

20<sup>th</sup> July 2018

Mr. S. Taylor  
Savannah Environmental (Pty) Ltd  
PO Box 148  
Sunninghill  
2157

Dear Mr Taylor

### RE-MODELLING OF NOISE IMPACT ASSESSMENT – KARREEBOSCH WIND ENERGY PROJECT

As per our recent correspondence, please find attached the re-modelling report for the Karreebosch Wind Energy Project near Laingsburg in the Western Cape and Northern Cape Provinces.

This report is to be viewed as an addendum to the main Noise Impact Report that was issued by Jongens Keet Associates (August 2015). The methodologies used to conduct the remodelling, identification of noise sensitive areas and the project description is described in the main report and is not repeated here.

The purpose of this report is to determine if the 65 turbine project layout with proposed amended turbine specifications will comply with the noise emission limits as contained in the Department of Environmental Affairs - Environmental Authorisation (14/12/16/3/3/2/807) issued on the 29<sup>th</sup> January 2016. The wind turbine specifications as authorised, are proposed to be amended, however. The proposed amendments include the following:

- Increase in output capacity per wind turbine from 2MW to 3.3MW, to 2MW up to 5.5MW;
- Increase in the rotor diameter from 140m to, up to 160m; and
- Increase in hub height from 100m to, up to 125m.

This has necessitated a remodelling of the layout. The results of the modelling are presented below.

Yours sincerely

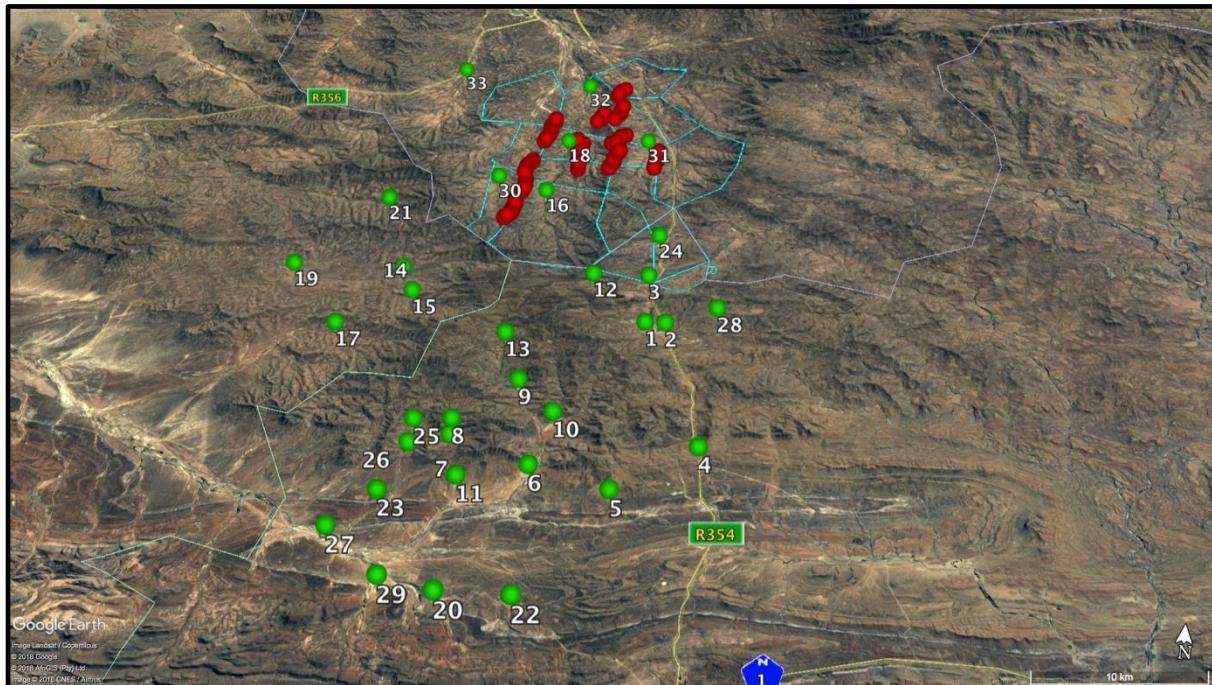

Dr Brett Williams

## 1. Noise Sensitive Areas (NSA)

The following noise sensitive areas have been used in the remodelling as identified in the Table 1 and Figure 1:

**Figure 1 – Noise Sensitive Areas**

WTG in Red, NSA in Green, Wind Farm Boundary in Blue

**Table 1 – Noise Sensitive Areas**

The text in blue indicates where a NSA is within the project boundary.

Description	East	South	Within Project Boundary	Type
NSA 1	20°30'17.97"	32°57'10.38"	No	Farmhouse

## 2. Wind Turbine Generators (WTG)

The wind turbine generator that was modelled is described in Table 2 below. This turbine was chosen to represent the worst-case scenario of a wind turbine up to 5.5 MW and 125m hub height. This model of turbine was chosen as it has published noise data in the WindPro catalogue of wind turbines. Furthermore, the noise data has been tested according to the methods described in IEC 61400-11 and are thus traceable. The modelled hub height (125m) the same as the hub height amendment proposed by the developer.

If a lower final hub height is chosen, the noise impacts could be reduced. Furthermore, if the final turbine that is chosen has a maximum sound power level that is similar or lower than the turbine modelled in this report, it can be assumed that the noise impacts will be similar or lower, irrespective of the turbine manufacturer.

**Table 2 - Proposed Turbine Specifications**

Manufacturer	Nordex
Type / Version	N149/4.0-4.5
Rated Power	4.5 MW
Rotor Diameter	149m
Tower	Tubular
Grid Connection	50 Hz
Maximum Sound Power Level	108.1 dB
Hub Height	125m

Sound Power Level dB(A) reference to 1pW from WindPro 3.2 Catalogue

\*The specifications of this turbine model were used as the data is available in WindPro. This does not bind the applicant to this specific model, and any turbine model with similar turbine specifications. An equal or lower maximum sound power level would be acceptable for the site.

The sound power levels at lower and higher wind speeds as stated above were interpolated from the published data. **The actual sound power levels may thus be less than those stated when the final turbine is selected.**

**The levels used in the re-modelling are thus a worst-case scenario.**

### 3. Cumulative Impacts

The proposed windfarm is located adjacent to several other windfarms. The details are as follows:

- Rietkloof – 60 wind turbines
- Witberg – 27 wind turbines
- Brandvalley – 58 wind turbines
- Esizayo – 55 wind turbines
- Roggeveld – 47 wind turbines
- Soetwater – 43 wind turbines
- Karusa – 43 wind turbines

The locations of these turbines are recorded in Annexure A. The turbine positions that are recorded in Annexure A, are purely as a record of what informed the cumulative noise modelling assessment. The same turbine data (as described in Table 2) was used to model the cumulative impacts from all the adjacent windfarms. This is thus a worst-case scenario, as it is unlikely that all 398 turbines will be operational simultaneously and if all the sites obtain the required regulatory approval.

#### 4. Modelling Results

The masking effect of the wind noise will mitigate the noise impact. The results are based on NO wind noise masking, which in reality rarely occurs when the turbines are operational. The maximum noise rating limit as per the DEA Environmental Authorisation is 45 dB(A). The noise impacts were modelled in WindPro Version 3.2.669 using the above data. The results area as follows:

**Table 3 - Modelling Results**

Environmental Authorisation Limit = 45dB(A)

## 5. Discussion & Summary

### Karreebosch Wind Energy Farm

The modelling results indicate that the Environmental Authorisation Limit of 45 dB(A) limit will not be exceeded at any of the noise sensitive areas. This includes the cumulative impacts from the other windfarms. **Kareebosch Wind Farm along with any of the alternatives currently proposed by the applicant may therefore proceed.**

### Cumulative Impacts

The cumulative impact modelling results indicate that the Environmental Authorisation Limit of 45 dB(A) limit will not be exceeded at any of the noise sensitive areas. This includes the cumulative impacts from the other seven windfarms that were modelled.

### Summary

It is highly likely that the wind noise will provide a masking effect. Furthermore, the modelling assumes the receiver is outdoors at all times.

If the final number of turbines is reduced or the layout changed such that no turbine is moved closer to a noise sensitive area, then remodelling will not be required, provided the final turbine choice sound power level is not greater than that that was used in this report (108.1 dBA).

## 6. Impact Statement

The overall environmental impact of the changes made to the project scope is rated as low and has not changed from the original noise impact assessment. No additional mitigation measures are required. There are no additional advantages or disadvantages in relation to the project impacts. The entire site as proposed may be developed with no constraints.

## 7. Conclusion

The overall environmental noise impact significance remains low taking into account the changes to the turbine specifications. The amended project description does not exceed the current Environmental Authorisation limit of 45 dB(A) at any of the noise sensitive receptors using the data that was modelled. The specific conditions as set in the Environmental Authorisation are thus complied with. It is my recommendation that based on the results presented here, the granting of an Environmental Authorisation with respect to the noise impacts is recommended.

Please feel free to contact us should you have any further requirements. Assuring you of our best attention at all times.

Yours sincerely

Dr Brett Williams
