# **FINAL ENVIRONMENTAL SENSITIVITY REPORT**

The proposed construction of Springhaas Collector Substation B, a collector/ switching/ transformation substation with a capacity of up to 400kV and associated infrastructure, near Dealesville, Bloemfontein, Free State (Collector Substation B)

DFFE Ref: PWRSTD/2023/FS/24 GE39159 May 2023

## **FINAL ENVIRONMENTAL SENSITIVITY REPORT**

The proposed construction of Springhaas Collector substation B, a collector/ switching/ transformation substation with a capacity of up to 400kV and associated infrastructure, near Dealesville, Bloemfontein, Free State

# Disclaimer

This report, and information or advice contained within it, is provided by GIBB Environmental (or any of its related entities) solely for internal use and for reliance by its Client in performance of GIBB Environmental's duties and liabilities under its contract with the Client. Any advice, opinions or recommendations within this report should be read and relied upon only in the context of the report as a whole. The advice and opinions in this report are based upon the information made available to GIBB Environmental at the date of this report and on current South African standards, codes, technology and construction practices as at the date of this report. Following final delivery of this report to the Client, GIBB Environmental will have no further obligations or duty to advise the Client on any matters, including development affecting the information or advice provided in this report. This report has been prepared by GIBB in their professional capacity as Environmental Consultants. The contents of the report do not, in any way, purport to include any manner of legal advice or opinion. This report is prepared in accordance with the terms and conditions of the GIBB Environmental contract with the Client. Regard should be had to those terms and conditions when considering and/or placing any reliance on this report. Should the Client wish to release this report to a Third Party for that party's reliance, GIBB may, at its discretion, agree to such release provided that:

- a) GIBB's Environmental written agreement is obtained prior to such release, and
- b) by release of the report to the Third Party, that Third Party does not acquire any rights, contractual or otherwise, whatsoever against GIBB and that GIBB, accordingly, assume no duties, liabilities or obligations to that Third Party, and that
- c) GIBB Environmental accepts no responsibility for any loss or damage incurred by the Client or for any conflict of GIBB Environmental interests arising out of the Client's release of this report to the Third Party.

# **Personal Information**

The Parties shall comply with any applicable data protection legislation regulating the processing of personal information, including the Protection of Personal Information Act, 2013 (POPIA) and any regulations issued in terms of POPIA that may apply in relation to the processing of any personal information in connection with this agreement.

Without derogating from the generality of the aforegoing, the receiving Party agrees that it will:

- follow and adhere to the Company's instructions in connection to processing of the personal information of the Company's employees, customers and suppliers it receives in connection with its performance of this Agreement;
- process any personal information provided to it by the Company only with the knowledge or authorisation of the Company and only for the purpose for which the personal information was provided;
- restrict access to personal Information to employees or agents who are properly authorised to process such
  personal information and who, by virtue of their office or contract are subject to appropriate confidentiality
  obligations;
- not disclose any personal information provided to it by the Company to any third party without the prior written consent of the Company or unless required by law;
- implement and maintain reasonable, appropriate technical and organisational security measures to preserve
  the integrity and confidentiality of the personal information provided and to prevent any loss of, damage to
  or unauthorised destruction of the personal information as well as unlawful access to or processing of the
  personal information;
- verify, upon request, that all security measures that are in place are effectively implemented;
- conduct regular assessments to identify all reasonable foreseeable internal and external risks to the personal
  information provided by The Company in its possession or control and update and align the security
  measures with the risks identified;
- not transfer or process personal information outside of South Africa to recipients that are not subject to adequate data protection laws unless the written consent of the Company is obtained and, where applicable, the necessary regulatory approval has been granted;
- only retain the personal information for as long as is reasonably necessary to perform the services in terms
  of this Agreement and shall return, delete or destroy such information after the lapse of the applicable
  retention period as prescribed by law, or upon the expiry or termination of this Agreement, or within ten
  (10) days of a written request by the Company requesting the handing over of or deletion of such personal
  information, whichever occurs first, unless otherwise agreed to in writing upon between the parties; and

In the event that the receiving Party has reasonable grounds to believe that the personal information provided to it by the Company has been accessed or acquired by any unauthorised person (a Data Breach), the receiving Party shall immediately notify the Company in writing of such Data Breach, and shall provide the Company with all reasonable assistance in order to mitigate the effects of such Data Breach.

The Operator hereby indemnifies and holds the Company and/or any of its directors, officers or any other officials thereof respectively, harmless against any and all loss, damage, costs (including legal costs on an attorney and client basis), charges, penalties, fines and/or expenses which may be incurred or sustained by the Company and/or any one or more of the aforesaid persons as a result of the Operator having failed to comply with this clause and with any applicable data protection legislation.

# 1 Introduction

## **1.1 Environmental Sensitivity Report History**

This is the second version of the final Environmental Sensitivity Report (ESR) for the proposed Collector B Substation.

The first version of the draft ESR was released for public review for 30 days from 21 September 2022 to 21 October 2023. Details of the public participation process and included in Section 5 and Appendix 13 of the Final ESR. The draft ESR which was made available to I&APs for review was not materially different to this version of the draft ESR. In addition, the final ESR was uploaded to the GIBB Environmental (GIBB) website on 02 December 2022 and the availability of the final ESR was communicated to registered interested and affected parties (I&APs).

The draft ESR was uploaded to the Department of Forestry, Fisheries and the Environment (DFFE) sfiler system on 20 September 2022. GIBB, at the request of DFFE withdrew these documents on 21 September 2022.

The draft ESR was made available for I&AP review and DFFE review due to an omission in the initial public participation process (i.e. site notice boards were not placed along the route). Site notice boards have since been placed (07 February 2023) and I&APs were informed of the availability of report for review (via the site notice). I&APs responding to the notice boards were given a 30 day period to review the draft ESR from 07 February 2023 to 08 March 2023. Note that no additional, substantive information that I&APS would not have seen with the first round of review was included in this report review period. The comments received during this period have been included in the revised final ESR **(this report)**.

The draft ESR was made available for DFFE to review for 30 days from 16 February 2023 to 17 March 2023, as per their request (which was a new request as DFFE had previously requested (21 September 2022) that the draft ESR was formally withdrawn from the sfiler system and that DFFE would not be commenting on the DESR).

### 1.1.1 Public Participation Process Summary

All relevant aspects of Chapter 6, Regulation 41 of the EIA Regulations 2014, as amended has been complied with as follows:

| NE  | MA PPP requirement   | Actions undertaken   |
|-----|--|--|
| (a) | Fixing a notice board at a place<br>conspicuous to and accessible by the<br>public at the boundary, on the fence or<br>along the corridor of<br>(i) the site where the activity to which the<br>application or proposed application relates<br>is or is to be undertaken | This was done on 06 & 07 February 2023, with the 30-day comment period on the DESR from 07 February to 08 March 2023   |
| (b) | Giving written notice, in any of the<br>manners provided for in section 47D of the<br>Act, to<br>(i) the occupiers of the site and, if the<br>proponent or applicant is not the owner or   | This was done on 11 August 2022, this notification informed<br>potential I&APs of the availability of the BID and the<br>procedure to be followed to register as an I&AP.<br>A second notification was sent to I&APs on 21 September to<br>indicate the availability of the DESR with the 30-day |

Table 1-1: Summary of public participation process undertaken

| NEMA PPP requirement  | Actions undertaken   |
|---|--|
| person in control of the site where the<br>activity is to be undertaken, the owner or<br>person in control of the site where the<br>activity is or to be undertaken.<br>(iii) the municipal councillor of the ward in<br>which the site and alternative is situated<br>and any organisation of rate payers that<br>represent the community in the area<br>(iv) the municipality which has jurisdiction<br>in the area<br>(v) any organ of state having jurisdiction in<br>the area<br>(vi) any other party as required by the<br>competent authority. | comment period on the DESR from 21 September – 21<br>October 2022.<br>DFFE were provided with a 30 day period to review the DESR<br>from 07 February to 08 March 2023. This report was no<br>materially different to the version provided to I&APs from 21<br>September – 21 October 2022.<br>In addition, engagement was undertaken with several parties<br>including VULPRO, BirdLife SA, EWT and DFFE Biodiversity<br>and Conservation Directorate. Where these parties<br>commented within the allocated 30 day period comments<br>have been captured in the comments and responses report<br>(Appendix 13). |
| <ul> <li>(c) Placing an advertisement in-</li> <li>(i) One local newspaper; or</li> <li>(ii) any official Gazette that is published<br/>specifically for the purpose of providing<br/>public notice of applications or other<br/>submissions made in terms of these<br/>Regulations</li> </ul>  | Adverts were placed two local newspapers in both English<br>and Afrikaans:<br>10 August 2022 – Express<br>11 August 2022 – Noordkaap Bulletin<br>These newspaper adverts informed potential I&APs of the<br>availability of the BID and the procedure to be followed to<br>register as an I&AP.  |

For ease of reference, all changes made to the ESR are shown in red text.

## 1.2 Background

GIBB Environmental (Pty) Ltd (GIBB) has been appointed as the independent Environmental Assessment Practitioner (EAP) by the Applicant to undertake the required registration process for the proposed Springhaas Grid Connection in terms of the National Environmental Management Act, 1998 (Act No. 107 of 1998) the *Standard for the Development and Expansion of Power Lines and Substation within Identified Geographical Areas Revision 2* (the Standard).

ABO Wind renewable energies (Pty) Ltd proposes the construction and operation of a grid connection to connect the Springhaas solar PV facilities located south-west of Dealesville in the Free State Province to add new capacity to the national electricity grid. In order for the Springhaas Solar PV facilities to evacuate the generated solar power to the national grid, a connection must be established between the solar PV facilities and the existing Eskom 400kV lines, namely the Beta/Delphi and Beta/Hydra lines located to the east and west of the solar PV facilities respectively.

The project is known as the Springhaas Grid Connection and would include development of the following:

1) Up to two collector sub-stations/switching stations and associated auxiliary buildings (i.e. for control/storage/electrical infrastructure/components) x 2 each with a development footprint of up to 8Ha for the collector station (this includes auxiliary building), including but not limited to the construction of a new platform with an earth mat and civil works, as well as new infrastructure such as feeder bay/s, line bay/s, busbar/s, circuit breaker/s, bussection/s, and/or transformer/s, with various protection equipment.

- 2) Up to 7 (seven) overhead lines (OHL) connecting the Springhaas Solar PV Facilities to the collector/switching/transformation sub-stations, via single/double-circuit with a capacity of up to 132kV, mono pole lines, complete with structures, foundations, conductor, fibre layout, insulation, and assemblies.
- 3) Up to 2 (two) LiLo connections into the existing Eskom 400KV line, via a single/doublecircuit power line of up to 400kV between the collector/switching/transformation substation/s and the Eskom 400kV line, complete with structures, foundations, conductor, fibre layout, insulation, and assemblies.

This revised final Environmental Sensitivity Report (ESR) is relevant to **Collector Substation B.** The other project components are covered by separate revised final ESRs.

## **1.3 Project Description**

Collector Substation B will be a collector/ switching/ transformation substation with a capacity of up to 400kV. Collector Substation B will be located on Farm Alsace No. 1181 and Farm Oertel's Rest No. 1184. Further details of Collector Substation B are provided in Table 1-2 below.

| Table 1-2: | Collector | Substation | В | details |  |
|------------|-----------|------------|---|---------|--|
|            |           |            |   |         |  |

| Name       | Springhaas Collector/switching/transformation sub-station B (and auxiliary buildings)   |
|------------|---|
|            |   |
| Location   | Farm Alsace No. 1181 and Farm Oertel's Rest No. 1184  |
| Connection | Will collect multiple up to 132kV overhead lines (located within the grid corridor), potentially step-up to 400kV (if required). Consolidated overhead lines would leave the collector sub- |
|            |   |
|            | station for connection to the existing Eskom 400kV lines.   |
| Capacity   | Up to 400kV   |
| Footprint  | Up to approximately 8Ha. This includes auxiliary buildings. A short section of new access road,   |
|            | approximately 75m in length and up to 6m wide will also be constructed.   |
| Height     | Up to approximately 10m   |
| Access     | Accessed via the main access road for Springhaas Solar Facilities 1 and 3 (noting that this is  |
|            | approved as part of the EA for those facilities), with an additional road of up to 6m wide and  |
|            | 75m long required extending from the facilities 'main access road to the sub-station  |

#### 1.3.1 Project Location

Collector Substation B would be located south-west of Dealesville, Free State, within the jurisdiction of the Tokologo Local Municipality, within the Lejweleputswa District Municipality. The Springhaas grid connection is located in Ward 1

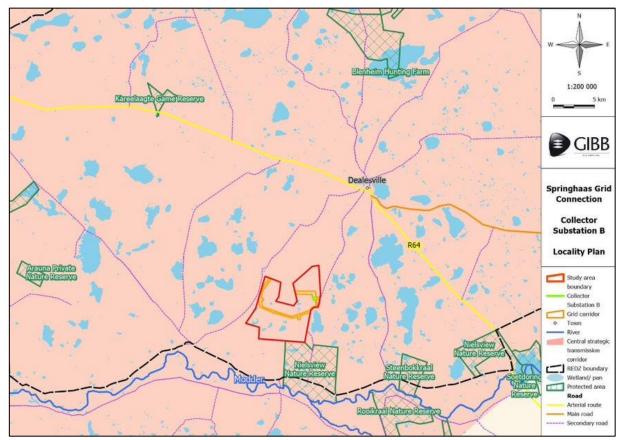

Figure 1-1: Locality plan. The location of Collector Substation B is shown by the green polygon.

Collector Substation B is located on the Farm Alsace No. 1181 and the Farm Oertel's Rest No. 1184. The tables below (Table 1-3 and Table 1-4) present further farm details and location information.

#### Table 1-3: Property details

| F (end)     | 28°47'38.00"S | 25°42'2.07"E  |

#### 1.3.2 Legislative Background

Collector Substation B would be located south-west of Dealesville, Free State, within the jurisdiction of the Tokologo Local Municipality, within the Lejweleputswa District Municipality.

The site is located within the Kimberley Renewable Energy Development Zone and is also located within the Central Strategic Transmission Corridor, as shown in Figure 1-2 below.

Figure 1-2: Gazetted electrical generation infrastructure corridors. The location of Collector Sustation B is indicated by the pink dot (data source DFFE, downloaded from DFFE website on 11 May 2023)

Prior to the gazetting of the *Standard for the Development and Expansion of Power Lines and Substations within Identified Geographical Areas* the development of Collector Substation B would have triggered the need to undertake an application for environmental authorisation in the format of a basic assessment report. With the promulgation of the new "Standard" in July 2022, an application for environmental authorisation is no longer required. The new standard does however require that the project (Collector Substation B) be subject to a registration process, which includes assessments. **Table 1-5** lists the applicable criteria, as defined in the Standard, for determining whether such a registration process is applicable. The applicability of the Collector Substation B is also addressed.

| No. | Requirement   | Applicability of the Proposed Development              |
|-----|---|--|
| 1   | The site must be located in areas identified by the | All the environmental sensitivity themes are rated     |
|     | national web based environmental screening tool     | as low to medium by the DFFE screening tool            |
|     | as being of medium or low environmental             | report. Specialists have undertaken site sensitivity   |
|     | sensitivity and confirmed to be such for identified | verifications (SSV) for all identified environmental   |
|     | environmental themes.                               | themes and all themes were confirmed to be of low      |
|     |   | or medium sensitivity.                                 |
| 2   | The site must be located within a strategic         | Collector substation B is fully located in the Central |
|     | transmission corridor, for the development or       | Strategic Transmission Corridor and constitutes        |

#### Table 1-5: Criteria for a registration process

| No. | Requirement  | Applicability of the Proposed Development            |
|-----|--|--|
|     | expansion of electricity transmission and            | electricity transmission and distribution            |
|     | distribution power line infrastructure and           | infrastructure.                                      |
|     | substations  |  |
| 3   | The development triggers                             | Collector Substation B will have a capacity of up to |
|     | Listing Notice 1 activity 11, activity 47 or Listing | 400kV located outside of urban areas. Listing Notice |
|     | Notice 2, activity 9.                                | 2, activity 9 is therefore applicable.               |

The proposed development is, therefore, in alignment with the criteria for registration.

The proposed development is, therefore, in alignment with the criteria for registration.

The registration process allows the Proponent to undertake the following listed activities as well as associated activities necessary for the realisation of the infrastructure without undertaking an application for Environmental Authorisation.

Table 1-6: Applicability of listed activities identified in the Standard

#### **1.4 Process Requirements**

Chapter 2 of the Standard details 21 procedural requirements for the registration process. These are listed in Table 1-7 below, as well as an explanation of how the process followed for this project complies.

Table 1-7: Procedural requirements for the registration process, as defined in Chapter 2 of the Standard.

| No. | Requirement   | Comment   |
|-----|---|---|
| 1   | The proponent must identify a <i>preliminary corridor</i> and/or<br>the proposed substation sites using the screening tool and<br>additional relevant spatial datasets where available. The<br>provincial department responsible for the environment and<br>local municipality in the area should be contacted in relation<br>to possible additional fine scale data. | Specialist site sensitivity verifications<br>were completed for the authorised<br>Springhaas Solar PV facilities. The<br>sensitivity mapping provided by the<br>specialist team was used to identify a grid<br>corridor which avoids areas of high<br>sensitivity.<br>The Proponent has identified a corridor<br>and proposed site for Collector Substation<br>B, which is confirmed to be of Medium to<br>Low environmental sensitivity. The 2015<br>Free State Biodiversity Plan data was |

| No. | Requirement   | Comment   |
|-----|---|---|
|     |   | reviewed to check the location of critical  |
|     |   | biodiversity areas (CBAs) and ecological  |
|     |   | support areas (ESAs)  |
|     |   | The Tokologo Local Municipality and the   |
|     |   | Free State Department of Economic,  |
|     |   | Small Business Development, Tourism   |
|     |   | and Environmental Affairs were<br>contacted via email on 15 August 2022 to                        |
|     |   | request relevant spatial data sets and  |
|     |   | follow up phone calls were made on 22,  |
|     |   | 24 and 26 August  |
|     |   | DESTEA provided a revised data set for  |
|     |   | the Free State Biodiversity Plan (2019) on  |
|     |   | 05 September 2022. This information was not received in a suitable format. Data in                |
|     |   | a useable format has been requested   |
|     |   | from DESTEA and follow ups have been  |
|     |   | made. The lack of this data is not  |
|     |   | considered as an issue as groudtruthing   |
|     |   | was undertaken by the specialist and  |
|     |   | more fine scaling GIS mapping was   |
|     |   | undertaken. The BGIS website was also   |
|     |   | checked for local and provincial datasets.  |
|     |   | A specialist team carried out site  |
|     |   | assessment and groundtruthing of the  |
|     |   | site, which considered available  |
|     |   | information, for Collector Substation B.  |
| 2   | The proponent must appoint an independent Environmental   | The Proponent (ABO Wind renewable   |
|     | Assessment Practitioner (EAP) and must ensure that the EAP fulfils the requirements to register the proposed                    | energies (Pty) Ltd) has appointed GIBB<br>Environmental as the EAP.                               |
|     | fulfils the requirements to register the proposed development in accordance with this Standard.                                 | Environmental as the EAP.   |
| 3   | The proponent must ensure that the EAP, as a minimum,   | The following public participation process  |
| •   | follows the public participation process required in Chapter  | has been undertaken, with all the   |
|     | 6 of the EIA Regulations for a linear development during the  | necessary steps in terms of the EIA   |
|     | route determination process, excluding the following  | Regulations, 2014 (as amended) with the   |
|     | requirements which would not be relevant to the Standard:   | exception of specific requirements as per   |
|     | Obtaining written consent from the owner or person in   | the Standard having been undertaken and   |
|     | control of the land on which the proposed development   | therefore legally compliant:  |
|     | <ul><li>is to be undertaken for the powerline development;</li><li>Timeframes pertaining to comment periods for basic</li></ul> | <ul> <li>Notification of stakeholders/ potential<br/>I&amp;APs of the project</li> </ul>          |
|     | assessment reports, EMPr, scoping reports, EIA reports,   | Placing a newspaper advert in two local   |
|     | and closure plans;  | newspapers (English and Afrikaans)  |
|     | Notification along alternative routes in the form of  | Placement of the BID and I&AP   |
|     | notice boards; and  | registration forms on a publicly  |
|     | <ul> <li>Giving notice of the process being applied (basic</li> </ul>   | accessible website  |

|     | for the Preliminary Corridor and/or proposed substation site;   |   |
|     | <ul> <li>(f) Location of the <i>Preliminary Corridor</i> and/or proposed substation site, including a map generated at an appropriate scale that displays the extent of the <i>Preliminary Corridor</i> and/or proposed substation as detailed as possible. Where an electronic copy of the BID is distributed, the spatial data of the <i>Preliminary Corridor</i> and/or proposed substation site must be made available;</li> <li>(g) Contact details of the EAP; and</li> </ul> |   |
|     | (h) I&AP registration forms.  |   |
| 7   | The proponent must ensure that the EAP and specialists  | The specialists have considered the       |
|     | identify through their specialist knowledge and site  | location of the site through site         |
|     | verifications/walkthrough as necessary, a proposed route  | verifications and walkthroughs.           |
|     | and/or the substation location/s (where a substation or substations are relevant) within the <i>preliminary corridor</i>  | a) The mitigation hierarchy has been      |
|     | based on:   |   |
|     | a) consideration and implementation of the mitigation   | considered:                               |
|     | hierarchy,  | • Avoid: The footprint of Collector       |
|     | b) environmental sensitivity identified using the   | Substation B avoids sensitive             |
|     | methodologies or processes as stipulated in Chapter 3   | habitats. Avoidance of high sensitivity   |
|     | of this Standard, and   | areas has been achieved.                  |
|     | c) engineering constraints.   | • Minimise: The specialists have          |
|     | c) engineering constraints.   |   |
|     |   | provided recommendations to               |
|     |   | minimise the impact of the                |
|     |   | development on the environment at         |
|     |   | all stages of the development. These      |
|     |   |   |
|     |   | measures have been incorporated           |
|     |   | into the generic EMPr.                    |
|     |   | Rehabilitate: The specialists have        |
|     |   | provided mitigation measures to           |
|     |   | rehabilitate areas disturbed by           |
|     |   |   |
|     |   |   |
|     |   | activities.                               |
|     |   | Offset: No offsets are required as no     |
|     |   | high sensitivity habitats and             |
|     |   | resources are impacted by Collector       |
|     |   |   |
|     |   | Substation B.                             |
|     |   | b) Sensitivities were identified using    |
|     |   | methodologies as stipulated in            |
|     |   | Chapter 3, General Environmental          |
|     |   | Processes. This is demonstrated in        |
|     |   |   |
|     |   | Table 1-9.                                |
|     |   | c) Engineering constraints were           |
|     |   | considered.                               |
|     |   | The overall grid connection corridor is   |
|     |   | considered appropriate from the           |
|     |   | perspective of all specialists, and the   |
|     |   | location of the project therein is also   |

| No. | Requirement   | Comment  |
|-----|---|--|
|     |   | acceptable.  |
| 8   | As the route is being identified, the initial servitude negotiations are to be undertaken to ensure that the route and/or substation location is not fatally flawed in relation to servitude access.  | The landowner has approved the location<br>of Collector Substation B. A copy of<br>landowner consent letter has been<br>submitted to DFFE with the registration<br>form.   |
| 9   | The process to identify the <i>proposed route</i> and/or substation<br>location and the outcome of the initial servitude negotiations<br>must be documented in an environmental sensitivity report,<br>which must be subjected to a minimum public comment<br>period of 30 days as part of the public participation process<br>identified in paragraph 3 above.   | The draft ESR was made available on GIBB<br>Environmental's website and a hardcopy<br>was also made available for review at<br>Tshwaranang (Dealesville) Public Library.<br>All the registered I&APs were notified of<br>the venue.  |
| 10  | The environmental sensitivity report must include, as a minimum, the following information:<br>(a) The details and relevant expertise of the EAP and specialists preparing the report;<br>(b) The outcome of the screening exercise undertaken using the screening tool, the expert knowledge of the specialists where necessary, results of the site verification, the adoption of the mitigation hierarchy principles and the principles contained in Chapter 3 of this Standard;<br>(c) Location map of the <i>proposed route</i> and/or proposed location of the substation at a scale not more than 1:15000 to identify environmental features;<br>(d) Details of the public participation process undertaken;<br>(e) A discussion by the specialists and/or EAP of the process used to confirm that the <i>proposed route</i> and/or substation location has applied the principles stipulated in Chapter 3, and the process used to confirm that the site sensitivity of the proposed route and/or substations is of low or medium environmental sensitivity;<br>(f) If applicable, a site specific EMPr as per Part C of the Generic EMPr for overhead power lines and/or substations gazetted in Government Notice 43519 published in Government <i>Gazette</i> No. 42323 of 22 March 2019;<br>(g) The completed generic EMPr pre-approved template which is Part B – Section 1 of the Generic EMPr for overhead power lines and/or substations, and where applicable Part C, gazetted in Government Notice 435 published in Government <i>Gazette</i> No. 42323 of 22 March 2019; for display on the websites of the proponent and the EAP; and (h) The confirming statement by the various specialists in the formation of the generic EMPr for overhead power lines and/or substations, and where applicable Part C, gazetted in Government by the various specialists in the formation of the proponent and the EAP; and (h) The confirming statement by the various specialists in the formation of the proponent and the EAP; and (h) The confirming statement by the various specialists in the formation of the proponent and the EAP; and (h) | The ESR meets these requirements. Refer<br>to<br>(a) Section 1.8, Table 1-11 and Table 1-12<br>for EAP and specialist details<br>(b) Section 3<br>(d) Section 5<br>(e) Section 3<br>(f) Appendix 13 of the registration form<br>(g) Appendix 13 of the registration form<br>(h) Appendix 13 of the registration form   |
| 11  | format as identified in Appendix B.<br>The <i>proposed route</i> must be finalised to become the final <i>pre-negotiated route</i> and where relevant the final location/s of the substation/s, by taking into consideration comments received during the public participation process and refining the route as relevant.  | The location of the substation has been<br>finalised. No changes were required to<br>the location of the substation as assessed<br>in the draft ESR. No significant comments<br>were received during the 30-day public<br>commenting period that necessitated<br>changes the route alignment. The current<br>route is also considered appropriate (i.e.<br>no need for revisions) from a specialist<br>assessment perspective. |
| 12  | A final environmental sensitivity report must be prepared by<br>the EAP supported by the specialists, which locates the final<br>pre-negotiated route and/or the substation location on a<br>map which includes the location of any mitigation devices<br>such as bird flight diverters, a record of comments and<br>responses and, where applicable, Part C of the Generic EMPr<br>and the final confirming statements by the various specialists<br>in the format as identified in Appendix B.  | This is the revised version of the final ESR.<br>No significant comments were received<br>during the 30-day public commenting<br>period for the first version of the draft ESR<br>that required changes to the location of<br>the substation. All the organs of state<br>which have jurisdiction in respect of the<br>proposed activity were also contacted  |

| No. | Requirement  | Comment |
|-----|--|---------|
|     | responsible for the environment, if the national department<br>responsible for the environment is the CA, prior to<br>commencement;<br>(b) made available by the proponent on request by any   |         |
|     | member of the public or Authority; and<br>(c) made available, where the proponent or owner has a<br>website, on such publicly accessible website.  |         |
| 21  | Where change of ownership of a development registered in terms of paragraph 16 occurs during the pre-construction or construction phases of the infrastructure, the registration number is retained by the new owner, however the new owner must submit to the competent authority for reregistration, the declaration by the proponent of commitment to implement the Standard (included as Appendix 9) and the declaration to implement Part B – Section 1 of the Generic EMPr for overhead power lines and/or substations, and where applicable Part C (Appendix 10), within 30 days upon finalisation of such change. There is no requirement for re-registration once the infrastructure has been constructed as the operation of a power line or substation is not an identified activity in terms of the Act. | Noted.  |

The process being undertaken (including activities to-date) is aligned with the requirements for registration, and exceeds them in some cases.

## **1.5** Environmental Sensitivity Report Content Requirements

The new standard (Chapter 2, point 10) lists the minimum information that the Environmental Sensitivity Report (this report) should contain. The table below (Table 1-8) lists these requirements and indicates how they have been met in this report.

| No. | Requirement  | Comment  |
|-----|--|--|
| a)  | The details and relevant expertise of the EAP and specialists preparing the report;  | Section 1.8.2  |
| b)  | The outcome of the screening exercise undertaken using the screening tool,<br>the expert knowledge of the specialists where necessary, results of the site<br>verification, the adoption of the mitigation hierarchy principles and the<br>principles contained in Chapter 3 of this Standard;   | Refer to Section 3 of the<br>final ESR, and Appendix<br>1 of the registration<br>form. |
| c)  | Location map of the proposed route and/or proposed location of the substation at a scale not more than 1:15000 to identify environmental features;   | Section 3  |
| d)  | Details of the public participation process undertaken;  | Section 6 and Appendix<br>14 of the registration<br>form.                              |
| e)  | A discussion by the specialists and/or EAP of the process used to confirm that<br>the proposed route and/or substation location has applied the principles<br>stipulated in Chapter 3, and the process used to confirm that the site sensitivity<br>of the proposed route and/or substation location is of low or medium<br>environmental sensitivity; | Section 3  |
| f)  | If applicable, a site specific EMPr as per Part C of the Generic EMPr for overhead power lines and/or substations gazetted in Government Notice 435 published in Government Gazette No. 42323 of 22 March 2019;  | Appendix 13 of the registration form   |
| g)  | The completed generic EMPr pre-approved template which is Part B – Section 1 of the Generic EMPr for overhead power lines and/or substations, and where applicable Part C, gazetted in Government Notice 435 published in Government gazette No. 42323 of 22 March 2019, for display on the websites of the proponent and the EAP; and                 | Appendix 13 of the registration form   |

#### Table 1-8: Minimum content requirements for an Environmental Sensitivity Report

| No. | Requirement   | Comment                 |
|-----|---|-------------------------|
| h)  | The confirming statement by the various specialists in the format as identified | Appendix <mark>2</mark> |
|     | in Appendix B.  |                         |

### **1.6 General Environmental Principles**

The new standard (Chapter 3) presents general principles that must be adhered to when planning a powerline route or locating a substation position. The table below (Table 1-9) lists these requirements and indicates how they have been met in this report.

 Table 1-9: General Environmental Principles that must be adhered to when planning a powerline route or locating a substation location

| No. | Requirement   | Comment   |
|-----|---|---|
| 22  | There must be no removal of threatened plant species.   | No threatened plant species were found.   |
| `23 | There must be no impact on Tier 1 plant species identified through the screening process and site verification process  | No Tier 1 plants species were found.  |
| 24  | Clear-cutting during construction must be kept to a maximum of 8 m.   | N/A. No clear cutting will be required for Collector<br>Substation B. All the vegetation in the footprint of<br>Collector Substation B will be cleared. |
| 25  | Wetlands must be avoided or, where wetland<br>crossing is unavoidable, the power line should be<br>routed over the narrowest part of the wetland.<br>For the most part, wetlands and rivers can be<br>traversed by the power line with little to no<br>impact by placing the pylons outside of the<br>wetland   | N/A there are no powerlines as part of Collector<br>Substation B. The footprint Collector Substation B<br>avoids all wetlands including a 250m buffer.  |
| 26  | Avoid all known Blue Swallow breeding habitat<br>by a 2.5 km buffer. Should the full extent of the<br>buffering not be practically possible, a thorough<br>investigation must be conducted by a suitably<br>experienced avifaunal specialist with experience<br>of Blue Swallows to identify any potential nesting<br>holes, which must then be appropriately<br>buffered, in consultation with Ezemvelo<br>KwaZulu-Natal Wildlife and BirdLife South Africa<br>to prevent destruction of the nest holes. | The site is not located within the distribution of Blue<br>Swallows.  |
| 27  | Avoid Cape Vulture and White-backed Vulture<br>breeding colonies by a 5 km buffer. In addition, it<br>would require management of the potential<br>impacts on the breeding birds once construction<br>commences, which would necessitate the<br>involvement of the avifaunal specialist and the<br>environmental control officer (ECO).   | No Cape Vulture and White-backed Vulture breeding colonies occur within 5 km of the site.   |
| 28  | Avoid Lappet-faced Vulture and Bearded Vulture<br>restaurants by a 5 km buffer. Should the full<br>extent of the buffering at vulture restaurants not<br>be practically possible, the vulture restaurant<br>should be relocated in consultation with the<br>owner of the restaurant   | No Lappet-faced Vulture or Bearded Vulture restaurants occur within 5 km of the site.   |
| 29  | The power line alignment or substation footing<br>shall not be located within 500m of the edge of<br>waterbodies found to be suitable for Greater<br>Flamingo, Black Stork, Blue Crane, Great White<br>Pelican, Lesser Flamingo and African Marsh-<br>harrier   | The project is not within 500m of waterbodies.  |
| 30. | The power line alignment or substation shall not be located within 1 km of major piggeries and poultry farms.   | No piggeries of poultry farms were identified within 1km of the Collector Substation B  |

#### 1.7 Project Team

GIBB Environmental was appointed as the EAP to manage the Springhaas Grid Connection registration process. A team of specialists was also appointed to assess the required environmental themes. The specialist investigations were undertaken prior to the gazetting of the new Standards. The reports compiled by specialists contain information and assessments over and above what is required in terms of the Standard. These reports are deemed to comply with the requirements of the Standard.

#### **1.8 Details of Role Players**

#### **1.8.1** Details of the Proponent

The details of the Proponent are presented in Table 1-10 below.

#### Table 1-10: Proponent contact details

#### 1.8.2 Details of Independent EAP

GIBB Environmental is an integrated group of scientists and project managers providing costeffective solutions and specialist services in a wide range of environmental disciplines. The multidisciplinary consulting, management and design approach allows for the execution of projects in a holistic way.

The GIBB Environmental has a formidable track record and comprises highly qualified and experienced technical staff *viz*, Environmental Scientists and Specialists, which work together collectively as a national team. The team members have broad experience in terms of working on a range of environmental projects within the public and private sector across South Africa. Refer to Table 1-11 for the contact details of the Environmental Assessment Practitioner (EAP).

#### 1.8.3 Details of Competent Authority

The Department of Environment, Forestry and Fisheries is the Competent Authority (CA) of the registration.

Government Notice No. 779 of the National Environmental Management Act, 1998 (Act 107 of 1998) (NEMA) identifies the Minister as the Competent Authority in instances where the activities related to the Integrated Resource Plan (IRP) 2010-2030 as the IRP 2010-2030 is a plan, among others, through which commitments to the United Nations Framework Convention on Climate Change regarding CO2 mitigation action are being implemented. The IRP for electricity 2010 – 2030 identifies the energy mix balance between renewable and non-renewable energy sources for the generation of electricity. The proposed activity is a grid connection to allow the large scale

solar photovoltaic energy development (Springhaas Solar PV facilities) to connect to the national grid. DFFE is therefore the CA for this registration process.

#### **1.8.4** Details of Specialists

In order to comprehensively investigate the impact of the proposed project on the receiving environment, a number of specialist studies were undertaken by independent specialists during the impact assessment phase of the project. The specialist team responsible for the various studies are presented in the Table 1-12 below. Further details of the specialists are provided in the specialist reports in **Appendix 2**. The specialist team was appointed prior to the gazetting of the Standard. The specialist studies were undertaken in accordance with the relevant protocols or Appendix 6 of the EIA Regulations. Preface letters have been compiled by all specialists to demonstrate compliance with the requirements of the Standard.

| Discipline                             | Specialist  | Qualification/ Expertise   |  |  |  |

# 2 Identification of the Location of Collector Substation B

The location of Collector Substation B was determined based on the following:

- Environmental sensitivity verifications -the specialist team undertook site sensitivity assessments and compiled maps which mapped the broader study area in terms of sensitivity. The Proponent consolidated the environmental sensitivity mapping and designed the grid corridor to avoid areas of high sensitivity, focusing mainly on areas where there is existing disturbance (e.g. roads) or where there would be future disturbance (i.e. proposed roads, proposed fenced areas). The footprint of Collector Substation B is located within the identified corridor
- Landowner approval the site for Collector Substation B has been approved by the landowners
- Technical considerations Collector Substation B will connect some of the Springhaas Solar PV facilities to the national grid. It therefore had to be located within close proximity to existing high voltage (400Kv) powerlines. A loop-in-loop-out (LiLo) connection will link Collector Substation B to the existing Beta/Hydra 400kV overhead line which runs to the east of the broader study area.

B: 28°47'32.33"S / 25°41'59.39"E

C: 28°47'41.35"S / 25°52'0.75"E D: 28°47'42.55"S / 25°41'50.52"E

# 3 Site Sensitivity Verification

## 3.1 Baseline Sensitivity Assessment

A development area has been identified for the proposed development. Within this identified development area, a development footprint has been defined in a manner which has considered the environmental sensitivities present on the affected property and intentionally remains outside of highly sensitive areas. All affected properties in their entirety have been considered in the specialist site sensitivity verification exercises.

## 3.2 Environmental Screening Tool Report

A Screening Report for the proposed Collector Substation B was generated using the online DFFE Screening Tool in June 2022. A copy of the Screening Report is available in **Appendix 1 of the Registration Form.** 

**Table 3-1** lists the sensitivities of the proposed development area as per the Screening Tool and a description of how the themes have been addressed in the registration process.

| Theme Screening Tool<br>Sensitivity Rating    |        | Registration Process Approach  | Specialist report<br>attached |
|---|--------|--|-------------------------------|
|   |        | An agricultural specialist has completed the site sensitivity verification.  | Yes, Appendix 2.1.            |
| Animal species                                | Medium | An ecologist has completed the site sensitivity verification.                | Yes, Appendix 2.2.            |
| Aquatic biodiversity                          | Low    | An aquatic ecologist has completed the site sensitivity verification.        | Yes, Appendix 2.3.            |
| Archaeological and<br>cultural heritage theme | Low    | An archaeologist has completed the site sensitivity verification.            | Yes, Appendix 2.4.            |
| Avian   | N/A    | An avifaunal specialist has completed the site<br>sensitivity verification.  | Yes, Appendix 2.5.            |
| Bats N/A                                      |        | A bat specialist has completed the site sensitivity verification.            | Yes, Appendix 2.6             |
| Civil Aviation Low                            |        | N/A. No specialist study necessary   | No                            |
| Defence theme Low                             |        | N/A. No specialist study necessary   | No                            |
| Palaeontology Medium                          |        | A palaeontologist has completed the site sensitivity verification.           | Yes, Appendix 2.7             |
| Plant species Low                             |        | A botanist has completed the site sensitivity verification.                  | Yes, Appendix 2.8             |
| Terrestrial biodiversity Low                  |        | An ecologist has completed the site sensitivity verification.                | Yes, Appendix 2.2             |
| Socio-Economic N/A                            |        | A socio-economic specialist has completed the site sensitivity verification. | Yes, Appendix 2.10            |
| Transport N/A                                 |        | A transport specialist has completed the site sensitivity verification.      | Yes, Appendix 2.11            |
| Geotechnical N/A                              |        | A Geotechnical specialist has completed the site sensitivity verification.   | Yes, Appendix 2.12            |
| Landscape and Visual N/A                      |        | A landscape architect completed the site sensitivity verification            | Yes, Appendix 2.9             |

#### Table 3-1: Environmental sensitivity as per DFFE screening report

The appointed specialists undertook a Site Sensitivity Verification (SSV) exercise to confirm the sensitivity ratings listed in the Screening Report. The results are presented in the following sections.

## **3.3** Agricultural Site Sensitivity

An Agricultural Site Sensitivity Verification was undertaken by TerraAfrica. A full version of the report is available in **Appendix 2.1**.

Site visits were undertaken on 27 - 29 September 2021, 05 - 07 October 2021 and 04 - 05 May 2022. The soil profiles were examined to a maximum depth of 1.5m using a hand-held auger. Observations on site were made regarding soil texture, structure, colour and soil depth at each survey point. The locality of each survey point was recorded. The soils are described using Soil Classification: A Natural and Anthropogenic System for South Africa (Soil Classification Working Group, 2018).

The screening tool report indicates that the site sensitivity for the agricultural theme is **Medium**. Following the on-site sensitivity verification, the entire Collector substation B area is classified as having **Low agricultural sensitivity** in terms of the proposed development. The proposed substation area has Low to Very low agricultural potential with effective soil depth of 0.3m or less and very limited to no suitability for rainfed crop production. The area of up to 8 ha that will be used for the substation, provides grazing for only one head of cattle.

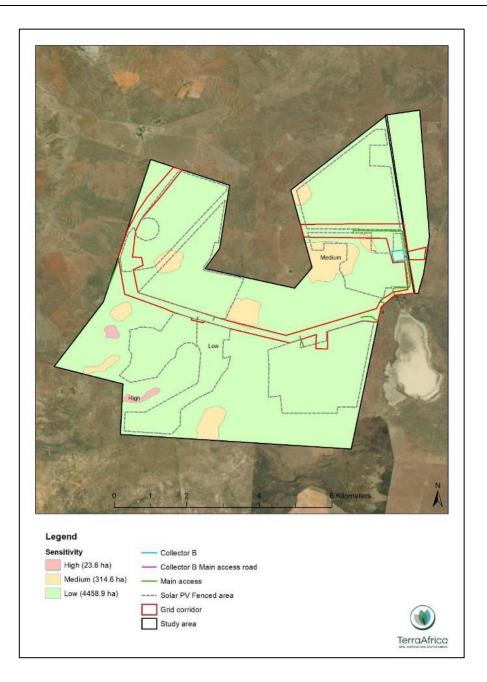

Figure 3-1: Agricultural sensitivity (source TerraAfrica, 2022)

### **3.3.1** Agricultural Environmental Specifications

The following environmental specifications apply to the agricultural theme:

| Standard<br>No. | Specification   | Comment   |
|-----------------|---|---|
| 10              | <ul> <li>The placement of pylons must be avoided in the following areas:</li> <li>a) Land capability evaluation values 11 – 15</li> <li>b) Demarcated high value agricultural areas with a priority rating of A and/or B</li> </ul> | No pylons will be constructed for Collector<br>Substation B. Collector Substation B is located in<br>an area of low to moderate capability (06 – 07). |

| Standard | Specification  | Comment  |
|----------|--|--|
| No.      |  |  |
| 11       | <ul> <li>Where pylons are located in the following areas, the placement must be undertaken in a manner in which the impact on these areas is minimised:</li> <li>a) Land capability and evaluation values 8 -10</li> <li>b) Irrigated land</li> <li>c) Horticulture and viticulture</li> <li>d) Demarcated high value agricultural areas with a priority rating of C and/or D</li> </ul> | No pylons will be constructed for Collector<br>Substation B. Collector Substation B is located in<br>an area of low to moderate capability (06 – 07).  |
| 12       | Where avoidance of the areas specified in<br>subparagraph 10 of Paragraph A.6 is not possible,<br>the areas disturbed during construction must be<br>returned to the pre-disturbance land capability<br>within two years of the construction.  | N/A.   |
| 13       | All reasonable measures must be taken through<br>micro-siting of the proposed development to<br>minimize fragmentation and disturbance of<br>agricultural activities.  | Collector Substation B is located on, and<br>immediately surrounded by, land of low<br>agricultural potential. The development of the<br>substation with a footprint of up to approximately<br>8Ha will not result in fragmentation of agricultural<br>activities. |
| 14       | Self-supporting lattice or monopole structures are to be used in crop fields, orchards and vineyards.  | N/A. Pylons do not form part of the infrastructure<br>for Collector Substation B. There are no crop<br>fields, orchards or vineyards within the footprint<br>of Collector Substation B or in the grid corridor.  |

#### **3.3.2** Adoption of the Mitigation Hierarchy

The Agricultural report provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

| Avoid        | Collector Substation B is located in an area of low agricultural sensitivity. Avoidance of high sensitivity areas has been achieved.  |
|--------------|---|
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on agricultural resources. These mitigation measures involve minimising the disturbance footprint and impacts of construction, operation and decommissioning activities. These mitigation measures have been incorporated into Part C of the generic EMPr (Appendix 13 of the Registration Form). |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas beyond the development footprint.  |
| Offset       | As no high sensitivity agricultural land will be lost through the construction of Collector substation B, no offset is deemed necessary.  |

#### Table 3-3: Consideration of the mitigation hierarchy

### 3.4 Animal Species Theme and Terrestrial Biodiversity

Cossypha Ecological was appointed to undertake the Terrestrial Biodiversity and Animal Species assessment. A full version of the report is available in **Appendix 2.2.** 

Field surveys were undertaken from 27 – 28 October 2021 and 06 - 07 December 2021.

The screening tool report rated the animal species theme as **medium sensitivity** and the terrestrial biodiversity theme as **low sensitivity** for Collector Substation B. The specialist site sensitivity verification confirmed that both themes are **medium sensitivity** for the site.

The different habitats on site were mapped out, and sensitive features such as pans and rocky ridges were prescribed buffers.

The following habitats were identified in the broader study area:

- Rocky ridges high sensitivity
- Pans high sensitivity
- Natural grassland medium sensitivity
- Past cultivation, heavy cattle use low sensitivity
- Cultivation, buildings and alien trees very low sensitivity

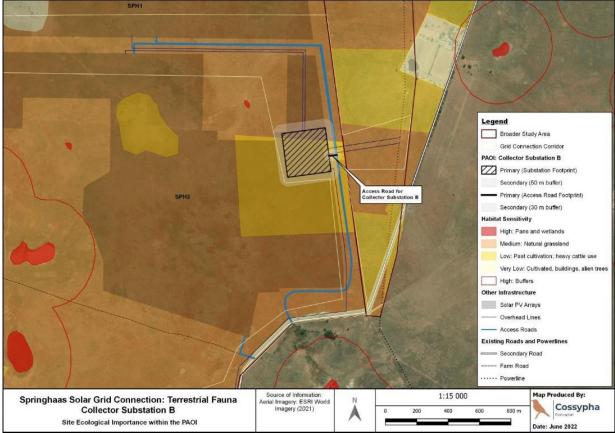

Figure 3-2: Animals species and terrestrial biodiversity site sensitivity (source Cossypha, 2022)

The majority of the footprint of Collector Substation B is located in an area which has been disturbed (low sensitivity) with the northern section located on natural grassland which is classified as medium sensitivity.

#### 3.4.1 Terrestrial Ecology Environmental Specifications

The following environmental specifications apply to the animal species and terrestrial biodiversity theme:

| Standard<br>No.                          | Specification                        | Comment  |
|--|--------------------------------------|--|
| The Terrestrial Ecology Specialist must: |                                      |  |
| 1a)                                      | Use the most recently obtainable and | This was complied with. At a desktop level the following |
|  | available information (spatial and   | documentation was considered:                            |

#### Table 3-4: Terrestrial Ecology theme specifications

|     | otherwise) to verify on a desktop level,<br>the environmental sensitivity of the<br>power line routing and/or substation<br>location. This includes, <i>inter alia</i> . most<br>recent version of the provincial or<br>municipal conservation plans. | The South African Vegetation Map (Mucina and   |
|-----|---|--|

|     |   | National Listed Ecosystems (DEA, 2011);  |
|     |   | National Biodiversity Assessment 2018 (NBA;  |
|     |   | (Skowno et al., 2019);   |
|     |   | • Free State Biodiversity Plan (FSBP; Collins, 2016);  |
|     |   | National Protected Area Database (SAPAD &  |
|     |   | SACAD Q4 (DFFE, 2021);   |
|     |   | National Protected Area Expansion Strategy   |
|     |   | (NPAES) 2018;  |
|     |   | <ul> <li>National Freshwater Ecosystem Priority Areas</li> </ul>   |
|     |   | (NFEPA); Nel et al., 2011.   |
| 1b) | Identify ecosystem types and faunal<br>species that are prone to the impacts<br>results from power line and/ or<br>substations within the proposed route.   | The potential impacts of Collector Substation B on<br>animal species and terrestrial biodiversity are discussed<br>in sections 3 & 4 of Appendix A2. |
| 1c) | Verify with a walkthrough, the presence   | The field surveys were undertaken from the 27 <sup>th</sup> to the   |
|     | and status of ecosystem type and species.   | 28 <sup>th</sup> of October and the 6 <sup>th</sup> to the 7 <sup>th</sup> of December 2021.   |
| 1d) | Avoid threatened ecosystem types (CR,   | The location of Collection Substation B, the entire grid   |
|     | EN and VU) or threatened or rare/range  | corridor and the broader study area are all located in   |
|     | restricted species in the final routing   | Western Free State Clay Grassland which is listed as   |
|     | and/or substation location if relevant.   | Least Threatened.  |

#### **3.4.2** Adoption of the Mitigation Hierarchy

The Terrestrial Biodiversity and Animals Species specialist study provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

#### Table 3-5: Consideration of the mitigation hierarchy

| Avoid        | Collector Substation B is located in an area of low to medium sensitivity. Avoidance of high sensitivity areas has been achieved.   |
|--------------|---|
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on fauna and terrestrial biodiversity resources. These mitigation measures involve minimising the disturbance footprint and impacts of construction, operation and decommissioning activities. These mitigation measures have been incorporated into Part C of the generic EMPr ((Appendix 13 of the Registration Form) |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas beyond the development footprint   |
| Offset       | As no high sensitivity terrestrial biodiversity features will be lost through the construction of Collector substation B no offset is deemed necessary.   |

### 3.5 Aquatic Ecology Site Sensitivity

An Aquatic Biodiversity and Species assessment was undertaken by BlueScience. A full version of the report is available in **Appendix 2.3.** 

Site visits were undertaken on 08 October 2021. During the field visit, the delineation, characterisation and integrity assessments of the freshwater features in and adjacent to the study area were undertaken.

The following aquatic features were identified in the broader study area:

• Pans and wetlands – high sensitivity

• Broad drainage regions – low sensitivity

A 250m buffer was prescribed to the pans and wetlands. The buffer areas were rated as medium sensitivity. The proposed Collector B substation avoided all aquatic features and their 250m buffers. The aquatic biodiversity sensitivity was confirmed to be of **low sensitivity** in-line with the rating given on the screening tool report.

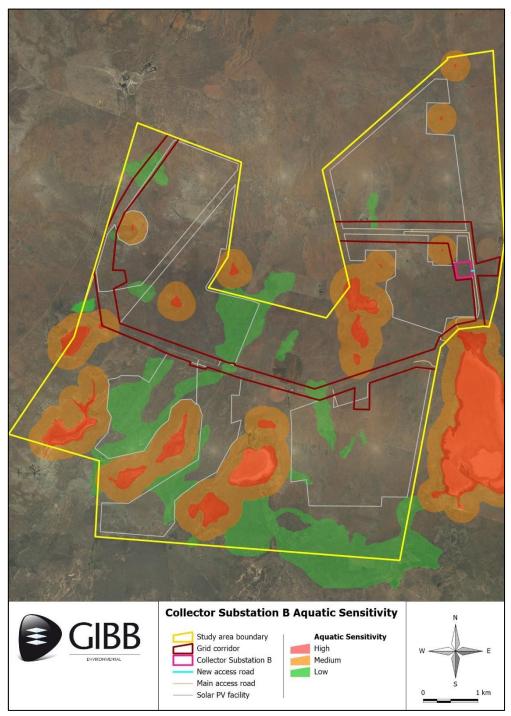

Figure 3-3: Aquatic sensitivity

### 3.5.1 Aquatic Ecology Specifications

The following environmental specifications apply to the aquatic ecology theme:

#### Table 3-6: Aquatic ecology theme specifications

| Standard | Specification  | Comment   |
|----------|--|---|
| No.      |  |   |
| 3        | Engage with the department responsible for<br>water affairs to discuss the requirements of a | The potential aquatic ecosystem impacts of the<br>proposed substation are deemed to be low such that                |
|          | General Authorisation or Water Use Licence.  | the proposed activities fall within the ambit of the  |
|          |  | General Authorisations for Section 21c&i water uses.  |
|          |  | The Aquatic Ecologist will engage with the  |
|          |  | Department of Water and Sanitation.   |
| 4        | The outcomes of the engagement process contemplated in subparagraph 3 of                     | The Department of Water and Sanitation (DWS) was contacted during the public participation process via              |
|          | Paragraph A.3, where required, must be documented in the final environmental                 | email on the 21 <sup>st</sup> of September for comment on the first Draft ESR and follow-up emails were sent on the |
|          | sensitivity report, including any restrictions   | 28 <sup>th</sup> of September and 20 <sup>th</sup> of October. A follow-up  |
|          | or design requirements.  | call was also made, but no comment was received   |
|          |  | within the 30 day public commenting period.   |
| 5        | Identify freshwater features that are prone  | All the aquatic features in the broader study area  |
|          | to impacts resulting from the construction   | have been identified and mapped.  |
|          | of power lines within the proposed route.  |   |
| 6        | Avoid the freshwater features in the final routing.  | The current layout avoids all aquatic features.   |

#### 3.5.2 Adoption of the Mitigation Hierarchy

The Aquatic report provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

| Avoid        | Collector Substation B is located in an area of low aquatic ecology sensitivity. Avoidance of high sensitivity areas has been achieved.  |
|--------------|--|
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on aquatic resources. These mitigation measures involve minimising the disturbance footprint and impacts of construction, operation and decommissioning activities such as pollution of water resources. These mitigation measures have been incorporated into Part C of the generic EMPr ((Appendix 13 of the Registration Form). |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas beyond the development footprint  |
| Offset       | As no aquatic features will be lost through the construction of Collector substation B no offset is deemed necessary.  |

#### Table 3-7: Consideration of the mitigation hierarchy

#### 3.6 Archaeological and Cultural Heritage Site Sensitivity

A Heritage Impact Assessment in-line with the requirement of the National Heritage Resources Act (No. 25 of 1999) was undertaken by ASHA Consulting. A full version of the report is available in **Appendix 2.4.** 

A field survey was undertaken from 03 - 07 October 2021. The survey was undertaken in spring when visibility was slightly better than summer when the grass is denser.

No heritage resources were found in the footprint of Collector Substation B. The site is therefore rated as low sensitivity, which is in-line with the findings of the screening tool report. It should be noted that the broader study area as a whole is rated as low sensitivity in terms of the screening tool but the specialist disputes this finding as within the broader study area there are heritage resources

such as graves of medium to high sensitivity. No known artefacts are however located in the footprint of Collector Substation B.

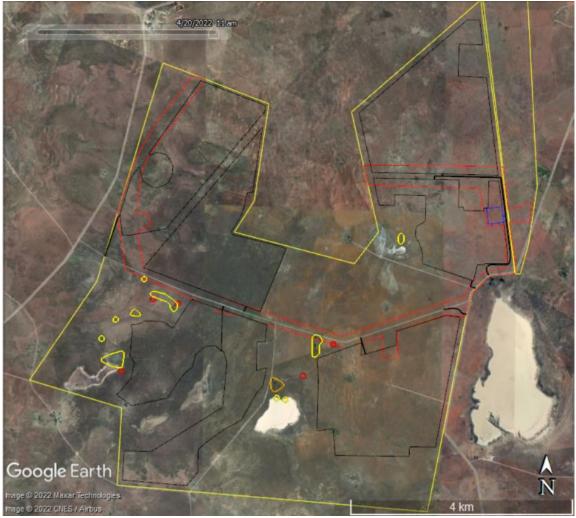

Figure 3-4: Archaeological and heritage sensitivity (red polygons – high sensitivity, orange polygons – medium sensitivity, yellow polygons – low sensitivity (data, ASHA, 2022). Note no sensitive areas within the footprint of Collector Substation B (blue square).

# 3.6.1 Heritage Specifications

The following environmental specifications apply to the heritage theme:

| Standard<br>No. | Specification  | Comment   |
|-----------------|--|---|
| 18              | Where required, a heritage impact assessment<br>(HIA) will be undertaken in compliance with<br>Section 38(1) to 38(4) of the National Heritage<br>Resources Act, 1999 (Act No. 25 of 1999) as well<br>as any Minimum Standards or Guidelines<br>published in relation to Section 38(3) | A HIA has been undertaken by the specialist.  |
| 19              | The HIA must be submitted to the South African<br>Heritage Resources Agency (SAHRA) and<br>applicable Provincial Heritage Authorities for<br>decision making procedures.   | The HIA report was submitted to the South<br>African Heritage Resources Agency and applicable<br>Provincial Heritage Authorities for decision<br>making. Comment was received from SAHRA on |

#### Table 3-8: Heritage resources specifications

| Standard<br>No. | Specification  | Comment  |
|-----------------|--|--|
|                 |  | 02 Nov 2022. No objections to the development<br>were raised by SAHRA. SAHRA included<br>recommendations and requirements for the<br>development in the letter received. All the<br>recommendations and requirements that have<br>been prescribed by SAHRA have been<br>incorporated in the revised final EMPr. The final<br>ESR (this report) will be submitted to SAHRA and<br>they will also be notified of the registration of the<br>document.      |
| 20              | The applicable recommendations or<br>requirements from the South African Heritage<br>Resources Agency and applicable Provincial<br>Heritage Authorities must be documented in the<br>final environmental sensitivity report. | The HIA report was submitted to the South<br>African Heritage Resources Agency and Free State<br>Provincial Heritage Resources Agency for<br>comment. Comment was received from SAHRA<br>on 02 Nov 2022. No objections to the<br>development were raised by SAHIRA and no<br>changes to the location of the line were required.<br>All the recommendations and requirements that<br>have been prescribed by SAHRA have been<br>incorporated in the EMPr. |

## 3.6.2 Adoption of the Mitigation Hierarchy

The Heritage impact assessment report provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

#### Table 3-9: Consideration of the mitigation hierarchy

| Avoid        | No heritage resources were identified in the footprint of Collector Substation B during fieldwork. |
|--------------|--|
|              | The site avoids all known heritage resources. Avoidance of high sensitivity areas has been         |
|              | achieved.  |
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on the       |
|              | visible landscape. These mitigation measures have been incorporated into Part C of the generic     |
|              | EMPr ((Appendix 13 of the Registration Form).  |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas not needed during operation.    |
| Offset       | No offsets are required.   |

# 3.7 Avifauna Species Site Sensitivity

An Avifaunal assessment was undertaken by WildSkies. A full version of the report is available in **Appendix 2.5.** 

A site assessment (28 to 30 September 2021) and two pre-construction bird monitoring site visits over two different seasons (spring (November 2021) and summer (January 2022)) were conducted on site.

No site sensitivity rating for the avian theme was provided for Collector Substation B by the DFFE Online Screening Tool. The tool identifies the grid corridor and site of Collector Substation B site as Medium sensitivity for the Animal Species Theme and Low for the Terrestrial Biodiversity. The avifaunal specialist assessment confirmed that the site is of **Medium – Low sensitivity**.

The avifauna specialist provided further clarification on the confirmed sensitivity rating: "Ludwig's Bustard is a nomadic species, which ranges over wide areas in response to local conditions. It is also a partial migrant, moving into the winter rainfall western parts of SA in winter and spring.

The presence of the species on the Springhaas site cannot alone be considered to constitute the site sensitivity as High. The screening tool has mapped the entire distribution of the species (based on Southern African Bird Atlas Project 2), not hotspots or breeding locations. We do not agree that the entire species range can be considered High sensitivity. We have not recorded the species on the Springhaas site in any remarkable numbers or with any consistent frequency, nor has any evidence of breeding behaviour been recorded. "

Figure 3-5: Avifaunal sensitivity on site (source Wildskies, 2022). The only sensitive spatial features identified were the pans. These, together with a 250m added buffer, are shown as green. Note that the footprint of Collector Substation B falls well outside these features.

# 3.7.1 Avian Specifications

The following environmental specifications apply to the avifauna theme:

| Standard<br>No. | Specification   | Comment   |
|-----------------|---|---|
| During plai     | nning   |   |
| a)              | A 2 km buffer either side of the centre line of<br>the proposed route of the power line alignment<br>falling within the <i>preliminary corridor</i> must be<br>drawn for verification of avifaunal sensitivity. | N/A. No power lines are required for Collector<br>Substation B. The overhead line and LiLo<br>connections, which form part of the grid<br>connection infrastructure, are assessed in<br>separate reports. |
| b) The avif     | auna specialist must  |   |
| i)              | Use the most recently obtainable and available information (spatial and otherwise) as well as   | These data sources were used  |

#### Table 3-10: Avian theme specifications

| Standard<br>No. | Specification  | Comment  |
|-----------------|--|--|
|                 | the screening tool, professional knowledge of<br>the EAP and the avifauna specialist to<br>determine, on a desktop level, the habitat<br>sensitivity for avifaunal species along the power<br>line route and/or substation location. BirdLife<br>South Africa, WWF, the Endangered Wildlife<br>Trust and VULPRO, must be contacted for their<br>input.             | Birdlife South Africa was contacted during the<br>public participation process via email on the 21 <sup>st</sup><br>September for comment on the Draft<br>Environmental Sensitivity Report and follow-up<br>emails were sent on the 28 <sup>th</sup> September and 20 <sup>th</sup><br>October. A follow-up call was also made, but no<br>comment was received within the 30-day public<br>commenting period. Endangered Wildlife Trust<br>was also contacted, and no comment was<br>received from them during the public<br>commenting period.<br>VulPro was contacted for input via email on the<br>18 April 2023 for the second version of the Draft<br>Environmental Sensitivity Report. VulPro stated<br>they have no further comments on the 26 <sup>th</sup> April<br>2023.<br>WWF was contacted via telephone to request the<br>contact details of the relevant person on the 18 <sup>th</sup><br>April 2023. A request for comment on the second<br>version of the Draft Environmental Sensitivity<br>Report was sent via email on the 18 <sup>th</sup> April 2023.<br>A follow-up email was sent on the 24 <sup>th</sup> April 2023,<br>but no comment was received. |
| ii)             | The power line bird mortality incident database<br>of the Endangered Wildlife Trust must be<br>consulted to determine which of the species<br>occurring in the broader study area are typically<br>impacted upon by power lines (EWT unpublished<br>data).   | N/A. No power lines are required for Collector<br>Substation B. The overhead line and LiLo<br>connections, which form part of the grid<br>connection infrastructure, are assessed in<br>separate reports.  |
| iii)            | Establish habitat and migratory routes and likely<br>flight paths based on the most recently<br>obtainable and available desktop data and site<br>verification.  | This was done  |
| iv)             | The conservation status of all avifaunal species<br>recorded by the most recent iteration of the<br>SABAP in the broader study area must be<br>determined as per the most recent iteration of<br>the list of threatened species and the IUCN Red<br>Data List of Birds.  | This was done  |
| v)              | Based on the information collected on birds<br>typically impacted upon by power lines, identify<br>the presence of threatened species which<br>include, as a minimum, Cranes, Flamingos,<br>Vultures, Kori Bustards, and Pelicans.   | N/A. No power lines are required for Collector<br>Substation B. The overhead line and LiLo<br>connections, which form part of the grid<br>connection infrastructure, are assessed in<br>separate ESRs. White backed vultures and Blue<br>Cranes were observed within the broader study<br>area during surveys.   |
| vi)             | Where high risk areas are identified these areas<br>must be confirmed with EWT by using their risk<br>assessment tool  | No high-risk areas were identified for the site.   |
| vii)            | Where the risk assessment tool identifies that<br>mitigation measures can be applied, apply these<br>mitigation measures in consultation with EWT,<br>BirdLife South Africa and the local conservation<br>agency.  | This was done. No additional mitigation requirements were received from these parties.   |
| viii)           | Where no acceptable mitigation measures can be<br>applied, re-routing options or engineering<br>solution, for example routing under the risk area<br>identified or increasing the height of the power<br>line in order to avoid potential collision risk areas,<br>must be applied. Where engineering options are<br>considered, these must be discussed with EWT, | N/A. No power lines are required for Collector<br>Substation B. The overhead line and LiLo<br>connections, which form part of the grid<br>connection infrastructure, are assessed in<br>separate ESRs. Collector Substation B falls outside<br>of identified sensitive areas.  |

| Standard<br>No. | Specification                                    | Comment |
|-----------------|--|---------|
|                 | BirdLife South Africa and the local conservation |         |
|                 | agency.  |         |

# 3.7.2 Adoption of the Mitigation Hierarchy

The Avifauna impact assessment report provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

#### Table 3-11: Consideration of the mitigation hierarchy

| Avoid        | The footprint of Collector Substation B avoids sensitive avifaunal habitats. Avoidance of high      |
|--------------|---|
|              | sensitivity areas has been achieved.  |
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on the        |
|              | avifauna species at all stages of the development. These mitigation measures have been              |
|              | incorporated into Part C of the generic EMPr (Appendix 13 of the Registration Form).                |
| Rehabilitate | The specialist mitigation measures address rehabilitation of the site.                              |
| Offset       | No offsets are required as no high sensitivity avifauna habitat is impacted by Collector Substation |
|              | B.  |

# **3.8 Bat Site Sensitivity**

A bat specialist assessment was undertaken. Arcus was appointed to undertake a site sensitivity verification for the bat theme. A copy of the site sensitivity verification report is available in **Appendix 2.6**.

### The key findings of the study are as follows:

"No active bat roosts were found during the respective site visit, and no overlap of the development with identified important foraging areas have been identified.

The site is considered to have a low sensitivity for bats, considering the type of infrastructure being proposed, as well as the likely impacts expected to occur. A site visit to the area (5 to 9 December 2021) confirmed a homogenous low grassland landscape, primarily used for cattle grazing, with very few features (bat roosts and important foraging areas) that could be identified as being relevant in terms of impacts to bats, particularly relating to the certain type of infrastructure being assessed, as described above" (Arcus, 2022).

#### **3.8.1** Bat Specifications

The following environmental specifications apply to the bat theme:

| Standard<br>No. | Specification  | Comment   |
|-----------------|--|---|
| 2               | Avoid bat roosts that are known and/or have been identified within a 500 m buffer of the proposed alignment. | N/A. Power lines do not form part of<br>the infrastructure for Collector<br>Substation B. In addition, no bat<br>roosts were identified in the broader<br>study area. |

#### Table 3-12: Bat resources specifications

## **3.8.2** Adoption of the Mitigation Hierarchy

The bat site sensitivity verification report confirms that the first level of the mitigation hierarchy, 'avoid', has been achieved as the site of Collector Substation B avoids areas which are sensitive from a bat perspective.

# **3.9 Civil Aviation Theme**

The Civil Aviation theme is rated as low sensitivity by the DFFE screening tool report. The EAP is in agreement with this rating as there are no airfields in close proximity to the site. The South African Civil Aviation Authority (SACAA) have been included in the I&AP database. An application with all relevant supporting documents was submitted by the applicant on the 26<sup>th</sup> August 2022 via email. A follow-up email was sent on 6<sup>th</sup> of September. Note that this application is made outside of NEMA-related processes as it is executed in terms of the Civil Aviation Act (No. 13 of 2009).

During the public participation process, another email was sent on the 21<sup>st</sup> of September for comment on the Draft Environmental Sensitivity Report and follow-up emails were sent on the 28<sup>th</sup> September and 20<sup>th</sup> October. A follow-up call was also made, but no comment was received within the 30-day public commenting period.

## 3.9.1 Civil Aviation Specifications

The following environmental specifications apply to the civil aviation theme:

| Standard  | Specification   | Comment  |
|-----------|---|--|
| No.<br>21 | Engage with Civil Aviation Authority to identify<br>potential hazards and obstacles to civil<br>aviation installations and conditions as<br>described in the South African Civil Aviation<br>Regulations of 2011. | The Civil Aviation Authority (CAA) is listed as an I&AP. They will be informed of the proposed development and requested to provide comment on the draft ESR. A CAA Obstacles Application was submitted to CAA on 26 August 2022, a follow up on the application was made on 06 September. No response has been received to date. Note that this application is made outside of NEMA-related processes as it is executed in terms of the Civil Aviation Act (No. 13 of 2009).  |
|           |   | During the public participation process, another<br>email was sent on the 21 <sup>st</sup> September for comment<br>on the Draft Environmental Sensitivity Report and<br>follow-up emails were sent on the 28 <sup>th</sup> of<br>September and 20 <sup>th</sup> of October. A follow-up call was<br>also made, but no comment was received within<br>the 30-day public commenting period. A CAA<br>obstacles application was lodged with the CAA on<br>26 August 2022. No response to the application has<br>yet been received. |
| 22        | The outcomes of the engagement process<br>must be documented in the final<br>environmental sensitivity report, including any<br>restrictions or design requirements.  | Copies of correspondence with the CAA have been included in the public participation report (Appendix B).  |

#### Table 3-13: Civil aviation theme specifications

# **3.10** Defence Theme

The defence theme was rated as low by the DFFE screening tool. There is no military infrastructure in close proximity to the site, thus a study was not required.

| Standard<br>No. | Specification   | Comment   |
|-----------------|---|---|
| 23              | Engage with the defence authorities in the event of the<br>power line being located within:<br>(a) 1 km of forward airfields, high sites, operational military<br>bases, military training areas, shooting ranges, border<br>posts, all other Department of defence features (including<br>naval bases, housing, offices, workshops);<br>(b) 8 km from air force bases;<br>(c) 10 km from ammunition depots; or<br>(d) 56 km from bombing ranges. | A notification on the intent to register<br>the project was submitted to the Air<br>Force Base Bloemspruit on 11 <sup>th</sup> August<br>2022 and a follow up email was sent on<br>23 <sup>rd</sup> August 2022. On the 20 <sup>th</sup> of<br>September, Airforce Bloemspruit<br>confirmed in an email that South<br>African National Defence Force (SANDF)<br>is the commenting authority.<br>During the public participation process,<br>an email was sent to the SANDF on 21 <sup>st</sup><br>of September for comment on the Draft<br>Environmental Sensitivity Report and<br>follow-up emails were sent on the 28 <sup>th</sup><br>September and 20 <sup>th</sup> October. A follow-<br>up call was also made, but no comment<br>was received within the 30-day public<br>commenting period |
| 24              | The outcomes of the engagement process, where required,<br>must be documented in the final environmental sensitivity<br>report, including any restrictions or design requirements.  | Copies of correspondence with SANDF<br>have been included in the public<br>participation report (Appendix B).   |

#### Table 3-14: Defence theme specifications

# 3.11 Palaeontology Theme

A Palaeontological Impact Assessment in-line with the requirement of the National Heritage Resources Act, 1999 (Act No. 25 of 1999) (NHRA) was undertaken by ASHA Consulting. A full version of the report is available in **Appendix 2.7**.

Even though only a desktop study was deemed necessary for the study, a site walk through was undertaken by the Archaeologist during the Heritage Impact Assessment field visit from 03 - 07 October 2021.

The screening tool report rated the palaeontology theme as **medium sensitivity** for Collector Substation B. Following a desktop investigation and the on-site sensitivity verification of key areas within the broader study area, the footprint for Collector substation B was classified as having **low** palaeontological sensitivity. If fossils are found during the construction and operation phase, they should be however photographed, removed and handled as per the Fossil Chance Find Protocol which will be incorporated into the EMPr as recommended in the specialist study.

Figure 3-6: Palaeontological sensitivity map (source ASHA Consulting, 2022) showing the footprint of the Collector substation B (blue box). Colours show areas of heritage sensitivity: red (very highly sensitive), orange/yellow (high), green (moderate), blue (low), grey (insignificant/zero).

# **3.11.1** Palaeontological Specifications

The following environmental specifications apply to the Palaeontological theme:

| Standard<br>No. | Specification  | Comment  |
|-----------------|--|--|
| 18              | Where required, a heritage impact assessment<br>(HIA) will be undertaken in compliance with<br>Section 38(1) to 38(4) of the National Heritage<br>Resources Act, 1999 (Act No. 25 of 1999) as well<br>as any Minimum Standards or Guidelines<br>published in relation to Section 38(3) 31. | A HIA has been undertaken by a specialist (Asha<br>Consulting). A Palaeontological Impact Assessment<br>(Phase 1) was undertaken by a specialist (Prof<br>Bamford) in support of the HIA.  |
| 19              | The HIA must be submitted to the South African<br>Heritage Resources Agency and applicable<br>Provincial Heritage Authorities for decision<br>making procedures.   | The HIA and PIA reports were uploaded to SAHRIS on 19 <sup>th</sup> September 2022. Comment was received from SAHRA on 02 Nov 2022. No objections to the development were raised by SAHIRA and no changes to the location of the line were required. All the recommendations and requirements that have been prescribed by SAHRA have been incorporated in the final EMPr. |
| 20              | The applicable recommendations or requirements from the South African Heritage Resources Agency and applicable Provincial Heritage Authorities must be documented in the final environmental sensitivity report.   | All the recommendations and requirements that have<br>been prescribed by SAHRA have been incorporated in<br>the final EMPr.  |

### Table 3-15: Palaeontological theme specifications

# **3.11.2** Adoption of the Mitigation Hierarchy

The Palaeontological specialist study provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

#### Table 3-16: Consideration of the mitigation hierarchy

| Avoid        | Collector Substation B is located in an area of low sensitivity. There are no areas with high paleontological sensitivities in the footprint and therefore no no-go areas have to be considered.   |
|--------------|--|
| Minimise     | The specialist has provided recommendations to minimise the impact of the development<br>on palaeontological resources. These mitigation measures involve minimising the<br>disturbance footprint and impacts of construction, operation and decommissioning<br>activities. These mitigation measures have been incorporated into Part C of the generic<br>EMPr ((Appendix 13 of the Registration Form). |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas beyond the development footprint  |
| Offset       | As no high sensitivity palaeontological areas will be lost through the construction of Collector substation B, no offset is deemed necessary.  |

# 3.12 Plant Species Sensitivity

A botanical assessment was undertaken by Bergwind. A full version of the report is available in **Appendix 2.8.** A site assessment was undertaken when vegetation was in its optimal condition / season from the 20<sup>th</sup> to 27<sup>th</sup> of January 2022.

The online screening tool report identifies the grid corridor and site of Collector Substation B footprint as **Low sensitivity** for the Plant Species Theme. The botanist confirmed that the site is of **Low sensitivity**. *No species of conservation concern (SCC), sometimes called Red Data or Red List species were found in the area surveyed* (Bergwind, 2022).

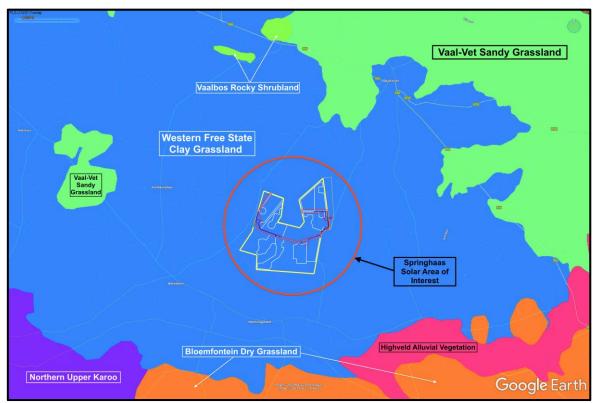

Figure 3-7: A portion of VEGMAP overlaid on Google Earth (source Bergwind, 2022) indicating that the entire Springhaas Solar PV area of interest is located in Western Free State Clay Grasslands.

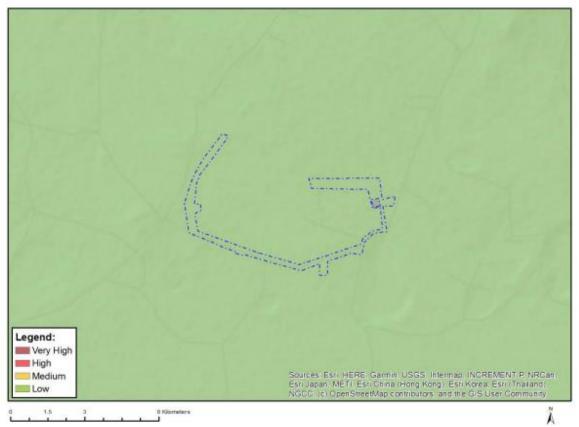

Figure 3-8: The specialist assessment confirmed that the "low sensitivity" as indicated by the National Environmental Screening Tool (above) was correct.

# **3.12.1** Adoption of the Mitigation Hierarchy

The botanical assessment report provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

#### Table 3-17: Consideration of the mitigation hierarchy

| Avoid        | The footprint of Collector Substation B avoids sensitive plant species. Where Ammocharis coranica bulbs cannot be avoided, they should be relocated.  |
|--------------|---|
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on plant species at all stages of the development. These mitigation measures have been incorporated into Part C of the generic EMPr (Appendix 13 of the Registration Form). |
| Rehabilitate | The specialist mitigation measures address rehabilitation of the site.  |
| Offset       | No offsets are required as no high sensitivity habitat is impacted by Collector Substation B.   |

# 4 Additional Specialist Studies

In addition to the specialist studies required in terms of the Standard, summarised in Section 3 additional studies were undertaken to confirm the suitability of the site for the development of Line 1. These studies are over and above the requirements of the Standard. As these studies are not required in terms of the Standard preface letters have not been compiled for all of them.

# 4.1 Socio-Economic Site Sensitivity

A socio-economic assessment was undertaken by Urban-Econ Development Economists. A full version of the report is available in **Appendix 2.9.** The site assessment was undertaken on the 12<sup>th</sup> October 2021 where the site and its surrounding were visited, seasonality does not impact the findings of this assessment.

No sensitivity rating for the socio-economic theme was provided for Collector B by the DFFE Online Screening Tool. Based on the specialist findings in **Appendix 2.9**, the development of Collector Substation B and associated infrastructure has the potential to stimulate the local economy, create new jobs and contribute to sustainable development.

The development will sterilise some agricultural land currently used for grazing, however the project will not impact on the production of the farm.

From a socio-economic perspective, no objections are made with regard to the proposed project, and it should be approved for development (Urban-Econ, 2022).

## 4.1.1 Adoption of the Mitigation Hierarchy

The socio-economic assessment report provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr

| Avoid        | The project developer should avoid procuring goods and services outside the local municipality |
|--------------|--|
|              | where possible.  |
| Minimise     | The specialist has provided recommendations to minimise outsourcing of goods and services      |
|              | beyond the local economy. These mitigation measures have been incorporated into Part C of the  |
|              | generic EMPr (Appendix 13 of the Registration Form).   |
| Rehabilitate | No rehabilitation is required.   |

#### Table 4-1: Consideration of the mitigation hierarchy

Offset No offsets are required.

# 4.2 Transport Sensitivity

A transport impact assessment was undertaken by the JG Afrika. A full version of the report is available in **Appendix 2.10.** Only a desktop study was undertaken for the assessment as a site visit was not deemed necessary.

No sensitivity rating for the traffic theme was provided for Collector B by the DFFE Online Screening Tool. Based on the specialist findings in **Appendix 2.10**, the significance of the transport impact without mitigation measures throughout all project phases can be rated as very low. The traffic generated during the construction phase, although very low, will be temporary and impacts are considered to be negative and of very low significance after mitigation. The traffic generated during the decommissioning phase will be less than the construction phase traffic and the impact on the surrounding road network will also be considered negative and of very low significance after mitigation.

The potential impacts associated with proposed Springhaas Grid Connection Collector B and associated infrastructure are acceptable from a transport perspective and it is therefore recommended that the proposed facility be authorised (JG Afrika, 2022).

# 4.2.1 Adoption of the Mitigation Hierarchy

The Traffic specialist study provides mitigation measures to reduce the negative impacts of all project phases. These mitigation measures have been incorporated into Part C of the generic EMPr.

| Avoid        | No roads or access points which are deemed unsuitable for use in the construction, operation or decommissioning of Collector Substation B were identified. The project therefore avoid unsuitable road.  |
|--------------|--|
| Minimise     | The specialist has provided recommendations to minimise the traffic impact of the development.<br>These mitigation measures involve minimising the disturbance footprint and impacts of<br>construction, operation and decommissioning activities. These mitigation measures have been<br>incorporated into Part C of the generic EMPr (Appendix 13 of the Registration Form). |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas beyond the development footprint  |
| Offset       | As no high traffic and transport related impacts will be caused through the construction of Collector substation B, no offset is deemed necessary.   |

#### Table 4-2: Consideration of the mitigation hierarchy

## 4.3 Geotechnical Site Sensitivity

A geotechnical specialist assessment was undertaken. Geotechnical Consult Services was appointed to undertake a site sensitivity verification for the geotechnical theme. A copy of the site sensitivity verification report is available in **Appendix 2.11**.

## The key findings of the study are as follows:

The specialist confirms that the DFFE Screening Tool Report for the proposed Springhaas Grid Connection does not identify unfavourable ground conditions as a sensitivity for further assessment. In addition, it is confirmed that the geotechnical impacts of the proposed Springhaas Collector Substation B, will be limited. The substation site is underlain by loose to medium dense transported soil overlying siltstone and or dolerite bedrock, with refusal ranging from 0.5m to 1.5m. The expected excavatability for service trenches and foundations is soft to intermediate to 1.50m across the site as determined during a detailed site investigation. The geotechnical land use potential for the proposed Collector Substation B is developable with precautions due to variable calcrete. Based on the above, it is unlikely that the proposed Springhaas Collector Substation B will have a negative impact on the environment from a geotechnical perspective and the proposed area is regarded as developable with minor precautions due to variable founding and excavatability conditions (Geotechnical Consult, 2022).

# 4.4 Landscape and Visual Sensitivity

A landscape and visual specialist assessment was undertaken. Afzelia Environmental Consultants & Environmental Planning and Design was appointed to undertake a site sensitivity verification for the landscape and visual theme. A site visit was undertaken on 1<sup>st</sup> and 2<sup>nd</sup> of October 2021. Seasonality has no impact on the findings. A copy of the site sensitivity verification report is available in **Appendix 2.12**.

No sensitivity rating for the landscape/ visual theme was provided for Collector B by the DFFE Online Screening Tool. Based on the specialist findings in **Appendix 2.12**, Collector B is located in an area of low sensitivity from a landscape/ visual perspective which borders on an area of medium sensitivity.

The development of Collector B will result in relatively low levels of impact post mitigation and the project is anticipated to have a low contribution to cumulative visual impacts. Provided that the proposed mitigation measures are implemented there is no reason from a landscape and visual perspective why Collector Substation B should not be authorised (Afzelia, 2022)

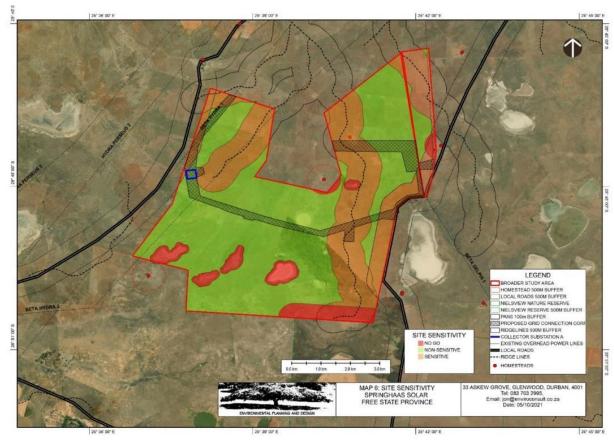

Figure 4-1: Landscape & Visual sensitivity map (source Afzelia, 2022) showing the footprint of the Collector substation B (blue box). Colours show areas of landscape & visual sensitivity: red (no go), orange (sensitive), green (non-sensitive).

# 4.4.1 Visual Specifications

The following environmental specifications apply to the Landscape and Visual theme:

| Standard<br>No. | Specification  | Comment   |
|-----------------|--|---|
| 15              | Sensitive receptors - including, but not limited<br>to human receptors such as residents,<br>commuters, visitors and tourists, as well as<br>sensitive scenic routs such as wilderness zones<br>30 must be identified. A visual sensitivity map<br>must be compiled to inform the location of the<br>proposed route of the power line. | This is included in the Landscape and Visual Impact<br>Assessment (LVIA)  |
| 16              | The precautionary principle must be followed,<br>whereby negotiations must be undertaken with<br>the sensitive human receptors.  | The precautionary principle was not applied as the impacts were relatively obvious and there was no concern regarding either significant impact on or loss of a valuable / sensitive landscape highlighted during the assessment process or the public participation process to date. |
| 17              | If the negotiations stipulated in subparagraph<br>16 of Paragraph A.7 are unsuccessful, the power<br>line must avoid sensitive human receptors and<br>sensitive scenic routes.   | Negotiations were not required. It was obvious<br>from the site visit that there were unlikely to be<br>significant sensitivities, and furthermore the public<br>participation process did not highlight significant<br>landscape or visual concerns.                                 |

#### Table 4-3: Landscape and visual theme specifications

# 4.4.2 Adoption of the Mitigation Hierarchy

| Avoid        | Collector Substation B is located in an area of low visual impact sensitivity. Avoidance of high sensitivity areas has been achieved.   |
|--------------|---|
| Minimise     | The specialist has provided recommendations to minimise the impact of the development on agricultural resources. These mitigation measures involve minimising the disturbance footprint and impacts of construction, operation and decommissioning activities. These mitigation measures have been incorporated into Part C of the generic EMPr (Appendix 13 of the Registration Form). |
| Rehabilitate | The specialist mitigation measures address rehabilitation of areas beyond the development footprint   |
| Offset       | As no high visual sensitivity land will be lost through the construction of Collector substation B, no offset is deemed necessary.  |

#### Table 4-4: Consideration of the mitigation hierarchy

# 4.5 Sensitivity Mapping & Specialist Input

The table below shows the online screening tool rating and the site sensitivity verifications undertaken by various specialists, including comment for each theme.

| Theme  | Screening<br>Tool<br>Sensitivity<br>Rating | Specialist<br>Verification | Registration<br>approach  | Specialist comment  |
|--|--|----------------------------|---|---|
| Agricultural                                     | Medium                                     | Low                        | appointed to<br>undertake an  |   |
| Animal species*                                  | Medium                                     | Medium                     | appointed to<br>undertake an animal<br>species impact                               | The site is situated in continuous natural grassland that has been grazed in places. The chance of <i>Neotis ludwigii</i> occurring on the site is medium-high, noting that this equates to a medium site sensitivity.  |
| Aquatic<br>biodiversity                          | Low  | Low                        | appointed to<br>undertake an aquatic<br>biodiversity impact<br>assessment including | The site verification assessment confirmed that<br>there are no aquatic constraints within the area.<br>This assessment thus concurs with the<br>screening tool mapping, that the proposed<br>development area is an area of low Aquatic<br>Biodiversity Combined Sensitivity.  |
| Archaeological and<br>cultural heritage<br>theme | Low  | Low                        | appointed to<br>undertake a heritage  | The site visit showed that in fact the majority of<br>the site is of low sensitivity but with several<br>pockets (where archaeological resources and<br>graves were found) considered to be of medium<br>and high sensitivity. The heritage specialist thus<br>disputes the screening tool report since there<br>are a number of areas of medium to high<br>sensitivity scattered through the broader study<br>area, although only a small section of the<br>corridor is affected. The footprint of Collector |

#### Table 4-5: Sensitivity mapping and specialist input

| Theme                        | Screening<br>Tool<br>Sensitivity<br>Rating | Specialist<br>Verification | Registration<br>approach  | Specialist comment  |
|------------------------------|--|----------------------------|---|---|
|                              |  |                            |   | Substation B, which avoids all known heritage resources is however confirmed to be low sensitivity. |
| Avian                        | N/A  | Medium - Low               | appointed to  |   |
| Bats                         | N/A  | Low                        | appointed to  |   |
| Civil Aviation               | Low  | N/A                        | Civil Aviation<br>Authority was<br>notified and an<br>obstacles application<br>was submitted.   |   |
| Defence theme                | Low  | N/A                        | A notification on the<br>intent to register the<br>project was<br>submitted to the Air<br>Force Base<br>Bloemspruit and the<br>South African<br>National Defence<br>Force |   |
| Palaeontology                | Medium                                     | Low                        |   | recorded fossils from the area  |
| Plant species                | Low  | Low                        | appointed to<br>undertake a plant   |   |
| Terrestrial<br>biodiversity* | Low  | Medium                     | appointed to<br>undertake a<br>terrestrial<br>biodiversity impact<br>assessment including<br>a site sensitivity<br>verification.  |   |
| Socio-Economic               | N/A  | Low                        |   | Collector B will have positive socio-economic impacts. No objections to the project were raised.    |

| Theme                   | Screening<br>Tool<br>Sensitivity<br>Rating | Specialist<br>Verification | Registration<br>approach  | Specialist comment   |
|-------------------------|--|----------------------------|---|--|
|                         |  |                            | socio-economic<br>impact assessment.                                    |  |
| Transport               | N/A  | Low                        | appointed to<br>undertake a<br>transport impact<br>assessment including | The new section of access road and access point<br>to the proposed site have been assessed and<br>were found to be acceptable from a traffic<br>engineering perspective. The potential impacts<br>associated with the development of Collector B<br>are acceptable from a transport perspective. |
| Geotechnical            | N/A  | Low                        | appointed to<br>undertake a Geotech                                     | The specialist confirms that the DFFE Screening<br>Tool Report for the proposed Springhaas Grid<br>Connection does not identify unfavourable<br>ground conditions as a sensitivity for further<br>assessment.  |
| Landscape and<br>visual | N/A  | Low                        | appointed to<br>undertake a   | classified as low-sensitivity.   |

All the relevant environmental sensitivity themes were evaluated by specialists and all themes were confirmed to be of low, low-medium, or medium sensitivity for Collector substation B.

As indicated in Table 1-12, a number of specialist studies were undertaken that were over and above those required in terms of the Standard. None of these studies presented any reason why the proposed project could not be developed.

# 5 Impact Assessment

The following section provides an overview of the impacts identified in the various specialist studies. Full impact assessments are available in the specialist reports in Appendix 2.

Note, the information provided below is not new information, it is an amalgamation of the impact assessments as provided in the specialist reports in Appendix 2.

# 5.1 **Pre-Construction**

No significant pre-construction impacts were identified by any of the specialist studies.

# 5.2 Construction Phase

The following impacts will occur during the construction phase of the project.

#### Table 5-1: Construction phase impacts

| Impact   | Status   | Pre-mitigation | Post mitigation |
|--|----------|----------------|-----------------|
| Agriculture and soils                                  |          |                |                 |
| Change in land use from livestock farming to renewable | Negative | Low            | Very low        |

| Impact  | Status    | Pre-mitigation | Post mitigation |
|---|-----------|----------------|-----------------|
| energy transmission                                     |           |                |                 |
| Impaired soil health                                    | Negative  | Low            | Very low        |

|   |           | (negative)     | (positive)      |
| Landscape and visual                                    |           |                |                 |
| Change of character due to industrialisation of a rural | Negative  | Low            | Low             |
| landscape   |           |                |                 |
| Industrialisation of the view from Nielsview NR due to  | Negative  | Very low       | Very low        |
| this project.   |           |                |                 |

| Impact   | Status   | Pre-mitigation | Post mitigation |
|--|----------|----------------|-----------------|
| Industrialisation of the landscape as seen from local roads  | Negative | Very low       | Very low        |
| Industrialisation of the landscape as seen from local homesteads   | Negative | Low            | Low             |
| Light pollution  | Negative | Moderate       | Very low        |
| Socio-economic   |          |                |                 |
| Creation of long term employment due to decommissioning activities   | Positive | Very low       | Very low        |
| Traffic  |          |                |                 |
| Traffic congestion due to an increase in traffic caused<br>by the transportation of equipment, material and staff<br>to site | Negative | Very low       | Very low        |

# 5.5 Cumulative Impacts

Cumulative impact assessments take into consideration the impact of the proposed development in addition to other proposed developments in the immediate surrounding area.

In the case of Collector Substation B, the cumulative impact assessment was undertaken at two levels

- 1. The impact of development of all the proposed Springhaas grid connection infrastructure
- 2. The impact of the development of six solar PV clusters consisting of 23 individual solar PV facilities within a 30km radius of the grid connection corridor.

In addition to Collector Substation B there is one further collector substation (Collector Substation B), 7 overhead powerlines each with a capacity of up to 132kV and two LiLo connections with a capacity of up to 400kV which form part of the Springhaas grid connection infrastructure. The cumulative impact assessment assesses the impact of the development of all the proposed grid infrastructure.

## 5.5.1 Cumulative Impact Assessment – Grid Connection

(a) Pre-construction

No significant pre-construction impacts were identified.

(b) Construction

The following impacts will occur during the construction phase of the project.

| Impact  | Status   | <b>Pre-mitigation</b> | Post mitigation |
|---|----------|-----------------------|-----------------|
| Agriculture and soils                               |          |                       |                 |
| Increased areas of land use change from livestock   | Negative | Moderate              | Low             |
| farming to energy transmission                      |          |                       |                 |
| Soil loss through erosion                           | Negative | Moderate              | Very low        |
| Larger areas affected by soil compaction            | Negative | Moderate              | Very low        |
| Increased risk of soil pollution                    | Negative | Moderate              | Very low        |
| Terrestrial biodiversity and animal species         |          |                       |                 |
| Environmental degradation, disturbance to fauna and | Negative | Moderate              | Low             |
| loss of habitat connectivity                        |          |                       |                 |
| Aquatic biodiversity and species                    |          |                       |                 |

Table 5-4: Construction phase cumulative impacts

| Impact   | Status                | Pre-mitigation         | Post mitigation        |
|--|-----------------------|------------------------|------------------------|
| Aquatic habitat disturbance  | Negative              | Very low               | Very low               |
| Archaeological and heritage resources  |                       |                        |                        |
| Alteration of the cultural landscape   | Negative              | Moderate               | Low                    |
| Avifauna   |                       |                        |                        |
| Habitat destruction  | Negative              | Low                    | Low                    |
| Palaeontology  |                       |                        |                        |
| Destruction of fossils in the footprint  | Negative/<br>Positive | Very low<br>(negative) | Very low<br>(positive) |
| Socio-economic   |                       |                        |                        |
| Socio-economic impact - employment   | Positive              | Low                    | Low                    |
| Traffic  |                       |                        |                        |
| Traffic congestion due to an increase in traffic caused<br>by the transportation of equipment, material and<br>staff to site | Negative              | Moderate               | Low                    |

### (c) Operation Phase

The following impacts will occur during the operation phase of the project.

| Impact  | Status    | Pre-mitigation | Post mitigation |
|---|-----------|----------------|-----------------|
| Agriculture and soils   |           |                |                 |
| Soil loss through erosion   | Negative  | Moderate       | Very low        |
| Impaired soil health  | Negative  | Very low       | Very low        |
| Terrestrial biodiversity and animal species                       |           |                |                 |
| Environmental degradation, disturbance to fauna and               | Negative  | Moderate       | Low             |
| loss of habitat connectivity                                      |           |                |                 |
| Aquatic biodiversity and species                                  |           |                |                 |

| Traffic congestion due to trips generated for facility operations | Negative  | Moderate       | Low             |

Table 5-5: Operation phase cumulative impacts

\*visual impacts are rated as high significance for site and a 10km radius due to the visibility of infrastructure. The contribution of Collector Substation B to the cumulative visual impact ranges from very low negative to low negative.

#### (d) Decommissioning Phase

The following impacts will occur during the decommissioning phase of the project.

Table 5-6: Decommissioning phase cumulative impacts

| Impact  | Status    | Pre-mitigation | Post mitigation |
|---|-----------|----------------|-----------------|
| Agriculture and soils                                   |           |                |                 |
| Land use reverting to grazing land                      | Positive  | Very low       | Low             |
| Aquatic biodiversity and species                        |           |                |                 |
| Aquatic habitat disturbance                             | Negative  | Very low       | Very low        |
| Archaeological and heritage resources                   |           |                |                 |
| Alteration of the cultural landscape                    | Negative  | Low            | Very low        |
| Palaeontology   |           |                |                 |
| Destruction of fossils in the footprint                 | Negative/ | Very low       | Very low        |
|   | Positive  | (negative)     | (positive)      |
| Socio-economic  |           |                |                 |
| Socio-economic impact - employment                      | Positive  | Low            | Low             |
| Traffic   |           |                |                 |
| Traffic congestion due to an increase in traffic caused | Negative  | Moderate       | Low             |
| by the transportation of equipment, material and        |           |                |                 |
| staff to site   |           |                |                 |

# 5.5.2 Cumulative Impact Assessment – 30km Radius

(a) Pre-construction

No significant pre-construction impacts were identified.

(b) Construction

The following impacts will occur during the construction phase of the project.

Table 5-7: Construction phase cumulative impacts

| Impact  | Status    | Pre-mitigation | Post mitigation |
|---|-----------|----------------|-----------------|
| Agriculture and soils                                   |           |                |                 |
| Increased areas of land use change from livestock       | Negative  | Moderate       | Low             |
| farming to energy transmission                          |           |                |                 |
| Soil loss through erosion                               | Negative  | Moderate       | Very low        |
| Larger areas affected by soil compaction                | Negative  | Moderate       | Very low        |
| Increased risk of soil pollution                        | Negative  | Moderate       | Very low        |
| Terrestrial biodiversity and animal species             |           |                |                 |
| Environmental degradation, disturbance to fauna and     | Negative  | High           | Moderate        |
| loss of habitat connectivity                            |           |                |                 |
| Aquatic biodiversity and species                        |           |                |                 |
| Aquatic habitat disturbance                             | Negative  | Very low       | Very low        |
| Archaeological and heritage resources                   |           |                |                 |
| Alteration of the cultural landscape                    | Negative  | Moderate       | Low             |
| Avifauna  |           |                |                 |
| Habitat destruction                                     | Negative  | Moderate       | Moderate        |
| Palaeontology   |           |                |                 |
| Destruction of fossils in the footprint                 | Negative/ | Very low       | Very low        |
|   | Positive  | (negative)     | (positive)      |
| Socio-economic  |           |                |                 |
| Socio-economic impact - employment                      | Positive  | Moderate       | Moderate        |
| Traffic   |           |                |                 |
| Traffic congestion due to an increase in traffic caused | Negative  | High           | Moderate        |
| by the transportation of equipment, material and        |           |                |                 |
| staff to site   |           |                |                 |

# (c) Operation Phase

# The following impacts will occur during the operation phase of the project.

Table 5-8: Operation phase cumulative impacts

| Impact  | Status    | Pre-mitigation | Post mitigation |
|---|-----------|----------------|-----------------|
| Agriculture and soils   |           |                |                 |
| Soil loss through erosion   | Negative  | Moderate       | Very low        |
| Impaired soil health  | Negative  | Low            | Very low        |
| Terrestrial biodiversity and animal species                       |           |                |                 |
| Environmental degradation, disturbance to fauna and               | Negative  | High           | Moderate        |
| loss of habitat connectivity                                      |           |                |                 |
| Aquatic biodiversity and species                                  |           |                |                 |
| Aquatic habitat disturbance                                       | Negative  | Very low       | Very low        |
| Archaeological and heritage resources                             |           |                |                 |
| Alteration of the cultural landscape                              | Negative  | Moderate       | Low             |
| Palaeontology   |           |                |                 |
| Destruction of fossils in the footprint                           | Negative/ | Very low       | Very low        |
|   | Positive  | (negative)     | (positive)      |
| Landscape and visual  |           |                |                 |
| Landscape change  | Negative  | Moderate       | Moderate        |
| Impact on protected areas   | Negative  | Moderate       | Moderate        |
| Impact on local roads   | Negative  | Moderate       | Moderate        |
| Socio-economic  |           |                |                 |
| Socio-economic impact - employment                                | Positive  | Moderate       | Moderate        |
| Traffic   |           |                |                 |
| Traffic congestion due to trips generated for facility operations | Negative  | Moderate       | Low             |

# (d) Decommissioning Phase

The following impacts will occur during the decommissioning phase of the project.

| Impact  | Status    | Pre-mitigation | Post mitigation |
|---|-----------|----------------|-----------------|
| Agriculture and soils                                   |           |                |                 |
| Land use reverting to grazing land                      | Positive  | Very low       | Low             |
| Terrestrial biodiversity and animal species             |           |                |                 |
| Environmental degradation, disturbance to fauna and     | Negative  | High           | Moderate        |
| loss of habitat connectivity                            |           |                |                 |
| Aquatic biodiversity and species                        |           |                |                 |
| Aquatic habitat disturbance                             | Negative  | Very low       | Very low        |
| Archaeological and heritage resources                   |           |                |                 |
| Alteration of the cultural landscape through the        | Negative  | Moderate       | Low             |
| presence of construction vehicles and activities        |           |                |                 |
| Palaeontology   |           |                |                 |
| Destruction of fossils in the footprint                 | Negative/ | Very low       | Very low        |
|   | Positive  | (negative)     | (positive)      |
| Socio-economic  |           |                |                 |
| Socio-economic impact - employment                      | Positive  | Moderate       | Moderate        |
| Traffic   |           |                |                 |
| Traffic congestion due to an increase in traffic caused | Negative  | High           | Moderate        |
| by the transportation of equipment, material and        |           |                |                 |
| staff to site   |           |                |                 |

Table 5-9: Decommissioning phase cumulative impacts

# 5.6 Impact Statement

# 5.6.1 Pre-Construction Phase

No significant pre-construction impacts were identified by the specialist team or EAP.

# 5.6.2 Construction Phase

Construction phase impacts would be short term in duration, 6 - 18 months. All of the negative construction phase impacts were rated as low or very low post mitigation with the exception of the visual impact associated with the change in character of the area due to industrialisation which was rated as a moderate negative impact.

The impact on palaeontological resources, destruction of fossils within the footprint of the development as a result of construction activities was rated as a negative impact of very low significance pre-mitigation and as a positive impact of very low significant post mitigation. If mitigation is correctly implemented any fossils uncovered would be reported via a palaeontologist and curated and stored at a museum or palaeontology department at a university. This would be a positive impact as it would contribute to a fossil record.

The construction phase of the project would result in an increase in spend on gross domestic product and increased short term local employment. Both of these impacts are rated as positive impacts of very low significance. It is important to note that the purpose of Collector Substation B is to connect Springhaas Solar Facilities 2, 4, 5 and 7 to the national grid. In order to realise the positive impacts associated with the solar PV facilities Collector Substation B is required.

No fatal flaws were identified with the construction phase of the project.

# 5.6.3 Operational Phase

Operational phase impacts would be long term in duration, in excess of 5 years. All of the negative operational phase impacts were rated as low or very low post mitigation with the exception of the visual impact associated with the change in character of the area due to industrialisation which was rated as a moderate negative impact. No fatal flaws were identified with the construction phase of the project.

Impacts on palaeontological resources, destruction of fossils within the footprint of development as a result of maintenance activities was rated as a negative impact of very low significance premitigation and as a positive impact of very low significant post mitigation. If mitigation is correctly implemented any fossils uncovered would be reported via a palaeontologist and curated and stored at a museum or palaeontology department at a university. This would be a positive impact as it would contribute to a fossil record.

The operational phase would result in long term local employment. This impact is rated as positive of very low significance. It is important to note that the purpose of Collector Substation B is to connect Springhaas Solar Facilities 2, 4, 5 and 7 to the national grid. In order to realise the positive impacts associated with the solar PV facilities Collector Substation B is required.

# 5.6.4 Cumulative Impact – Grid Connection Level

The cumulative impact at a grid level refers to the combined impact of all eleven grid connection components being developed simultaneously. In reality not all of the grid connection infrastructure may be required. The grid connection infrastructure is required to connect the proposed Springhaas Solar PV facilities to the national grid. If these projects are not awarded preferred bidder status, move forward to financial close and are constructed the grid infrastructure would not be required.

The negative cumulative impacts associated with the construction and decommissioning phases of the development were all rated as low or very low significance post mitigation.

The negative cumulative impacts of the operation phase of the grid connection projects were also all rated as low or very significance post mitigation with the exception of visual impacts which all remained as high significance impacts post mitigation.

The cumulative impact of job creation was rated as a positive impact of low significance at each of the project phases due to short term job creation during the construction and decommissioning phases and long-term job creation during the operational phase.

# 5.6.5 Cumulative Impact – 30km radius

The cumulative impact was assessed for an area of 30km surrounding the grid connection corridor. There are six solar PV clusters consisting of 23 individual solar PV facilities and within a 30km radius of the Springhaas grid connection corridor. Each of the 23 solar PV facilities would also require supporting infrastructure (powerlines, substations, access roads) to allow them to connect into the national grid. The cumulative impact assessment is undertaken on the assumption that all 23 solar PV facilities and supporting infrastructure would be constructed. It is unlikely that this would happen as each of the solar PV facilities, if going through the Independent Power Producer Procurement Programme would need to selected as a preferred bidder and reach financial close. In reality, it is highly unlikely that all of the project would be constructed.

The post mitigation ratings of negative cumulative impacts of the construction, operation and decommissioning phases of the various proposed development within a 30km radius of the grid connection corridor ranged from very low to moderate significance. The impacts rated as moderate relate to ecological impacts from loss of habitat and disturbance of fauna which would occur if all the solar PV facilities and associated infrastructure was developed. Traffic impacts were also rated as a negative impact of moderate significance, if all 23 solar PV facilities and associated infrastructure were constructed simultaneously there would be moderate traffic impact.

A positive socio-economic impact of moderate significance is anticipated for all project phases due to the combined employment opportunities from the various developments.

# 6 Public Participation Process

A Public Participation Process (PPP) has concluded. Public participation is the involvement of all parties who potentially have an interest in a development or project or may be affected by it.

The principal objective of public participation is to inform and enrich decision-making. These principles include the provision of sufficient and transparent information to I&APs on an on-going basis, to allow them to comment and ensure the participation of historically disadvantaged individuals, including women, the disabled and the youth.

The PPP aims to:

- Ensure all relevant key stakeholders and I&APs have been identified and invited to engage in the ESR Process;
- Raise awareness, educate and increase understanding of stakeholders about the proposed project, the affected environment and the environmental process being undertaken;
- Create open channels of communication between key stakeholders and I&APs and the project team;
- Provide opportunities for key stakeholders and I&APs to identify issues or concerns and propose suggestions for enhancing potential benefits;
- Provide opportunities for key stakeholders and I&APs to provide suggestions in terms of mitigating the severity of potential impacts that may result from the project; and
- Accurately document all opinions, concerns and queries raised regarding the project.

# 6.1.1 Identification of Key Stakeholders and I&APs

The identification and registration of I&APs is an on-going activity during the course of the ESR Process. GIBB Environmental has developed, and will maintain and update, an electronic I&AP database for the project during the ESR phase (see **Appendix B**, note the I&AP database is excluded from document made available to the public). As such, I&APs were identified using the following:

- Existing I&AP databases obtained from the Applicant (where available / applicable);
- Existing I&AP databases for other projects within the study area (where available);
- Placement of an advertisement in two local newspapers (The Express 10 August 2022 and Noordkaap Bulletin 11 August 2022) in English and Afrikaans;
- Placement of site notice boards around the grid connection corridor and posters in Dealesville on 07 February 2023

As indicated above an I&AP database is included in **Appendix B**. I&APs representing the following sectors of society were identified:

- National, provincial and local government;
- Affected landowners/ occupiers
- Adjacent landowners/ occupiers
- Ward councillors and committees;

- Community Based Organisations;
- Non-Governmental Organisations;
- Business, Religious and Civic Organisations;
- Service Providers; and
- Relevant Parastatals.

# 6.1.2 Public Announcement of the Project

Interested and Affected Parties (I&APs), as listed above, were informed of the Proposed Development and were requested to register, review the BID and Draft Environmental Sensitivity Report and submit their comments to GIBB Environmental by means of the following:

- Publication of newspaper advertisements in the Express and Noordkaap Bulletin (Appendix B); and
- Placement of site notice boards and posters; and
- Distribution of notification letters by email.

# 6.1.3 Environmental Sensitivity Report for Public Review

The BID was made available on GIBB's website on 11 August 2022 and potential I&APs were informed in writing of the availability thereof and procedure to follow to register as an I&AP. The draft ESR were made available electronically on GIBB's website for the 30-day public participation period from 21 September – 22 October 2022.

A hard copy of the DESR was also made available at Tshwaranang (Dealesville) Public Library.

## 6.1.4 Draft Environmental Sensitivity Report

The draft ESR was made available for a 30-day review period from 21<sup>st</sup> September – 21<sup>st</sup> October 2022 and from 07 February 2023 to 08 March 2023.

A hardcopy of the draft ESR was made available at the Tshwaranang (Dealesville) Primary Library, Potlaki Street, Tshwaranang, Dealesville, 9341

The draft ESR was available electronically for download from the GIBB Environmental website. It was communicated to I&APs that CD copies of the report could be made available. No requests were received.

All comments made on the draft ESR during the first public review period have been captured and adequately responded to in the Comments and Response Report (CRR) (Appendix B).

All comments received during the second review period from I&APs have been addressed in the revised final ESR (this report).

## 6.1.5 Final Environmental Sensitivity Report

The revised final ESR **(this report)** has been compiled and submitted to the DFFE for decision making upon completion of the public participation process of the draft ESR.

# The revised final ESR (this report) has been made available for I&APs for information purposes.

Registered I&APs will be notified of the availability of the revised final ESR. Registered I&APs will then be notified of the decision issued by the DFFE within the legislated timeframe.

### 6.1.6 Compliance of Public Participation Process with NEMA EIA Regulation Requirements

All relevant aspects of Chapter 6, Regulation 41 of the EIA Regulations 2014, as amended has been complied with as follows:

| NEN | /IA PPP requirement   | Actions undertaken   |
|-----|---|--|
| (d) | Fixing a notice board at a place<br>conspicuous to and accessible by the<br>public at the boundary, on the fence or<br>along the corridor of<br>(i) the site where the activity to which the<br>application or proposed application relates<br>is or is to be undertaken  | This was done on 06 & 07 February 2023, with the 30-day comment period on the DESR from 07 February to 08 March 2023   |
| (e) | Giving written notice, in any of the<br>manners provided for in section 47D of the<br>Act, to<br>(i) the occupiers of the site and, if the<br>proponent or applicant is not the owner or<br>person in control of the site where the<br>activity is to be undertaken, the owner or<br>person in control of the site where the<br>activity is or to be undertaken.<br>(iii) the municipal councillor of the ward in<br>which the site and alternative is situated<br>and any organisation of rate payers that<br>represent the community in the area<br>(iv) the municipality which has jurisdiction<br>in the area<br>(v) any organ of state having jurisdiction in<br>the area<br>(vi) any other party as required by the<br>competent authority. | This was done on 11 August 2022, this notification informed<br>potential I&APs of the availability of the BID and the<br>procedure to be followed to register as an I&AP.<br>A second notification was sent to I&APs on 21 September to<br>indicate the availability of the DESR with the 30-day<br>comment period on the DESR from 21 September – 21<br>October 2022.<br>DFFE were provided with a 30 day period to review the DESR<br>from 07 February to 08 March 2023. This report was no<br>materially different to the version provided to I&APs from 21<br>September – 21 October 2022.<br>In addition, engagement was undertaken with several parties<br>including VULPRO, BirdLife SA, EWT and DFFE Biodiversity<br>and Conservation Directorate. Where these parties<br>commented within the allocated 30 day period comments<br>have been captured in the comments and responses report<br>(Appendix 14). |
| (f) | <ul> <li>Placing an advertisement in-</li> <li>(j) One local newspaper; or</li> <li>(ii) any official Gazette that is published specifically for the purpose of providing public notice of applications or other submissions made in terms of these Regulations</li> </ul>  | Adverts were placed two local newspapers in both English<br>and Afrikaans:<br>10 August 2022 – Express<br>11 August 2022 – Noordkaap Bulletin<br>These newspaper adverts informed potential I&APs of the<br>availability of the BID and the procedure to be followed to<br>register as an I&AP.  |
