

Bushman Rock Shelter

Anthropogenic sediment sampling protocol and aDNA analyses

Figure 1. Stringent contamination-prevention protocols are followed during the anthropogenic soil sampling procedure.

Figure 2. The global distribution of aDNA analytical facilities. Of the 63 aDNA laboratories that exist worldwide, Africa (excluding Antarctica) is the only continent which does not have an aDNA dedicated facility. Map by Austin Reynolds (<https://palaeogenomics.wordpress.com/ancient-dna-labs/>).
