1. IMPORTANT NOTICE

In terms of the Mineral and Petroleum Resources Development Act (Act 28 of 2002 as amended), the Minister must grant a prospecting or mining right if among others the mining “will not result in unacceptable pollution, ecological degradation or damage to the environment”.

Unless an Environmental Authorisation can be granted following the evaluation of an Environmental Impact Assessment and an Environmental Management Programme report in terms of the National Environmental Management Act (Act 107 of 1998) (NEMA), it cannot be concluded that the said activities will not result in unacceptable pollution, ecological degradation or damage to the environment.

In terms of section 16(3)(b) of the EIA Regulations, 2014, any report submitted as part of an application must be prepared in a format that may be determined by the Competent Authority and in terms of section 17 (1) (c) the competent Authority must check whether the application has taken into account any minimum requirements applicable or instructions or guidance provided by the competent authority to the submission of applications.

It is therefore an instruction that the prescribed reports required in respect of applications for an environmental authorisation for listed activities triggered by an application for a right or a permit are submitted in the exact format of, and provide all the information required in terms of, this template. Furthermore, please be advised that failure to submit the information required in the format provided in this template will be regarded as a failure to meet the requirements of the Regulation and will lead to the Environmental Authorisation being refused.

It is furthermore an instruction that the Environmental Assessment Practitioner must process and interpret his/her research and analysis and use the findings thereof to compile the information required herein. (Unprocessed supporting information may be attached as appendices). The EAP must ensure that the information required is placed correctly in the relevant sections of the Report, in the order, and under the provided headings as set out below, and ensure that the report is not cluttered with un-interpreted information and that it unambiguously represents the interpretation of the applicant.

2. Objective of the basic assessment process

The objective of the basic assessment process is to, through a consultative process—

- (a) determine the policy and legislative context within which the proposed activity is located and how the activity complies with and responds to the policy and legislative context;
- (b) identify the alternatives considered, including the activity, location, and technology alternatives;
- (c) describe the need and desirability of the proposed alternatives,
- (d) through the undertaking of an impact and risk assessment process inclusive of cumulative impacts which focused on determining the geographical, physical, biological, social, economic, heritage , and cultural sensitivity of the sites and locations within sites and the risk of impact of the proposed activity and technology alternatives on the these aspects to determine:
 - (i) the nature, significance, consequence, extent, duration, and probability of the impacts occurring to; and
 - (ii) the degree to which these impacts—
 - (aa) can be reversed;
 - (bb) may cause irreplaceable loss of resources; and
 - (cc) can be managed, avoided or mitigated;
- (e) through a ranking of the site sensitivities and possible impacts the activity and technology alternatives will impose on the sites and location identified through the life of the activity to—
 - (i) identify and motivate a preferred site, activity and technology alternative;
 - (ii) identify suitable measures to manage, avoid or mitigate identified impacts; and
 - (iii) identify residual risks that need to be managed and monitored.

PART A

SCOPE OF ASSESSMENT AND BASIC ASSESSMENT REPORT

3. Contact Person and correspondence address

a) Details of

i) Details of the EAP

Name of The Practitioner: Moses Malungisa Msitsini

Tel No.: 0719064780

e-mail address: malungisamoses@gmail.com

ii) Expertise of the EAP.

(1) The qualifications of the EAP

BSc Geology and Geography, See appendix A

(2) Summary of the EAP's past experience.

(In carrying out the Environmental Impact Assessment Procedure):

I have worked with the small scale miners in the region of Free State helping them with the application for Mining permit, prospecting right and comply reports with the legislation of the Department of Mineral Resource

b) Location of the overall Activity.

Farm Name:	Lower Kuruman Native Reserve 219
Application area (Ha)	5.0
Magisterial district:	John Taolo Gaetsewe
Distance and direction from nearest town	About 16 km North of Kuruman
21 digit Surveyor General Code for each farm portion	C0410000000021900000

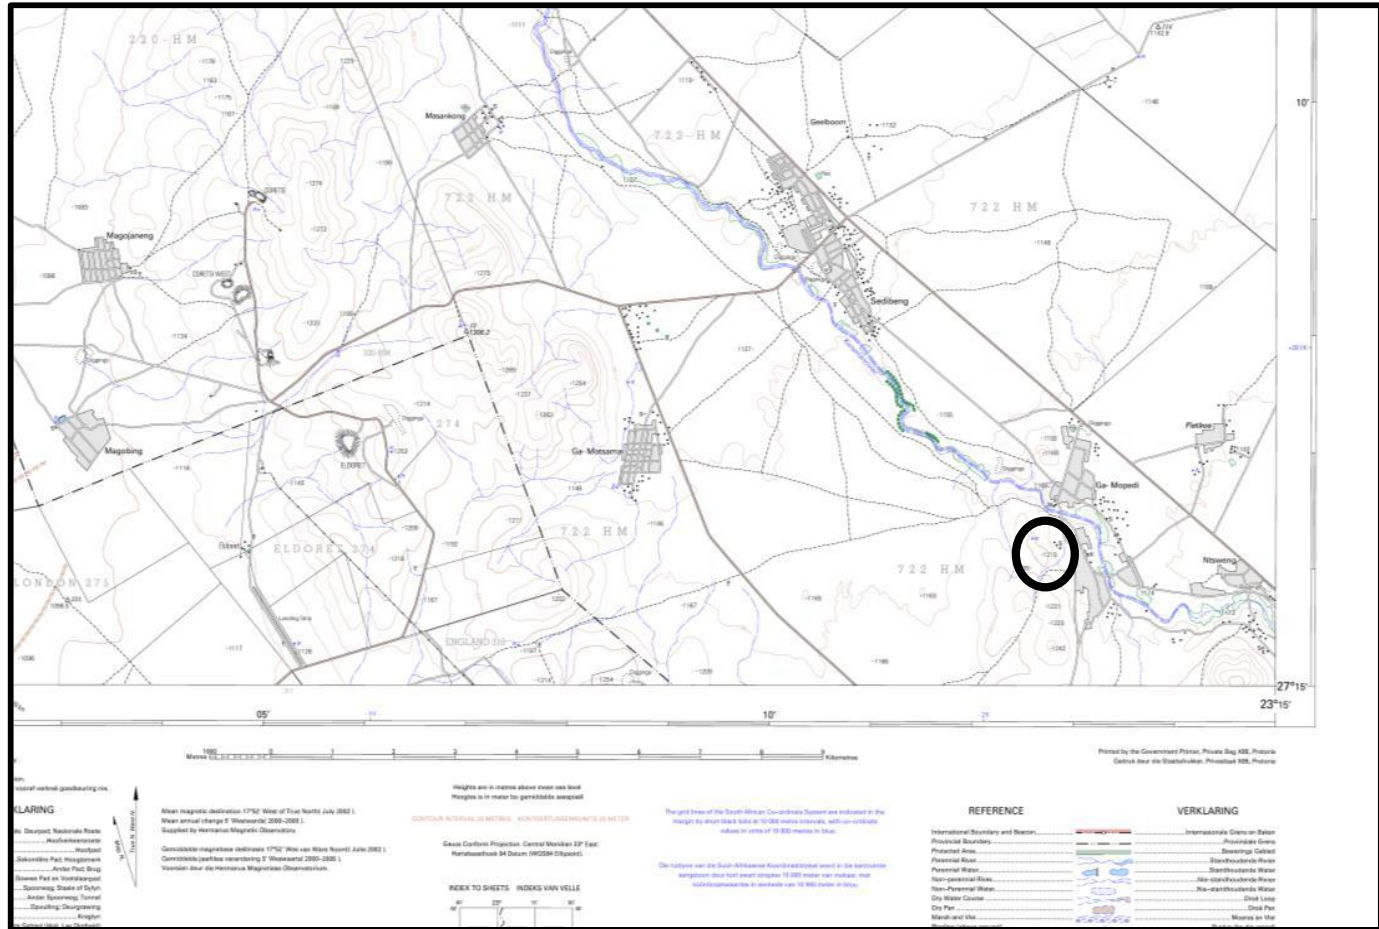

c) Locality map
 (show nearest town, scale not smaller than 1:250000).

LOCALITY OF MINING PERMIT APPLICATION AREA

PROPOSED SITE PLAN

MAP INDICATING LOCALITY WHERE MINING PERMIT IS APPLIED FOR HIGHLIGHTED WITH BLACK CIRCLE SHAPE

APPLICANT: Boswa Boteng Mining Resources (Pty) Ltd

d) Description of the scope of the proposed overall activity.

Provide a plan drawn to a scale acceptable to the competent authority but not less than 1: 10 000 that shows the location, and area (hectares) of all the aforesaid main and listed activities, and infrastructure to be placed on site

Boswa Boteng Mining Resources (Pty) Ltd proposes to establish a small-scale tigers-eye mining operation. The total development area will be approximately 5.0 hectares, and will have a lifespan of 2 years. The process will include the removal of tigers-eye from the demarcated land. The tigers-eye will be stored in stockpiles within the 5.0-hectare area. The removal unprocessed tigers eye boulders will be transported using a Truck Load Backhoe (TLB) to the camp site, located within the 5.0 hectares. The following infrastructure will form part of this mining operation

- Stockpile area
- 1 x TLB
- Diesel storage tank
- Machinery/vehicle maintenance area
- Storage facility
- Septic toilets
- Security/Workers hut
- Office
- Dump Truck

(i) Listed and specified activities

<p>NAME OF ACTIVITY</p> <p>(E.g. For prospecting - drill site, site camp, ablution facility, accommodation, equipment storage, sample storage, site office, access route etc...etc...etc E.g. for mining, - excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc...etc...etc.)</p>	<p>Aerial extent of the Activity</p> <p>Ha or m²</p>	<p>LISTED ACTIVITY</p> <p>(Mark with an X where applicable or affected).</p>	<p>APPLICABLE LISTING NOTICE</p> <p>(GNR 544, GNR 545 or GNR 546)</p>	<p>WASTE MANAGEMENT AUTHORISATION</p> <p>(Indicate whether an authorisation is required in terms of the Waste Management Act).</p> <p>(Mark with an X)</p>
Removal unprocessed tigers eye boulders	5.0 ha	X	GNR 327, Listed activity number 21	X
Stockpile	On-site	X	GNR 327, Listed activity number 21	X
Access Roads	Off-Site	X	GNR 327, Listed activity number 24	X
Discard dumps	0.1	X	GNR 327, Listed activity number 21	X

(ii) Description of the activities to be undertaken

(Describe Methodology or technology to be employed, including the type of commodity to be prospected/mined and for a linear activity, a description of the route of the activity)

Boswa Boteng Mining Resources (Pty) Ltd plans to have removal mining operation for unprocessed tigers eye boulders within a 5.0 ha area to be located on Lower Kuruman Native Reserve 219 about 16 km North of Kuruman.

PROJECT PHASES:

Construction Phase

- Preparing an area of 900 m² for a portable campsite to accommodate infrastructure associated with stockpiling, septic toilets, offices, etc.
- Clearing vegetation for mining operation.

Operational Phase

- Removal and transportation of tigers-eye boulders
- TLB activity and operation of mining equipment
- Storage of diesel and vehicle/machinery maintenance equipment
- Stockpiling of tigers-eye

Decommissioning Phase

- Demolition and/or removal of mobile camp site infrastructure/equipment and vehicles
- Rehabilitation and restoration of disturbed areas

e) Policy and Legislative Context

APPLICABLE LEGISLATION AND GUIDELINES USED TO COMPILE THE REPORT (a description of the policy and legislative context within which the development is proposed including an identification of all legislation, policies, plans, guidelines, spatial tools, municipal development planning frameworks and instruments that are applicable to this activity and are to be considered in the assessment process)	REFERENCE WHERE APPLIED	HOW DOES THIS DEVELOPMENT COMPLY WITH AND RESPOND TO THE LEGISLATION AND POLICY CONTEX. (E.g. In terms of the National Water Act a Water Use License has/ has not been applied for)
The Minerals and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002)	Mining activity	This BA and EMP report has been compiled in accordance with the Act.
National Environmental Management Act (Act No. 107 of 1998)	Mining activity	This BA is being undertaken in terms of NEMA in order to determine any possible impacts on the environment and to undertake mitigation measures that reduce any potential harm to the environment.
Environmental Impact Assessment Regulations: GNR 982 to 985 of 4 December 2014	Mining activity	Listed activities as per the NEMA EIA Regulations have been considered and authorisation is thus required with regards to the triggering activities. National
National Water Act, 1998 (Act No. 36 of 1998)	Not applicable	An application for a water use licence is not required.
National Environmental Management: Waste Act, 2008 (Act No. 59 of 2008) The National Heritage Resources Act (Act No. 25 of 1999)	Not applicable	Listed activities as per the 2013 NEM:WA Regulations have been considered and it has been determined that a waste licence is not required.

f) Need and desirability of the proposed activities.

(Motivate the need and desirability of the proposed development including the need and desirability of the activity in the context of the preferred location).

For years, mining has been the driving force behind South Africa's economy and continues to make a valuable contribution to the country's economy. Mining makes a valuable contribution to the South African economy, tiger's used as gemstone (for decorating and jewellery) etc, this bring value to the economy. In addition, it supports Small-medium and micro sized enterprises (SMME's) and it is also one of the sectors that provide employment opportunities for unskilled and semi-skilled people.

The South African mining industry has its origin in small-scale mining activities, with these operations offering much needed employment opportunities and entrepreneurship, as well as contributing to the mineral sector and local economy. Small-scale mining impact on employment is especially observed in the rural town where there are limited opportunities; providing significant livelihood for rural communities and a means of alleviating poverty. The proposed project is for a small-scale mining operation at Lower Kuruman Native Reserve 219 located in the Ga-Segonyana Local Municipality. The municipality is faced with challenges of high unemployment levels and poverty, making economic development one of the municipality's main priorities and general public needs. Economic sectors identified as important in the Ga-Segonyana municipality include mining, with this sector making a significant contribution to the local economy, thus necessitating the need to prioritise and support these sectors.

The municipality's objective is to also create an enabling environment for job creation and businesses to thrive, with some of its specific strategies aimed at monitoring the implementation of Social Labour Plans by mining businesses in the municipal area in this period. Boswa Boteng Mining Resources (Pty) Ltd has thus identified an opportunity as the proposed project will add great socio-economic value. It could contribute to the local economic opportunities, the business, ultimately impacting socio-economic development of the area in support of the municipality and district's development opportunities and targets/goals.

g) Motivation for the overall preferred site, activities and technology alternative.

The tiger's eye mining industry is one of the important industries in the country and Lower Kuruman Native Reserve 219 about 16 km North of Kuruman has an abundant supply of this resource.

The proposed method of removal of tiger's eye allows easy access of machinery to the site and does not require extensive machinery as other methods, making it feasible for small-scale miners. It reduces the overall costs associated with the mining process, thus allowing financial viability in small scale mining of deposits.

Boswa Boteng Mining Resources (Pty) Ltd would contribute towards local socio-economic development, as it aims to provide employment opportunities to the local people as far as possible, thus stimulating development in the Gamopedi community. The proposed project therefore is an

effort to make use of available opportunities and development in the Ga-Segonyana Local Municipality.

h) Description of the process followed to reach the proposed preferred alternatives within the site.

NB!! – This section is about the determination of the specific site layout and the location of infrastructure and activities on site, having taken into consideration the issues raised by interested and affected parties, and the consideration of alternatives to the initially proposed site layout.

i) Details of the development footprint alternatives considered.

With reference to the site plan provided as Appendix 4 and the location of the individual activities on site, provide details of the alternatives considered with respect to:

- (a) the property on which or location where it is proposed to undertake the activity;
- (b) the type of activity to be undertaken;
- (c) the design or layout of the activity;
- (d) the technology to be used in the activity;
- (e) the operational aspects of the activity; and
- (f) the option of not implementing the activity.

(a) The property on which or location where it is proposed to undertake the activity:

No property alternatives have been considered as the envisaged mining operations will occur in an area of existing mining operations, and also in close proximity to the access road and community in need of such a development.

(b) The type of activity to be undertaken;

No alternatives to the mining of tigers-eye have been considered.

(c) The design or layout of the activity;

The site layout was determined by considering the ease of access to roads and the desired resource.

(d) The technology to be used in the activity;

No alternative technology has been considered for the proposed mining activity.

(f) The option of not implementing the activity.

The option of not implementing the activity has been considered, and assumes that should the proposed activity not proceed then the status quo would remain. This includes no clearing of land, no digging of trenches, no mining operations on site and no decommissioning at the end of the project life cycle. The fact that this is an area of mineral potential and that the proposed mining would lead to job creation, contribution to the GDP of the municipality and the province, and be an opportunity to improve the local socio-economic situation, therefore the option of not implementing the activity will not be pursued at this stage.

ii) Details of the Public Participation Process Followed

Describe the process undertaken to consult interested and affected parties including public meetings and one on one consultation. NB the affected parties must be specifically consulted regardless of whether or not they attended public meetings. (Information to be provided to affected parties must include sufficient detail of the intended operation to enable them to assess what impact the activities will have on them or on the use of their land.

A Basic Assessment is required to obtain Environmental Authorisation for Boswa Boteng Mining Resources (Pty) Ltd proposed small-scale tiger's eye mining operation. A public participation process was undertaken as part of the Basic Assessment process and was done in the following manner:

Notice of the Basic Assessment process has been given by:

- (1) Placing a Site Notice in public places such as stores, offices, town hall, site of the operation, public clinic.
- (2) Posting and emailing written notice regarding the proposed development to interested and affected parties, including neighbours and community leader (representing the community in control of the farm), competent authority and other relevant Government departments;
- (3) A loud hailer was used in transit to announce the meeting.

iii) Summary of issues raised by I&Aps

(Complete the table summarising comments and issues raised, and reaction to those responses)

Interested and Affected Parties		Date	Issues raised	EAPs response to issues as mandated by the applicant	Section and paragraph reference in this report where the issues and or response were incorporated.

- iv) **The Environmental attributes associated with the alternatives.** (The environmental attributed described must include socio-economic, social, heritage, cultural, geographical, physical and biological aspects)
- v) **environmental attributed described must include socio-economic, social, heritage, cultural, geographical, physical and biological aspects)**

(1) Baseline Environment

(a) Type of environment affected by the proposed activity.

(its current geographical, physical, biological, socio- economic, and cultural character).

Site description

The proposed project site is located approximately 16 km North of Kuruman. The area is a portion of land with no formal activities. There is no other infrastructure in project site and land has slightly slopes. The site is dominated with coarse soil which is red and rich is iron oxides.

Geology

The geology of the study falls under Transvaal Supergroup which include the Ghaap Group. The Ghaap Group represents some 200 Ma of chemical sedimentation - notably iron and manganese ores, cherts and carbonates - within the Griqualand West Basin that was situated towards the western edge of the Kaapvaal Craton

Climate

The climate here is considered to be a local steppe climate. During the year there is little rainfall. This location is classified as Dfa by Köppen and Geiger. The average annual temperature is 17.6 °C in Kuruman. Precipitation here averages 472 mm. The least amount of rainfall occurs in July with average of 3 mm. In March, the precipitation reaches its peak, with an average of 85 mm. The variation in the precipitation between the driest and wettest months is 82 mm. The variation in annual temperature is around 14.8 °C.

CLIMATE GRAPH // WEATHER BY MONTH KURUMAN

AVERAGE TEMPERATURE KURUMAN

Water Resources

The source of water in this area is the stream.

Soil and land capability

Soils of the general area are very coarse and appear relatively deep with sections of prominent surface rock (silica rich rocks and dolomite). Land capability of the area is described as non-arable, with very dry surfaces and thus not very suitable for cultivation.

Biodiversity

The biome of the project site is Savanna and there are a number subset contingent vegetation's therein. The vegetation type has not been heavily impacted by transformation and 98.10% of the original extent is still intact. Within the site, the vegetation was dominated by low trees such as *Tarchonanthus camphoratus*, *Grewia flava*, *Acacia mellifera*, *Olea europea* subsp. *Africana*, *Searsia tridactyla* and *Ziziphus mucronata* subsp. *mucronata*. The grass layer is fairly dense and is composed of species such as *Themeda triandra*, *Cymbopogon pospischilii*, *Eragrostis lehmanniana* var. *lehmanniana*, *Schmidtia pappophoroides*, *Fingerhuthia africana*, *Eustachys paspaloides* and *Cenchrus ciliaris*. There were also a number of shrub species present including *Gnidia polycephala*, *Eriocephalus ericoides* subsp. *ericoides*, *Asparagus suaveolens* and *Lebeckia macrantha*.

Socio-economic

The Ga-Segonyana Local Municipality falls under the John Taolo Gaetsewe District Municipality. Mining is the main contributor to the local economy, which there is high production of manganese, iron and limestone.

Lower Kuruman Native Reserve 219 situated approximately 16 km North of Kuruman. The Boswa Boteng Mining Resources (Pty) Ltd project will contribute work opportunities during the construction phases and operation of the proposed site. In addition, the project will strengthen the local economy of Kuruman as especially in Gamopedi.

Cultural Heritage

There are no archaeological, cultural or historical materials were found on site, if any are found they will be reported to SAHRA.

(b) Description of the current land uses.

The land is located 1 kilometre away from the community. The site is covered minor dwarf shrub component. The site is devoid of large trees and this is considered natural to this vegetation type.

(c) Description of specific environmental features and infrastructure on the site.

There is a pathways road and, with no infrastructure occurring on site and general area. The proposed mining site is predominantly a dry surface with minor vegetation such as dwarf shrubs covering the land.

(d) Environmental and current land use map.
 (Show all environmental, and current land use features)

Erosion of cultural Landscape	Local	short-term	Slight	Likely	Low	Low (with rehabilitation)	Low	No	Yes
Impact on health, and safety of workers	Site	Short-term	Moderate	Unlikely	Low	Non-reversible	Moderate	No	Yes

2.2 TLB activity and operation of mining equipment

Nature of potential Impact/risk	Extent	Duration	Consequence	Probability	Significance	Reversibility of impact	Irreplaceability of receiving environment/resource	Can impact be avoided?	Can impact be managed or mitigated?
Loss of vegetation and faunal habitat	Site	Medium-term	Moderate	Very likely	Moderate	Moderate (rehabilitation after construction)	Moderate	No	Yes
Exposed soil susceptible to erosion	Site	Medium-term	Moderate	Likely	Moderate	Low (rehabilitation after construction)	Moderate	No	Yes
Noise generation	Site	Short-term	Slight	Very likely	Very low	Non-reversible	Low	No	Yes
Dust emissions	Site	Long-term	Slight	Very likely	Very low	Non-reversible	Low	No	Yes
Soil and water resources contamination and Siltation	Local	Medium-term	Moderate	Likely	Low	Non-reversible	Moderate	No	Yes
Topography and visual Alteration	Site	Medium-term	Substantial	Likely	Moderate	Moderate (rehabilitation during closure)	Low	No	Yes

Soil disturbance resulting in the spread of alien plant species	Site and Local	Long-term	Moderate	Likely	Low	Low (rehabilitation after construction)	Moderate	No	Yes
Loss of Species of Special Concern	Site	Medium-term	Substantial	Very likely	Moderate	Moderate (rehabilitation after construction)	Moderate	No	Yes
Disturbance of fauna	Site and Local	Medium-term	Moderate	Likely	Low	Non-reversible	Moderate	No	Yes
Impact on health, and safety of workers	Site	Medium-term	Moderate	Likely	Low	Non-reversible	Moderate	No	Yes

2.3 Storage of diesel and vehicle/machinery maintenance equipment

Nature of potential Impact/risk	Extent	Duration	Consequence	Probability	Significance	Reversibility of impact	Irreplaceability of receiving environment/resource	Can impact be avoided?	Can impact be managed or mitigated?
Air quality	Site	Medium-term	Slight	Likely	Very low	Non-reversible	Low	No	Yes
Surface water impacts	Local	Medium-term	Substantial	Likely	Very low	Non-reversible	Moderate	No	Yes

Impact on hydrogeology and soil contamination due to spills or seepage	Site	Medium-term	Moderate	Likely	Moderate	Non-reversible	Moderate	No	Yes
Visual impact	Site	Medium-term	Moderate	Likely	Low	High	Low	No	Yes

2.4 Waste generation and disposal

Nature of potential Impact/risk	Extent	Duration	Consequence	Probability	Significance	Reversibility of impact	Irreplaceability of receiving environment/resource	Can impact be avoided?	Can impact be managed or mitigated?
Air quality	Local	Medium-term	Slightly Moderate	Likely	Low	Non-reversible	Low	No	Yes
Surface water impacts	Local	Medium-term	Moderate	Likely	Moderate	Non-reversible	Moderate	No	Yes
Impact on hydrogeology and soil contamination due to spills, seepage or hazardous substances	Site	Short-term	Moderate	Likely	Moderate	Non-reversible	Moderate	No	Yes
Topography and visual Alteration	Site	Medium-term	Moderate	Likely	Moderate	High	Low	No	Yes

3. Decommissioning phase

3.1 Demolition and/or removal of mobile camp site infrastructure/equipment

Nature of potential Impact/risk	Extent	Duration	Consequence	Probability	Significance	Reversibility of impact	Irreplaceability of receiving environment/resource	Can impact be avoided?	Can impact be managed or mitigated?
Destruction of Vegetation	Site	Short-term	Substantial	Likely	Moderate	Moderate (rehabilitation post closure)	Moderate	Yes	Yes
Establishment and spread of alien plant Species	Site and Local	Long-term	Substantial	Very likely	Moderate	Low (rehabilitation post closure)	Moderate	No	Yes
Impact on groundwater and aquifer	Local	Medium-term	Moderate	Likely	Moderate	Non-reversible	Moderate	No	Yes
Impact on upstream tributaries and water in the catchment	Local	Medium-term	Moderate	Likely	Moderate	Non-reversible	Moderate	No	Yes
Topography and visual Impact	Site	Short-term	Moderate	Likely	Neutral	None-reversible	Low	No	Yes
Noise generation	Site	Short-term	Moderate	Very likely	Moderate	Non-reversible	Low	No	Yes
Air quality and dust Emissions	Local	Short-term	Slight	Very likely	Very low	Non-reversible	Low	No	Yes
Impact on health, and safety of workers	Site	Short-term	Moderate	Likely	Low	Non-reversible	Moderate	No	Yes

3.2 Rehabilitation and restoration of disturbed areas

Nature of potential Impact/risk	Extent	Duration	Consequence	Probability	Significance	Reversibility of impact	Irreplaceability of receiving environment/resource	Can impact be avoided?	Can impact be managed or mitigated?
Impact on groundwater and aquifer	Local	Long-term	Moderate	Very likely	Low	Non-reversible	Moderate	No	Yes
Impact on upstream tributaries and water in the catchment	Local	Long-term	Moderate	Likely	Low	Non-reversible	Moderate	No	Yes
Topography and visual impact	Site	Long-term	Moderate	Very likely	Low	Non-reversible	Low	Yes	Yes
Noise generation	Site	Short-term	Low	Very likely	Moderate	Non-reversible	Low	No	Yes
Air quality and dust emissions	Site	Short-term	Moderate	Very likely	Very low	Non-reversible	Low	No	Yes
Impact on land capability	Site	Medium-term	Substantial	Likely	Moderate	Non-reversible	Moderate	No	Yes

vi) Methodology used in determining and ranking the nature, significance, consequences, extent, duration and probability of potential environmental impacts and risks;

(Describe how the significance, probability, and duration of the aforesaid identified impacts that were identified through the consultation process was determined in order to decide the extent to which the initial site layout needs revision).

APPROACH TO THE BASIC ASSESSMENT

1. METHODOLOGY OF IMPACT ASSESSMENT

According to the DEA IEM Series guideline on "Impact Significance" (2002), there are a number of quantitative and qualitative methods that can be used to identify the significance of impacts resulting from a development. The process of determining impact significance should ideally involve a process of determining the acceptability of a predicted impact to society. Making this process explicit and open to public comment and input would be an improvement of the EIA/BA process. The approach to determining significance is generally as follows:

- Use of expert opinion by the specialists ("professional judgement"), based on their experience, a site visit and analysis, and use of existing guidelines and strategic planning documents and conservation mapping (e.g. SANBI biodiversity databases);
- Review of specialist assessment by all stakeholders including authorities such as nature conservation officials, as part of the report review process (i.e. if a nature conservation official disagreed with the significance rating, then we could negotiate the rating); and
- Our approach is more a qualitative approach - we do not have a formal matrix calculation of significance as is sometimes done.

2. SPECIALIST CRITERIA FOR IMPACT ASSESSMENT

Assessment of Potential Impacts

The assessment of impact significance is based on the following conventions:

Nature of Impact - this reviews the type of effect that a proposed activity will have on the environment and should include "what will be affected and how?"

Spatial Extent - this should indicate whether the impact will be:

- Site specific;
- Local (<2 km from site);
- Regional (within 30 km of site); or
- National.

Duration - The timeframe during which (lifetime of) the impact will be experienced:

- Temporary (less than 1 year);
- Short term (1 to 4 years);
- Medium term (5 to 10 years);
- Long term (the impact will cease after the operational life of the activity); or
- Permanent (mitigation will not occur in such a way or in such a time span that the impact can be considered transient).

Intensity - it should be established whether the impact is destructive or innocuous and should be described as either:

- High (severe alteration of natural systems, patterns or processes such that they temporarily or permanently cease);
- Medium (notable alteration of natural systems, patterns or processes; where the environment continues to function but in a modified manner); or
- Low (negligible or no alteration of natural systems, patterns or processes); can be easily avoided by implementing appropriate mitigation measures, and will not have an influence on decision-making.

Probability - this considers the likelihood of the impact occurring and should be described as:

- Improbable (little or no chance of occurring);
- Probable (<50% chance of occurring);
- Highly probable (50 – 90% chance of occurring); or
- Definite (>90% chance of occurring).

Reversibility - this considers the degree to which the adverse environmental impacts are reversible or irreversible. For example, an impact will be described as low should the impact have little chance of being rectified to correct environmental impacts. On the other hand, an impact such as the nuisance factor caused by noise impacts from wind turbines can be considered to be highly reversible at the end of the project lifespan. The assessment of the reversibility of potential impacts is based on the following terms:

- High - impacts on the environment at the end of the operational life cycle are highly reversible;
- Moderate - impacts on the environment at the end of the operational life cycle are reasonably reversible;
- Low - impacts on the environment at the end of the operational life cycle are slightly reversible; or
- Non-reversible - impacts on the environment at the end of the operational life cycle are not reversible and are consequently permanent.

Irreplaceability - this reviews the extent to which an environmental resource is replaceable or irreplaceable. For example, if the proposed project will be undertaken on land that is already transformed and degraded, this will yield a low irreplaceability score; however, should a proposed development destroy unique wetland systems for example, these may be considered irreplaceable and thus be described as high. The assessment of the degree to which the impact causes irreplaceable loss of resources is based on the following terms:

- High irreplaceability of resources (this is the least favourable assessment for the environment);
- Moderate irreplaceability of resources;
- Low irreplaceability of resources; or
- Resources are replaceable (this is the most favourable assessment for the environment).

The status of the impacts and degree of confidence with respect to the assessment of the significance is stated as follows:

Status of the impact: A description as to whether the impact will be:

- Positive (environment overall benefits from impact);
- Negative (environment overall adversely affected); or
- Neutral (environment overall not affected).

Degree of confidence in predictions: The degree of confidence in the predictions, based on the availability of information and specialist knowledge. This should be assessed as:

- High;
- Medium; or
- Low.

Based on the above considerations, the specialist provides an overall evaluation of the significance of the potential impact, which should be described as follows:

- **Low to very low:** the impact may result in minor alterations of the environment and can be reduced or avoided by implementing the appropriate mitigation measures, and will only have an influence on the decision-making if not mitigated;
- **Medium:** the impact will result in moderate alteration of the environment and can be reduced or avoided by implementing the appropriate mitigation measures, and will only have an influence on the decision-making if not mitigated; or
- **High:** Where it could have a “no-go” implication for the project unless mitigation or re-design is practically achievable.

Furthermore, the following must be considered:

- Impacts should be described both before and after the proposed mitigation and management measures have been implemented.
- All impacts should be evaluated for the construction, operation and decommissioning phases of the project, where relevant.
- The impact evaluation should take into consideration the cumulative effects associated with this and other facilities which are either developed or in the process of being developed in the region, if relevant.

Management Actions:

- Where negative impacts are identified, migratory measures will be identified to avoid or reduce negative impacts. Where no migratory measures are possible this will be stated.
- Where positive impacts are identified, augmentation measures will be identified to potentially enhance these.
- Quantifiable standards for measuring and monitoring migratory measures and enhancements will be set. This will include a programme for monitoring and reviewing the recommendations to ensure their ongoing effectiveness.

Monitoring:

Specialists should recommend monitoring requirements to assess the effectiveness of mitigation actions, indicating what actions are required, by whom, and the timing and frequency thereof.

Cumulative Impact: Consideration is given to the extent of any accumulative impact that may occur due to the proposed development. Such impacts are evaluated with an assessment of similar developments already in the environment. Such impacts will be either positive or negative, and will be graded as being of negligible, low, medium or high impact.

Mitigation:

The objective of mitigation is to firstly avoid and minimise impacts where possible and where these cannot be completely avoided, to compensate for the negative impacts of the development on the receiving environment and to maximise re-vegetation and rehabilitation of disturbed areas. For each impact identified, appropriate mitigation measures to reduce or otherwise avoid the potentially negative impacts are suggested. All impacts are assessed without mitigation and with the mitigation measures as suggested.

vii) The positive and negative impacts that the proposed activity (in terms of the initial site layout) and alternatives will have on the environment and the community that may be affected.

(Provide a discussion in terms of advantages and disadvantages of the initial site layout compared to alternative layout options to accommodate concerns raised by affected parties)

Kindly see Section h (i) above; the advantages and disadvantages of the proposed site layout have been discussed in the reasons provided in this section, inclusive of the reasons for not considering alternatives.

viii) The possible mitigation measures that could be applied and the level of risk.

(With regard to the issues and concerns raised by affected parties provide a list of the issues raised and an assessment/ discussion of the mitigations or site layout alternatives available to accommodate or address their concerns, together with an assessment of the impacts or risks associated with the mitigation or alternatives considered).

CONSTRUCTION PHASE			
Potential impact Description	Significance Rating (positive or negative)	Proposed Mitigation	Significance Rating after Mitigation
Proposal (preferred alternative)			
Direct Impacts			
Loss of vegetation and faunal habitat	Moderate (Negative)	<ul style="list-style-type: none"> - Development planning must ensure loss of vegetation and disturbance is restricted to within the minimum and designated areas only. - Vegetate and irrigate open areas to limit erosion, but take care not to promote erosion by irrigating. - Removal of vegetation during construction and operation will be minimised to reduce the risk of excessive open areas occurring. - Adhere to existing roads, and if new roads are constructed, these must not cross sensitive areas such as the ridges or drainage lines. - Protected plant or animal species encountered must be managed in accordance with an accepted management plan for these species. 	Low
Loss of Conservation Important (CI) or medicinally important flora.	Moderate (Negative)	<ul style="list-style-type: none"> - Preconstruction walk through the facility in order to locate species of conservation concern that can be translocated as well as comply with permitting conditions. - Prior to construction any CI and medicinally important floral specimens that may occur within the site layout should be collected and replanted in the surrounding areas. 	Low

Soil and water resources contamination	Moderate (Negative)	<ul style="list-style-type: none"> - Prevent any spills from occurring; If a spill occurs it is to be cleaned up immediately and Reported to the appropriate authorities. - All vehicles are to be serviced in a correctly bunded area or at an off-site location. - Ensure that spillage control kits are available during transport and on storage sites in case of any accidental leakages of spillages, which can then be cleared immediately. -The temporary storage facilities of fuel, lubricants and explosives must be a hard park, roofed and bunded facility. This will prevent contamination of soils and the possibility of contamination of the surface water resources. -Machinery should be maintained properly. Diesel and other chemicals should be handled appropriately. Refuelling protocols must be followed to ensure no diesel is spilled during filling. - Clean and dirty surface water channels should be constructed to divert runoff separately to appropriate storage dams (dirty water to the PCD to avoid eroded soils entering the clean water areas). 	Low
Potential of soil erosion due to exposed soil	Low (Negative)	<ul style="list-style-type: none"> - Removal of topsoil should be done systematically, only clearing the necessary areas at a time. - The topsoil stockpiles should be vegetated as soon as possible to prevent erosion, which might cause siltation of the water resources. - Erosion berms are to be put in. 	Very low
Noise disturbances as a result of construction activities.	Very low (Negative)	<ul style="list-style-type: none"> -The noise created by the proposed development is not expected to be problematic. If required, noise reduction measures will have to be implemented in compliance with Noise standards and Regulations. - No sound amplification equipment to be used on site, except in emergency situations. - Limit vehicles travelling to and from the site to minimise traffic noise to the surrounding environment. 	Very low

		<ul style="list-style-type: none"> - Limit construction activities to day time hours. - Mining related machines and vehicles to be serviced on a regular basis to ensure noise suppression mechanisms are effective. - Activities that will generate the most noise should be limited to during the day, where viable, in order minimise disturbance. - Equipment that is not in use should be switched off. - A complaints register should be kept on site, with records of complaints received and manner in which the complaint was addressed. 	
Sensory disturbance of fauna due to noise	Low (Negative)	<ul style="list-style-type: none"> - Limit construction activities to day time hours. - Minimize or eliminate security and construction lighting, to reduce the disturbance of nocturnal fauna. - All outside lighting should be directed away from sensitive areas. 	Low
Impact on health, and safety of workers.	Moderate (Negative)	<ul style="list-style-type: none"> - Training of workers in the correct use of the machinery and/or equipment so as to avoid incidents. - Workers to wear Personal Protective Equipment (PPE). - Hazardous material must be correctly labelled and handled in a safe manner. 	Low
Potential deterioration of the existing gravel road due to use by heavy vehicles.	Moderate (Negative)	<ul style="list-style-type: none"> -Limit vehicles coming to the site and limit to a temporary minimal duration. - Maintain and/or upgrade the gravel road. 	Moderate
Generation of waste	Moderate (Negative)	<ul style="list-style-type: none"> - Any waste generated during construction must be stored in such a manner that it prevents pollution and amenity impacts. - Waste to be disposed of at a licenced landfill site. - Hazardous waste to be correctly stored and disposed of in terms of relevant legislation and guidelines. 	Low

Topography and visual alteration.	Moderate (Negative)	- Limit the footprint area of the construction where possible. - Topsoil stockpiles should be vegetated and positioned to reduce visual disturbance where possible.	Low
Degradation of ambient air quality as a result of dust and other emissions generated.	Very low (Negative)	-Exposed areas should be revegetated with locally indigenous flora. If the soil is compacted, it should be ripped, and fertilised. -Implement effective and environmentally-friendly dust control measures, such as mulching or periodic wetting of the entrance road. -A complaints register should be kept on site, with records of complaints received and manner in which the complaint was addressed.	Very low
Indirect Impacts			
Introduction and increase in alien vegetation	Moderate (Negative)	- Keep the footprint of the disturbed area to the minimum and designated areas only. - Vegetate and irrigate open areas to limit erosion, but take care not to cause erosion by irrigating. Removal of vegetation during construction and operation will be minimised to reduce the risk of excessive open areas occurring. - Adhere to existing roads, and if new roads are constructed, these must not cross sensitive areas such as the ridges or drainage lines.	Low
The creation of new employment opportunities and skills development	Moderate (Positive)	Ensure maximisation of job creation and promote local employment and skills training.	High
NO-GO ALTERNATIVE			
DIRECT IMPACTS:			

- None of the impacts mentioned above will occur.
- The site will remain with existing structures, no new clearance will occur which will result in no clearance of indigenous vegetation and no clearance of present alien species.

INDIRECT IMPACTS:

There are no indirect impacts during the construction phase for the No-go Option.

If the proposed project does not proceed, increased income and economic benefits associated with the project will not be realised.

No employment opportunities will be created.

If the proposed project does not proceed, the potential to produce and supply minerals to industrial and commercial establishments and the subsequent contribution to the Gross Domestic Product (GDP) of the municipality and Province will not be realised; thus, hindering economic growth potential.

OPERATIONAL PHASE			
Potential Impact Descriptio	Significance Rating (Positive or Negative)	Proposed Mitigation	Significance Rating after Mitigation
PROPOSAL (preferred alternative)			
Direct Impacts			
Impact on aquifers and groundwater quality.	Low (Negative)	- Portable toilets must be set up correctly and emptied regularly to prevent any leaks and potential contamination of the aquifer. - Fuel needs to be stored in a specified lined area to prevent any chance of contamination to the underlying soil/aquifer.	Low

		<ul style="list-style-type: none"> - Waste generated from the operation of the mine to be stored in an appropriate and designated storage and be disposed of in a permitted designated waste disposal site. - Mining equipment is regularly maintained to prevent any fuel or oil leaks. - Correct lining of any tailings dam facilities, as well as ensuring correct dam wall heights, in order to prevent infiltration of potential contaminants and overflow respectively. - Tailings piles should be lined covered, to reduce exposure to the atmosphere and prevent infiltration of potential contaminants. - Funnelling of all drainage from mining operations to lined tailings dam facilities via lined channels with bund walls and swales, in order to reduce infiltration of potential Acid Mine Drainage (AMD) water into the aquifer. - Funnelling of all drainage from mining operations to lined tailings dam facilities via lined channels with bund walls and swales, in order to reduce infiltration of potential AMD water into the aquifer. 	
Impact on groundwater recharge and run-off alteration	Very low (Negative)	<p>Implement measures to collect and store clean water that falls within the Project area for use on site e.g. watering of gardens, wash bays and dust suppression. Although the hard surfaces on site will increase runoff thereby reducing recharge of the aquifer.</p> <ul style="list-style-type: none"> - Monitor changes in water levels and quality around the Project area, so as to be aware of changes in groundwater conditions. 	Very Low
Impact on upstream tributaries and water in catchment	Very low (Negative)	-A surface water management plan must be implemented to minimise the volume of dirty water produced thereby reducing the probability of contamination of groundwater from infiltration of dirty surface water.	Very low

Impact on ambient air quality and dust emissions	Low (Negative)	<p>Vehicles operating on the mine must keep at minimum speed to reduce dust generation.</p> <ul style="list-style-type: none"> - Vehicles that are used must be roadworthy and regularly inspected in order to prevent unwanted emissions and/or leaks. - In order to reduce emissions from stockpiles, mitigation measures such as spraying must be implemented as well as regular re-vegetation of topsoil stockpile to avoid or minimise wind erosion from exposed surfaces. - Waste management plans must be developed and implemented to reduce negative impact on the ambient air quality. 	Low
Noise generation	Low (Negative)	<ul style="list-style-type: none"> - The noise created by the proposed development is not expected to be problematic. If required, noise reduction measures will have to be implemented in compliance with Noise Regulations. - No sound amplification equipment to be used on site, except in emergency situations. - Limit vehicles travelling to and from the site to minimise traffic noise to the surrounding environment. - Mining related machines and vehicles to be serviced on a regular basis to ensure noise suppression mechanisms are effective. - Activities that will generate the most noise should be limited to day-time hours, where viable, in order to minimise disturbance. - Equipment that is not in use should be switched off. - A complaints register should be kept on site, with records of complaints received and manner in which the complaint was addressed. 	Very low
Construction activities may disturb or destroy	Low – Very low (Negative)	<ul style="list-style-type: none"> - Should any features of heritage be identified on site, these should not be disturbed. They should be safeguarded, preferably in situ, and immediately reported to a Heritage specialist and/or SAHRA. 	Very low

sites or features of heritage importance			
Impact on health, and safety of workers.	Moderate (Negative)	<ul style="list-style-type: none"> - Training of workers in the correct use of the machinery and/or equipment so as to avoid incidents. - Workers to wear Personal Protective Equipment (PPE). - Hazardous material must be correctly labelled and handled in a safe manner. - Hazardous waste to be correctly disposed of. 	Low
Topography and visual alteration.	Low (Negative)	<ul style="list-style-type: none"> - Limit the footprint area where possible. - Roads used for hauling of ore should be regularly contoured. 	Very low
Impact of operational activities on fauna	Moderate (Negative)	<ul style="list-style-type: none"> - Minimize noise to limit its impact on sensitive fauna. - Operational areas to be demarcated and workers to stay within these areas. - Create awareness on the importance of fauna and ecosystem functioning. - Workers to stay within demarcated operational areas. 	Low
Possible soil and water contamination from diesel storage on site.	Low (Negative)	<p>Appropriate storage of hazardous material such as diesel must be implemented.</p> <ul style="list-style-type: none"> - The areas where hazardous substances are stored should be bunded to avoid soil and water contamination. - Fuel must be stored in a secure designated room. - The ground where refuelling takes place must be protected and refuelling to be handled in a cautious manner. - In the event of spills, the area is to be cleaned immediately using bioremediation products. - Ensure that any accidental spills do not move beyond the designated storage area. - Ensure appropriate and safe disposal of hazardous chemicals. 	Low

		- Ensure training of staff to handle hazardous chemicals.	
Indirect Impacts			
Impact on vegetation and faunal habitat.	Moderate (Negative)	<ul style="list-style-type: none"> -Vegetation cover must be reinstated through rehabilitation. - Removal of vegetation during operation will be minimised to reduce the risk of excessive open areas occurring. - Adhere to existing roads, and if new roads are constructed, these must not cross sensitive areas such as the ridges or drainage lines. - Continuously manage the establishment of alien invasive species through removal. - Protected plant or animal species encountered must be managed in accordance with an accepted management plan for these species. 	Low
The proposed project is a job creation initiative with the potential to create local employment and skill development.	Moderate (Positive)	<ul style="list-style-type: none"> -Maximise job creation and promote local employment and skills training. - Promote employment of women and youth. 	High
The proposed project will contribute to the short term growth of the local economy.	Moderate (Positive)	<ul style="list-style-type: none"> -Explore opportunities for mineral markets. - Development of skills in mining Small-Medium Micro Enterprises (SMMEs) as part of Municipal Local Economic Development initiatives. - Development of contractual agreements to supply local beneficiation markets. 	High
NO-GO ALTERNATIVE			

Potential Impact Description	Significance Rating (Positive or Negative)
Direct Impacts	
DIRECT IMPACTS:	
<ul style="list-style-type: none"> • None of the impacts mentioned above will occur. • The status quo of the site and area will remain with existing structures • No new clearance will occur which will result in no clearance of indigenous vegetation and no clearance of present alien species. 	
Indirect Impacts	
<ul style="list-style-type: none"> • If the proposed project does not proceed, increased income and economic benefits associated with the project will not be realised. • No new employment opportunities will be created. 	

DECOMMISSIONING			
Potential Impact Descriptio	Significance Rating (Positive or Negative)	Proposed Mitigation	Significance Rating after Mitigation
PROPOSAL (preferred alternative)			
Direct Impact			
Soil and water resources contamination.	Low (Negative)	<ul style="list-style-type: none"> - Prevent any spills from occurring; If a spill occurs it is to be cleaned up immediately and reported to the appropriate authorities. - Accredited contractors must be used for disposal and transport of demolition material. 	Very low
Destruction of vegetation.	Moderate (Negative)	<ul style="list-style-type: none"> - Special care must be taken not to destroy rehabilitated areas. - All disturbed areas must be rehabilitated. 	Low
Impact on land capability.	Moderate (Negative)	<ul style="list-style-type: none"> - Topsoil replacement should be done systematically; slopes should be kept low to prevent run-off and erosion, and replaced according to the soil types. - The topsoil stockpiles should be vegetated as soon as possible to prevent erosion, which might cause siltation of the water resources. - Avoid compaction of topsoil. 	Very low

Noise disturbances as a result of decommissioning activities.	Very low (Negative)	<ul style="list-style-type: none"> - The noise created by the proposed development is not expected to be problematic. If required, noise reduction measures will have to be implemented in compliance with Noise Regulations. - No sound amplification equipment to be used on site, except in emergency situations. - Mining related machines and vehicles to be serviced on regular basis to ensure noise suppression mechanisms are effective. - Activities that will generate the most noise should be limited to during the day, where viable, in order minimise disturbance. - Equipment that is not in use should be switched off. - A complaints register should be kept on site, with records of complaints received and manner in which the complaint was addressed. 	Very low
Impact on health, and safety of workers.	Moderate (Negative)	<ul style="list-style-type: none"> - Training of workers in the correct use of the machinery and/or equipment so as to avoid incidents. - Worker to wear Personal Protective Equipment (PPE). - Hazardous material must be correctly labelled and handled in a safe manner. 	Low
Topography and visual alteration.	Low (Negative)	<ul style="list-style-type: none"> - Ensure that all infrastructure installed pre-mining is removed from the site. - Roads should be regularly maintained. - Topsoil stockpiles should be vegetated and positioned to reduce visual disturbance where possible. 	Very low
Degradation of ambient air quality as a result of dust and other emissions generated.	Very low (Negative)	<ul style="list-style-type: none"> -Demolition and removal of structures and rubble to be done cautiously. - Exposed areas should be revegetated with locally indigenous flora. If the soil is compacted, it should be ripped, and fertilised. - Limit the area of exposure to minimise wind erosion. - Implement effective and environmentally-friendly dust control measures, such as mulching or periodic wetting of the entrance road. -Vehicles must keep at minimum speed to reduce dust generation. 	Very Low

		- A complaints register should be kept on site, with records of complaints received and manner in which the complaint was addressed.	
Indirect Impact			
Establishment and increase in alien vegetation.	Moderate (Negative)	<ul style="list-style-type: none"> -Reinstate vegetation cover through rehabilitation. - Keep the footprint of the disturbed area to the minimum and designated areas only. - Adhere to existing roads, and if new routes are used, these must not cross sensitive areas such as the ridges or drainage lines. - All alien plant species should be removed, preferably as juveniles, before they become established and bear seed and flowers. - Alien plant monitoring should take place for 2-3 years. 	Very low
Restoration of water quality and quantity	Low (Negative)	<ul style="list-style-type: none"> -If the site is not rehabilitated post mining operations then impacts on the water resources may occur, therefore rehabilitation will have a positive impact on the water resources. - Disturbed areas should be vegetated and contoured to allow for good drainage. - Associated potential soil erosion post rehabilitation should be mitigated. - Regular inspection and monitoring of water quality should be implemented for a period of at least 3 years post closure of the mine, in order to determine any negative residual impacts that could occur years later. 	Low (Positive)
NO-GO ALTERNATIVE			
DIRECT IMPACTS:			
-None of the impacts mentioned above will occur.			
INDIRECT IMPACTS:			
-There are no indirect impacts during the decommissioning phase for the No-go Option.			

ix) Motivation where no alternative sites were considered.

No property alternatives have been considered as the envisaged mining operations will occur in an area of existing mining operations, and also in close proximity to the access road.

x)

xi) Statement motivating the alternative development location within the overall site. (Provide a statement motivating the final site layout that is proposed)

The site is a wide open relatively flat area with no activities taking place. The site is richer in tiger's eye boulders which need to be mined for gemstone.

(i) Full description of the process undertaken to identify, assess and rank the impacts and risks the activity will impose on the preferred site (In respect of the final site layout plan) through the life of the activity. (Including (i) a description of all environmental issues and risks that are identified during the environmental impact assessment process and (ii) an assessment of the significance of each issue and risk and an indication of the extent to which the issue and risk could be avoided or addressed by the adoption of mitigation measures.)

The identified risks and impacts for this study, specifically the proposed site layout, were informed by the environmental studies undertaken for this site, the socio-economic need of the surrounding area, as well as the evidence of historical tiger's eye on site and the landscape.

i) Assessment of each identified potentially significant impact and risk

(This section of the report must consider all the known typical impacts of each of the activities (including those that could or should have been identified by knowledgeable persons) and not only those that were raised by registered interested and affected parties).

NAME OF ACTIVITY	POTENTIAL IMPACT	ASPECTS AFFECTED	PHASE	SIGNIFICANCE if not mitigated	MITIGATION TYPE	SIGNIFICANCE if mitigated

j) Summary of specialist reports.

(This summary must be completed if any specialist reports informed the impact assessment and final site layout process and must be in the following tabular form):-

LIST OF STUDIES UNDERTAKEN	RECOMMENDATIONS OF SPECIALIST REPORTS	SPECIALIST RECOMMENDATIONS THAT HAVE BEEN INCLUDED IN THE EIA REPORT (Mark with an X where applicable)	REFERENCE TO APPLICABLE SECTION OF REPORT WHERE SPECIALIST RECOMMENDATIONS HAVE BEEN INCLUDED.
Fauna and Flora Impact Assessment	The proposed development will result in the loss of moderate ecologically sensitive habitat in the form of disturbed grassland. It is recommended that species of special concern be managed and specific mitigation measures described in this assessment are adhered to. The overall impact of the proposed small-scale mining facility will be moderate to low. Since the majority of the site is of moderate ecological sensitivity, it is the specialist's opinion that should the project proceed then the ecological aspects related to the impact assessment can be managed accordingly. Mitigation and management measures described in this report should be followed.	X	The mitigation measures, as well as the environmental management programme included in this report is informed by the Flora and Fauna Specialist study undertaken, including the recommendations provided therein.

k) Environmental impact statement

(i) Summary of the key findings of the environmental impact assessment;

The proposed mining area is a single section, which is transformed, mostly as a result of alien plant species, and possible past clearing activities that have occurred in the area. The transformed areas contain few or no indigenous species, whereas the transformed areas are mainly made up of indigenous species with some invasive species in disturbed areas. The main potential environmental impacts associated with the proposed project include:

Noise generation

Noise generation as a result of machinery and vehicles operated on site is likely to impact on the surrounding receptors in the nearby location. All reasonable measures need to be implemented to minimise noise levels to the nearby receptors throughout the life cycle of the proposed mine. Due to the small-scale nature and size of the proposed mining activity, and therefore basic machinery and equipment, this impact is expected to be of very low significance.

Air quality and dust emission

Vehicles transporting mining material to and from the site, as well site preparation activities, excavation, processing and decommissioning activities will result in the generation of fugitive dust. Air quality emissions will also include the evaporation of fuels stored on site. Air quality emissions will be of low to very low significance. The recommended mitigation measures in this report should reduce the potential for these impacts on the ambient air quality.

Topography and Visual Alteration

Storage of material and equipment on site, vehicular activities, stockpiling of topsoil and dredging will alter the visual environment in the area. The impacts will be of moderate to low significance at the different phases and activities of the project. All reasonable measures need to be implemented to minimise and limit these impacts where possible, incorporating the recommended mitigation measures of the specialists included in this report. Rehabilitation of the disturbed areas to return the site to its similar visual state prior mining will have a neutral visual impact on the area.

Soil erosion

Mining activities on site will result in exposed soil, which could result in soil erosion. Erosion can lead to destruction of natural habitats and sedimentation of the watercourse. This impact will have a low probability of occurrence with implemented mitigation measures and ultimately low impact.

Soil and water resources contamination

The potential impact of contamination will arise throughout the life cycle of the proposed mine as a result of contaminants such as fuels, waste material on site, seepage of waste water, spills etc. These possible contaminants need to be managed and prevented through an effective Emergency Response Plan and Storm Water Management Plan in order to reduce the significance of these impacts.

Loss of vegetation and faunal habitat

Vegetation loss is unavoidable during the activities of the proposed mining project. The majority of the site has been transformed and is degraded; however, these degraded areas contain some indigenous vegetation thus necessitating high consideration of the vegetation on site. The developmental footprint of the proposed small-scale mining will impact on the natural vegetation and faunal habitats. Recommended mitigation measures described in the assessment must be adhered to in order to reduce the impacts from moderate to low and special care must be taken to manage any species of special concern.

Destruction of features of heritage importance

It is of the opinion of the heritage study undertaken that any heritage resources (palaeontology, possible archaeology and the cultural landscape) that are affected by the proposed development would be impacted during the construction and operation phases when the site is cleared. The impacts would be direct but because of their very low significance would not require any further studies or mitigation work prior to the commencement of development. It is recommended that the Environmental Control Officer (ECO) and mine staff should be made aware of the possibility of uncovering fossils such as wood in the gravels. With this plan in place the significance of impacts would be reduced from low to very low.

Groundwater quantity and quality

It is expected that environmental impacts on groundwater will occur as result of potential contaminants being on site. The significance is expected to be of low significance and thus low risk of groundwater contamination on a local scale; however, this impact may increase to moderate at a regional scale.

Mining operations may also influence groundwater recharge as a result of digging. Monitoring and the implementation of the recommended mitigation measures can reduce the potential hydrogeological impacts to the environment.

Surface water

Surface is running on site, and the mine operation has a potentially moderate to low significance. Monitoring and the implementation of the recommended mitigation measures can reduce the potential hydrogeological impacts to the environment.

Land capability reduction

Removal of soil for site preparation during the construction and operation phase will impact the land capability in that it will prevent the support of vegetation growth thereof. The removed soil should be stockpiled and managed correctly to minimise this impact. Soil replacement during rehabilitation has the potential to impact on the land capability as it will support the growth of vegetation, potentially returning land capability to its pre-mining state such as arable and/or grazing land.

Establishment and spread of alien plant species

Alien plant invasion is expected to occur in disturbed areas, however with the implementation of mitigation measures this impact can be reduced from moderate to low. This should be mitigated through the establishment of an alien invasive management plan to ensure the establishment of indigenous vegetation.

Socio-economic

Based on the environmental assessment presented in this report and the specialists' reports, it is the conclusion of this Basic Assessment that the proposed project will have relatively low impacts on the environment. With effective implementation management and mitigation measures, as well as recommended monitoring plans suggested in this report and those of the specialists', the significance of most potential environmental impacts on site from an environmental perspective will be reduced to low-very low. There will be potential impacts on vegetation and habitat, groundwater, soil, dust, air quality and visual environment as a result of earthworks associated with the activity, influx and movement of vehicles, infrastructure, waste and waste water generated by the project as a whole. The Environmental Management Programme supporting this BA outlines adequate methods and mitigation measures that need to be implemented in order for the identified impacts to not pose any environmental flaws associated with the proposed establishment of a small-scale mining operation.

(ii) Final Site Map

Provide a map at an appropriate scale which superimposes the proposed overall activity and its associated structures and infrastructure on the environmental sensitivities of the preferred site indicating any areas that should be avoided, including buffers.

Attached as Appendix B

(iii) Summary of the positive and negative impacts and risks of the proposed activity and identified alternatives;

A summary of the positive and negative potential impacts associated with the project has been outlined in Section I (i) above.

I) Proposed impact management objectives and the impact management outcomes for inclusion in the EMPr;

Based on the assessment and where applicable the recommendations from specialist reports, the recording of proposed impact management objectives, and the impact management outcomes for the development for inclusion in the EMPr as well as for inclusion as conditions of authorisation.

The EMPr addresses the environmental impacts associated with the project during Construction, Operation, Decommissioning and Post Closure Phases of the proposed project. The objectives of the EMPr will be to provide detailed information that will advise the planning design of Boswa Boteng Mining Resources (Pty) Ltd mining activities in order to avoid and/or reduce impacts that may be detrimental to the environment.

The following environmental management objectives are recommended for the proposed mining development and associated infrastructure:

- Alien plant monitoring should take place after construction, throughout the lifecycle of the mine, as well as post closure of the mine.
- Development planning must restrict the area of impact to a minimum and designated areas only.
- Monitor and prevent contamination and undertake appropriate remedial actions.
- Limit the visual and noise impact on receptors.
- Avoid impact on possible heritage finds.
- Promote health and safety of workers.
- Limit dust and other emissions to within allowable limits.
- Manage soils to prevent erosion.
- Limit the impact on the watercourse.

m) Aspects for inclusion as conditions of Authorisation.

Any aspects which must be made conditions of the Environmental Authorisation

The following aspects as recommended by the specialist studies are emphasised to be included as conditions in the Environmental Authorisation:

- Since the majority of the site is of moderate ecological sensitivity, it is of the specialist's opinion should the project proceed then the ecological aspects related to the impact assessment can be managed accordingly.
- Mitigation and management measures described in the flora and fauna report should be followed.
- If any archaeological or palaeontological material or human burials are uncovered during the course of development, then work in the immediate area should be halted. The find would need to be reported to the heritage authorities and may require inspection by an archaeologist or palaeontologist as appropriate. Such heritage is the property of the state and may require excavation and curation in an approved institution. The project EMPr should make reference to this possibility so that appropriate action can be taken as and when necessary.
- Workers should be educated about the importance of wildlife and the environment.

n) Description of any assumptions, uncertainties and gaps in knowledge.

(Which relate to the assessment and mitigation measures proposed)

Uncertainties form part of any proposed development with regards to the actual degree of impact that the development will have on the immediate environment. Any actual and/or site-specific results will only be determined once development has commenced and throughout the life cycle of the proposed project

The following assumptions have been made for this study in terms of the specialists' reports:

- The flora and fauna field investigation took place after drought conditions, although this was during the expected rainy season. As not all plant species on site were identifiable during the flora survey, it is possible that Red Data species could have been missed. It is strongly recommended that an additional flora Red Data survey is conducted prior to the clearing of any habitat associated with the site.
- The faunal sampling assessment was intended to document any faunal activity or evidence thereof on site. It is likely that some elusive, shy, nocturnal or migrant species may not have been recorded during the faunal survey.

o) Reasoned opinion as to whether the proposed activity should or should not be authorised

i) Reasons why the activity should be authorized or not.

Mining is the most important economic sector in the Northern Cape and the area proposed for the project is an area where is rich in tiger's eye boulders. The proposed project is thus an initiative in meeting and/or addressing this socio-economic need.

Specialists' studies were conducted as part of this BAR, providing mitigation measures and recommendations to ensure that environmental aspects of the site and surrounding area are not impacted severely. The site is composed of disturbed areas, and the undertaken ecological study did not identify any areas of high significance that could pose a fatal flaw prohibiting the proposed development. It is the opinion of the EAP that the proposed project will comply with current relevant legislation, and that with the implementation of the mitigation measures suggested in this BAR, there are no environmental impacts identified as highly detrimental to the environment. It is therefore recommended that following the above, the proposed development be granted Environmental Authorisation.

ii) Conditions that must be included in the authorisation

The EMPr of this proposed project must form part of the contractual agreement and be adhered to by both the contractors and the applicant. The applicant must also ascertain that there is representation of the applicant on site, at all times of the project, ensuring compliance with the conditions of the EMPr and specialist reports, and Environmental Authorisation thereof.

p) Period for which the Environmental Authorisation is required.

The proposed Boswa Boteng Mining Resources (Pty) Ltd mining project will have a Life of Mine of approximately 2 years upon commencement of operation.

q) Undertaking

Confirm that the undertaking required to meet the requirements of this section is provided at the end of the EMPr and is applicable to both the Basic assessment report and the Environmental Management Programme report.

The undertaking is provided at the end of the EMPr.

r) Financial Provision

State the amount that is required to both manage and rehabilitate the environment in respect of rehabilitation.

i) Explain how the aforesaid amount was derived.

The amount required manage and rehabilitate the environment is R81 635.00 This amount was calculated according to the guideline for the Calculation of the Quantum for rehabilitation as provided by DMR. The mining operation will entail the removal of tigers-eye in sections, where after excavation each section will be closed/rehabilitated and a different/new section will be excavated within the 5.0 hectares' area. The open cast rehabilitation fee is thus calculated on a pit size of rehabilitated concurrently, campsite area.

ii) Confirm that this amount can be provided for from operating expenditure. (Confirm that the amount, is anticipated to be an operating cost and is provided for as such in the Mining work programme, Financial and Technical Competence Report or Prospecting Work Programme as the case may be).

Mr Orapeleng Edwin Mocumi (the Project Applicant), has confirmed that this amount can be provided for from operating expenditure.

s) Specific Information required by the competent Authority

i) Compliance with the provisions of sections 24(4)(a) and (b) read with section 24 (3) (a) and (7) of the National Environmental Management Act (Act 107 of 1998). the EIA report must include the: -

(1) Impact on the socio-economic conditions of any directly affected person. (Provide the suits of Investigation, assessment, and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any directly affected person including the landowner, lawful occupier, or, where applicable, potential beneficiaries of any land restitution claim, attach the investigation report as an Appendix.

The proposed Boswa Boteng Mining Resources (Pty) Ltd mining operation is proposed on property under the jurisdiction of the municipality.

(2) Impact on any national estate referred to in section 3(2) of the National Heritage Resources Act. (Provide the results of Investigation, assessment, and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any national estate referred to in section 3(2) of the National Heritage Resources Act, 1999 (Act No. 25 of 1999) with the exception of the national estate contemplated in section 3(2)(i)(vi) and (vii) of that

Act, attach the investigation report as Appendix 2.19.2 and confirm that the applicable mitigation is reflected in 2.5.3; 2.11.6.and 2.12.herein).

There are no significant heritage resources present on the site and significant impacts are thus not expected.

t) Other matters required in terms of sections 24(4)(a) and (b) of the Act.

(the EAP managing the application must provide the competent authority with detailed, written proof of an investigation as required by section 24(4)(b)(i) of the Act and motivation if no reasonable or feasible alternatives, as contemplated in sub-regulation 22(2)(h), exist. The EAP must attach such motivation as **Appendix 4**).

No other matters required.

PART B

ENVIRONMENTAL MANAGEMENT PROGRAMME REPORT

1) Draft environmental management programme.

- a) **Details of the EAP, (Confirm that the requirement for the provision of the details and expertise of the EAP are already included in PART A, section 1(a) herein as required).**

The requirements for the provision of the details and expertise of the EAP are included in Part A,

Section a) and as **Appendix A.**

- b) **Description of the Aspects of the Activity (Confirm that the requirement to describe the aspects of the activity that are covered by the draft environmental management programme is already included in PART A, section (1)(h) herein as required).**

The requirement to describe the aspects of the activity that are covered by the environmental management programme is included in PART A, **Section d).**

c) **Composite Map**

(Provide a map (**Attached as an Appendix**) at an appropriate scale which superimposes the proposed activity, its associated structures, and infrastructure on the environmental sensitivities of the preferred site, indicating any areas that any areas that should be avoided, including buffers)

The composite plan is included in **Appendix B.**

d) **Description of Impact management objectives including management statements**

The proposed impact management objectives and management statements are informed by the environmental setting of the proposed mining site, as well as the desired state during closure and post closure of the mine.

i) **Determination of closure objectives.**

(Ensure that the closure objectives are informed by the type of environment described)

The proposed mining area is a single section, which is transformed land, possible past clearing activities that have occurred in the area. The transformed areas are mainly made-

up of indigenous species with some invasive species in disturbed areas. The main potential environmental impacts associated with the proposed project include:

- Noise generation
- Air quality and dust emission
- Topography and Visual Alteration
- Soil erosion
- Soil and water resources contamination
- Loss of vegetation and faunal habitat
- Land capability reduction
- Establishment and spread of alien plant species
- Socio-economic

Therefore, effective and practical measures need to be implemented to prevent, reduce or control and remedy any impacts that may be detrimental to the environment, as well as to rehabilitate the site to a desired state similar to that of the pre-mining state. These measures include:

- Rehabilitate the site in accordance with a detailed closure plan and implement an alien invasive management plan to ensure the establishment of indigenous vegetation.
- Rehabilitation of the disturbed areas to return the site to its similar visual state prior mining.
- Identify and attend to possible areas of erosion.
- Implement an effective waste management plan to contain waste on site, as well as any spills that may occur.

ii) Volumes and rate of water use required for the operation.

Not applicable to this project.

iii) Has a water use licence has been applied for?

No application for a water use licence has been made. The required mine operation volume falls within the General Authorisation, in terms of water use, of the farm portion, and therefore a Section 21 (a) water use licence will not be required by the mine.

iv) Impacts to be mitigated in their respective phases

Measures to rehabilitate the environment affected by the undertaking of any listed activity

ACTIVITIES (E.g. For prospecting - drill site, site camp, ablution facility, accommodation, equipment storage, sample storage, site office, access route etc...etc...etc E.g. For mining, - excavations, blasting, stockpiles, discard dumps or dams, Loading, hauling and transport, Water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc...etc...etc.)	PHASE (of operation in which activity will take place. State; Planning and design, Pre-Construction, Construction, Operational, Rehabilitation, Closure, Post closure).	SIZE AND SCALE of Disturbance (volumes, tonnages and hectares or m ²)	MITIGATION MEASURES (describe how each of the recommendations in herein will remedy the cause of pollution or degradation and migration of pollutants)	COMPLIANCE WITH STANDARDS (A description of how each of the recommendations herein will comply with any prescribed environmental management standards or practices that have been identified by Competent Authorities)	TIME PERIOD FOR IMPLEMENTATION Describe the time period when the measures in the environmental management programme must be implemented when required. With regard to Rehabilitation specifically this must take place at the earliest opportunity. With regard to Rehabilitation, therefore state either: - Upon cessation of the individual activity or. Upon the cessation of mining, bulk sampling or alluvial diamond prospecting as the case may be.
Vehicular activities.	Construction Operational Decommissioning	Site	-Adhere to existing roads, and if new roads are constructed, these must not cross sensitive areas such as the ridges or drainage lines. -Limit vehicles travelling to and from the site to minimise traffic noise to the surrounding environment. -Effective signage and traffic control measures along the route.	-Manage and avoid through Environmental Conservation Management Plan. -Minimise through Mine Design and Management Plan. -Monitor and manage through Dust Management Plan and Measures. - Implement noise reduction measures in compliance with Noise standards and Regulations.	Daily and on-going during the Life of Mine.

			<ul style="list-style-type: none"> -Implement effective and environmentally-friendly dust control measures, such as mulching or periodic wetting of the entrance road. -Vehicles operating on the mine must keep at minimum speed to reduce dust generation. 		
Site clearing and topsoil removal for mining operation, and construction of a mine	Construction	Site	<ul style="list-style-type: none"> -Development planning must ensure loss of vegetation and disturbance is restricted to within the minimum and designated areas only. -Revegetate exposed areas to prevent soil erosion and the establishment of alien invasive species. -Manage any encountered protected plant or animal species. -Implement dust suppression measures. -Prevent any spillages from hauling vehicles. -Report any identified features of heritage. 	<ul style="list-style-type: none"> -Manage and avoid through Environmental Conservation Management Plan. -Implement in accordance with the rehabilitation plan and standards. -Comply with the Alien invasive Management Plan in accordance with NEM:BA. -Monitor and manage through Dust Management Plan and Measures to ensure that the acceptable standards as set out in Regulation 3 of NEMAQA National Dust Control Regulations. - Manage through Emergency Response Plan. -Manage through Best Practice Guidelines. 	On-going during the construction and operational phase.

Construction of infrastructure.	Construction	Site	<ul style="list-style-type: none"> -Implement effective Storm-water Management measures. -Vegetate soil stockpiles and prevent soil erosion. -Avoid contamination and divert any dirty water to suitable storage facility. 	<ul style="list-style-type: none"> -Manage through Stormwater Management Plan. -Manage in accordance with the rehabilitation plan. -Manage through Stormwater Management Plan and Groundwater Monitoring Plan. 	On-going during the construction phase.
Preparing an area of the Offsite land for a portable campsite to accommodate infrastructure associated with stockpiling.	Construction	Site	<ul style="list-style-type: none"> -Development planning must ensure loss of vegetation and disturbance is restricted to within the minimum and designated areas only. -All disturbed areas must be rehabilitated. -Vegetation cover must be reinstated through rehabilitation. -Implement effective and environmentally-friendly dust control measures. 	<ul style="list-style-type: none"> -Minimise through Mine Design and Management Plan. -Manage in accordance with the Rehabilitation Plan. -Dust Monitoring Measures to ensure that the acceptable standards as set out in Regulation 3 of NEMAQA National Dust Control Regulations. 	Daily during construction in accordance with the Management Plan.
Removal and transportation of ore. TLB activity and operation of mining equipment.	Operational	Site	<ul style="list-style-type: none"> - Avoid contamination and divert any dirty water to suitable storage facility. -Implement noise minimisation measures. 	<ul style="list-style-type: none"> -Control through Stormwater Management Plan. -Regular vehicle and machinery inspection. 	Ongoing during the Life of Mine.

i) Financial Provision

(1) Determination of the amount of Financial Provision.

(a) Describe the closure objectives and the extent to which they have been aligned to the baseline environment described under the Regulation.

Boswa Boteng Mining Resources (Pty) Ltd will be using a mobile campsite for its processing activities, and therefore no infrastructure associated with the camp site will require breaking down or demolishing at closure. The areas disturbed as a result of the mining operation will be rehabilitated by maintaining the general topography of the surrounding area, ensuring that there are no remnants of the structures. The closure objectives aim to return the affected area to a land use condition or desired state similar to that of the pre-mining state. Closure and rehabilitation of land will be undertaken during the operational phase when the activities are completed in that area, to achieve a desired land condition as early as possible. Post-closure monitoring will assist in determining the success of the rehabilitation and also identify whether any additional measures need to be taken to ensure the area is restored to a reasonable and acceptable condition.

Rehabilitation measures and objectives will be undertaken in compliance with legislation and policy governing the requirements for rehabilitation such as the National Environmental Management Act 107 of 1998 and the Mineral and Petroleum Resources Development Act 28 of 2002.

(b) Confirm specifically that the environmental objectives in relation to closure have been consulted with landowner, interested, and affected parties.

This Report highlights the rehabilitation and management objectives with regards to mitigating negative environmental impacts associated with the proposed mining operation. These environmental objectives related to the closure of the mining operation contained in this report will be subjected to a 30-day review period by Interested and Affected Parties.

(c) Provide a rehabilitation plan that describes and shows the scale and aerial extent of the main mining activities, including the anticipated mining area at the time of closure.

The rehabilitation plan for the proposed Boswa Boteng Mining Resources (Pty) Ltd mining operation aims to mitigate the negative impacts associated with the mining activities, and ultimately to return the affected land to its desired land use standard. The objectives of the

plan are to ensure that the condition of the site post mining operation are suitable to and in agreement with the affected neighbouring community and the competent authority, that there is minimal loss to the biodiversity of the area, and that rehabilitation restores the land use and capability of the area/site.

The rehabilitation process will commence during the mining operation throughout the life of mine; involving concurrent rehabilitation of disturb land when activities are completed in that disturb land and thereafter the final rehabilitation will be undertaken during the mine closure phase. A more detailed closure plan will be developed during the life of mine, prior to the cessation of mining activities; adapted to the developed information and environmental impact status of the project in order to achieve a site-specific closure plan.

A map showing the site layout and aerial extent of the proposed mining activities, depicting the anticipated mining permit area at the time of closure is included as Map 2 in Appendix B.

(d) Explain why it can be confirmed that the rehabilitation plan is compatible with the closure objectives.

The closure plan will assist the proposed mining operation to achieve the following objectives:

- Comply with relevant legislation and policy requirements with regards to mine rehabilitation.
- Avoid or mitigate impacts associated with the project which may be detrimental to the environment.
- Land rehabilitation to a predetermined and agreed upon state that allows sustainable land use and capability of the site, that is to return the site to the condition that existed prior to mining or an agreed upon state.
- Cost effective and efficient closure of mining operations.
- Management and monitoring of the area post-closure.

The rehabilitation plan will thus be aligned to the closure objectives and tailored to the project to achieve these objectives. It will include information about the site prior to the mining operation and provide information on the maintenance of resources required for the rehabilitation process, as well as detail plan on how rehabilitation will be undertaken. It will also provide information on the management and monitoring of disturbance to avoid or minimise detrimental impacts, as well as an estimate of the financial closure provision. It will also include information associated with post-closure environmental monitoring of the site to ensure that the rehabilitation plan is followed and its objectives are achieved.

(e) Calculate and state the quantum of the financial provision required to manage and rehabilitate the environment in accordance with the applicable guideline.

This amount was calculated according to the guideline for the Calculation of the Quantum for rehabilitation as provided by DMR. The mining operation will entail the excavating of land in sections, where after the excavated section will be closed/rehabilitated and a different/new section will be excavated, within the 5.0 hectares area. The rehabilitation fee is thus calculated on a general surface. General surface rehabilitation and grassing at R 81 635,00.

Refer to the table below for the Calculated Quantum Rehabilitation Financial Provision

Table 1: Calculation of the financial provision required for the proposed Boswa Boteng Mining Resources (Pty) Ltd

(f) Confirm that the financial provision will be provided as determined.

Boswa Boteng Mining Resources (Pty) Ltd confirms that the financial provision will be provided as determined.

Mechanisms for monitoring compliance with and performance assessment against the environmental management programme and reporting thereon, including

- (g) Monitoring of Impact Management Actions**
- (h) Monitoring and reporting frequency**
- (i) Responsible persons**
- (j) Time period for implementing impact management actions**
- (k) Mechanism for monitoring compliance**

SOURCE ACTIVITY	IMPACTS REQUIRING MONITORING PROGRAMMES	FUNCTIONAL REQUIREMENTS FOR MONITORING	ROLES AND RESPONSIBILITIES (FOR THE EXECUTION OF THE MONITORING PROGRAMMES)	MONITORING AND REPORTING FREQUENCY and TIME PERIODS FOR IMPLEMENTING IMPACT MANAGEMENT ACTIONS
Site clearing and topsoil removal.	Air quality.	Set up PM ¹⁰ Monitoring sites in the area to monitor dustfall, using method ASTM D1739: 1970 (or equivalent).	Environmental Control Officer	Ongoing during the Life of Mine. Compile monthly reports.
Construction of infrastructure (Offices and storage) TLB activity and operation of mining equipment.	Soil	Management and monitoring of soil stockpiles. Soils must be stored properly and revegetated to prevent erosion and to enable	Environmental Control Officer Boswa Boteng Mining Resources (Pty) Ltd Management	Monitor and inspect on a daily basis. Compile monthly reports.

		re-use during rehabilitation.		
Demolition and/or removal of mobile camp site infrastructure /equipment.	Surface water.	Monitor and manage through Stormwater Management Plan	Environmental Control Officer Boswa Boteng Mining Resources (Pty) Ltd Management	Ongoing during the Life of Mine, as well as for at least a year post mine closure.
Rehabilitation and restoration of disturbed areas.	Establishment and spread of alien plant species.	Alien invasive vegetation monitoring and control through Alien Invasive Management Plan	Environmental Control Officer	Ongoing during the Life of Mine. Monitor and control on a monthly basis.

(l) Indicate the frequency of the submission of the performance assessment/ environmental audit report.

The Environmental Control Officer will undertake audits in compliance with the provided EMP contents and guidelines and will compile audit reports, which will ultimately be submitted to the DMR every year.

(m) Environmental Awareness Plan

(1) Manner in which the applicant intends to inform his or her employees of any environmental risk which may result from their work.

Boswa Boteng Mining Resources (Pty) Ltd Management has to appoint an independent Environmental Control Officer whose duty is to also implement an effective environmental awareness plan aimed to educate workers and contractors in terms of the biodiversity on site, environmental risks associated with the proposed development and land management of the site. Training and/or awareness should be raised and effectively communicated prior to the commencement of the construction phase. Training sessions should incorporate the management plans addressed in this EMP as well as any new information and documentation provided by the ECO, as well as that of the Environmental Health & Safety Officer. The ECO would be the most suitable person to conduct these training sessions, identifying sensitive environments as well as all the risks and impacts associated with the mining operation and the methods in which to deal with the impacts in order to avoid environmental degradation. Training sessions can be monitored by providing an attendance register indicating the workers that received training as well as evidence of the training and/or awareness received. These sessions would also need to be carried out throughout the Life of Mine, at least once a year, or as new information becomes available.

(2) Manner in which risks will be dealt with in order to avoid pollution or the degradation of the environment.

Kindly refer to the table of possible mitigation measures that could be applied in **section (viii) of Part A** for an indication of the manner in which risks will be dealt with

(n) Specific information required by the Competent Authority

(Among others, confirm that the financial provision will be reviewed annually).

No specific information requirements have been made by the competent authority at this stage.

2) UNDERTAKING

The EAP herewith confirms

- a) the correctness of the information provided in the reports
- b) the inclusion of comments and inputs from stakeholders and I&APs ;
- c) the inclusion of inputs and recommendations from the specialist reports where relevant;
and
- d) that the information provided by the EAP to interested and affected parties and any responses by the EAP to comments or inputs made by interested and affected. parties are correctly reflected herein.

CURRICULUM VITAE

MSITSINI Moses Malungisa

Date of Birth: 1994/02/15

ID Number: 9402155510083

Email: malungisamoses@gmail.com

Mobile: 0719064780

I am an individual who works very hard to deliver goods result, I have developed great combination of key skills that allow me to do my best in everything I do. I am a critical thinker, able to work under pressure and work in group. I give my level best in everything I do, I am an intellectual who is every innovative. Most of the time I am always up for a challenge and this helps me to improve my critical thinking and problem-solving skills.

PERSONAL DETAILS

Surname : Msitsini
Name(s) : Moses Malungisa
ID Number : 9402155510083
Date of Birth : 1994/02/15
Gender : Male
Nationality : South African
Marital Status : Single
Home Language : SiSwati
Residential Address : Stand no 424 Ekulindeni 1301

EDUCATION

SECONDARY EDUCATION

Qualification : Matric
School Attended : Highveld Secondary School
Year Completed : 2013

TERTIARY EDUCATION

Qualification : Bsc Geology and Geography

Institution : University of the Free State
Year Completed : 2018

WORKING EXPERIENCE

I have worked with the small scale miners in the region of Free State helping them with the application for Mining permit, prospecting right and comply reports with the legislation of the Department of Mineral Resource.

University of the free State-Student Assistance

Worked as a Student lab assistance (Information Technology Assistance). Worked as a student assistance in the Department of Geology and Geography.

Vocational work

I worked as a student geologist at Nkomati mine, doing strata-control and mineral separation. I also work as a student geologist at Exxaro mine, doing soil sampling.

Attribute acquired during Job experience

Interpersonal skill: I managed to acquire skills that very important when assisting people of different personalities, amongst the skills is communication skill.

Time Management: I managed to work with time when I was assisting student and also in the mine I manage to work with time during the period of time give to complete the given task.

Study Methods: Manage to introduce learners to different study methods that helped students to be successful to their studies.

Report writing: I learned to write different types of reports in different activities or events when I was doing strata control and soil sampling in the mine industry.

INVOLVED ORGANIZATIONS AND CERTIFICATES OBTAINED

GSA Geography Student Association

University of the Free State Hospital Ministry

PARTICIPATION

Hostel Soccer Team (University of the Free State)

Hostel Cricket Team (University of the Free State)

KEY SKILLS

Statistical Analysis

Good Communication

Information Evaluation

Interpretation Results

Software Skills: Map production (ArcGis), Microsoft Word, Microsoft Excel, Microsoft PowerPoint, Microsoft Access.

PERSONAL ATTRIBUTES

Communication Skill: I am an individual who communicate with an appreciation for different communication style requires when working with team members.

Honest and Reliable: I have a strong moral and ethics ensuring honest, reliability and ability and ability to responsibly undertake task.

Time Management: Dedication to effective prioritization and management of time by allowing tasks.

Report on the results of consolation.....	3
1. Methodology applied to consultation	4
1.1 Name the community as defined or explain why no such community was identified.....	4
1.2 Specifically state whether or not the Community is also the landowner.....	4
1.3 State whether or not the Department of Land Affairs been identified as an interested and affected party.	4
1.4 State specifically whether or not a land claim is involved	4
1.5 Name the Traditional Authority identified	4
1.6 List the landowners identified by the applicant (Traditional and title Deed owners).....	4
1.7 List the lawful occupiers of the land concerned.	4
1.8 Explain whether or not other persons' (including on adjacent and non-adjacent properties) socio-economic conditions will be directly affected by the proposed prospecting or mining operation and if not, explain why not.....	4
1.9 Name the Local Municipality identified by the applicant	5
1.10 Name the relevant Government Departments, agencies and institutions responsible for the various aspects of the environment and for infrastructure which may be affected by the proposed project5	
1.11 Submit evidence that the landowner or lawful occupier of the land in question, and any other interested and affected parties including all those listed above, were notified.	5
2. Description of the existing status of the cultural, socio-economic or biophysical environment, as the case may be, prior to the proposed prospecting or mining operation.....	5
2.1 Confirm that the identified and consulted interested and affected parties agree on the description of the existing status of the environment.	5
2.2 Describe the existing status of the cultural environment that may be affected	5
2.3 Describe the existing status of any heritage environment that may be affected	5
2.4 Describe the existing status of any current land uses and the socio-economic environment that may be directly affected	5
2.5 Describe the existing status of any infrastructure that may be affected.	6
2.6 Describe the existing status of the biophysical environment that will be affected, including the main aspects such as water resources, flora, fauna, air, soil, topography et	6
2.7 Provide any relevant additional information	6
3. The anticipated environmental, social or cultural impacts identified.....	6
3.1 Confirmation that the community and identified interested and affected parties have been consulted and that they agree that the potential impacts identified include those identified by them	6
3.1.1 Provide a list and description of potential impacts identified on the cultural environment.6	
3.1.2 Provide a list and description of potential impacts identified on the heritage environment, if applicable.....	6

3.1.3 Provide a list and description of potential impacts identified on the socio-economic conditions of any person on the property and on any adjacent or non-adjacent property who may be affected by the proposed prospecting or mining operation.	7
3.1.4 Provide a list and description of potential impacts (positive and negative) identified on: employment opportunities, community health, and community proximity. Unemployment levels are relatively high and income levels are relatively low thus there is sure to be raised expectations due to the arrival of another project.....	7
3.1.5 Provide a list and description of potential impacts identified on the biophysical environment including but not limited to impacts on: flora, fauna, water resources, air, noise, soil etc.	7
3.1.6 Provide a description of potential cumulative impacts that the proposed operation may contribute to considering other identified land uses which may have potential environmental linkages to the land concerned.	8
4. Land use or development alternatives, alternative means of carrying out the proposed operation, and the consequences of not proceeding with the proposed operation.	8
4.1 Provide a list of and describe any alternative land uses that exist on the property or on adjacent or non-adjacent properties that may be affected by the proposed mining operation.....	8
4.2 Provide a list of and describe any land developments identified by the community or interested and affected parties that are in progress and which may be affected by the proposed mining operation	8
4.3 Provide a list of and describe any proposals made in the consultation process to adjust the operational plans of the mine to accommodate the needs of the community, landowners and interested and affected parties.....	8
5. Description of the process of engagement referred to in 3.2.1 and 3.2.2 above with identified communities, landowners and interested and affected parties.....	8
5.1 Provide a description of the information provided to the community, landowners, and interested and affected parties to inform them in sufficient detail of what the prospecting or mining operation will entail on the land, in order for them to assess what impact the prospecting will have on them or on the use of their land.....	8
5.2 Provide a list of which of the identified communities, landowners, lawful occupiers, and other interested and affected parties were in fact consulted.	8
5.3 Provide a list of their views raised in regard to the existing cultural, socio-economic or biophysical environment, as the case may be.	9
5.4 Provide a list of their views raised on how their existing cultural, socio-economic or biophysical environment potentially will be impacted on by the proposed prospecting or mining operation. ..	9
5.5 Provide a list of any other concerns raised by the aforementioned parties.....	9
5.6 Provide the applicable minutes and records of the consultations as appendices	9
5.7 Provide information with regard to any objections received.	9
6. Describe the most appropriate means to carry out the proposed operation with due accommodation of the issues raised in the consultation process.	9
Appendix List.....	10

Definitions

‘**Consultation**’ means a two-way communication process between the applicant and the community or interested and affected party wherein the former is seeking, listening to, and considering the latter’s response, which allows openness in the decision-making process.

‘**community**’ means a group of historically disadvantaged persons with interest or rights in a particular area of land on which the members have or exercise communal rights in terms of an agreement, custom or law: Provided that, where as a consequence of the provisions of the Act negotiations or consultations with the community, directly affected by prospecting or mining, on land occupied by such members or part of the community:

‘**Interested and affected**’ parties include, but are not limited to: -

- (i) Host Communities
- (ii) Landowners (Traditional and Title Deed owners)
- (iii) Traditional Authority
- (iv) Land Claimants
- (v) Lawful land occupier
- (vi) The Department of Land Affairs
- (vii) Any other person (including on adjacent and non-adjacent properties) whose socio economic conditions may be directly affected by the proposed prospecting or mining operation)
- (viii) (viii) The Local Municipality
- (ix) The relevant Government Departments, agencies and institutions responsible for the various aspects of the environmental and for infrastructure which may be affected by the proposed project

Report on the results of consultation

The Kuruman Lower Kuruman Native land was identified for the proposed prospecting activities by Boswa Boteng Mining Resources (Pty) Ltd, to compile and submit an Environmental Management Plan (EMP), pursuant to an application for a mining permit, in terms of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002) (MPRDA) to the Free State Department of Mineral Resources (DMR). The Project is situated on portion a land in Frankfort, situated in the Free State Province.

The Mining Permit Application (MPA) has been accepted by the Regional Manager Free State Region, of the DMR under Reference NC 30/5/1/3/2/10721 MP and Boswa Boteng Mining Resources (Pty) Ltd has been instructed to prepare an EMP, and a Public Participation Process (PPP) will be undertaken, **see Appendix B.**

1. Methodology applied to consultation

1.1 Name the community as defined or explain why no such community was identified.

Within the applicable MPA area communities were identified. A landowner was identified and consulted within the MPA area.

1.2 Specifically state whether or not the Community is also the landowner.

Landowners (Royal House) were identified as landowners. A field visit was conducted by the EAP on the 10th January 2019 in order to identify affected communities or residents together with traditional authorities, see **Appendix B**.

1.3 State whether or not the Department of Land Affairs been identified as an interested and affected party.

No the Department of Land Affairs was not identified as an interested or affected party.

1.4 State specifically whether or not a land claim is involved

A request for land claims information was submitted to the Department of Mineral Resources of which the outcome of any land claims over the applicable land are detailed below.

A directive from the DMR stated that consultation needs to be undertaken with the Department of Land Affairs, if the affected land is state-owned, or the office of Commission of Land Rights if the affected land is subject to land restitution.

Through the process to establish landownership it was found that the property is owned by the Traditional Authority.

1.5 Name the Traditional Authority identified

There is traditional Authority identified.

1.6 List the landowners identified by the applicant (Traditional and title Deed owners)

Gamopedi tribal Traditional Authority

1.7 List the lawful occupiers of the land concerned.

Gamopedi tribal Traditional Authority

1.8 Explain whether or not other persons' (including on adjacent and non-adjacent properties) socio-economic conditions will be directly affected by the proposed prospecting or mining operation and if not, explain why not.

The proposed mining operations will be conducted using invasive and non-invasive methods. Because of the removal of tigers-eye mining, invasive methods will result in land disturbances. However, the socio-economic conditions of land occupants will not be directly impacted since site rehabilitation will be undertaken and mitigation measures implemented throughout the mining process.

1.9 Name the Local Municipality identified by the applicant

The Local Municipality identified is the Ga-Segonyana Local Municipality, which falls under the Magisterial District of John Taolo Gaetsewe in the Northern Cape Province.

1.10 Name the relevant Government Departments, agencies and institutions responsible for the various aspects of the environment and for infrastructure which may be affected by the proposed project

The various Government Departments, agencies and institutions included in the PPP are set out below:
Provincial

- Free State Department of Mineral Resources (DMR).

District and Local

- Gamopedi tribal Traditional Authority
- Magisterial District of John Taolo Gaetsewe

1.11 Submit evidence that the landowner or lawful occupier of the land in question, and any other interested and affected parties including all those listed above, were notified.

See Appendix B and H.

2. Description of the existing status of the cultural, socio-economic or biophysical environment, as the case may be, prior to the proposed prospecting or mining operation.

2.1 Confirm that the identified and consulted interested and affected parties agree on the description of the existing status of the environment.

The interested parties and community made comment to the status of the existing environment and there was a clear understanding between them.

2.2 Describe the existing status of the cultural environment that may be affected

The dominant ethnicity of the area is Tswana. No current sites of cultural significance such as initiation sites or other culturally significant sites were identified.

2.3 Describe the existing status of any heritage environment that may be affected

There are no heritage resources that were identified.

2.4 Describe the existing status of any current land uses and the socio-economic environment that may be directly affected

There is no land use and the socio-economic environment affected as the targeted site is secluded.

2.5 Describe the existing status of any infrastructure that may be affected.

There is an access road to the site that may be affected but the extent of the impact is uncertain and possibly negligible, at least in the early stage of the Life of Mine.

2.6 Describe the existing status of the biophysical environment that will be affected, including the main aspects such as water resources, flora, fauna, air, soil, topography etc.

Soil

Soils of the general area are very coarse and appear relatively deep with sections of prominent surface rock (silica rich rocks and dolomite). Land capability of the area is described as non-arable, with very dry surfaces and thus not very suitable for cultivation.

Fauna and Flora

The biome of the project site is Savanna and there are a number subset contingent vegetation's therein. The vegetation type has not been heavily impacted by transformation and 98.10% of the original extent is still intact. Within the site, the vegetation was dominated by low trees such as *Tarchonanthus camphoratus*, *Grewia flava*, *Acacia mellifera*, *Olea europea* subsp. *Africana*, *Searsia tridactyla* and *Ziziphus mucronata* subsp. *mucronata*. The grass layer is fairly dense and is composed of species such as *Themeda triandra*, *Cymbopogon pospischilii*, *Eragrostis lehmanniana* var. *lehmanniana*, *Schmidtia pappophoroides*, *Fingerhuthia africana*, *Eustachys paspaloides* and *Cenchrus ciliaris*. There were also a number of shrub species present including *Gnidia polycephala*, *Eriocephalus ericoides* subsp. *ericoides*, *Asparagus suaveolens* and *Lebeckia macrantha*.

2.7 Provide any relevant additional information

No additional information.

3. The anticipated environmental, social or cultural impacts identified.

3.1 Confirmation that the community and identified interested and affected parties have been consulted and that they agree that the potential impacts identified include those identified by them

Please refer to Sections 1.11 and 2.1 above. With availability of the EMP to stakeholders, it is envisaged that further comments will be obtained.

3.1.1 Provide a list and description of potential impacts identified on the cultural environment.

Please refer to Section 2.2.

3.1.2 Provide a list and description of potential impacts identified on the heritage environment, if applicable.

Please refer to Section 2.3.

3.1.3 Provide a list and description of potential impacts identified on the socio-economic conditions of any person on the property and on any adjacent or non-adjacent property who may be affected by the proposed prospecting or mining operation.

Please also refer to Sections 2.2, 2.4 and 2.5

3.1.4 Provide a list and description of potential impacts (positive and negative) identified on: employment opportunities, community health, and community proximity. Unemployment levels are relatively high and income levels are relatively low thus there is sure to be raised expectations due to the arrival of another project.

Please also refer to Sections 2.4 and 2.5 for supporting information.

3.1.5 Provide a list and description of potential impacts identified on the biophysical environment including but not limited to impacts on: flora, fauna, water resources, air, noise, soil etc.

Construction Phase

During the construction phase the work carried out will include the construction of the mine and supporting infrastructure. This will entail the clearing of areas and the disturbance of the topsoil through excavations as well as the construction of a soil stockpile. The topography and natural drainage lines will be disturbed. The overall impact will be loss of topsoil as a result of erosion and possible contamination of the soil by fuel, and oils due to the excavation activities. Soil compaction caused by heavy vehicles and machinery surrounding the mining areas could also be a problem. The Construction activities will change the land use from natural/subsistence grazing to mining.

Operation Phase

Soil erosion through wind and storm water run-off, and soil pollution by means of hydrocarbon contamination may be encountered during the operational phase. Water runoff from roads must be controlled and managed by means of proper storm water management facilities in order to prevent soil erosion. Diesel and oil spills are common at mine sites due to the large volumes of diesel and oil consumed by mining vehicles, also vehicles must be maintained to reduce the chances of any leaks occurring. Pollution may however be localised. Small pockets of localised pollution may be cleared up easily using commercially available hydrocarbon emergency clean-up kits. Air pollution may occur in the form of dust due to the disturbance of top soil and digging. The clearing of vegetation will also occur during the operational phase. The movement of heavy vehicles will cause noise pollution which will be localised to the site which is secluded from busy environment.

Decommissioning Phase

During the decommissioning phase all infrastructure will be demolished and removed, which will entail vehicle movement in the infrastructure area. The potential impacts associated with these activities will include the risk of hydrocarbon spills, and compaction. The rehabilitation of the mining area and infrastructure area should have a positive impact if done correctly.

Fauna and Flora / Ecology the following impacts from the proposed project on ecology have been identified:

- Removal of vegetation;
- Disturbance of the soil;
- Vehicle operation;
- Machinery and vehicle operation (noise).

A Land survey was conducted and showed that not much of the ecosystem will be damaged and only the 5.0 ha that was requested in the mine permit will affect the ecosystem.

3.1.6 Provide a description of potential cumulative impacts that the proposed operation may contribute to considering other identified land uses which may have potential environmental linkages to the land concerned.

This will be discussed in detail in the EMP developed for the MPA and will be submitted to the DMR.

4. Land use or development alternatives, alternative means of carrying out the proposed operation, and the consequences of not proceeding with the proposed operation.

4.1 Provide a list of and describe any alternative land uses that exist on the property or on adjacent or non-adjacent properties that may be affected by the proposed mining operation.

No alternative land use will be affected by the mining as the proposed.

4.2 Provide a list of and describe any land developments identified by the community or interested and affected parties that are in progress and which may be affected by the proposed mining operation

No land developments were identified by the landowner during the consultation undertaken for the prospecting rights application.

4.3 Provide a list of and describe any proposals made in the consultation process to adjust the operational plans of the mine to accommodate the needs of the community, landowners and interested and affected parties.

No suggestions were made by the landowner through the consultation process relating to operational plans.

5. Description of the process of engagement referred to in 3.2.1 and 3.2.2 above with identified communities, landowners and interested and affected parties.

5.1 Provide a description of the information provided to the community, landowners, and interested and affected parties to inform them in sufficient detail of what the prospecting or mining operation will entail on the land, in order for them to assess what impact the prospecting will have on them or on the use of their land.

See Appendix G.

5.2 Provide a list of which of the identified communities, landowners, lawful occupiers, and other interested and affected parties were in fact consulted.

See Appendix B and H.

5.3 Provide a list of their views raised in regard to the existing cultural, socio-economic or biophysical environment, as the case may be.

See appendix H.

5.4 Provide a list of their views raised on how their existing cultural, socio-economic or biophysical environment potentially will be impacted on by the proposed prospecting or mining operation.

See Appendix G.

5.5 Provide a list of any other concerns raised by the aforementioned parties.

No comments were made.

5.6 Provide the applicable minutes and records of the consultations as appendices.

See Appendix G.

5.7 Provide information with regard to any objections received.

No objections to the project were raised.

6. Describe the most appropriate means to carry out the proposed operation with due accommodation of the issues raised in the consultation process.

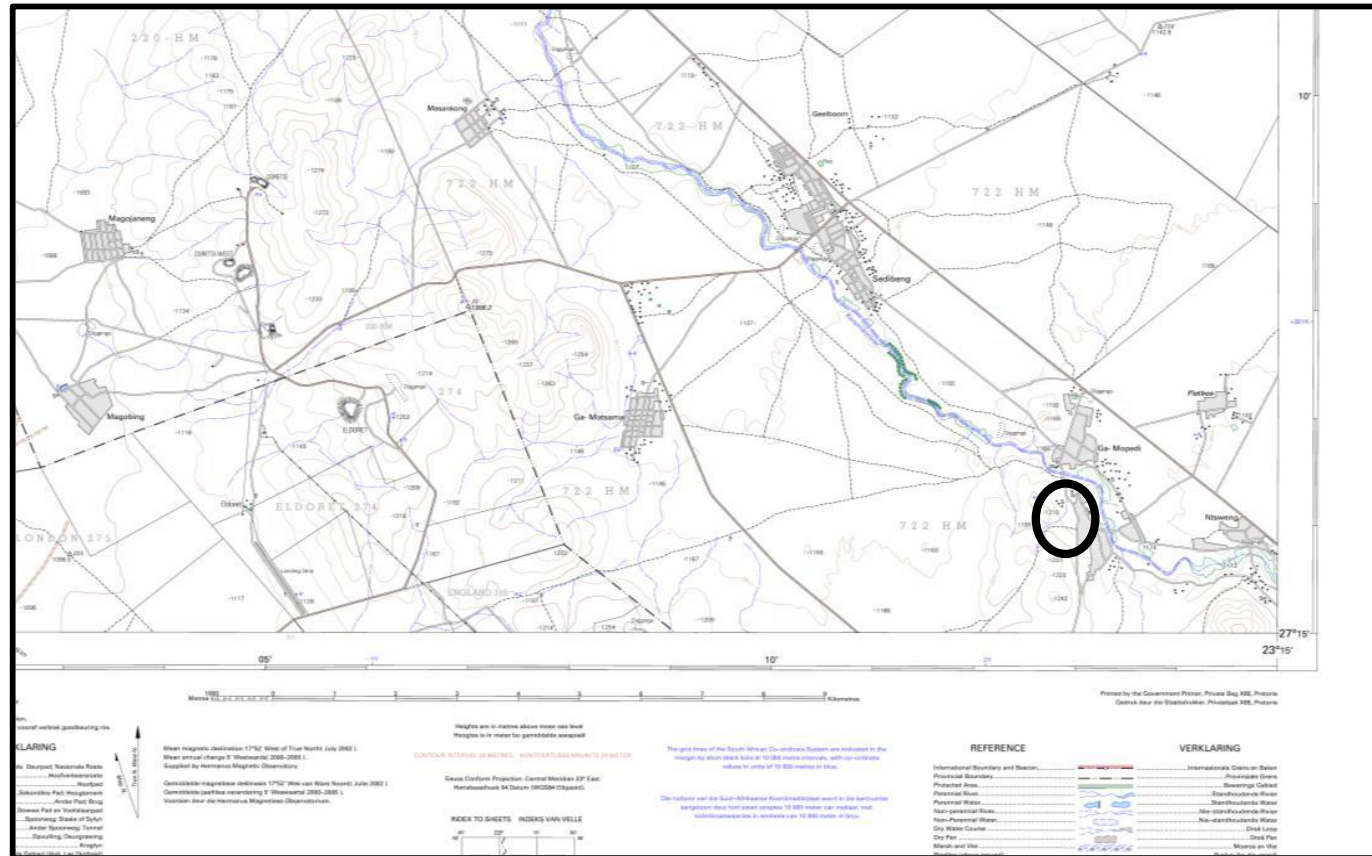

As far as possible local people should be employed to assist with the prospecting process. Community infrastructure should be avoided as far as possible, where these cannot be avoided discussions should take place with the affected community and mitigation measures put in place.

Appendix C: Background Information Document (BID)

Project Description

The purpose of the impact is to explore the property below for tigers-eye and to develop successful mining site.

Project Location

The image below shows the 5.0 ha that Boswa Boteng Mining Resources (Pty) Ltd has applied for a mining permit. This is located in Kuruman.

Kuruman (Gamopedi)

Geological Background of the area

The geology of the study falls under Transvaal Supergroup which include the Ghaap Group. The Ghaap Group represents some 200 Ma of chemical sedimentation - notably iron and manganese ores, cherts and carbonates - within the Griqualand West Basin that was situated towards the western edge of the Kaapvaal Craton

Stratigraphy of Transvaal Supergroup

Supergroup	Group	Subgroup	Formation	Lithology
Transvaal Supergroup (Griqualand West)	Postmasburg	Voelwater	Mapedi	Shale, quartzite and conglomerate
			Moodraai	Carbonate and minor chert
			Hotazel	Iron-formation and Mn ore
			Ongeluk	Andesitic lavas
			Makganyene	Glacial diamictite
	Ghaap	Asbestos Hills	Koegas	Siliciclastics and iron-formation
			Griquatown	Clastic-textured iron-formation
			Kuruman	Microbanded iron-formation
			Campbellrand	Carbonate and minor shale
			Schmidtsdrif	Shale, quartzite, carbonate and lava

NOTICE – DMR REF NO. NC 30/5/1/3/2/10721MP

RE: APPLICATION FOR A MINING PERMIT TO MINE TIGERS EYE ON A PORTION OF THE FARM: LOWER KURUMAN NATIVE RESERVE 219, SITUATED IN THE MAGISTERIAL DISTRICT OF JOHN TAOLO GAETSEWE IN THE NORTHERN CAPE PROVINCE.

Notice is hereby given of the intent of **BOSWA BOTENG MINING RESOURCES (Pty) Ltd** to mine for Tigers eye on the above-mentioned property. An application for Mining Permit has been accepted by the Department of Mineral Resources Northern Cape Province, and Kuruman region in this regard.

According to Section 27 (5) (b) of the Minerals and Petroleum Resources Development Act, 2002 (Act 28 of 2002) and Environmental Authorisation in terms of National Environmental Management Act, 1998 (Act 107 of 1998) as amended, the landowner or lawful occupier of the land, as well as any interested and affected parties must be notified and consulted regarding the proposed operation. You're hereby invited to address any comment to support / objection to the proposed mining operation to Azatitrax (Pty) Ltd on the **2 April 2019**.

Venue: Community Hall • Time: 14:00 pm

Please feel free to contact the undersigned on the following contact details:

Email: Azatitrax@mail.com

Phone: 0719064780

If no correspondence is received from you within the stated period, it will be accepted that you have no objections against the proposed prospecting activities.

Appendix G: Public Participation

Boswa Boteng Mining Resources (Pty) Ltd will be mining tigers-eye in Kuruman Land. The tigers-eye will be removed from the land and will be used for gemstone. The proposed site of mining is 5.0 ha

The proposed project is initiated by Boswa Boteng Mining Resources (Pty) Ltd nearby the Kuruman community. The propose project will provide opportunity to the community in the form of labour

Lower Kuruman Native Reserve Agenda

- The site plan.
 - Lower Kuruman native reserve 219
 - 5.0 ha
 - About 16 km North of Kuruman

- List of activities to be authorised
 - Removal unprocessed tigers eye boulders for further processing or use off site.

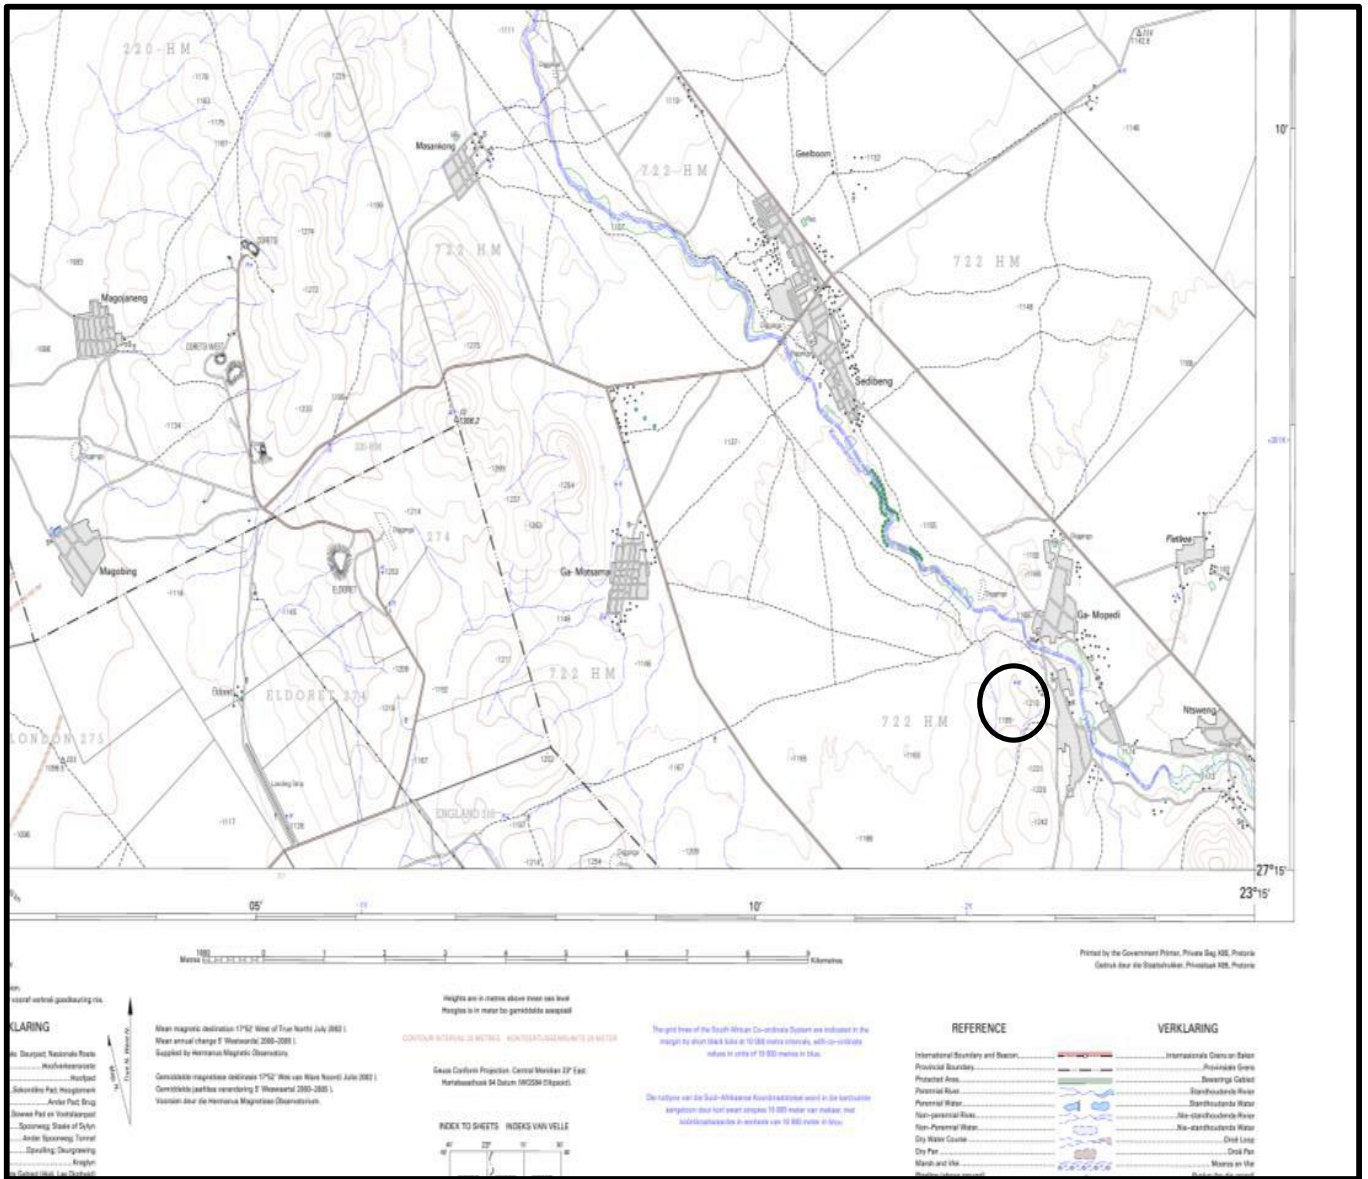

- Scale and extent of activities to be authorised
 - 5.0 ha

- Typical impacts of activities to be authorised (e.g.surface disturbance, dust, noise, flying rock etc.)
 - Noise (trucks)
 - Open cast excavation
 - Dust
 - Surface disturbance

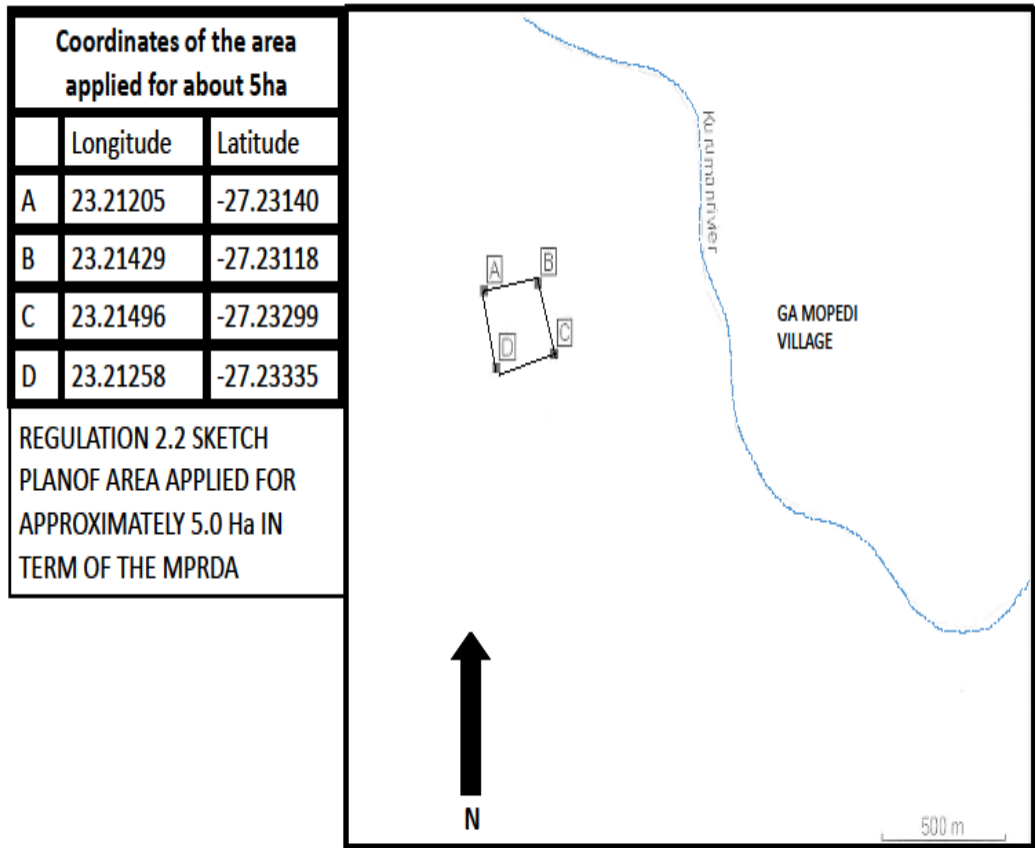

- The duration of the activity.
 - Long term

- Sufficient detail of the intended operation to enable them to assess what impact the activities will have on them or on the use of their land)
 - Summary
