1 INTRODUCTION

This Environmental Management Programme (EMPr) has been compiled for: the proposed development of Siyathemba substation consists of 2 x 5MVA 88kV/6.6kV transformers within the jurisdiction of Dipaleseng Local Municipality in the Mpumalanga Province. The proposed substation construction have major impacts on the environment, as such, an environmental authorization needs to be obtained prior to commencement of the activity/ies in accordance with the requirements of the National Environmental Management Act, 1998 (Act 107 of 1998) [NEMA] and the Environmental Impact Assessment (EIA) Regulations of 2014 as amended. It is therefore imperative that precautions are taken to ensure that environmental degradation is minimized while the project is undertaken. This will take a concerted effort from the project team and proper planning is of the utmost importance.

Consequently, Nsovo Environmental Consulting (hereafter referred to as Nsovo) has been appointed by Dipaleseng Local Municipality (hereafter referred to DLM) to undertake a Basic Assessment (BA) process for the proposed development of a substation. As part of the BA process an EMPr must be prepared as a guideline for the mitigation and management measures to be implemented during the planning, construction and operational phases of the project.

This EMPr is applicable to all the employees and contractors of Municipality working on the development. The document will be adhered to and updated as relevant; it is therefore a living document that guides the day to day activities throughout the lifecycle of the development. Any changes to the EMPr must be undertaken in accordance with the requirements of the NEMA EIA Regulations and any other legislation relevant at the time. This EMPr has been developed to ensure compliance with the requirements of the National legislative - and other relevant regulatory requirements

2 DETAILS AND EXPERTISE OF THE ENVIRONMENTAL ASSESSMENT PRACTITIONER

Nsovo has been appointed as an independent Environmental Assessment Practitioner (EAP) for the proposed project and meets the general requirements as stipulated in Regulations 13 (3) of the NEMA EIA 2014 Regulations as amended. Nsovo therefore is:

- Independent and objective;
- Has expertise in conducting EIA's;
- Takes into account all relevant factors relating to the application; and
- Provides full disclosure to the applicant and the relevant environmental authority.

Table 1 below provides the details of the EAP and relevant experience. A detailed CV and qualifications of the EAP is attached as **Appendix E1**.

Dipaleseng Local Municipality 7 | P a g e

Table 1: Details of the EAP

Name of Company	Nsovo Environmental Consulting	
Person Responsible	Masala Mahumela	
Professional Registration	South African Council for Natural Scientific Professions (SACNASP)	
Postal Address	P/Bag x29 Post net Suite 697 Gallo Manor 2052	
Telephone Number	011 041 3689	
Fax Number	086 602 8821	
Email	Masala.mahumela@nsovo.co.za	
Qualifications & Experience	B.Sc. Honours Environmental Management	
	10 years of experience	
Project Related Expertise	In terms of project related expertise, the EAP has worked on the following projects: EIA for the proposed Shongweni substation and Hector - Shongweni 400kV powerline in Kwazulu Natal Province. EIA for the proposed Inyaninga substation and Inyaninga – Mbewu 400kV powerline in Kwazulu Natal Province. EIA for the proposed Tubatse strengthening Phase 1 – Senakangwedi B integration within the jurisdiction of Greater Tubatse Local Municipality in Limpopo Province. EMPr, WULA and EA amendment for the proposed Juno - Gromis 400kV power line. Basic Assessment for the proposed Decommissioning and Demolition of Verwoedberg Substation and 275kV power.	

Dipaleseng Local Municipality 8 | P a g e

3 PROJECT BACKGROUND

Eskom is supplying the Local Municipality (via Balfour Town Substation) with a Noted Maximum Demand (N.M.D) of 7.5MVA. The substation consists of 2 x 5MVA 88kV/6.6kV transformers and the peak demand was recently recorded to be 7.2 MVA. Furthermore, Eskom also distributes (at 22kV) to identified rural settlements in the vicinity of Balfour substation through a 1 x 5MVA 88/22kV transformer. The municipality initiated a project to establish a new 88/22kV Siyathemba substation with an end state capacity of 20 MVA. The project will entail the entire substation infrastructure (primary, secondary plant and civil associated works) and the 132kV feeder (Operated at 88kV) from Eskom switching station into the newly proposed Siyathemba substation. The existing Balfour Municipal Substation will be reconfigured and the load will be shifted to the new Siyathemba substation.

The Balfour town substation recorded an increase in consumption and a need for a network expansion plan was then justified. The municipality also experienced several unplanned outages due to a significant load increase on the North side of Balfour town. The infrastructure is obsolete and has a negative impact on the quality of supply. In essence, the existing 2 x 5MVA transformers installed at Balfour Substation are too small to cater for the current loading in Balfour and Siyathemba area. The current electricity network does not have spare capacity to accommodate future residential developments and potential industries.

The proponent for the proposed development is Dipaleseng Local Municipality (DLM) whereas the Competent Authority (CA) is the National Department of Environmental Affairs (DEA). The proposed project will be undertaken in terms of the National Environmental Management Act, 1998 (NEMA 107 of 1998) and the EIA Regulation of December 2014 (as amended in April 2017), other applicable Acts and Legislation will be equally considered.

The EMPr is prepared for the proposed project and will address mitigation measures for the identified impacts during the preconstruction, construction and operational phases.

4 PURPOSE AND SCOPE OF THE EMPR

The EMPr sets out general environmental specifications, which are applicable to the construction activities associated with the proposed project. This document serves as a guideline for the management of the site and provides specifications and Regulations that must in all instances be adhered to. It is the responsibility of all parties, including contractors and subcontractors, involved in the project to commit themselves to the implementation of the Construction and Operation EMPr in all phases of the project.

The objectives of the EMPr are to:

Dipaleseng Local Municipality 9 | P a g e

- Ensure that the activity is undertaken in compliance with all statutory and regulatory requirements;
- Ensure that the most updated DLM's Environmental Policy is underwritten at all times;
- All landowner special conditions are identified and taken into consideration;
- Ensure that all environmental conditions stipulated in the EA are implemented;
- Detail mitigation measures, time-frames and criteria for assessing the success or failure of each measure;
- Provide detailed monitoring programmes to ensure compliance;
- Provide input and strategies for environmental quality control and risk management;
- To preserve the natural environment by limiting destructive actions on site;
- Ensure appropriate restoration of areas affected by construction; and
- Prevent long term environmental degradation.

The purpose of the EMPr is to give effect to precautionary measures, which are to be put in place for controlling the activities that will take place on site. It has been developed to ensure compliance with the national legislative and regulatory requirements as well as DLM's guidelines associated with projects of a similar nature.

5 DESCRIPTION OF LOCALITY

The proposed project will be undertaken on portion 5 of Farm Vlakfonteing 556IR in Siyathemba (Enkanini) Extension 4, in Ward 3 within the jurisdiction of Dipaleseng Local Municipality in the Mpumalanga Province (refer to Figure 1 below for locality map).

Dipaleseng Local Municipality 10 | P a g e

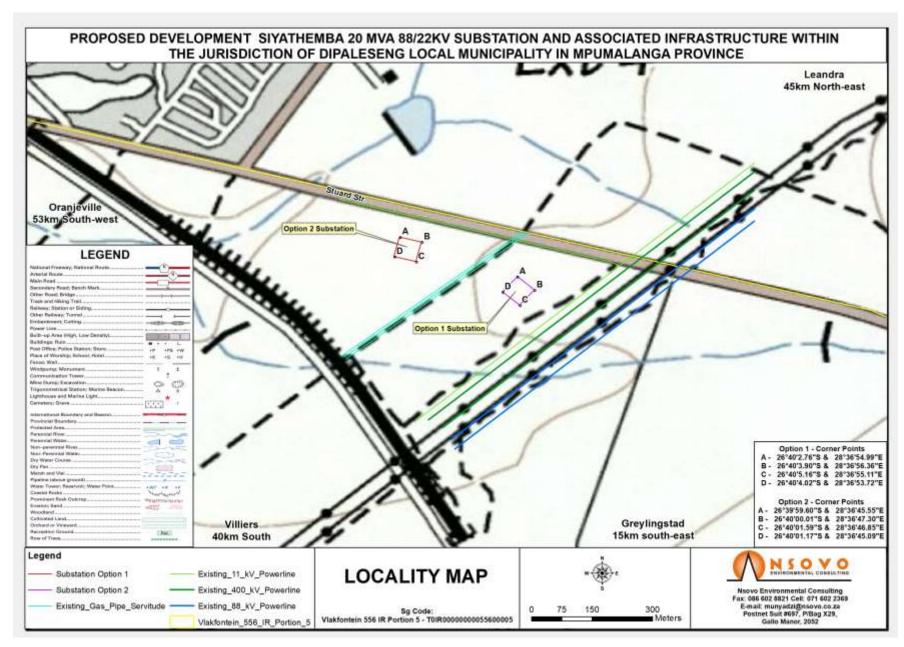

Figure 1: Locality Map for the proposed Siyathemba substation.

6 GENERAL ENVIRONMENTAL GUIDELINES FOR THE CONSTRUCTION PHASE

This EMPr has been compiled in fulfilment with the requirements of the National Environmental Management Act, 1998 (Act 107 of 1998). This document serves as a guideline for the management of the site by the Municipality, Contractor and subcontractors, in order to minimise adverse environmental impacts. DLM will be responsible for ensuring compliance of the Contractor with the EMPr and will rely on the Environmental Control Officer (ECO) to monitor compliance. The Contractor must in turn monitor his/her employees to ensure compliance with the provisions of this EMPr.

The main Contractor shall receive a copy of the EMPr from the Municipality and will be given the opportunity to clear any misconceptions and uncertainties. The EMPr will form part of the contract between the Municipality and the Contractor/s, and will therefore be a legally binding document. In the event of discrepancy with regard to environmental matters or environmental specifications this document shall take precedence.

7 APPLICABLE LEGISLATION

This list is not intended as an exhaustive analysis of the applicable environmental legislations but provides a guideline to the relevant aspects of each Act.

Table 2: Legislation pertaining to the proposed project

Aspect	Relevant Legislation	Brief Description	
Environment	National Environmental Management: Act 1998, (Act No. 107 of 1998)	The overarching principles of sound environmental responsibility are reflected in the National Environmental Management Act, 1998 (Act No. 107 of 1998) (NEMA), The principles set out in the National Environmental Management Act, 1998 (Act No. 107 of 1998), hereafter, referred to as NEMA, apply to all listed projects. Construction and operation have to be conducted in line with the generally accepted principles of sustainable development, integrating social, economic and environmental factors.	
Biodiversity	National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004)	The purpose of the National Environmental Management Biodiversity Act, 2004 (Act No. 10 of 2004) (NEMBA) is to provide for the management and conservation of South Africa's biodiversity within the framework of the NEMA and the protection of species and ecosystems that warrant national protection. As	

Aspect	Relevant Legislation	Brief Description		
		part of its implementation strategy, the National Spatial Biodiversity Assessment was developed.		
Protected Areas	National Environmental Management: Protected Areas Act, 2003 (Act No. 57 of 2003)	The purpose of this Act is to provide for the protection, conservation and management of ecologically viable areas representative of South Africa's biological diversity and its natural landscapes.		
Heritage Resources	National Heritage Resources Act, 1999 (Act No. 25 of 1999)	The National Heritage Resources Act, 1999 (Act No. 25 of 1999) legislates the necessity for cultural and heritage impact assessment in areas earmarked for development, which exceed 0.5 ha. The Act makes provision for the potential destruction to existing sites, pending the archaeologist's recommendations through permitting procedures. Permits are administered by the South African Heritage Resources Agency (SAHRA).		
Air quality management and control	National Environmental Management: Air Quality Act, 2004 (Act 39 of 2004)	The object of the Act is to protect the environment by providing reasonable measures for the protection and enhancement of the air quality and to prevent air pollution. Section 32 of The National Environmental Management: Air Quality Act, 2004 (Act 39 of 2004) deals with dust control measures in respect of dust control. Whilst none are promulgated at present, it provides that the Minister or MEC may prescribe measures for the control of dust in specified places or areas, either in general or by specified machinery or in specified instances, the steps to be taken to prevent nuisance by dust or other measures aimed at the control of dust.		
Noise Management and Control	Noise Control Regulations in terms of the Environmental Conservation, 1989 (Act 73 of 1989)	The assessment of impacts relating to noise pollution management and control, where appropriate, must form part of the EMPr. Applicable laws regarding noise management and control refer to the National Noise Control Regulations issued in terms of the Environment Conservation, 1989 (Act 73 of 1989).		

Dipaleseng Local Municipality 13 | P a g e

Aspect	Relevant Legislation	Brief Description
Water	National Water Act, 1998 (Act 36 of 1998)	This Act provides for fundamental reform of law relating to water resources and use ¹ . The preamble to the Act recognizes that the ultimate aim of water resource management is to achieve sustainable use of water for the benefit of all users and that the protection of the quality of water resources is necessary to ensure sustainability of the nation's water resources in the interests of all water users.
Agricultural Resources	Conservation of Agricultural Resources Act, 1983 (Act No. 43 of 1983)	The Act aims to provide for control over the utilization of natural agricultural resources in order to promote the conservation of the soil, water resources and vegetation and to combat weeds and invader plants. Section 6 of the Act makes provision for control measures to be applied in order to achieve the objectives of the Act.
Human	The Constitution of South Africa, 1996 (Act No. 108 of 1996	The Constitution of South Africa, 1996 (Act No. 108 of 1996) provides for an environmental right (contained in the Bill of Rights, Chapter 2). In terms of Section 7, the state is obliged to respect, promote and fulfill the rights in the Bill of Rights. The environmental right states that: "Everyone has the right - a) To an environment that is not harmful to their health or well-being; and b) To have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures thatPrevent pollution and ecological degradation; -Promote conservation; and -Secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development."

Dipaleseng Local Municipality 14 | P a g e

7.1 METHOD STATEMENTS FOR THE ACTIVITIES TO BE CARRIED OUT

Method Statements (MS) must be prepared and signed by DLM's Project Manager or Engineer, ECO and the Contractor prior to commencement of activities on site and this include but not limited to the following:

- Vegetation clearing;
- Fauna and flora management;
- Excavations for installation of foundations;
- ..Chemical/hazardous substance storage;
- Cement/concrete use;
- Environmental awareness training;
- Fire management;
- Emergency Response;
- Storm water and soil erosion management;
- Waste management;
- Access road(s);
- Contaminated water management;
- Site establishment and site layout plan;
- Use of herbicides/pesticides;
- Temporary site closure;
- Site Rehabilitation;
- Blasting;
- Alien plants removal and use of herbicides and pesticides; and
- Dust suppression.

This list has not exhausted all the activities/aspects that may require MS prior to commencement of the work. The Environmental Control Officer (ECO) may require more MSs to be submitted as the project progresses.

Dipaleseng Local Municipality 15 | P a g e

8 PROJECT TEAM

8.1 ROLES AND RESPONSIBILITIES OF THE PROJECT TEAM

8.1.1 Environmental Control Officer

An independent ECO must be appointed to assist the Contractor(s) on site regarding environmental matters and should be on site during the entire construction phase. The primary role of the ECO is as follows:

- To provide an on-site environmental management service to DLM to ensure effective implementation of EA, EMPr and landowner conditions.
- To ensure implementation and compliance with any DLM site procedures and requirements.
- Be responsible for the planning and management of all environmental activities for this position, but more specifically the following:

Communication Services

- To liaise closely with the DLM and Contractor's Environmental Officer (CEO).
- To ensure that the landowner agreed General and Special Conditions are implemented.
- To agree with landowner on the bush clearing method.
- To assist in conflict resolution.
- To ensure that the Contractor rehabilitates any damage caused during construction.
- To indicate where bird guards, bird diverters, bird lights and aviation warning spheres are to be installed as specified in the EMPr, EA conditions and or the line profile.
- After the final rehabilitation has been completed on a property, to obtain the immediate release from the landowner.

Environmental Management

- Monitoring of site environmental progress in respect of time, deliverables and quality.
- Liaison between Project Manager, SHEQ/SHE/Environmental Manage, Senior Environmental Advisor, Site Supervisor, CEO, affected and interested parties, authorities and stakeholders on environmental matters.
- Recommending EMPr modifications to the Project/SHEQ/SHE/Environmental Manager as and when the particular site conditions warrant it.
- Communicating changes of the EMPr to all relevant parties.
- Maintaining climatic data on an ECO register using DLM/Contractor EO readings.
- Issuing Contractors Communications and Site Instructions via the Site Supervisor or delegated person as delegated by the Project Manager.

Dipaleseng Local Municipality 16 | P a g e

- Monitoring performance of Contractor and sub-contractors to ensure compliance with environmental and statutory requirements.
- Validating the regular site inspection reports prepared by the CEO.
- Checking the CEO's record of environmental incidents (spills, impacts, legal transgressions, etc.) as well as corrective and preventive actions taken.
- Checking the CEO's complaints register in which all complaints are recorded, as well as actions taken.
- Assisting in the resolution of environmental related conflicts.
- Compiling and completing the environmental management related component of the handing-over documentation and any other related documents.
- Timeously identifying any sensitive site issues which may affect environmental aspects and the reporting of this to the Project/SHEQ/SHE/Environmental Manager.
- Monitoring that good housekeeping practices are followed and maintained by the Contractor.
- Monitoring that the ground rehabilitation is initiated on time, complying with the EA, EMPr and to the satisfaction of the landowner.
- Assisting the Contractor and DLM EO with the environmental awareness training course to all site staff, targeted at
 the level of the workers so that they have a basic understanding of the environment that they are working in. The
 Contractor will provide an interpreter if needed.
- Monitoring that sensitive areas are demarcated within or alongside the construction areas i.e. sites identified in the EMPr, EA. All personnel are to be informed of such sites and the reason the site is demarcated.

Monitoring

- Validating the site environmental monitoring plan.
- Validating the "Punch List/daily pre-warning" and reporting all defects and non-conformances as per the Control of Nonconformity Procedure.
- Carrying out environmental surveillances.
- Validating and recording of certificates proving the legal disposal of waste streams.

Reporting

- To complete a daily diary and monthly (completed by the 24th of each month) reporting to Land and Rights and the Project/SHEQ/SHE/Environmental.
- To prepare monthly monitoring reports for submission to the DEA, Environmental Compliance Section as and when required.
- Manage the compliance of the Contractor according to the Environmental Authorization, EMPr and landowner conditions. The reports are to include photographic images of special occurrences taking place during the reporting period.

Dipaleseng Local Municipality 17 | P a g e

- To attend site meetings as required.
- To inform Land Development and Management and the Project/SHEQ/SHE/Environmental Manager of any activity
 that is not in accordance with the EA and respective Conditions, the EMPr and Landowner' agreed general and
 special conditions or detrimental to the environment.

Administration

- To assure a proper site ECO administration function to cater for all environmental site related correspondence.
- To execute environmental responsibilities as per DLM's Risk Management System.
- To promote and maintain sound relationships with the landowner, community, Contractors and suppliers.

8.1.2 Contractor

- To provide all necessary supervision during the execution of the project. He/ She must be available on site at all times.
- To appoint a competent Contractor Environmental Officer (CEO).
- To implement the projects as per the approved project plan.
- To ensure that implementation is conducted in an environmentally acceptable manner.
- To fulfil all obligations as per the agreed contract.
- To comply with special conditions as stipulated by landowners during the negotiation process.
- To inform and educate all employees about the environmental risks associated with the different construction
 activities and lessen significant impacts to the environment.
- Report environmental incidents.
- Provides environmental training.
- Ensures compliance with pertinent environmental legislations and other legally binding documents.

8.1.3 Authorising Department

The role of the Authority is to enforce compliance with the EA and associated amendments as well as the EMPr.

9 DESCRIPTION OF MITIGATION MEASURES

This section serves to prescribe mitigation measures to prevent, reduce, eliminate or compensate for impacts, to acceptable/insignificant levels.

Dipaleseng Local Municipality 18 | P a g e

10 PRE- CONSTRUCTION MANAGEMENT PROGRAMME

The pre-construction management programme is to be used as a guide during the planning, design and detailing of the development components. This part of the programme is to be referenced by all involved in decision making during the planning and design phases.

10.1 COMMISSIONING OF TENDER

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible	Monitoring Frequency
Ensure that proper environmental conditions are established prior to commencing with construction by informing all parties of appropriate	 The successful bidding Contractors must be made aware of the contents of this EMPr and any penalties arising from noncompliance prior to the commencement of work. All Contractors must be made aware of the audit 	 Signed Declaration by contractor. Appointment Letter 	DLM Contractor	Prior commencement of construction activities
environmental protection measures.	 All Contractors must be made aware of the addit and monitoring requirements as stipulated in this EMPr. The Authorisation Holder must appoint an Environmental Control Officer (ECO) who will be responsible to monitor compliance to the EMPr and EA as well as other permits and license requirements; and 			
	Inform the Competent Authority of the appointment of the ECO and provide the candidate's contact details.			

10.2 SEARCH AND RESCUE OF SPECIES OF CONCERN

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible Agent	Monitoring Frequency
To conserve protected and other species.	 The development fall within a CBA and the loss of habitat in CBAs may impact the ecological functioning of the CBAs and reduce biodiversity within the affected areas site. Application for all the necessary plant removal 	Agreements with	DLM Contractor	Prior commencement of construction activities

/relocation permits form the responsible authorities must be undertaken accordingly. • Suitable safe receiving areas should be identified prior to search and rescue commencing.	
 Search and rescue of all identified species of conservation concern that will be disturbed should be undertaken. 	

11 CONSTRUCTION MANAGEMENT PROGRAMME

11.1 SITE ESTABLISHMENT

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible Agent	Monitoring Frequency
To ensure minimal disturbance of the environment during the site establishment.	Construction camps on the site must be established on least sensitive locations preferably within already disturbed areas. After completion of the construction activities, these areas must be rehabilitated.	Site Plan	ECO Contractor CEO	Prior to site establishment
 11.1.1 Site Plan: Documentation for the proposed camp site must be prepared by the Contractor prior to the commencement of construction activities and must be submitted to DLM for approval. This documentation must include, but not limited to the following: Site access (including entry and exit points). All material and equipment storage areas including storage areas for hazardous substances. Construction offices and other structures. Security requirements including temporary and 				

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible Agent	Monitoring Frequency
	permanent fencing, and lighting. Solid waste management facilities. Storm water control measures. Provision of potable water and mobile chemical ablution facilities. Throughout the period of construction, the Contractor shall restrict all activities to within the designated areas as per the construction layout plan. Any relaxation or modification of the construction layout plan shall be approved by the ECO.			
	 11.1.2 Site Camps: The following restrictions shall be placed on the site camp for the construction staff in general: • The use of water courses for washing of clothes. • The use of welding equipment, oxy-acetylene torches and other bare flames where veld fires can be a hazard. • Collection of firewood. • Poaching of any form. • Use of surrounding veld as toilets. 			
	 11.1.3 Vegetation clearing: The natural vegetation encountered on site must be conserved and left intact as much as possible. Only flora within the construction footprint must be cleared. Clearance must be as per the approved Method statement in line with DLM policies. Search and rescue should be done by a suitable 			

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible Agent	Monitoring Frequency
	Specialist in accordance with the perr requirements from the responsible authorities at in consultation with the ECO.			
	11.1.4 Water for human consumption:			
	Water for human consumption must be available at all time	S.		
	11.1.5 Sewage Treatment:			
	 Chemical toilets must be supplied at a ratio of toilet per 15 persons and must be regularly cleaner and maintained by the Contractor. The Contractor must arrange for regular emptying of toilets and shall be entirely responsible the enforcing their use and for maintenance. The ablution facilities must be at least 100m away from the identified watercourses and associate buffers. All ablution facilities must be anchored to prevent them from being toppled by the wind. Only rigmaterial such as steel wires and droppers will leased for anchoring of toilets. No conductors or rogmay be used for this purpose. 	ed ing for ay ed int gid oe

substances. To ensure full compliance with the requirements of the applicable legislation.	 11.3.1 Safety: All the necessary handling and safety equipment required for the safe use of hydrocarbons shall be provided by the Contractor to be used and/or worn by the staff. The Contractor must comply with the Occupational Health and Safety Act, 1993 (Act 85 of 1993) and Construction Regulations, 2003 as this governs what the Contractor must do and provide for his staff. 			
	 Hydrocarbons and hazardous substances must only be stored under controlled conditions. All hazardous materials must be stored in a secured, designated area with restricted entry. Storage of hazardous products must only be in suitable containers. The containers must indicate the nature of the stored materials and Material Safety Data Sheets (MSDS) must be available on site. 11.3.3 Fuels and Gas Storage: 			
	 Should fuel be stored on site, it must be stored in a steel tank supplied and maintained by the Contractor according to safety procedures. The tanks/ bowsers shall be situated on a smooth impermeable surface (concrete) with a permanent bund. The 			

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible Agent	Monitoring Frequency
	impermeable lining shall extend to the crest of the bund and			
	the volume inside the bund shall be 110% of the total			
	capacity of all the storage tanks/ bowsers.			
	Gas welding cylinders and LPG cylinders must be stored in a			
	secure, well-ventilated area. The Contractor must supply			
	sufficient fire fighting equipment;			
	No smoking is allowed where fuel is stored and used.			
	Smoking must only be at a designated smoking area.			

11.4 CONSTRUCTION AND OPERATION EMPR TRAINING

Objective	Mitigation / Management Action	Monitoring Criteria	Responsible Agent	Monitoring Frequency
To ensure that all site personnel have basic level of environmental awareness training.	 The CEO shall arrange for Environmental Awareness Training programs for all personnel on site. The training must include the content of the EMPr and the CEO must sensitise the team on the importance of compliance. Daily toolbox talks must be undertaken by the CEO and an attendance register kept on site. 	 Signed training attendance Register Declaration of good conduct signed by all site personnel 	• CEO	Prior construction commencement and to continue throughout construction phase.

	aesthetics.		the most preferred option; Locate access routes so as to limit modification to the topography and to avoid the removal of established vegetation; Maintain no or minimum cleared road verges; Access routes should be located on the perimeter of disturbed areas such as cultivated/fallow lands as not to fragment intact vegetated areas; and If it is necessary to clear vegetation for a road, avoid doing so in a continuous	parties.			
			straight line. Alternatively, curve the road in order to reduce the visible extent of the cleared corridor. 11.21.2 CLEARED SERVITUDES Locate the alignment and the associated cleared servitude so as to avoid the removal of established vegetation; and Avoid a continuous linear path of				

Possible Impact	Objective	Applicable Legislation/P olicy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
			cleared vegetation that would strongly				
			contrast with the surrounding landscape				
			character. Feather the edges of the				
			cleared corridor to avoid a clearly				
			defined line through the landscape.				
			11.21.3 CONSTRUCTION CAMPS AND				
			LAY DOWN YARDS				
			If practically possible, locate				
			construction camps in areas that are				
			already disturbed or where it isn't				
			necessary to remove established				
			vegetation like for example naturally				
			bare areas.				
			Utilise existing screening features such				
			as dense vegetation stands or				
			topographical features to place the				
			construction camps and lay-down yards				
			out of the view of sensitivity visual				
			receptors.				
			Keep the construction sites and camps				
			neat, clean and organised in order to				

Possible Impact	Objective	Applicable Legislation/P olicy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
			portray a tidy appearance.				
			Screen the construction camp and lay-				
			down yards by enclosing the entire area				
			with a dark green or black shade cloth of				
			no less than 2m height.				
			Where possible, keep the construction				
			camps away from existing residents and				
			especially lodges and tourist venues.				
			11.21.4 GENERAL				
			Demarcate sensitive areas and no-go				
			areas with danger tape to prevent				
			disturbance during construction.				
			Plan construction times in such a				
			manner to have the least impact on				
			surrounding properties.				
			Keep disturbed areas to a minimum.				
			No clearing of land to take place outside				
			the demarcated footprints.				
			The steel components should not be				
			painted but be galvanised and allowed				
			to oxidise naturally over time. The grey				

Possible Impact	Objective	Applicable Legislation/P olicy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
			colour produced in this process will help				
			to reduce the visual impact.				
			New road construction must be kept to a				
			minimum. Utilise existing roads and				
			tracks to the extent possible.				
			Reduce and control dust through the				
			use of approved dust suspension				
			techniques as and when required.				
			Construction to occur only during				
			daytime. Should the DLM and ECO				
			authorize night work, low flux and				
			frequency lighting shall be used.				
			Rehabilitate all disturbed areas in				
			accordance with the Method Statement.				
			Maintain access roads to prevent				
			scouring and erosion, especially after				
			rains.				
			Storage facilities and other temporary				
			structures on site must be located such				
			that they have as little visual impact on				
			local residents as possible.				
			All temporary structures erected on site				
			for the purposes of the project's				

Possible Impact	Objective	Applicable Legislation/P olicy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
			construction phase will be removed from site upon completion of the project. • Lighting will be sufficient to ensure security but will not constitute 'light pollution' to the surrounding areas. • The site must be clean and tidy at all times.

11.24 EROSION AND CONTROL

Possible Impact	Objective	Applicable Legislation /Policy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
Impact on soils and habitats and sensitive environs.	To prevent erosion and sedimentat ion.	• NWA	 To prevent any form of erosion the following must be adhered to: During construction, the Contractor will protect areas susceptible to erosion by installing necessary temporary and / or permanent drainage system and by taking suitable measures to prevent surface water concentration into nearby roadways. Prior to construction, all topsoil must be stripped and stockpiled separately from subsoil and rocky material. Soil must be stripped in a phased manner so as to retain vegetation cover for as long as possible. Stockpiled topsoil must not be compacted and must be replaced as the final soil layer. Stockpiled soil must be protected by erosion-control berms if exposed for a period of greater than 14 days during the 	No visible signs of erosion.	 Observation Complaints register 	• Contractor • ECO • CEO	On-going particularly during excavations

Possible Impact	Objective	Applicable Legislation /Policy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
			wet/windy season.				
			Topsoil stockpiles must not be				
			contaminated with oil, diesel, petrol,				
			waste or any other foreign matter, which				
			may inhibit the later growth of vegetation				
			and micro-organisms in the soil.				
			Soil must not be stockpiled on drainage				
			lines or near watercourses.				
			The timing of clearing and grubbing				
			must be co-ordinated as much as				
			possible to avoid prolonged exposure of				
			soils to wind and water erosion.				
			If topsoil will be stockpiled for a longer				
			period, it must be either vegetated with				
			indigenous grasses or covered with a				
			suitable material to prevent erosion and				
			invasion by weeds.				
			To limit the introduction of alien species				
			into the area, no soil may be imported				
			onto site.				
			Where required, cut-off trenches can be				
			installed to divert substantial run-off and				
			prevent erosion as and when necessary.				

Possible Impact	Objective	Applicable Legislation /Policy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
			 Where new roads are constructed, water diversion berms should be constructed to prevent erosion. Sensitive areas such as watercourses (wetlands) must be cordoned off to control vehicles and construction personnel access. 				

11.25 USE OF CEMENT AND CONCRETE

Possible Impact	Objective	Applicable Legislation/P olicy	Mitigation / Management Action	Performance Indicator	Monitoring Criteria	Responsible Agent	Monitoring Frequency
Soil, surface and ground water pollution.	 To conserve soils, surface and groundwa ter. To minimise waste concrete from polluting the 	NEMANEMWAHSA	Cement and concrete are regarded as highly hazardous to the natural environment due to their high pH and the chemicals contained therein. To avoid ground pollution the following must be implemented: • Pre-mix concrete shall be the preferred option where possible. If concrete mixing is undertaken on site, the following measures must be put in place: • The batching / mixing area must be	Areas of construction are clear of all concrete residue/waste following construction. 13 GENERIC CONDITIONS

In order to ensure compliance with DLM's environmental policy as well as environmental legislation requirements, the following generic conditions are applicable Site documentation/monitoring. The site documentation shall be used to keep records on site. All documents shall be kept on site and be available for monitoring and auditing purposes. Site inspections by an Environmental Audit Team may require access to this documentation for auditing purposes. The documentation shall be signed by all parties to ensure that such documents are legitimate. Regular monitoring of all site works by the ECO is imperative to ensure that all problems encountered are solved punctually and amicably. When the ECO is not available, the Contract Manager/Site Supervisor shall keep abreast of all works to ensure no problems arise.

Monthly reports shall be submitted to the appointed Land Development Environmental Advisor with all information relating to environmental matters. The following Key Performance Indicators must be reported on a monthly basis:

- Complaints received from Landowners and actions taken;
- Environmental incidents, such as oil spills, concrete spills, etc. and actions taken (litigation excluded);
- Incidents possibly leading to litigation and legal contraventions; and
- Environmental damage that needs rehabilitation measures to be taken.

The following documentation shall be kept on site:

- Access negotiations and physical access plan;
- Complaints register;
- Daily site dairy;
- Records of all remediation / rehabilitation activities:
- Copies of monthly reports;
- Tree removal permits and other permits;
- Copy of the EMPr; and
- Copy of EA.

13.1 AUDITS

All audits shall be undertaken in accordance with the requirement of Appendix 7 of the EIA Regulations of December 2014 as amended. During the construction period at least Quarterly Environmental Audits shall be conducted by the ECO to determine compliance with the recommendations of the EMPr and conditions of the EA.

The appointed ECO, as well as the Contractors on site, are responsible for ensuring compliance with the EMPr. It is recommended that Quarterly EMPr compliance reports (audits) are compiled by the ECO and submitted to CEO for correction of non-compliance issues. It is the responsibility of the ECO to report any non-compliance, which is not correctly rectified to the DEA. Further an audit should be conducted by a qualified botanical or rehabilitation specialist once construction has been completed.

13.2 Access To Documents

Interested and Affected Parties (Landowners) must be allowed access to the EMPr document should they so wish. They have the right to monitor specific aspects of the EMPr in conjunction with the ECO and Contractor in a reasonable and informal manner, without unreasonably disrupting construction activities.

13.3 SOCIO-CULTURAL ISSUES

- A plan of action must be drawn up in the case of an emergency (veld fire, damaged substation, vegetation problems etc.)
- Property owners or occupiers must be treated with respect and courtesy at all times;
- Removal of agricultural products is prohibited. Receipts must be obtained for any merchandise purchased or received from landowners;
- Vehicles must be driven carefully in hazardous road conditions (sharp bends, narrow roads, bad weather, children playing on or near the road, domestic animals on or near the road etc.). Vehicle movement must be kept to a minimum during rain to avoid damage to the access road;
- Environmental clauses (as referred to in this EMPr) must be included into contract documents for all Contractors;
- Graves, archaeological sites and sites of historical interest are to be treated with respect and protected.
- No firewood is to be collected except with the written consent of the landowner; and
- A register must be maintained of all complaints or queries received as well as action taken.

14 FAILURE TO COMPLY WITH THE ENVIRONMENTAL CONSIDERATIONS

The ECO will, acting reasonably, have the authority to order the Contractor to suspend part or all of the works if he causes unacceptable damage to the environment by not adhering to the specifications set out below. The suspension will be enforced until such time as the offending parties' actions, procedures and/or equipment are corrected and adequate mitigation measures implemented.

15 AMENDMENT OF CONSTRUCTION AND OPERATION EMPR

Any issue that may arise during the construction or operational phase of the development and that is not provided for in this EMPr may be addressed as an addendum to this EMPr.

An addendum will be submitted to the Client for approval prior to the implementation of the provisions contained and communicated to the Authorities.
