills;

To establish rehabilitated area which is not subject to soil erosion which may result in the loss of soil, degradation of the environment and cause pollution of surface water resources; and

Restore disturbed area and re-vegetate these areas with grass species naturally occurring in the area to restore the ecological function of such areas as far as is practicable.

ii) Volumes and rate of water use required for the operation.

No water needed for this prospecting operation due to selected air flush method as opposed to water flush. However, in terms of Government Notices Regulation 399, the applicant can be allowed to abstract 75m³ of groundwater per hectare per annum from groundwater within the Quaternary Catchment. It is currently not anticipated that this quantity will be exceeded.

It is important to note that air flush method does not require the use of water

iii) Has a water use licence has been applied for?

There are boreholes located on the site. However due to lack of sufficient rainfall (drought) water will not be given for drilling purpose. Hence, air flush is preferred by the client. In case, where the water will be given, it is anticipated that water will be brought onto the site, will be sourced from the private water dealer. No WUL is needed.

ACTIVITIES	PHASE	SIZE AND SCALE of disturbance	MITIGATION MEASURES	COMPLIANCE WITH STANDARDS	TIME PERIOD FOR IMPLEMENTATION
Phase 1: Desktop Study					
Data collection and assessment (desktop only)	Planning	Entire property	1. No mitigation proposed	Identification of the potential coal seams and prospecting activities to occur within sensitive environments such as the pans and river systems, in this event the necessary consultation must be initiated with the DWS. 			<p>South African Police Service will be informed of unauthorised persons encountered on site.</p> <p>28. Prior to the site establishment, a heritage impact assessment must be undertaken and mitigation and / or management measure for the protection of such resources must be implemented</p>		
<p>Exploration drilling and core sample collection and storage including:</p> <p>(a) Scout and delineation drilling</p> <p>(b) Drill maintenance and re-fuelling</p> <p>(c) Core sample collection and storage</p> <p>(d) Drill fluid collection,</p>	Operational	<p>Included into the Site establishment size of 18 450m²</p>	<p>29. A sump will be constructed with a sufficient capacity to receive drill fluids and allow for evaporation.</p> <p>30. The sump will be constructed to divert stormwater away and / or around the sump to avoid clean stormwater inflow.</p> <p>31. In the event that raise blade clearing is not undertaken, and the drill pad is cleared, topsoil will be stockpiles to a maximum height of 1.5m with a side slope of not more than 1:3.</p> <p>32. The topsoil stockpile will be shaped to divert stormwater around the drill pad to minimise soil erosion of the pad.</p>	<p>The applicant must adhere to the NEMA Section 2 Principle and ensure that a cradle to grave approach is followed in terms of waste management and that all activities are undertaken with a precautionary approach. Where impacts may result a proactive manner should be implemented to ensure that potential negative results are avoided.</p> <p>The applicant must comply with the conditions of the Environmental Authorisation at all times.</p>	<p>Concurrently with the completion of prospecting activities in an area.</p>

<p>storage and evaporation</p> <p>(e) Waste generation and management</p>					
---	--	--	--	--	--

			<p>33. Management efforts through the use of mechanical erosion control methods will be implemented if required. This may include the use of geotextiles.</p> <p>34. Fuel storage tanks will have a secondary containment structure with a capacity of 110% of the total tank capacity.</p> <p>35. Oils and lubricant will be stored within secondary containment structures.</p> <p>36. Where practicable, vehicle maintenance will be undertaken off-site.</p> <p>37. In the event that vehicle maintenance is undertaken onsite (i.e. such as breakdown maintenance), drip trays and / or UPVC sheets will be used to prevent spills and leaks onto the soil.</p> <p>38. Unused machinery must be completely drained of oil and other hydrocarbons to ensure that leaks do not develop.</p>		
--	--	--	--	--	--

			<p>39. Regular inspections of all vehicles must be carried out to ensure that all leaks are identified early and rectified.</p> <p>40. A sufficient number of waste receptacles will be provided.</p> <p>41. Waste separation will be undertaken at source and separate receptacles will be provided (i.e. general waste, recyclables and hazardous waste).</p> <p>42. Receptacles will be closed (i.e. fitted with a lockable lid) to eliminate the possibility of access by animals overnight.</p> <p>43. Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.</p> <p>44. Based on visual observation wet dust suppression will be undertaken as and when required to manage dust emissions from vehicle movement.</p>	
--	--	--	--	--

			<p>45. Depending on the need and quantity of water used for wet suppression, chemical suppression alternatives must be considered in order to conserve water resources.</p> <p>46. Visual impact of structures will be mitigated through measures as included in Item 35.</p> <p>47. Visual dust dispersion will be mitigated through measures as included in Item 33.</p> <p>48. Site activities will be conducted during daytime hours 07h00 – 17h00 to avoid night time noise disturbances.</p> <p>49. Access control procedures must be agreed on with farm owners.</p> <p>50. Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment.</p>		
--	--	--	--	--	--

			<p>51. The landowner (the Department of Rural Development and Land Reform) will be notified of unauthorised persons encountered on site.</p> <p>52. If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.</p> <p>53. The prospecting areas must be clearly demarcated.</p> <p>54. No prospecting activities may be undertaken within the pan areas.</p> <p>55. All site plans must indicate the presence of pans.</p>		
<p>Removal of temporary infrastructure including:</p> <p>(a) Removal of temporary site office shaded area, potable ablution facilities,</p>	Decommissioning	<p>Included into the Site establishment size of 18 450m²</p>	<p>56. Drill holes must be temporarily plugged immediately after drilling is completed and remain plugged until they are permanently plugged below ground to eliminate the risk posed to fauna by open drill holes.</p> <p>57. Drill holes must be permanently capped as soon as is practicable.</p>	<p>The applicant must adhere to the NEMA Section 2 Principle and ensure that a cradle to grave approach is followed in terms of waste management and that all activities are undertaken with a precautionary approach. Where impacts may result a proactive manner should be</p>	<p>Concurrently with the completion of prospecting activities in an area.</p>

<p>water storage tanks and core bay</p>				<p>implemented to ensure that potential negative results are avoided.</p>	
---	--	--	--	---	--

<p><i>(b) Borehole capping</i></p> <p>Drill pad rehabilitation including:</p> <p><i>(a) Ripping of drill pad and access road</i></p> <p><i>(b) Re-spreading of stockpiled topsoil</i></p> <p><i>(c) Re-vegetation</i></p>			<p>58. Based on visual observation wet dust suppression will be undertaken to manage dust emissions from vehicle movement.</p> <p>59. Depending on the need and quantity of water used for wet suppression, chemical suppression alternatives must be considered in order to conserve water resources.</p> <p>60. Access control procedures must be agreed on with farm owners and all staff trained.</p> <p>61. All fuel storage tanks will be emptied prior to removal.</p> <p>62. Drill holes must be permanently capped as soon as is practicable to eliminate the risk of groundwater contamination.</p> <p>63. Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.</p>	<p>The applicant must comply with the conditions of the Environmental Authorisation at all times.</p>	
---	--	--	---	---	--

			<p>64. Mechanical erosion control methods will be implemented if required. This may include the use of geotextiles.</p> <p>65. Re-vegetation will be conducted through hand seeding exposed areas using indigenous grass species as determined by a suitably qualified ecologist.</p> <p>66. Re-vegetation efforts will be monitored every second month for a period of six months after initial seeding.</p> <p>67. An effective vegetation cover of 45% must be achieved. Reseeding will be undertaken if this cover has not been achieved after six months.</p>		
--	--	--	--	--	--

7.4 Impacts to be mitigated in their respective phases

Measures to rehabilitate the environment affected by the undertaking of any listed activity is presented in the following table.

7.5 Impact Management Outcomes

(A description of impact management outcomes, identifying the standard of impact management required for the aspects contemplated in paragraph ());

ACTIVITY (whether listed or not listed).	POTENTIAL IMPACT	ASPECTS AFFECTED	PHASE (In which impact is anticipated)	MITIGATION TYPE	STANDARD TO BE ACHIEVED

Phase 1: Data Acquisition and Desktop Study

Data collection and assessment (desktop only)	1. None identified.	N/A	Planning	Control potential deviations from the approved Prospecting Works Programme through the effective implementation of the data acquisition and desktop study.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
---	---------------------	-----	----------	--	--

ACTIVITY (whether listed or not listed).	POTENTIAL IMPACT	ASPECTS AFFECTED	PHASE (In which impact is anticipated)	MITIGATION TYPE	STANDARD TO BE ACHIEVED
---	-------------------------	-------------------------	---	------------------------	--------------------------------

Phase 2: Drilling

Site Access	2. Destruction and / or disturbance of on-site fauna and flora.	Loss of Fauna and Flora	Construction Phase	Control through the clear delineation of the prospecting area.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
	3. Soil compaction resulting from repeated use of access roads to drill sites.	Loss of soil resources	Construction Phase	Control through the clear delineation of the prospecting area. Control through the implementation of a soil management programme in terms of the correct topsoil removal, stockpiling and rehabilitation practices as discussed in the EMP.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. Retain topsoil integrity for the reuse in rehabilitation.

	4. Vehicle traffic noise impact affecting cattle and / or wildlife.	Loss of fauna	Construction Phase	Control through the clear delineation of the prospecting area. Control through the limiting of the activities to the day time and the implementation of an open and transparent channel of communication.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

ACTIVITY (whether listed or not listed).	POTENTIAL IMPACT	ASPECTS AFFECTED	PHASE (In which impact is anticipated)	MITIGATION TYPE	STANDARD TO BE ACHIEVED
	5. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.	Loss of fauna	Construction Phase	Control through the clear delineation of the prospecting area. Control through the limiting of the activities to the day time and the implementation of an open and transparent channel of communication.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

	6. Potential destruction of heritage resources.	Loss of Cultural and/or Heritage Significance	Construction Phase	Control through the clear delineation of the prospecting area.	Comply with the requirements by SAHRA. No damage may result on heritage and cultural significant sites.
Site establishment activities including: (a) <i>Vegetation clearing of drill pad area</i> (b) <i>Topsoil stripping and stockpiling</i> (c) <i>Drill pad compaction</i> (d) <i>Excavation and lining of drill water sump</i> (e) <i>Erection of temporary site office shaded area,</i>	7. Destruction and / or disturbance of on-site fauna and flora.	Loss of Fauna and Flora	Construction Phase	Control through the clear delineation of the prospecting area.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
	8. Soil disturbance and topsoil stockpiling resulting in soil compaction and	Loss of soil resources	Construction Phase	Control through the clear delineation of the prospecting area. 	resulting in increased incidents of theft and opportunistic crime.			communication.	activities and applicant.
	11. Potential destruction of heritage resources.	Loss of Cultural and/or Heritage Significance	Construction Phase	Control through the clear delineation of the prospecting area. Control through the implementation of environmental induction and toolbox talks.	Comply with the requirements by SAHRA. No damage may result on heritage and cultural significant sites.
Exploration drilling and core sample collection and storage including: (a) Scout and delineation drilling (b) Drill maintenance and re-fuelling (c) Core sample collection and storage (d) Drill fluid collection, storage and evaporation (e) Waste generation and management	12. Water and soil pollution resulting from disposal of drill fluids.	Loss of water resources, loss of soil resources	Operational Phase	Control through the clear delineation of the prospecting area. Control through the implementation of environmental induction and toolbox talks, as well as the implementation of a fine system. Control through the implementation of a soil management programme in terms of the correct topsoil removal, stockpiling and rehabilitation practices as discussed in the EMP. Control through the implementation of the NWA GN704 water management principles.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. Retain topsoil integrity for the reuse in rehabilitation.

ACTIVITY (whether listed or not listed).	POTENTIAL IMPACT	ASPECTS AFFECTED	PHASE (In which impact is anticipated)	MITIGATION TYPE	STANDARD TO BE ACHIEVED
	13. Continued soil erosion from topsoil stockpile and soil compaction from drill pad platform.	Loss of soil resources	Operational Phase	Control through the clear delineation of the prospecting area. Control through the implementation of a soil management programme in terms of the correct topsoil removal, stockpiling and rehabilitation practices as discussed in the EMP	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. Retain topsoil integrity for the reuse in rehabilitation.
	14. Potential water and soil pollution resulting from hydrocarbon spills and drill maintenance activities.	Loss of water resources, loss of soil resources	Operational Phase	Control through the clear delineation of the prospecting area. Control through the implementation of the NWA GN704 water management principles.	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. Retain topsoil integrity for the reuse in rehabilitation.

	15. Dust emissions from drilling and general site activities (including vehicle entrained dust)	Increase in dust emissions	Operational Phase	Control to the implementation of dust suppression methods, when this is required. Dust suppression methods could include wet suppression.	Remain within the designated area demarcated for prospecting activities. Remain within the National Environmental Management: Air Quality Act, 2004 Dust Regulation guidelines for rural

7.6 Impact Management Actions

(A description of impact management actions, identifying the manner in which the impact management objectives and outcomes contemplated in paragraphs (c) and (d) will be achieved).

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
Phase1: Data Acquisition and Desktop Study				
Data collection and assessment (desktop only)	1. None identified.	1. No mitigation proposed	N/A	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

Phase 2: Drilling

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
	Site establishment	1. Site activities will be conducted during daytime hours 07h00 – 17h30 to avoid night time noise disturbances and night time collisions with fauna. 2. Vehicle speed will be reduced, particularly in highly vegetated areas is one way to avoid deaths by vehicle impacts.		
	3. Soil compaction	3. Where track clearing is necessary, raised blade clearing be conducted to minimise disturbance and aid rehabilitation efforts. 4. As part of rehabilitation, all compacted roads and drill pads will be ripped and re-vegetated.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. Retain topsoil integrity for the reuse in rehabilitation.
	4. Vehicle traffic noise impact affecting cattle and / or wildlife.	5. Site activities will be conducted during daytime hours 07h00 – 17h30 to avoid night time noise disturbances.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
	5. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.	6. Access control procedures must be agreed on with farm owners and staff trained.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
	6. Potential destruction of heritage resources.	7. Prior to the establishment of new access roads, a heritage impact assessment must be undertaken and mitigation and / or management measure for the protection of such resources must be implemented	Concurrently with the completion of prospecting activities	Comply with the requirements by SAHRA. No damage may result on heritage and cultural significant sites.
Site establishment activities including: (a) <i>Vegetation clearing of drill pad area</i> (b) <i>Topsoil stripping and stockpiling</i>	7. Destruction and / or disturbance of on-site fauna and flora.	8. The removal of vegetation within the drill pad area will be minimized. 9. If practicable, raised blade clearing be conducted for the entire drill pad to minimise disturbance and aid rehabilitation efforts.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
---	------------------	-----------------	--------------------------------	---------------------------

<p>(c) Drill pad compaction</p> <p>(d) Excavation and lining of drill water sump</p> <p>(e) Erection of temporary site office shaded area, potable ablution facilities and water storage tanks and core bay</p> <p>(f) Erection of fuel storage tank</p> <p>(g) Erection of safety barrier</p> <p>(h) Waste generation and management</p>		<p>10. The design of the drill fluid sump must incorporate effective fauna egress to avoid entrapment.</p> <p>11. A fire emergency procedure will be developed to contain and minimise the destruction of flora and faunal habitat which may result from fire.</p>		
	<p>8. Soil disturbance and topsoil stockpiling resulting in soil compaction and erosion.</p>	<p>12. In the event that the drill pad is cleared of all vegetation, lower blade clearing will be undertaken prior to the stripping of topsoil.</p> <p>13. Topsoil including the remaining vegetation, will be stripped and stockpiled up-slope of the pad. The stockpile will be shaped to divert</p>	<p>Concurrently with the completion of prospecting activities</p>	<p>Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.</p> <p>Retain topsoil integrity for the reuse in rehabilitation.</p>

		stormwater around the drill pad to minimise soil erosion of the pad.		
ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
		<p>14. Where practicable topsoil will be stripped to a depth of 10cm.</p> <p>15. Vegetation removed through lower blade clearing will be mixed with topsoil to increase organic content and to preserve the seed bank in order to aid rehabilitation efforts.</p> <p>16. Topsoil will be stockpiles to a maximum height of 1.5m with a side slope of not more than 1:3.</p> <p>17. Mechanical erosion control methods will be implemented if required. This may include the use of geotextiles to stabilise slopes.</p>		

	9. Dust emission resulting from site clearing, soil stripping and construction activities (including vehicle entrained dust).	18. Based on visual observation, wet dust suppression will be undertaken to manage dust emissions from vehicle movement and other construction activities as and when needed.	Concurrently with the completion of prospecting activities	Remain within the designated area demarcated for prospecting activities. Remain within the National
--	---	---	--	--

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
		19. Depending on the need and quantity of water used for wet suppression, a suitable, low environmental impact chemical suppression alternative must be considered in order to conserve water resources.		Environmental Management: Air Quality Act, 2004 Dust Regulation guidelines for rural communities.
	10. Visual Impact affecting visual character and "sense of place".	20. The shaded office area, portable ablution facilities, vertical water tanks and any other infrastructure should be acquired with a consideration for colour. Natural earth, green and mat black options which will blend in with the surrounding area must be favoured.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. No removal of vegetation outside of demarcated areas.

	11. Influx of persons (job seekers) to site as a result of increased activity resulting in increased incidents of theft and opportunistic crime.	21. Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment.		Maintain a 100% crime free area within the control of the prospecting activities and applicant.
--	--	---	--	---

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
		<p>22. The landowner (all private and state land owners) will be notified of unauthorised persons encountered on site.</p> <p>23. If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.</p>		

	12. Potential destruction of heritage resources.	24. Prior to the site establishment, a heritage impact assessment must be undertaken and mitigation and / or management measure for the protection of such resources must be implemented	Concurrently with the completion of prospecting activities	Comply with the requirements by SAHRA. No damage may result on heritage and cultural significant sites.
Exploration drilling and core sample collection and storage including: (a) Scout and	13. Water and soil pollution resulting from disposal of drill fluids.	25. A sump will be constructed with a sufficient capacity to receive drill fluids and allow for evaporation.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. Retain topsoil integrity for the reuse in rehabilitation.

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
<i>delineation drilling</i> (b) <i>Drill maintenance and re-fuelling</i> (c) <i>Core sample collection and storage</i> (d) <i>Drill fluid collection, storage and evaporation</i>		26. The sump will be constructed to divert stormwater away and / or around the sump to avoid clean stormwater inflow.		

<p>Waste generation and management</p>				
	<p>14. Continued soil erosion from topsoil stockpile and soil compaction from drill pad platform.</p>	<p>27. In the event that raise blade clearing is not undertaken, and the drill pad is cleared, topsoil will be stockpiles to a maximum height of 1.5m with a side slope of not more than 1:3.</p> <p>28. The topsoil stockpile will be shaped to divert stormwater around the drill pad to minimise soil erosion of the pad.</p> <p>29. Management efforts through the use of mechanical erosion control methods will be implemented if required. This may include the use of geotextiles.</p>	<p>Concurrently with the completion of prospecting activities</p>	<p>Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.</p> <p>Retain topsoil integrity for the reuse in rehabilitation.</p>

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
	<p>15. Potential water and soil pollution resulting from hydrocarbon spills and drill maintenance activities.</p>	<p>30. Fuel storage tanks will have a secondary containment structure with a capacity of 110% of the total tank capacity.</p> <p>31. Oils and lubricant will be stored within secondary containment structures.</p> <p>32. Where practicable, vehicle maintenance will be undertaken off-site.</p> <p>33. In the event that vehicle maintenance is undertaken on-site (i.e. such as breakdown maintenance), drip trays and / or UPVC sheets will be used to prevent spills and leaks onto the soil.</p> <p>34. Unused machinery must be completely drained of oil and other hydrocarbons to ensure that leaks do not develop.</p>	<p>Concurrently with the completion of prospecting activities</p>	<p>Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.</p> <p>Retain topsoil integrity for the reuse in rehabilitation.</p>

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
		<p>35. Regular inspections of all vehicles must be carried out to ensure that all leaks are identified early and rectified.</p> <p>36. A sufficient number of waste receptacles will be provided.</p> <p>37. Waste separation will be undertaken at source and separate receptacles will be provided (i.e. general waste, recyclables and hazardous waste).</p> <p>38. Receptacles will be closed (i.e. fitted with a lockable lid) to eliminate the possibility of access by animals overnight.</p> <p>39. Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.</p>		

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
	16. Dust emissions from drilling and general site activities (including vehicle entrained dust)	40. Based on visual observation wet dust suppression will be undertaken as and when required to manage dust emissions from vehicle movement. 41. Depending on the need and quantity of water used for wet suppression, chemical suppression alternatives must be considered in order to conserve water resources.	Concurrently with the completion of prospecting activities	Remain within the designated area demarcated for prospecting activities. Remain within the National Environmental Management: Air Quality Act, 2004 Dust Regulation guidelines for rural communities.
	17. Visual Impact affecting visual character and "sense of place"	42. Visual impact of structures will be mitigated through measures as included in Item 35. 43. Visual dust dispersion will be mitigated through measures as included in Item 33.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation. No removal of vegetation outside of demarcated areas.

	18. Vehicle traffic and drill noise impact affecting wildlife game farm animals.	44. Site activities will be conducted during daytime hours 07h00 – 17h00 to avoid night time noise disturbances.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
--	--	--	--	--

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
	19. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.	45. Access control procedures must be agreed on with farm owners.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

	<p>20. Influx of persons (job seekers) to site as a result of increased activity resulting in increased incidents of theft and opportunistic crime.</p>	<p>46. Casual labour will not be recruited at the site to eliminate the incentive for persons travelling to site seeking employment.</p> <p>47. The landowner (the Department of Rural Development and Land Reform) will be notified of unauthorised persons encountered on site.</p> <p>48. If deemed necessary, the South African Police Service will be informed of unauthorised persons encountered on site.</p>	<p>Concurrently with the completion of prospecting activities</p>	<p>Maintain a 100% crime free area within the control of the prospecting activities and applicant.</p>
--	---	--	---	--

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
---	------------------	-----------------	--------------------------------	---------------------------

	21. Impact on the pans and associated ecosystems in the area.	49. The prospecting areas must be clearly demarcated. 50. No prospecting activities may be undertaken within the pan areas. 51. All site plans must indicate the presence of pans.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
Removal of temporary infrastructure including: (a) <i>Removal of temporary site office shaded area, potable ablution facilities, water storage tanks and core bay</i> (b) <i>Borehole capping</i> Drill pad rehabilitation including: (a) <i>Ripping of drill pad</i>	22. Destruction and / or disturbance of on-site fauna.	52. Drill holes must be temporarily plugged immediately after drilling is completed and remain plugged until they are permanently plugged below ground to eliminate the risk posed to fauna by open drill holes. 53. Drill holes must be permanently capped as soon as is practicable	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
<p><i>and access road</i></p> <p>(b) <i>Re-spreading of stockpiled topsoil</i></p> <p>(c) <i>Re-vegetation</i></p>				
	<p>23. Dust emissions from decommissioning activities (including vehicle entrained dust).</p>	<p>54. Based on visual observation wet dust suppression will be undertaken to manage dust emissions from vehicle movement.</p> <p>55. Depending on the need and quantity of water used for wet suppression, chemical suppression alternatives must be considered in order to conserve water resources.</p>	<p>Concurrently with the completion of prospecting activities</p>	<p>Remain within the designated area demarcated for prospecting activities.</p> <p>Remain within the National Environmental Management: Air Quality Act, 2004 Dust Regulation guidelines for rural communities.</p>
	<p>24. Poor access control resulting in impacts on cattle movement, breeding and grazing practices.</p>	<p>56. Access control procedures must be agreed on with farm owners and all staff trained.</p>	<p>Concurrently with the completion of prospecting activities</p>	<p>Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.</p>

	25. Potential water and soil pollution resulting from hydrocarbon spills.	57. All fuel storage tanks will be emptied prior to removal.	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.
--	---	--	--	--

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
		58. Drill holes must be permanently capped as soon as is practicable to eliminate the risk of groundwater contamination. 59. Wastes will be removed and disposed of at an appropriately licensed landfill (facility disposal licenses will be verified) and recyclables will be taken to a licensed recycling facility.		
	26. Soil erosion resulting from the re-spreading of topsoil before vegetation is re-established.	60. Mechanical erosion control methods will be implemented if required. This may include the use of geotextiles. 61. Re-vegetation will be conducted through hand seeding exposed areas using indigenous grass species as	Concurrently with the completion of prospecting activities	Remain within the ambits of the Prospecting Works Programme and Environmental Authorisation.

		determined by a suitably qualified ecologist.		
--	--	---	--	--

ACTIVITY (whether listed or not listed)	POTENTIAL IMPACT	MITIGATION TYPE	TIME PERIOD FOR IMPLEMENTATION	COMPLIANCE WITH STANDARDS
		<p>62. Re-vegetation efforts will be monitored every second month for a period of six months after initial seeding.</p> <p>63. An effective vegetation cover of 45% must be achieved. Re-seeding will be undertaken if this cover has not been achieved after six months.</p>		

8. Financial Provision

8.1 Determination of the amount of Financial Provision.

8.2 Describe the closure objectives and the extent to which they have been aligned to the baseline environment described under the Regulation.

As previously mentioned, each phase of the prospecting activities is dependent on the success of the previous. Depending on the outcome of the Phase 1 assessment, drilling programme will be initiated. The location and extent drill sites can therefore not be determined at this stage.

The rehabilitation plan is developed on the basis that the rehabilitated areas are safe, stable, non-polluting and are able to support a self-sustaining ecosystem similar to surrounding natural environment. To ensure that the rehabilitation plan is aligned with the closure objective, a high-level risk assessment of the prospecting components has been undertaken to establish the potential risks associated therewith.

The closure objectives are to:

Eliminate any safety risk associated with drill holes and sumps through adequate drill hole capping and backfilling.

Remove and / or rehabilitate all pollution and pollution sources such as waste materials and spills;

To establish rehabilitated area which is not subject to soil erosion which may result in the loss of soil, degradation of the environment and cause pollution of surface water resources; and

Restore disturbed area and re-vegetate these areas with grass species naturally occurring in the area to restore the ecological function of such areas as far as is practicable.

8.3 Confirm specifically that the environmental objectives in relation to closure have been consulted with landowners and interested and affected parties

This Basic Assessment Report and Environmental Management Plan will be made available to each registered stakeholder for review and comment. All comments will be captured in the issues and response section and will be included into the final report.

8.4 Provide a rehabilitation plan that describes and shows the scale and aerial extent of the main mining activities, including the anticipated mining area at the time of closure.

As previously mentioned, each phase of the prospecting activities is dependent on the success of the previous. Depending on the outcome of the Phase 1 assessment, an airborne / ground geophysics survey and/or loam sampling programme will be initiated. Targets that have been prioritized through detailed anomaly-specific loam sampling will be tested by initial drilling.

The location and extent of soil sampling and drill sites can therefore not be determined at this stage.

Mapping of the prospecting activities could thus not be undertaken.

Due to the nature of the activities, the impacts will be very limited and of short duration. The management plan is provided in such a manner as to ensure concurrent rehabilitation. The areas for drilling purposes will be the main area experiencing impacts. In this event the activities will be temporary in nature, and a detailed management plan has been provided to address potential impacts associated with these activities.

The only rehabilitation that will specifically be required is borehole capping and revegetation:

Borehole capping

Drill holes must be permanently capped as soon as is practicable. Figure 19 below provides the prepared procedure for the secure plugging of exploration drill holes.

Re-vegetation

It is recommended that a standard commercial fertilizer high in the standard elements is added to the soil before re-vegetation, at a rate of 10-20kg/ha (application rate to be confirmed based on input from a suitably qualified specialist). The fertilizer should be added to the soil in a slow release granular form.

A suitably qualified ecologist will be appointed to determine the appropriate veld grass mix for hand seeding.

Re-vegetation efforts will be monitored every second month for a period of six months after initial seeding. An effective vegetation cover of 45% must be achieved. Re-seeding will be undertaken if this cover has not been achieved after six months.

8.5 Explain why it can be confirmed that the rehabilitation plan is compatible with the closure objectives.

Due to the nature of the activities, the impacts will be very limited and of short duration. The management plan is provided in such a manner as to ensure concurrent rehabilitation. The areas for drilling purposes will be the main area experiencing impacts. In this event the activities will be temporary in nature, and a detailed management plan has been provided to address potential impacts associated with these activities.

8.6 Calculate and state the quantum of the financial provision required to manage and rehabilitate the environment in accordance with the applicable guideline.

The financial provision for the environmental rehabilitation and closure of any mine/prospecting and its associated operations forms an integral part of the MPRDA. Sections 41(1), 41(2), 41(3) and 45 of the MPRDA deal with the financial provision for rehabilitation and closure. During 2017 the DMR made updated rates available for the calculation of the closure costs, where contractor's costs are not available these are used in assessments.

The "Guideline Document for the Evaluation of Financial Provision made by the Mining Industry" was developed by the DMR in January 2005, in order to empower the personnel at Regional DMR offices to review the quantum determination for the rehabilitation and closure of mining sites.

With the determination of the quantum for closure it must be assumed that the infrastructure has no salvage value (clean closure). The closure cost estimate (clean closure) was determined in accordance with the DMR guidelines and is based, where possible. The closure costs are as follows:

Sub-Total 1:	R 378 177 (excluding VAT)
Sub-Total 2:	R 461 3759(excluding VAT)
Sub-Total 3 (clean closure cost):	R 476 38 (including VAT)

8.7 Confirm that the financial provision will be provided as determined.

The amount the finance the prospecting activities will amount to (R476 38). Financing will be sourced from the capital expenditure as planned by the company; this capital will come from the treasury of the company. As part of the Prospecting Works Programme, the applicant has

provided the annual financial statement for 2015. The Mine's annual financial statement for 2015 was also submitted to the DMR for confirmation that the company has available funding to implement this proposed project.

It should be noted that the current expenditure provided for in the Prospecting Works Programme does not include the calculated Financial Provision as included into this Basic Assessment, as these values were not available at the time of the submission of the Prospecting Works Programme.

The provision for closure, should be updated into the Prospecting Works Programme prior the decision by the DMR should this decision be positive.

Mechanisms for monitoring compliance with and performance assessment against the environmental management programme and reporting thereon, including

- g) **Monitoring of Impact Management Actions**
- h) **Monitoring and reporting frequency**
- i) **Responsible persons**
- j) **Time period for implementing impact management actions**
- k) **Mechanism for monitoring compliance**

SOURCE ACTIVITY	IMPACTS REQUIRING MONITORING PROGRAMMES	FUNCTIONAL REQUIREMENTS FOR MONITORING	ROLES AND RESPONSIBILITIES (FOR THE EXECUTION OF THE MONITORING PROGRAMMES)	MONITORING AND REPORTING FREQUENCY and TIME PERIODS FOR IMPLEMENTING IMPACT MANAGEMENT ACTIONS

				assessment report for site closure to be submitted to the Department of Mineral Resources for approval.

8.7 Indicate the frequency of the submission of the performance assessment/ environmental audit report

Annual performance assessments must be undertaken on the EMP. These reports must also include the assessment of the financial provision. The reports should be submitted to the DMR.

8.8 Environmental Awareness Plan

8.9 Way the applicant intends to inform his or her employees of any environmental risk which may result from their work.

An Environmental Awareness and Risk Assessment Schedule have been developed and is outline in Table 24. The purpose of this schedule is to ensure that employees are not only trained but that the principles are continuously re enforced.

Table 16: Environmental Training and Awareness Schedule

Frequency	Time allocation	Objective
Induction (all staff and workers)	1-hour training on environmental awareness training as part of site induction	<ol style="list-style-type: none"> 1. Develop an understanding of what is meant by the natural environmental and social environment and establish a common language as it relates to environmental, health, safety and community aspects. 2. Establish a basic knowledge of the environmental legal framework and consequences of non-compliance. 3. Clarify the content and required actions for the implementation of the Environmental Management Plan. 4. Confirm the spatial extent of areas regarded as sensitive and clarify restrictions. 5. Provide a detailed understanding of the definition, the method for identification and required response to emergency incidents.
Monthly Awareness Talks (all staff and workers)	30-minute awareness talks	Based on actual identified risks and incidents (if occurred) reinforce legal requirements, appropriate responses and measures for the adaptation of mitigation and/or management practices.

Risk Assessments (supervisor and workers involved in task)	Daily task-based risk assessment	Establish an understanding of the risks associated with a specific task and the required mitigation and management measures on a daily basis as part of daily toolbox talks.
--	-------------------------------------	---

8.10 Manner in which risks will be dealt with in order to avoid pollution or the degradation of the environment.

As prescribed in Table 24, Task / Issue Based Risk Assessments must be undertaken with all worker involved in the specific task in order to establish an understanding of the risks associated with a specific task and the required mitigation and management measures.

Environmental Awareness Training Content – Induction Training

The following environmental awareness training will be provided to all staff and workers who will be involved in prospecting activities.

Description of the approved prospecting activities and content of the prospecting right.

An overview of the applicable legislation and regulations as it relates to environmental, health, safety and community including (but not limited to):

- General Environmental Legal Principles and Requirements
- Air Quality Management
- Water and Wastewater Management
- Hazardous Substances
- Non-Mining-Related Waste Management
- The Appropriate Remediation Strategies & Deteriorated Water Resources
- Biodiversity
- Weeds and Invader Plants
- Rehabilitation
- Contractors and Tenants
- Energy & Conservation
- Heritage Resources
- General Health and Safety Matters
- Basic Conditions of Employment
- Compensation for Occupational Injuries and Diseases
- General Mine Health and Safety Matters
- Smoking in the Workplace

- Noise & Hearing Conservation
- Handling, Storage and use of Hazardous Substances
- Weapons and Firearms
- Content and implementation of the approved Environmental Management Plan
- Allocated responsibilities and functions
- Management and Mitigation Measures
- Identification of risks and requirements adaptation
- Sensitive environments and features
- Description of environmentally sensitive areas and features
- Prohibitions as it relates to activities in or in proximity to such areas
- Emergency Situations and Remediation
- Methodology for the identify areas where accidents and emergency situations may occur, communities and individuals that may be impacted
- An overview of the response procedures,
- Equipment and resources
- Designate of responsibilities
- Communication, including communication with potentially Affected Communities
- Training schedule to ensure effective response.

Development of procedures and checklists

The following procedures will be developed, and all staff and workers will be adequately trained on the content and implementation thereof.

Emergency Preparedness and Response

The procedure will be developed to specifically include risk identification, preparedness, response measures and reporting. The procedure will specifically include spill and fire risk, preparedness and response measures. The appropriate emergency control centres (fire department, hospitals) will be identified and the contact numbers obtained and made available on site. The procedure must be developed in consultation with all potentially affected landowners.

In the event that risks are identified which may affected adjacent landowners (or other persons), the procedure will include the appropriate communication strategy to inform such persons and provide response measures to minimize the impact.

Incident Reporting Procedure

Incident reporting will be undertaken in accordance with an established incident reporting procedure to (including but not limited to):

- Provide details of the responsible person including any person who: (i) is responsible for the incident; (ii) owns any hazardous substance involved in the incident; or (iii) was in control when the incident occurred;
- Provide details of the incident (time, date, location);
- The details of the cause of the incident.
- Identify the aspects of the environment impacted.
- The details corrective action taken, and
- The identification of any potential residual or secondary risks that must be monitored and corrected or managed.

Environmental and Social Audit Checklist

An environmental audit checklist will be established to include the environmental and social mitigation and management measures as developed and approved as part of the Environmental Management Plan. Non-conformances will be identified, and corrective action taken where required.

9. Specific information required by the Competent Authority

(Among others, confirm that the financial provision will be reviewed annually).

No specific information was required by the Competent Authority.

10. UNDERTAKING

The EAP herewith confirms

- a) the correctness of the information provided in the reports
the inclusion of comments and inputs from stakeholders and I&APs ;
- b) the inclusion of inputs and recommendations from the specialist reports where relevant;
and
- c) that the information provided by the EAP to interested and affected parties and any responses by the EAP to comments or inputs made by interested and affected. parties are correctly reflected herein

Good Day Albertus Jacobus

We trust this email finds you well.

Singo Consulting (Pty) Ltd on behalf of **RDH Holdings (Pty) Ltd** hereby wish to inform you that it has submitted an application for a Prospecting Right together with an Environmental Authorization to the Mpumalanga Department of Mineral Resources (DMR) for the proposed project of prospecting for **Coal, Pseudo Coal, Shale & Clay** on the Farm **Welgelegen 221 IR**, situated under the Magisterial District of Delmas, Mpumalanga Province.

Kindly find attached Landowner Letter, Regulation Map and Background Information Document (BID) for detailed description of the proposed project and timelines.

Kind regards,

Sirs

RE: Prospecting Right application for Welgelegen 221 IR farm on all portion (excluding portion 07) & Mining Permit on Welgelegen 221 IR on portion of portion 07

1. We act for and on behalf of both VV Mining (Pty) Ltd and we make reference to your email of 15 July 2020. While we note the contents therein, our failure to deal with each and every allegation contained therein should not be construed as an admission, acceptance and or support thereof and we reserve our client's rights to deal with same at a later and within the appropriate forum should the need arise.
2. In consideration of the documents you have provided, we note that same does not contain any official issuance from the relevant governmental department and we have reason to believe that a mining right already exists on the site you are considering.
3. We apologise for accepting the requested meeting in error, our client has informed us that they are willing for us to receive written questions and we shall reserve our client's rights, addressing same if necessary.
4. Should you require anything, the writer of this communication can be contacted on 074-149-7030 or at brendon@cubetheorem.co.za.

Yours faithfully

Brendon Fraser

Subject: REGISTRATION AS AN INTERESTED AND AFFECTED PARTY MJ KLEYN IN TERMS OF PROPOSED PROSPECTING BY RDH HOLDINGS DMR REF NUMBER MP30/5/1/1/2/(16307)PR

Dear Madam

11 July 2020

As managing trustee of Rooibult Trust, a farm close to the proposed exploration site, I hereby wish to register as an interested and affected party.

My preliminary concerns around the proposed exploration site are:

1. The proposed site is in a wetland and by law any mining activity including prospecting is prohibited;
2. The site is adjacent to a Transnet pipeline which enjoys protection against any mining, blasting, etc activities by means of servitudes;
3. I am not aware that a public participation meeting has been announced and if any has taken place, I would like to be informed when and where it took place. Please advise the date and venue of the meeting if it is still to be held.
4. On the notice of public participation you indicate that the EMP is available for review from 13 July 2020 to 13 August 2020. Please make arrangements to deliver a printed copy to me by contacting me at the number provided below.

5. If a site inspection was conducted by the Department of Environmental Affairs, please provide details of the official responsible for such inspection.

Yours Truly

Magda Kleyn

Managing Trustee Rooibult Trust

Straffontein

APPLICATION - DMR REF NUMBER: MP 30/5/1/1/2/16307 PR

Good Day

Receive warm greetings from Singo Consulting (Pty) Ltd,

Singo Consulting (Pty) Ltd on behalf of **RDH Holding (Pty) Ltd**, hereby wish to inform you that it has submitted an application for a Prospecting Right together with an Environmental Authorization to the Mpumalanga Department of Mineral Resources (DMR) for the proposed project of the prospecting of **Coal, Pseudo Coal, Clay & Shale** on **all portions (excluding portion of portion 07)** of the farm **Welgelegen 221 IR**, situated under the Delmas Magisterial District, Mpumalanga Province. (**DMR REF: MP 30/5/1/1/2/16307 PR**)

This Notification is being given in compliance with the terms of: Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002) (MPRDA), National Environmental Management Act, 1998 (Act No. 107 of 1998), and EIA Regulations (as amended, 07 April 2017) which requires that stakeholders must be notified of **RDH Holding (Pty) Ltd.'s** intention to obtain Prospecting Right for the above mentioned mineral.

This invitation is being extended to you because the department that you represent might be somehow enforcing any of the Republic of South Africa's laws of which ensures; prevention of pollution & environmental degradation, promotes sustainable development & socio-economic development, or instead might be affected by mining activities. Hence you are being offered an opportunity to:

- Register as an I&AP and to respond to the environmental compliance process.
- Raise issues of concern and provide suggestions for enhanced benefits.
- Contribute to local knowledge.
- Comment on the Draft Basic Assessment Report (DBAR) & Environmental Management Plan Report (EMPR)

Singo Consulting (Pty) Ltd has been appointed as an independent Environmental Assessment Practitioner (EAP) to manage the environmental authorization process, by conducting Environmental Impact Assessment, Public Participation for the proposed project and compile an Environmental Management Plan. A Basic Assessment process has commenced, for your participation kindly fill the registration and comment form at the end of the Background Information Document (BID) attached and register your comments, issues, questions that you have about the proposed project. Should you need any clarity on the attached documents or have any queries with regards to the project, please do not hesitate to contact me on the details below.

Please find the attached Background Information Document (BID) for detailed description of the proposed project and timelines.

If you know anyone who might be interested in this project, kindly forward this email to that person.

Kind regards,

You replied to this message on 2020/05/07 13:03.

Dear Takalani,

I hope that you are well.

I have sent the BID to my colleague Masala Nemukula whom I cced. However we are not yet back to work and you will only receive the Department's comment once we are operational.

I hope you find the above in order.

Kind Regards,

Ms Gloria Moloto

Dear Sir/madam

WAYLEAVE APPLICATION: FOR A PROSPECTING RIGHT TOGETHER WITH AN ENVIRONMENTAL AUTHORIZATION TO THE MPUMALANGA DEPARTMENT OF MINERAL RESOURCES (DMR) FOR THE PROPOSED PROJECT OF THE PROSPECTING OF COAL, PSEUDO COAL, CLAY & SHALE ON ALL PORTIONS (EXCLUDING PORTION OF PORTION 07) OF THE FARM WELGELEGEN 221 IR

We refer to your application dated 08 May 2020.

This application affects the existing Eskom Distribution line,

KENDAL/BRAKFORTEIN 22kV Overhead Line
GROOTPAN/BRAKFORTEIN TRAC 88kV Overhead Line

The approximate positions of these services are indicated on the attached sketches.

Eskom has no objection to the above mentioned application, provided the following conditions are adhered to:

- a) There is a 9 meters building and tree restriction on either side of the Centre lines of the 22kV ,and 15.5 meters for 88kV and 132kV power lines, which must be adhered to in all future development and or construction. Eskom's rights are protected by servitude. The approximate positions of these services are indicated on the attached sketches.
- b) Eskom's services and equipment must be acknowledged at all times and may not be tampered with or interfered with.
- b) No construction work may be executed closer than ten metres from any Eskom Distribution structure or structure-supporting mechanism.
- c) Natural ground level must be maintained within Eskom reserve areas and servitudes.

Eskom Holdings SOC Ltd Reg No 2002/015527/30

- d) All work within Eskom reserve areas and servitudes must be carried out in accordance with the requirements of the Occupational Health and Safety Act 85 of 1983 as amended.
- e) Special attention must be given to the clearances between Eskom's conductors, structures, cables, electrical apparatus and proposed work as stipulated by Regulation R15 of the Electrical Installations Regulations of the aforementioned Act or any other legal requirements.
- f) Eskom shall not be liable for the death or injury of any person, or for loss of or damage to any property, whether as a result of the encroachment or use of the area where Eskom has its services, by the applicant, his/her agent, contractors, employees, successors in title and assignees.
- g) The applicant indemnifies Eskom against loss, claims or damages, including claims pertaining to interference with Eskom services, apparatus or otherwise.
- h) Eskom shall at all times have unobstructed access to and egress from its services.
- i) No dumping shall be allowed within Eskom Distribution Services.
- j) Any development which necessitates the relocation of Eskom's services will be to the account of the developer.

For arrangement with the supervision of and/ or precautionary instructions please contact Eskom's authorised area representative for the Emalahleni Technical Service Area: Jotham Mnisi at Tel: +27 13 693 4743, email address: MnisiMJ@eskom.co.za

Should the applicant or his/her contractor damage any of Eskom's services during execution of any work whatsoever, the incident must be reported to Eskom's 24-hour Contact Centre (08600 37566) immediately.

The above conditions should be accepted in writing before any work within Eskom Services commences.

If Eskom has to incur any expenditure in order to comply with statutory clearances or other regulations as a result of the applicant's activities or because of the presence of his equipment or installation within the servitude or wayleave area, the applicant shall pay such costs to Eskom on demand.

Yours faithfully

for
Livhuwani Mashamba

Good Day

I hope this email finds you well.

Thank you for your response looking forward to hearing from you when you get back to work.

Kind regards,

Greetings

I hope this email finds you well.

You are kindly receiving this email as an enquiry for any possible land claim on the Farm **Welgelegen 221 IR**, situated in the Magisterial District of Delmas, Mpumalanga Province. **DMR Ref: MP 30/5/1/1/2/16307 PR.**

Kindly review attached BID for detailed description of proposed project. This is to ensure that all claimants are properly consulted and are given opportunity to:

- Register as an I&AP and to respond to the environmental compliance process.
- Raise issues of concern and provide suggestions for enhanced benefits.
- Contribute to local knowledge.
- Comment on the Draft Basic Assessment Report (DBAR) & Environmental Management Program (EMP); and
- Inform any other person / organization that they may feel should be informed about the project.

Your comments will be highly appreciated as they will assist us in developing a well-informed BAR and EMP.

Kind regards

- Contribute to local knowledge;
- Comment on the Draft Basic Assessment Report (DBAR) & Environmental Management Plan Report (EMPR)

Singo Consulting (Pty) Ltd has been appointed as an independent Environmental Assessment Practitioner (EAP) to manage the environmental authorization process, by conducting Environmental Impact Assessment, Public Participation for the proposed project and compile an Environmental Management Plan. A Basic Assessment process has commenced, for your participation kindly fill the registration and comment form at the end of the Background Information Document (BID) attached and register your comments, issues, questions that you have about the proposed project. Should you need any clarity on the attached documents or have any queries with regards to the project, please do not hesitate to contact me on the details below.

Please find the attached Background Information Document (BID) for detailed description of the proposed project and timelines.

If you know anyone who might be interested in this project, kindly forward this email to that person.

Kind regards,

Takalani Rakuambo
Junior Consultant

Subject: LAND RESTITUTION

Greetings

I hope this email finds you well.

You are kindly receiving this email as an enquiry for any possible land claim on the Farm **Welgelegen 221 IR**, situated in the Magisterial District of Delmas, Mpumalanga Province. **DMR Ref: MP 30/5/1/1/2/16307 PR.**

Kindly review attached BID for detailed description of proposed project. This is to ensure that all claimants are properly consulted and are given opportunity to:

- Register as an I&AP and to respond to the environmental compliance process.
- Raise issues of concern and provide suggestions for enhanced benefits.
- Contribute to local knowledge.
- Comment on the Draft Basic Assessment Report (DBAR) & Environmental Management Program (EMP); and

- Inform any other person / organization that they may feel should be informed about the project.

Your comments will be highly appreciated as they will assist us in developing a well-informed BAR and EMPr.

Kind regards,

From: Themba Mkhonto <Themba.Mkhonto@drdlr.gov.za>

APPENDIX 4: IMPACT MANAGEMENT OUTCOME

ACTIVITY (Whether listed or not listed). (E.g. Excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc.).	POTENTIAL IMPACT (Including the potential impacts for cumulative impacts) (E.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etc.)	ASPECTS AFFECTED	PHASE In which impact is anticipated (E.g. Construction, commissioning, operational, Decommissioning, closure, post-closure)	MITIGATION TYPE (modify, remedy, control, or stop) Through (E.g. noise control measures, storm-water control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc.) (E.g. Modify through alternative method. Control through noise control. Control through management and monitoring through rehabilitation)	STANDARD TO BE ACHIEVED (Impact avoided, noise levels, dust levels, rehabilitation standards, end use objectives) etc.
Planning and Project Management	EMP	Project Management	Planning	<ul style="list-style-type: none"> • A finalized EMP must address all authorization conditions stipulated by the DEA (and other commenting authorities). • The EMP should also encompass all environmental impact mitigation measures as identified in the final BAR. 	MPRDA & NEMA
	Appointment of Environmental Officer	Project Management	Planning	<input type="checkbox"/> RDH Holdings (Pty) Ltd environmental geologist will serve as the Environmental Officer (EO) during construction, given the short duration of construction and the low significance impacts which are envisaged. RDH Holdings (Pty) Ltd environmental geologist will be responsible for monitoring the compliance of the construction workers and employees on site with the EMP and ensure their co-operation.	MPRDA & NEMA

	Permits and Permissions		Planning	<input type="checkbox"/> JB Marks Local Municipality must ensure that all licensing, permits or certificates required for the project are obtained and in place prior to the commencing of any construction activities on site.	MPRDA & NEMA
--	--------------------------------	--	----------	---	--------------

	Emergency	Safety and health	Planning	<input type="checkbox"/> Plan all emergency responses including:	MPRDA & NEMA
ACTIVITY (Whether listed or not listed). (E.g. Excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc.).	POTENTIAL IMPACT (Including the potential impacts for cumulative impacts) (E.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etc.)	ASPECTS AFFECTED	PHASE In which impact is anticipated (E.g. Construction, commissioning, operational, Decommissioning, closure, post-closure)	MITIGATION TYPE (modify, remedy, control, or stop) Through (E.g. noise control measures, storm-water control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc.) (E.g. Modify through alternative method. Control through noise control. Control through management and monitoring through rehabilitation)	STANDARD TO BE ACHIEVED (Impact avoided, noise levels, dust levels, rehabilitation standards, end use objectives) etc.

	Response Planning	personnel on site		<ul style="list-style-type: none"> • Response procedures to fires, explosions, or any accidents that will require rapid medical responses; and • Responses to community and stakeholder concerns and communication procedures with potentially affected parties (I&AP). 	
	Project Schedule	Undertaking the project in a timeous manner	Planning	<input type="checkbox"/> Plan and develop a construction sequence to alleviate noise generation during the construction phase.	N/A
	Method Statement	Project Management	Planning	<input type="checkbox"/> Ensure that a method statement has been compiled and submitted to the Site/Construction manager.	N/A
	Grievances	Project Management	Planning	<input type="checkbox"/> Develop grievance mechanisms for the recording and management of complaints and grievances specifically including (but not limited to) grievances from those living in the area.	N/A
	Records and Administration	Project Management	Planning	<p>Ensure the following are up to date and available on site:</p> <ul style="list-style-type: none"> • A complaint register. • An approved method statements. • Copies of the EMP. 	

ACTIVITY (Whether listed or not listed). (E.g. Excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc.).	POTENTIAL IMPACT (Including the potential impacts for cumulative impacts) (E.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etc.)	ASPECTS AFFECTED	PHASE In which impact is anticipated (E.g. Construction, commissioning, operational, Decommissioning, closure, post-closure)	MITIGATION TYPE (modify, remedy, control, or stop) Through (E.g. noise control measures, storm-water control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc.) (E.g. Modify through alternative method. Control through noise control. Control through management and monitoring through rehabilitation)	STANDARD TO BE ACHIEVED (Impact avoided, noise levels, dust levels, rehabilitation standards, end use objectives) etc.
				<ul style="list-style-type: none"> • Environmental Permits and authorizations. • Copies of weekly checklists, compliance reports, incidence reports and corrective action reports. • Photographs of areas of concern (photos of non-compliance areas as well corrective action). • Attendance registers of environmental awareness training. 	
	Recruitment of Labour	Project Management	Planning	<ul style="list-style-type: none"> • Where possible, the contractor must make use of local labour in support of the local economy. • Advertise employment opportunities adequately, so as not to limit application opportunities. • Implement a transparent process of recruiting construction staff, following pre-established and accepted criteria. 	Basic Conditions of Employment Act, No. 75 of 1997 (as amended)
PRE-DRILLING/ EXPLORATION					

	Site establishment	Project Management	Planning	<input type="checkbox"/> The Contractor must, in agreement with the Construction Manager, decide upon an area for the location of a construction camp. The construction camp should be properly demarcated and fenced, and be adequately sized, with sufficient space for site offices, construction vehicles, equipment, material and waste storage areas	
--	--------------------	--------------------	----------	--	--

ACTIVITY (Whether listed or not listed). (E.g. Excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc.).	POTENTIAL IMPACT (Including the potential impacts for cumulative impacts) (E.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination groundwater contamination air pollution etc.)	ASPECTS AFFECTED	PHASE In which impact is anticipated (E.g. Construction, commissioning, operational, Decommissioning, closure, post-closure)	MITIGATION TYPE (modify, remedy, control, or stop) Through (E.g. noise control measures, storm-water control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc.) (E.g. Modify through alternative method. Control through noise control. Control through management and monitoring through rehabilitation)	STANDARD TO BE ACHIEVED (Impact avoided, noise levels, dust levels, rehabilitation standards, end use objectives) etc.
				<ul style="list-style-type: none"> The construction camp must be located in an area with minimal damage or disturbance to the environment. Establish 'NO-GO' areas- where no construction personnel, equipment/machinery or vehicles are permitted. Any identified Environmental Sensitive or important areas should be designated as 'NO-GO' areas. 	
	Site Housekeeping	Project Management	Planning	<input type="checkbox"/> The construction camp should be kept clean and orderly at all times.	

	Ablution Facilities	Project Management	Planning	<ul style="list-style-type: none"> • Enough toilet facilities should be provided near construction camp. The toilets should be properly covered and ventilated and should contain hand washing facilities. • Portable toilets should be properly secured to the grounds to avoid toppling in the case of a wind/storm event. • Ensure that all toilets function properly and are in a hygienic state. The toilets should be cleaned and emptied regularly. • Ensure that there are no spillages when toilets get cleaned and emptied. • Urination on site should be strictly prohibited. 	
ACTIVITY (Whether listed or not listed). (E.g. Excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc.).	POTENTIAL IMPACT (Including the potential impacts for cumulative impacts) (E.g. dust, noise, drainage surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etc.)	ASPECTS AFFECTED	PHASE In which impact is anticipated (E.g. TERTIARY EDUCATION

Qualification : **Ph.D.** (Geology, Applied Environmental Mineralogy & Geochemistry)
Institution : University of Johannesburg
Year Obtained : Results issued, graduation date to be confirmed.
PhD Project Title : In Search of the Possible Economic Potential, through Conceptual Study,
on Reclamation of Defunct Mine Residue areas for Development Purposes:
Case study of Musina Copper Mine, Giyani Louis Moore Gold Mine and
Zwigodini Nyala Magnesite Mine, South Africa

Qualification : **M.Sc.** (Environmental Management)
Institution : University of South Africa
Year Obtained : 2013
Masters Project Title : An Assessment of Heavy Metal Pollution in the Vicinity of the Defunct
Copper Mine Dumps in Musina, South Africa

Qualification : **B.Sc.** (Hons) Mining & Environmental Geology
Institution : University of Venda
Year Obtained : 2008
Honours Project Title : Structural Control on Kimberlite Pipes: A Case Study of Venetia Kimberlite
Pipe-K19, Venetia Open Cast Diamond Mine, South Africa

WORK EXPERIENCE

Company : Singo Consulting
Position : Director/Principal Consultant
Duration : 9 August 2012—TODATE
Key Focus Area : Environmental Projects

Technical work:

- Environmental Impact Assessment
- Environmental Management Plans
- Social and Community Development Plans
- Geological (Exploration, Resource Estimation and Competency Report)
- Hydrological and Hydrology (Surface and Groundwater Studies)
- Soil Science (Soil profiling, Modelling and Soil Chemistry)
- Environmental Control Office
- Geotechnical (Soil and Rock)
- Mining Feasibility Studies

TRAINING COURSES

➤ 17- 19 April 2012: GSSA Drilling Methods & Techniques in Resource Exploration

- > 13-14 September 2012: GSSA Exploration Drill Site Safety
- > 3 May 2013: SHE Representative Training
- > 6-10 May 2013: Witwatersrand University, A3 SHE Risk Assessment Management
- > 22 July 2013: AATCGS Geophysics 101: Basics of Geophysics and Its Application in Coal
- > 31 July 2013: Mentorship Training
- > 14 April 2014: A2 Safety for Managers
- > 13 May - 26 June: Lump Ore Beneficiation (Basic Coal Preparation): Metallurgy G101-105, Colliery Training College, Witbank
- > 14-17 July 2014: Safety Leadership Programme
- > 6-8 Oct 2014: Understanding Coal Quality, ALS Witbank Training
- > 3-7 Nov 2014: Foundation for Leadership Programme
- > 3 Feb 2015: 4X4 Defensive Driving Training
- > 1 May 2015: Assertiveness Awareness and Training
- > 21-22 July 2016: Time Management Training

SYMPOSIUMS

- > 29 July 2013: **Presenter:** 4th Prof Humphrey Memorial Post-Graduate Symposium, University of South Africa
- > 11 November 2015: **Presenter:** Wits GSSA REI Colloquium: Economic Potential and Viability of reclaiming mine dumps in the Limpopo Province.

CONFERENCES

LIST OF CONFERENCE PROCEEDINGS AND SYMPOSIUMS:

- > 26-28 November 2012: Aminergy Acid Mine Drainage South Africa Conference
- > 10-12 March 2014: **Presenter:** SAICE 5th International Mining and Industrial Waste Management Conference
- > 29 Sept-3 Oct 2014: 9th International Mine Closure Conference, Sandton
- > 16-17 March 2015: Workshop: South Africa Mining-Related Landscape* Rehabilitation Status Quo: Identifying Work Required to Close Current Knowledge gaps, WRC, Pretoria.
- > 8-11 Sept 2015: Land Rehabilitation Society of Southern Africa (LaRSSA): Mine rehab and biodiversity.
- > N.K. Singo*, 2015. Wits GSSA REI Colloquium: Economic Potential and Viability of reclaiming mine dumps in the Limpopo Province. 11th November 2015, Witwatersrand University, Johannesburg, South Africa.
- > N.K. Singo* and J.D. Kramers, 2016. Uranium as a potential health hazard as well as (even) an economic asset in the Louis Moore tailings dump, near Giyani, Limpopo Province. In symposium Proceedings; 6th Mintek Analytical Symposium "The Environment", Mintek G4, Randburg, Johannesburg, South Africa, Friday 21st October 2016.
- > N.K. Singo* and J.D. Kramers, 2017. Chrysotile (white asbestos) occurrence in the Nyala Magnesite Mine dumps and the soils around them, and its health implications to the community of Zwigodini Village, Limpopo Province. 5th Annual Conference. 1-4 August 2017, Resilient Landscapes in a Changing Climate.
- > N.K. Singo* and J.D. Kramers, 2017. Unlocking the potential economic benefit of a tailings dump through resource modelling and estimation: SHE (safety, health, and environmental) issues and solutions. MineSafe 2017 Conference, Striving for zero harm (driving excellence through compliance), Emperors Palace, Hotel Casino Convention Resort, Johannesburg, 30-31 August 2017, The Southern African Institute of Mining and Metallurgy (SAIMM).

List of publications:

- > N.K. Singo, and J.D., Kramers, 2017. Geochemical and Mineralogical Characterization of two low grade stockpiles (mine residue deposits): acid mine drainage vs neutral-alkaline mine drainage perspectives. A case study of the Musina (Copper) and Nyala (Magnesium) mines, South Africa.
- > N.K. Singo, and J.D., Kramers, 2017. Preferred tailings retreatment approach to unlock value and create environmental sustainability of the Louis Moore tailings dump, near Giyani, South Africa.
- > N.K. Singo, and J.D., Kramers, 2017. Copper tailings retreatment to deliver economic value with concurrent rehabilitation at the Musina mine, South Africa.
