2.1.1.2 Environmental sensitivities

The Screening Tool report (page 78 of the report, **Appendix A**) has identified the following environmental sensitivities that have been classified to have either a “Very High” or “High” Sensitivity:

- Agricultural theme with “Very High” sensitivity features, with land capability and annual crop cultivation that has been rated as “High”;
- Animal Species theme with “High” sensitivity including the “Aves-Geronticus calvus” feature as “High”;

- Aquatic Biodiversity theme with “Very High” sensitivity features which are classified as Wetlands and Estuaries;
- Archaeological and Cultural Heritage theme with “Very High” sensitivity features that are associated with infrastructure within 100 m and 50 m of a Grade IIIb and Grade IIIc Heritage site, respectively;
- Civil Aviation theme with “High” a sensitivity feature because the Alexander Mine is located within 8 km of a civil aerodrome;
- A Palaeontology theme with “Very High” sensitivity features;
- Terrestrial Biodiversity theme with “Very High” sensitivity features as the proposed project area falls within a Vulnerable ecosystem, Critical Biodiversity Areas (CBA) and Ecological Support Areas (ESA), and Focus Areas for land-based protected areas expansion.

It should be noted that the although the aquatic and terrestrial biodiversity are of high biodiversity value, a large extent of the project area has been transformed by agricultural and mining activities.

An overview of the status quo of the environmental sensitivities within the identified themes is discussed below. All specialist studies mentioned below will be included in the EIA Report for the Alexander Mining Project.

Agriculture

As stated above, the Alexander Project is greenfields project and the area that has been granted the Mining Right covers an area which is predominately arable, as can be seen in **Figure 2-2** above. The Land capability has been found to be of high value and thus confirms the outcomes of the screening tool.

The potential loss of valuable soil resource and land capability is expected during the construction and operational phases of the project, however, these impacts can be mitigated to acceptable levels. This has been addressed in the Soils, and Land Capability Assessment undertaken for the project.

Aquatic and Terrestrial Biodiversity

The broader area in which the proposed mining is located incorporates some highly sensitive untransformed grassland, wetlands and species of conservation concern. A portion of the untransformed vegetation within the project area falls within a CBA (Lotter *et al*, 2014). A portion of the untransformed vegetation is also classified as Other Natural Habitats, while the transformed areas are classified as Modified.

The Very High Aquatic and Terrestrial Biodiversity sensitivity identified by the screening tool can be confirmed by the following habitat descriptions:

Semi-natural Mesic Grassland (Moist Grassland and Rocky Grassland)

This habitat type is regarded as semi-natural grassland, but slightly disturbed due to grazing by livestock and also human infringement in areas close to the roads. The Mesic Grassland habitat still persists in an area transformed largely due to agriculture due to the fact that these areas don't allow the land use due to topography and water saturation

The current ecological condition of this habitat in regard to the main driving forces, are intact; which is evident by the number of faunal species (including Species of Conservation Concern (SCCs)) recorded and the high floral species diversity and densities.

This habitat unit can thus be regarded as critically important, not only within the local landscape, but also regionally; it acts are a buffer for the wetland habitats and the only

remaining green lands, used for habitat, foraging area and movement corridors for fauna (including SCC) within a landscape fragmented by agriculture and mining to more natural areas where they may reproduce. The habitat sensitivity of the Mesic Grassland is regarded as high, due to floral and faunal species recorded as well as the role of this intact habitat to biodiversity within a very fragmented local landscape, not to mention the various ecological datasets.

Modified Grassland (Disturbed and Degraded)

The disturbed habitat is regarded as areas that have been impacted by edge effects of transformed areas as well as direct impacts from littering, overgrazing, dumping and infringement. The degraded grassland habitat is habitat where the condition of these grassland's ranges from moderately disturbed (largely due to grazing) to semi-natural grassland but fragmented grassland. The difference between this habitat and the disturbed grassland is the extent of the disturbance in the disturbed grassland being more severe.

Collectively these habitats can be regarded as modified grassland. These habitats are not entirely transformed but in a constant modified state as it cannot recover to a more natural state due to ongoing disturbances and pressures imposed from the surrounding transformed areas and the current land use, in most cases grazing pastures. These areas are considered to have a low-moderate sensitivity due to the fact that these areas may be used as a movement corridor and in many cases form a barrier between the more natural mesic grassland and the modified/transformed areas.

Wetlands and Watercourses

Even though somewhat disturbed in the project area, the ecological integrity, importance and functioning of these areas play a crucial role as a water resource system and an important habitat for various fauna and flora, including the SCC recorded.

The preservation of these systems is the most important aspect to consider for the proposed development, even more so due to the high sensitivity of the area according to the various ecological datasets.

Transformed

This habitat unit represents all areas of agriculture farms, mainly Maize and Soya (old and recent), associated roads, built infrastructure and all mining infrastructure. Due to the transformed nature of this habitat, it is regarded as having a low concern sensitivity.

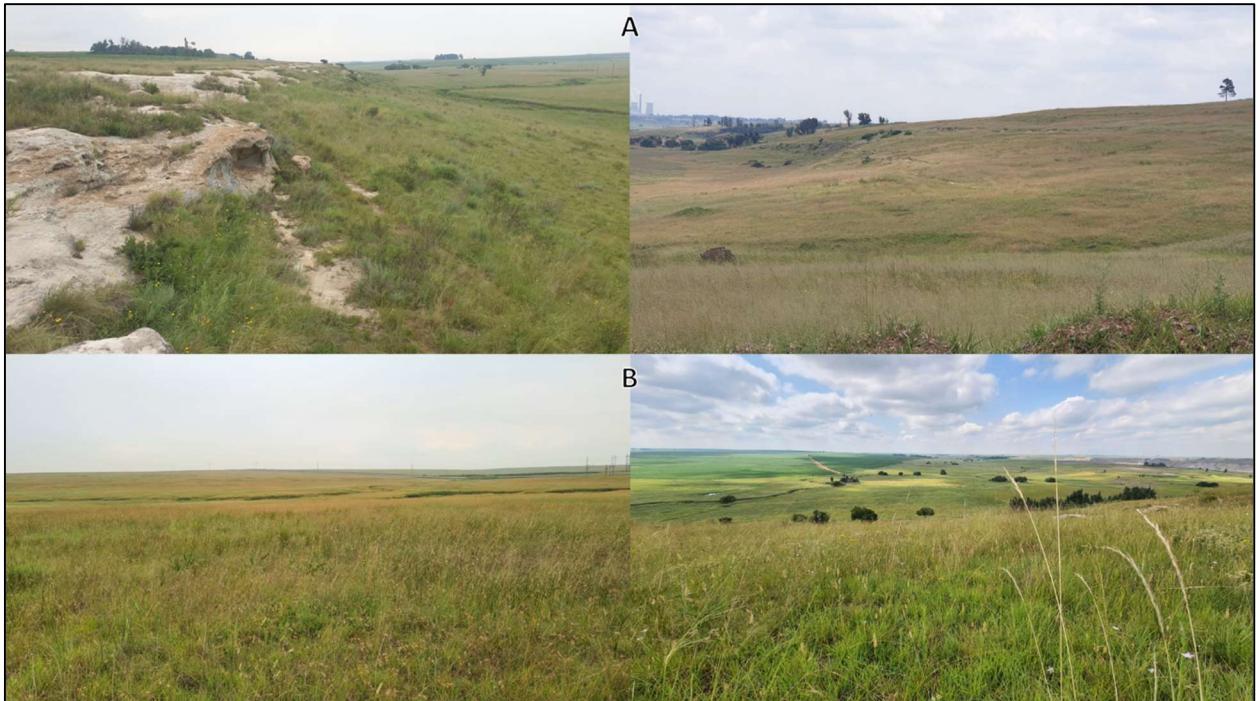

Figure 2-3: Photographs of the dominant habitat type in the project area: A) Rocky Grassland; B) Moist Grassland (TBC, 2022)

In addition to the above, the following environmental sensitivities can be noted:

- The Steenkoolspruit, Piekespruit and Debeerspruit floodplain systems are gazetted Priority floodplain systems (GN. No 932 of 7 September 2018). All wetlands feeding the Priority Wetlands form part of the Priority system as they are critical in maintaining the Present Ecological State (PES) and form part of the Importance and Sensitivity (IS) categorisation of the system.
- According to the most recent Wetland Map 5, released as part of the National Biodiversity Assessment (2018) the seeps, floodplains and channelled valley bottoms within the area have an Ecosystem Threat Status (ETS) of Critical. This threat status will increase the hectare equivalents that need to be replaced.
- The sandstone ridges and associated habitats running along the northern side of the Steenkoolspruit have been identified as a key feature of the floodplain system that supports one of the prioritisation criteria making the system representative of a type unique to a particular area or region. This habitat is irreplaceable and needs to be protected as part of the Priority Wetland. The floodplains plus the rocky ridges are also classified as Critical Biodiversity Areas (CBA's) and Ecological Support Areas (ESA's). These ridges also have sheetrock wetlands in some places which are generally known to support relatively unique assemblages of biota. All areas to the north of the Steenkoolspruit have therefore been classified as No-Go areas in terms of opencast mining.

The establishment of infrastructure as well as certain supportive activities have the potential to result in the loss of vegetation, habitat and related ecosystem functionality through physical disturbance and/or contamination of soil and/or water resources. Due to the sensitivities of the wetlands that have been gazetted, a great deal of work has gone into optimising the mine plan and infrastructure layouts to minimise the destruction and disturbance of biodiversity and the loss of soil resources. Sasol has reduced the mineable

reserves at Alexander by 39 million tonnes due to environmental and geotechnical sensitivities. The specialist Terrestrial Biodiversity and Aquatic Assessments provide mitigation measures to address the risks to these environmental sensitivities.

Archaeological and Cultural Heritage

The cultural landscape of the local study area comprises five heritage resources categories. These include Stone and Iron Age remains, historical structures and graves, as well as fossils.

The majority of heritage resources comprise burial grounds and graves, which combined with historical built environment resources accounts for 84% of identified heritage. Archaeological heritage only accounts for less than 14% of the total number of identified sites, whilst resources described as cultural landscapes, geological sites or palaeontological resources are less than 1%. Burial grounds are considered to have very high cultural significance and a Grade IIIA Field Rating is recommended for all burial grounds and graves. Historical built environment heritage resources are considered to be of medium-high cultural significance and a Grade IIIB Field Rating is recommended.

The development of the proposed Alexander Mining Project can have significant effects on surface heritage resources. However, only one site will be directly affected. Impacts on the remaining heritage resources can be mitigated and managed if the recommendations of this report are implemented.

Sasol considered a number of mining and infrastructure alternatives to determine the preferred layout and methodology with lower impacts.

2.2 Specialist assessments identified and assessments included in the application for EA

The specialist assessments identified through the National Web Based Environmental Screening Tool are provided on page 79 of the generated Screening Report (**Appendix A**). These specialist reports are based on the Classification Category selected when compiling the Screening Report and are a guideline in terms of the assessments which may be required, based on the Development Type.

The list of specialist assessments listed in the Screening Report and the extent to which they have been considered in the application for EA for the Alexander Mining project, is indicated in Error! Reference source not found. below. Where applicable, motivation is provided for the exclusion of certain specialist assessments. All specialist assessments will be made available with the EIA Report for the Alexander Mining Project.

Table 2-1: Specialist assessments

Specialist assessments listed in the Screening Report generated from the National Web Based Environmental Screening Tool	Included in EA application	Extent to which it is included in the application for EA and specialist studies assessment submitted in support thereof
Agricultural Impact Assessment	Yes	A Soils, Land Use and Land Capability Assessment has been undertaken by Jones & Wagener.
Landscape/Visual Impact Assessment	Yes	A Visual Impact Assessment has been undertaken by Jones & Wagener.
Archaeological and Cultural Heritage Impact Assessment	Yes	A Phase 1 Heritage Assessment including a Paleontological Assessment have been undertaken by Digby Wells.

Specialist assessments listed in the Screening Report generated from the National Web Based Environmental Screening Tool	Included in EA application	Extent to which it is included in the application for EA and specialist studies assessment submitted in support thereof
Palaeontological Impact Assessment	Yes	A Phase 1 Heritage Assessment including a Paleontological Assessment have been undertaken by Digby Wells.
Terrestrial Biodiversity Impact Assessment	Yes	A Terrestrial Biodiversity Assessment has been undertaken by The Biodiversity Company.
Aquatic Biodiversity Impact Assessment	Yes	An Aquatics and Wetlands Impact Assessment have been undertaken by The Biodiversity Company.
Hydrological Impact Assessment	Yes	A Surface Water Assessment and Hydrogeological Assessment have been undertaken by Jones & Wagener.
Nosie Impact Assessment	Yes	A Noise Impact Assessment has been by Airshed Planning Professionals.
Radioactivity Impact Assessment	No	Please refer to Section 3 for motivation to exclude the assessment.
Traffic Impact Assessment	Yes	A Traffic Impact Assessment has been undertaken by WSP consulting.
Geotechnical Assessment	Yes	A Geotechnical Assessment is being undertaken on behalf of GIBB Mining (Sasol-appointed design engineer) as part of the feasibility designs. The design report will be included in the EIA.
Climate Impact Assessment	Yes	A Climate Impact Assessment has been undertaken by Airshed Planning Professionals.
Health Impact Assessment	No	Not included as a stand-alone assessment, however aspects related to health risks such as the potential for non-carcinogenic health impacts have been assessed in the Air Quality Impact Assessment. Average pollutants concentrations were also compared to available health effect screening levels.
Socio-Economic Assessment	Yes	A Socio-Economic Impact Assessment has been undertaken by Conningarth Economists.
Ambient Air Quality Impact Assessment	Yes	An Air Quality Impact Assessment has been undertaken by Airshed Planning Professionals.
Seismicity Assessment	Yes	A Blasting and Vibrations Assessment will be undertaken by Blast Management & Consulting.
Plant Species Assessment	Yes	A Terrestrial Biodiversity Impact Assessment has been undertaken by The Biodiversity Company.
Animal Species Assessment	Yes	A Terrestrial Biodiversity Impact Assessment has been undertaken by The Biodiversity Company.

3. MOTIVATION FOR EXCLUSION OF IDENTIFIED SPECIALIST ASSESSMENTS

According to the GN 320 Procedures for *The Assessment And Minimum Criteria For Reporting on Identified Environmental Themes in terms of Sections 24(5)(A) And (H) and 44 of the National Environmental Management Act, 1998, when Applying for Environmental Authorisation*, where information gathered from the site sensitivity verification differs from the designation of “very high” or “high” environmental sensitivity, and it is found to be “medium” or “low” sensitivity, a compliance statement must be submitted.

In line with the above, this section therefore addresses the motivation to exclude specific specialist assessments which have been identified by the screening tool.

3.1.1 Radioactivity Impact Assessment

Radioactivity Assessments are typically undertaken for gold mines to assess levels of radionuclides in soils or tailings facilities. Coal typically consists of a variety of organic and inorganic components. One reason for health concerns is that toxic trace elements from commercial combustion sources are enriched on the surface of particulate matter (less than 2.5 µm), compared to bulk particulate matter (Ahmed et al. 2020). Some trace elements in coal are naturally radioactive. These radioactive elements include uranium (U), thorium (Th), and their numerous decay products—including radium (Ra) and radon (Rn) (Ahmed et al. 2020).

When coal is burned, coal combustion residuals (CCR) such as fly ash, bottom ash and boiler slag are formed. The concentration of most radioactive elements in solid combustion wastes such as fly ash and bottom ash will be multiple times higher than the concentration in the original coal.

A study by Ahmed et al., 2020 quantified uranium (U), thorium (Th) and specific radionuclides found in the coal used in selected South African Coal-Fired Power Plants (CFPP) in comparison to world averages found in literature.

Radiological hazard indices such as radium equivalent (Ra_{eq}); external hazard index (H_{ex}) and internal hazard index (H_{in}), that were estimated from these average radionuclide concentrations were less than the prescribed values found in literature (see **Table 3-1**). The calculated value for the radium (Ra_{eq}) activity index for the three CFPP were in the range of 61.35 to 91.06 Bq/kg. The H_{ex} values ranged between 0.17 to 0.25. The Ra_{eq} values established were lower than 370 Bq/kg and the H_{ex} was less than 1, both of these values are within the prescribed limits set by United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR). The degree of internal exposure of Rn and its decay products is quantified by the internal hazard index (H_{in}) and for this study recorded values of 0.22 to 0.39 which are below the prescribed limits by the UNSCEAR, which is less than 1. Mpumalanga's (in which the SO are located) Ra_{eq} values were 61.35 while the internal hazard index was found to be 0.22.

Table 3-1: Radium equivalent (Bq/kg), external and internal hazard Index for the coal used in the three coal fired power plants (Ahmed et al. 2020)

Location of Coal Fired Power Plant	Ra_{eq}	H_{ex}	H_{in}
Mpumalanga	61.35	0.17	0.22
Limpopo	91.06	0.25	0.39
Free State	61.39	0.17	0.23

As demonstrated by the study above, it is unlikely that the coal that will be produced at the Alexander operations will have high concentrations of radionuclides. A Radioactivity Impact Assessment has not been deemed necessary for as part of this EA application for reasons stated above.

3.1.2 Health Impact Assessment

While a Health Impact Assessment is not included as a stand-alone specialist study, aspects relating to health risks - such as the potential for non-carcinogenic health impacts - have been assessed in the Air Quality Impact Assessment. Average pollutants concentrations were also compared to available health effect screening levels.

4. CONCLUSION

We are of the opinion that all relevant specialist studies to determine the impacts of the proposed Alexander Mining Project have been undertaken and will be included in the Scoping and Environmental Impact Reporting, to address any key environmental issues.

Environmental screening results and assessment outcomes

The following sections contain a summary of any development incentives, restrictions, exclusions or prohibitions that apply to the proposed development footprint as well as the most environmental sensitive features on the footprint based on the footprint sensitivity screening results for the application classification that was selected. The application classification selected for this report is:

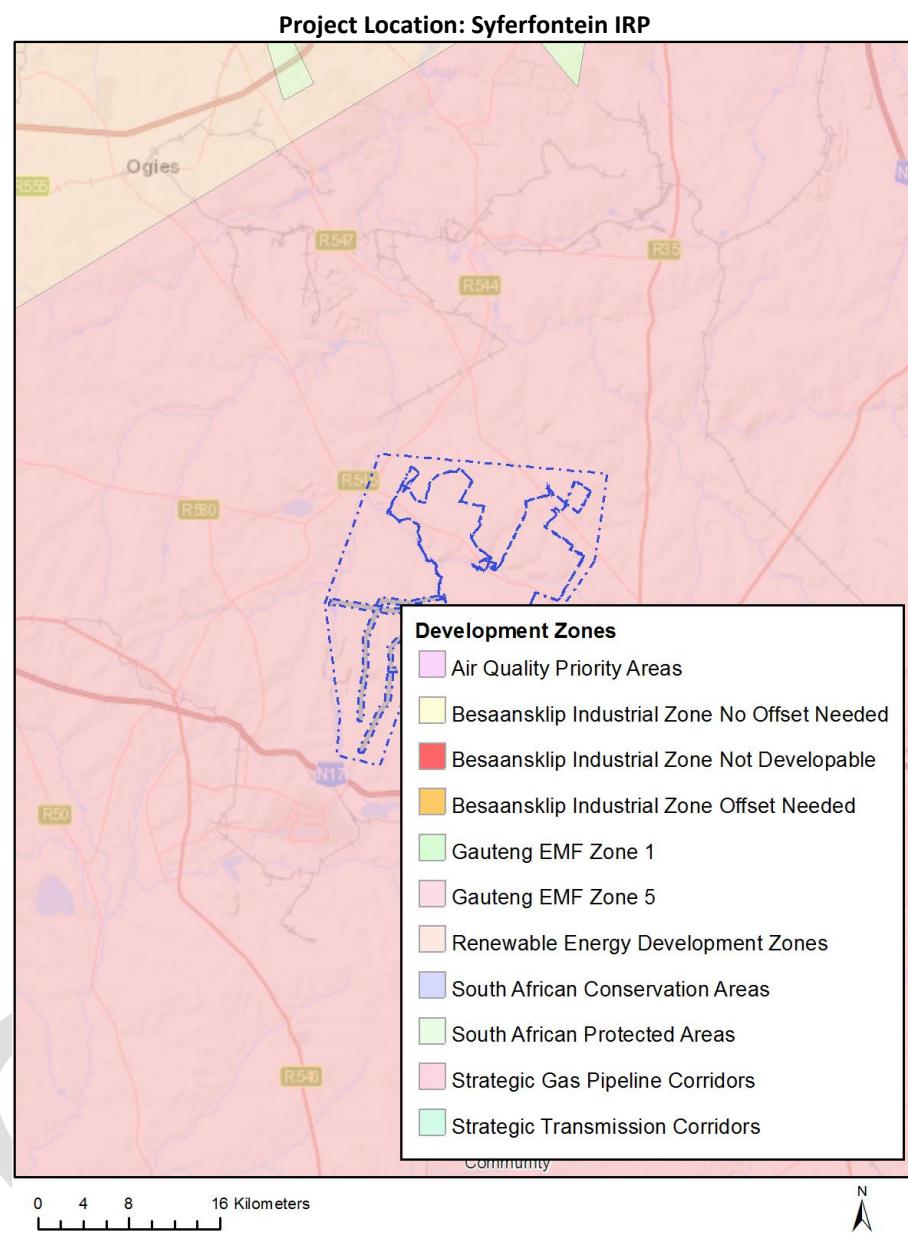

Mining | Mining Right.

Relevant development incentives, restrictions, exclusions or prohibitions

The following development incentives, restrictions, exclusions or prohibitions and their implications that apply to this footprint are indicated below.

Incentive, restriction or prohibition	Implication
Air Quality-Highveld Priority Area	https://screening.environment.gov.za/ScreeningDownloads/DevelopmentZones/HIGH VELD PRIORITY AREA AQMP.pdf
Strategic Gas Pipeline Corridors -Phase 8: Rompcos Pipeline Corridor	https://screening.environment.gov.za/ScreeningDownloads/DevelopmentZones/Combined_GAS.pdf

Map indicating proposed development footprint within applicable development incentive, restriction, exclusion or prohibition zones

Proposed Development Area Environmental Sensitivity

The following summary of the development footprint environmental sensitivities is identified. Only the highest environmental sensitivity is indicated. The footprint environmental sensitivities for the proposed development footprint as identified, are indicative only and must be verified on site by a suitably qualified person before the specialist assessments identified below can be confirmed.

Theme	Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
Agriculture Theme	X			
Animal Species Theme		X		

Aquatic Biodiversity Theme	X			
Archaeological and Cultural Heritage Theme	X			
Civil Aviation Theme		X		
Defence Theme				X
Paleontology Theme	X			
Plant Species Theme			X	
Terrestrial Biodiversity Theme	X			

Specialist assessments identified

Based on the selected classification, and the environmental sensitivities of the proposed development footprint, the following list of specialist assessments have been identified for inclusion in the assessment report. It is the responsibility of the EAP to confirm this list and to motivate in the assessment report, the reason for not including any of the identified specialist study including the provision of photographic evidence of the footprint situation.

Results of the environmental sensitivity of the proposed area.

The following section represents the results of the screening for environmental sensitivity of the proposed footprint for relevant environmental themes associated with the project classification. It is the duty of the EAP to ensure that the environmental themes provided by the screening tool are comprehensive and complete for the project. Refer to the disclaimer.

Very High	Pivot Irrigation;Land capability;09. Moderate-High/10. Moderate-High

MAP OF RELATIVE ANIMAL SPECIES THEME SENSITIVITY

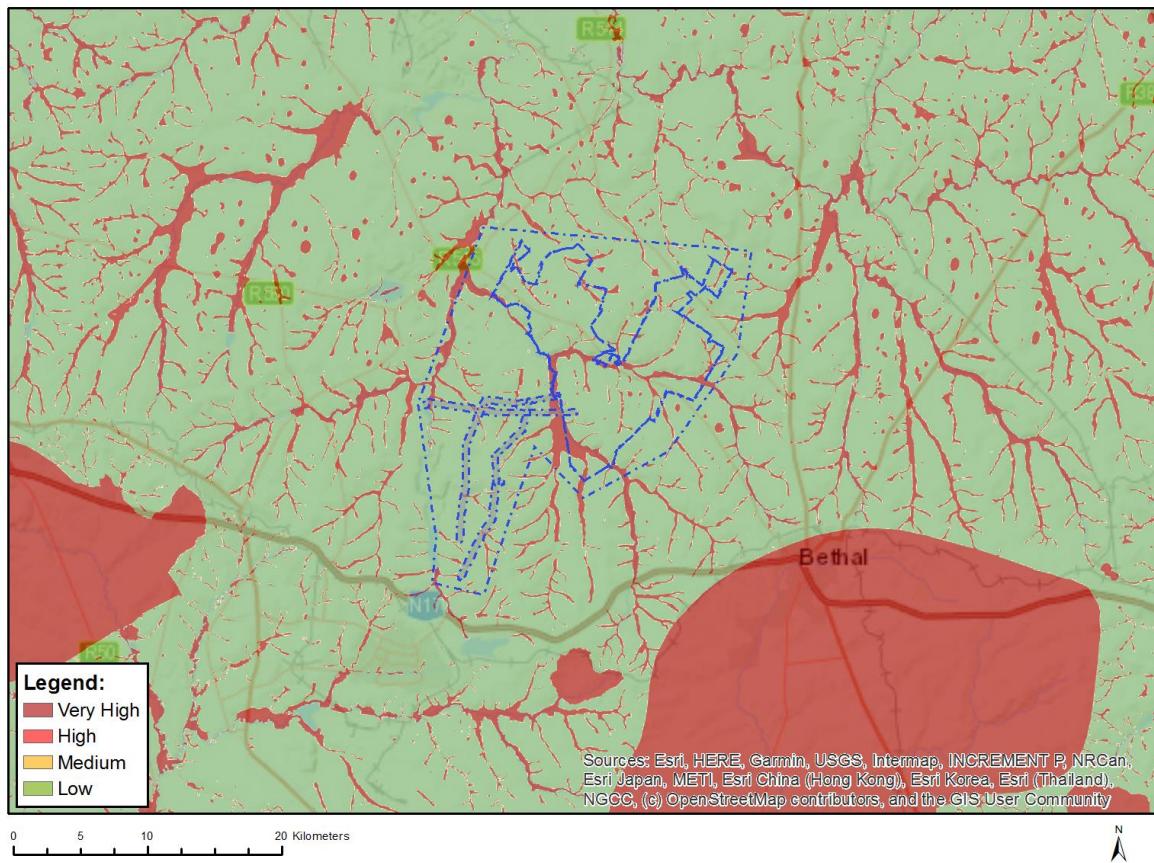

Where only a sensitive plant unique number or sensitive animal unique number is provided in the screening report and an assessment is required, the environmental assessment practitioner (EAP) or specialist is required to email SANBI at eiadatarequests@sanbi.org.za listing all sensitive species with their unique identifiers for which information is required. The name has been withheld as the species may be prone to illegal harvesting and must be protected. SANBI will release the actual species name after the details of the EAP or specialist have been documented.

Medium	Aves-Sagittarius serpentarius
Medium	Insecta-Lepidochrysops procera
Medium	Mammalia-Crocidura maquassiensis
Medium	Mammalia-Dasymys robertsii
Medium	Mammalia-Hydrictis maculicollis
Medium	Mammalia-Ourebia ourebi ourebi

MAP OF RELATIVE AQUATIC BIODIVERSITY THEME SENSITIVITY

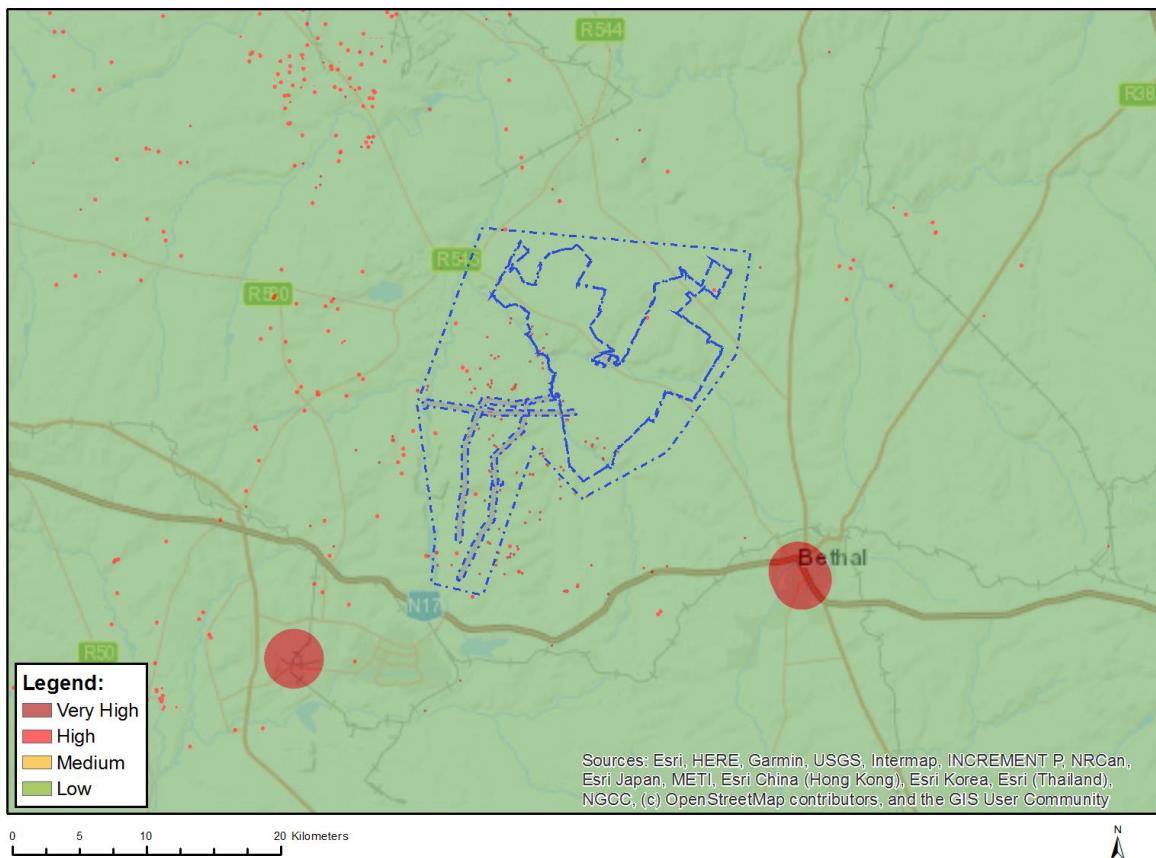

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
X			

Sensitivity Features:

Sensitivity	Feature(s)
Low	Low sensitivity
Very High	Wetlands and Estuaries

MAP OF RELATIVE ARCHAEOLOGICAL AND CULTURAL HERITAGE THEME SENSITIVITY

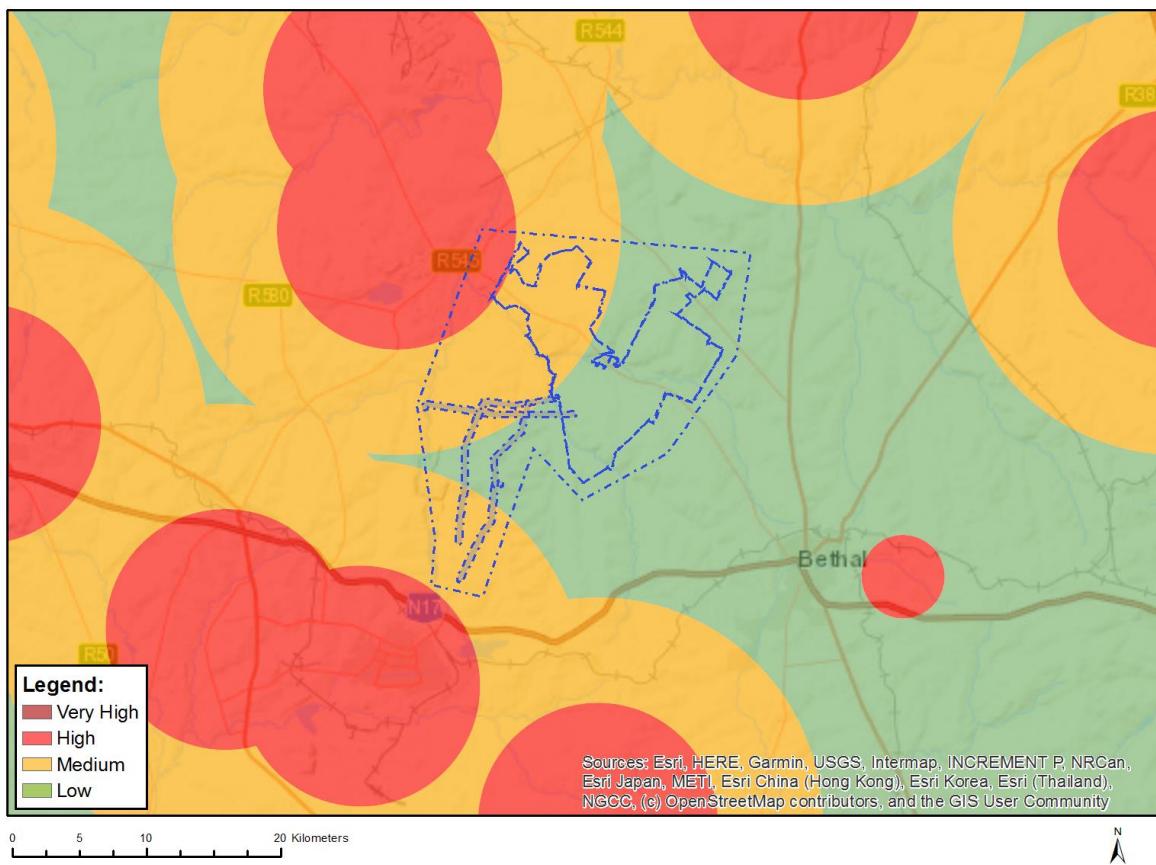

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
X			

Sensitivity Features:

Sensitivity	Feature(s)
High	Within 100m of a Grade IIIB Heritage site
High	Within 50m of a Grade IIIC Heritage site
Low	Low sensitivity
Very High	Within 100m of an Ungraded Heritage site

MAP OF RELATIVE CIVIL AVIATION THEME SENSITIVITY

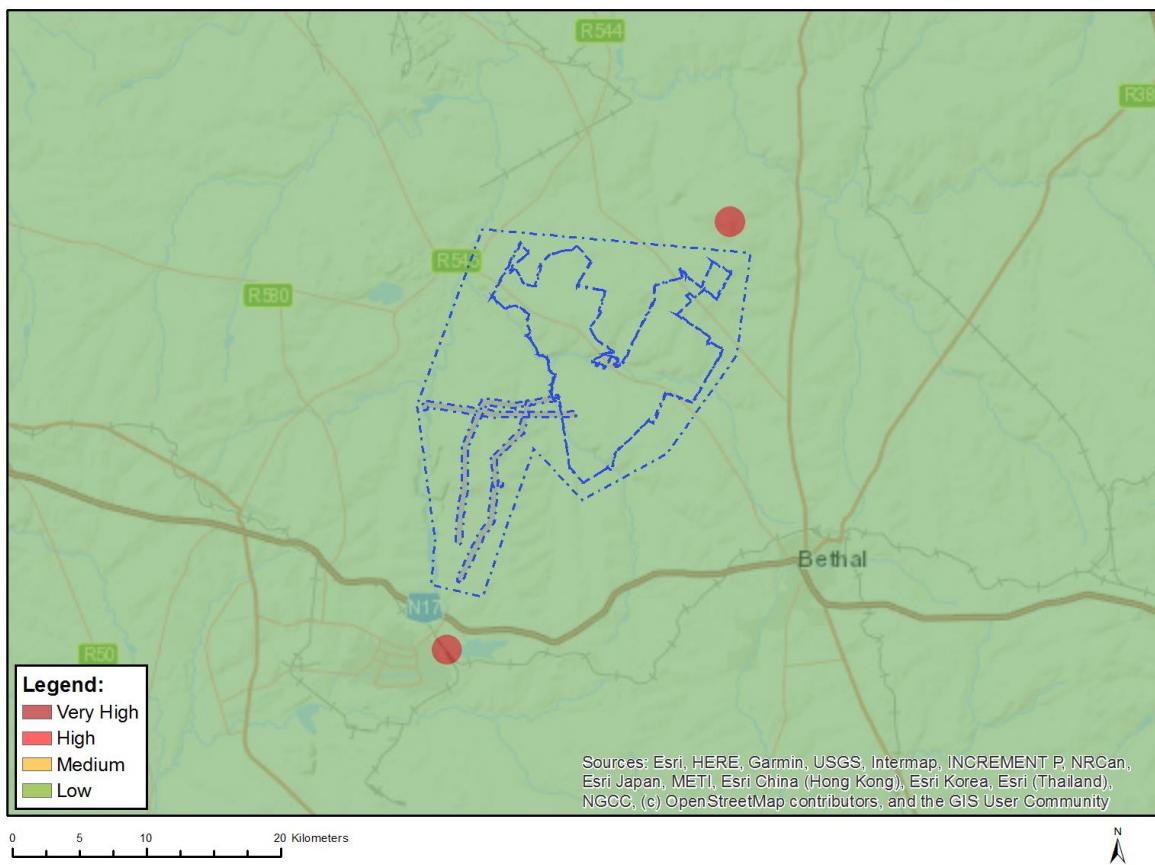

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
	X		

Sensitivity Features:

Sensitivity	Feature(s)
High	Within 8 km of other civil aviation aerodrome
Low	Low sensitivity
Medium	Between 8 and 15 km of other civil aviation aerodrome

MAP OF RELATIVE DEFENCE THEME SENSITIVITY

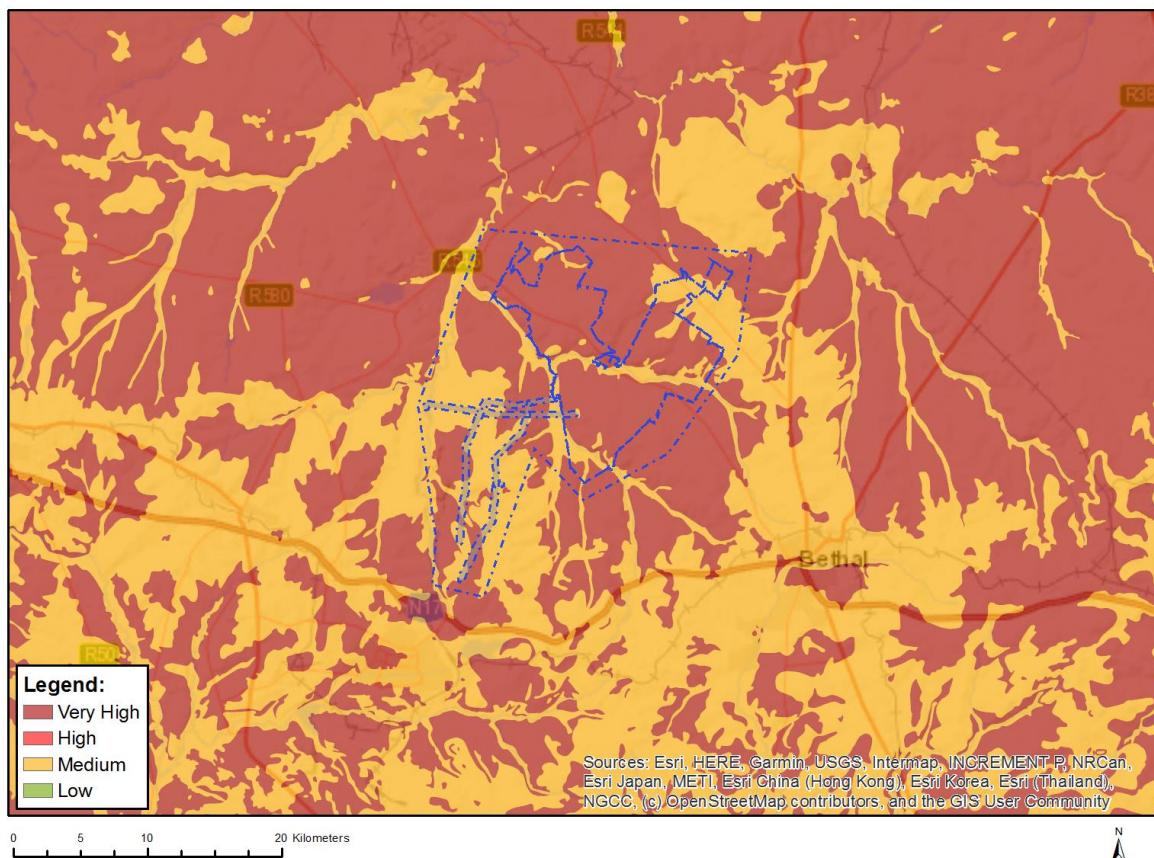

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
			X

Sensitivity Features:

Sensitivity	Feature(s)
Low	Low Sensitivity

MAP OF RELATIVE PALEONTOLOGY THEME SENSITIVITY

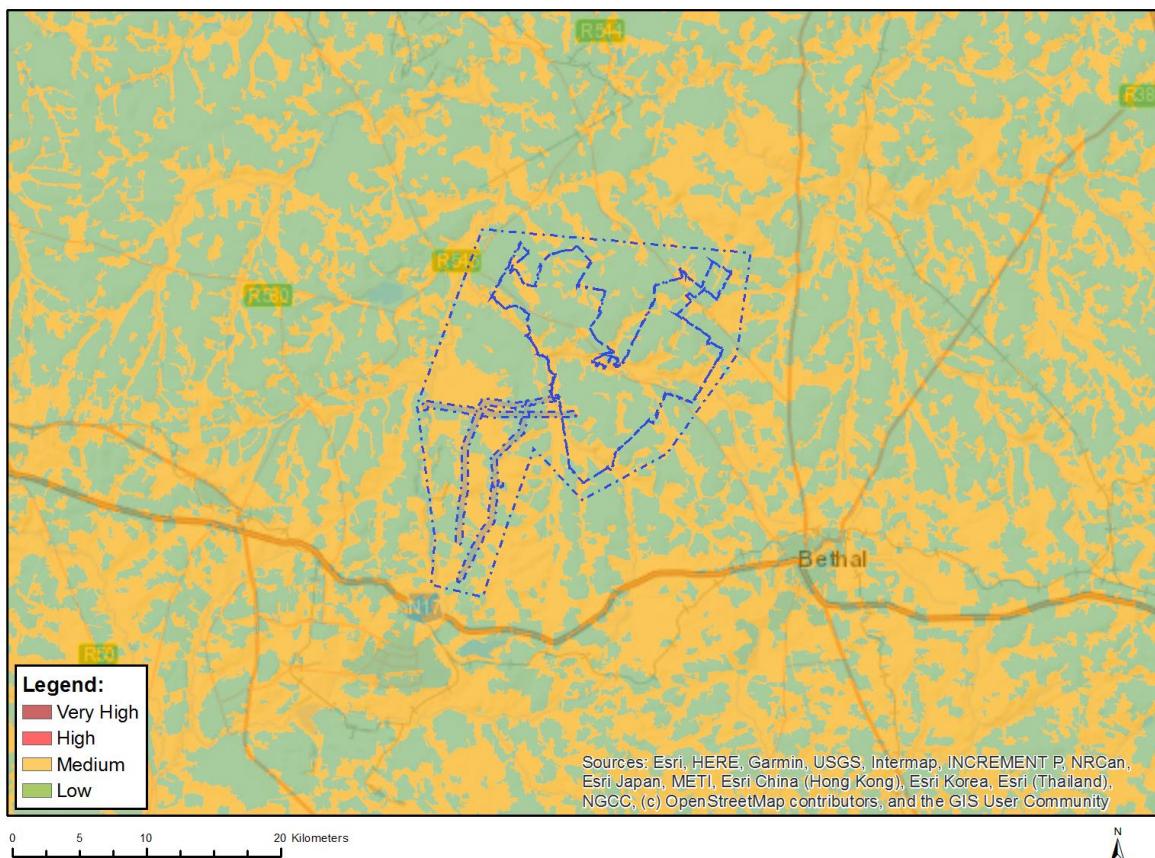

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
X			

Sensitivity Features:

Sensitivity	Feature(s)
Medium	Features with a Medium paleontological sensitivity
Very High	Features with a Very High paleontological sensitivity

MAP OF RELATIVE PLANT SPECIES THEME SENSITIVITY

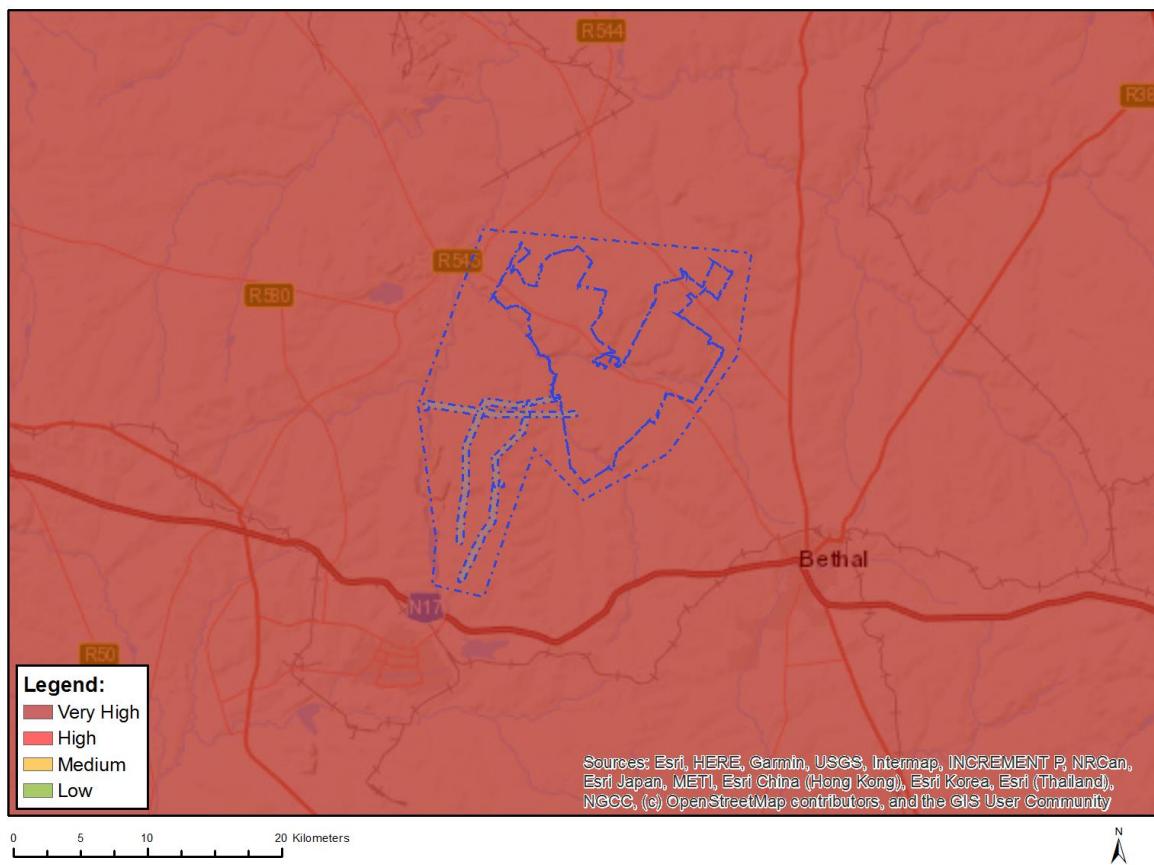

Where only a sensitive plant unique number or sensitive animal unique number is provided in the screening report and an assessment is required, the environmental assessment practitioner (EAP) or specialist is required to email SANBI at eiadatarequests@sanbi.org.za listing all sensitive species with their unique identifiers for which information is required. The name has been withheld as the species may be prone to illegal harvesting and must be protected. SANBI will release the actual species name after the details of the EAP or specialist have been documented.

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
		X	

Sensitivity Features:

Sensitivity	Feature(s)
Low	Low Sensitivity
Medium	Sensitive species 1252
Medium	Sensitive species 41
Medium	Sensitive species 691
Medium	Pachycarpus suaveolens

MAP OF RELATIVE TERRESTRIAL BIODIVERSITY THEME SENSITIVITY

Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
X			

Sensitivity Features:

Sensitivity	Feature(s)
Very High	Critical biodiversity area 1
Very High	Critical biodiversity area 2
Very High	Ecological support area: local corridor
Very High	Vulnerable ecosystem
Very High	Protected Areas Expansion Strategy
