

mineral resources

Department:
Mineral Resources
REPUBLIC OF SOUTH AFRICA

SCOPING REPORT

FOR LISTED ACTIVITIES ASSOCIATED WITH MINING RIGHT AND/OR BULK SAMPLING ACTIVITIES INCLUDING TRENCHING IN CASES OF ALLUVIAL DIAMOND PROSPECTING.

SUBMITTED FOR ENVIRONMENTAL AUTHORIZATIONS IN TERMS OF THE NATIONAL ENVIRONMENTAL MANAGEMENT ACT, 1998 AND THE NATIONAL ENVIRONMENTAL MANAGEMENT WASTE ACT, 2008 IN RESPECT OF LISTED ACTIVITIES THAT HAVE BEEN TRIGGERED BY APPLICATIONS IN TERMS OF THE MINERAL AND PETROLEUM RESOURCES DEVELOPMENT ACT, 2002 (MPRDA) (AS AMENDED).

NAME OF APPLICANT: GEJ RESOURCES (PTY) LTD ('GEJ')

TEL NO: 084 400 0096

FAX NO: 086 534 2076

POSTAL ADDRESS: 44 NORTHGATE OFFICE PARK, AUREOLE AVENUE, NORTH RIDING, 2162

PHYSICAL ADDRESS: 35 DUVENHAGE ROAD, POSTMASBURG, 8420

FILE REFERENCE NUMBER SAMRAD: (NC) 30/5/1/1/2/13214 PR

IMPORANT NOTICE

In terms of the Mineral and Petroleum Resources Development Act (Act 28 of 2002 as amended), the Minister must grant a prospecting or mining right if among others the mining “will not result in unacceptable pollution, ecological degradation or damage to the environment”.

Unless an Environmental Authorisation can be granted following the evaluation of an Environmental Impact Assessment and an Environmental Management Programme Report in terms of the National Environmental Management Act (Act 107 of 1998) (NEMA), it cannot be concluded that the said activities will not result in unacceptable pollution, ecological degradation or damage to the environment.

In terms of Section 16(3)(b) of the EIA Regulations, 2014, any report submitted as part of an application must be prepared in a format that may be determined by the Competent Authority and in terms of Section 17(1)(c) the Competent Authority must check whether the application has taken into account any minimum requirements applicable or instructions or guidance provided by the Competent Authority to the submission of applications.

It is therefore an instruction that the prescribed reports required in respect of applications for an environmental authorisation for listed activities triggered by an application for a right or permit are submitted in the exact format of, and provide all the information required in terms of, this template. Furthermore please be advised that failure to submit the information required in the format provided in this template will be regarded as a failure to meet the requirements of the Regulation and will lead to the Environmental Authorisation being refused.

It is furthermore an instruction that the Environmental Assessment Practitioner must process and interpret his/her research and analysis and use the findings thereof to compile the information required herein. (Unprocessed supporting information may be attached as appendices.) The EAP must ensure that the information required is placed correctly in the relevant sections of the Report, in the order, and under the provided headings as set out below, and ensure that the report is not cluttered with un-interpreted information and that it unambiguously represents the interpretation of the applicant.

OBJECTIVE OF THE SCOPING PROCESS

- 1) The objective of the scoping process is to, through a consultative process:-
 - a) identify the relevant policies and legislation relevant to the activity;
 - b) motivate the need and desirability of the proposed activity, including the need and desirability of the activity in the context of the preferred location;
 - c) identify and confirm the preferred activity and technology alternative through an impact and risk assessment and ranking process;
 - d) identify and confirm the preferred site, through a detailed site selection process, which includes an impact and risk assessment process inclusive of cumulative impacts and a ranking process of all the identified alternatives focusing on the geographical, physical, biological, social, economic, and cultural aspects of the environment;
 - e) identify the key issues to be addressed in the assessment phase;
 - f) agree on the level of assessment to be undertaken, including the methodology to be applied, the expertise required as well as the extent of further consultation to be undertaken to determine the impacts and risks the activity will impose on the preferred site through the life of the activity, including the nature, significance, consequence, extent, duration and probability of the impacts to inform the location of the development footprint within the preferred site; and
 - g) identify suitable measures to avoid, manage, or mitigate identified impacts and to determine the extent of the residual risks that need to be managed and monitored.

SCOPING REPORT

2) Contact Person and correspondence address:

a) Details of:

i) The EAP who prepared the report:

Name of the Company: M and S Consulting (Pty) Ltd

Name of the Practitioner: Ms. T. Jooste

Tel No: 053 861 1765

Fax No: 086 636 0731

Cell No: 084 444 4474

E-Mail address: ms.consulting@vodamail.co.za // joostetanja@gmail.com

Physical Address: 36 William Street, Kestellhof, Kimberley, 8301

Postal Address: P.O. Box 2473, Kimberley, 8300

ii) Expertise of the EAP:

(1) The qualifications of the EAP:

(With evidence attached as Appendix 1)

- Professional registration of EAP:

Ms. Jooste is a registered EAP with the Environmental Assessment Practitioners Association of South Africa (EAPASA) (Reg. No. 2019/1983).

- The qualifications of the EAP:

- Fourteen years professional experience, in terms of Section 15(1) of the National Environmental Management Act, 1998 (Act No. 107 of 1998), Section 24H Registration Authority Regulations as published on 22 July 2016 under Government Gazette No. 40154 (849);
- Environmental Management Certificate; and
- BA in Environmental Management (UNISA).

(2) Summary of the EAP's past experience:

(Attach the EAP's curriculum vitae as Appendix 2)

Relevant past experiences in carrying out the Environmental Impact Assessment Procedures include Environmental Impact Assessments, Environmental Management Plans / Programmes / Reports, Performance Assessments, Rehabilitation Progress Assessments, Environmental Liability Assessments, Environmental Compliance Monitoring, Scoping Reports, etc.

b) Description of the property:

Farm Name:	<ul style="list-style-type: none"> → Remaining Extent of the Farm Cox 571 → Remaining Extent of Portion 1 of the Farm Cox 571 → Portion 2 of the Farm Cox 571 → Portion 3 (a portion of Portion 1) of the Farm Cox 571 <p>The properties will be referred to as the 'PR Area' in this document.</p>
Application area (Ha)	2 978.3345 Ha
Magisterial district:	Kuruman
Distance and direction from nearest town	<p>The PR Area is situated approximately 6km east of Olifantshoek in the Northern Cape Province.</p> <p>Access to the site is via the N14 between Olifantshoek and Kathu.</p>
21 digit Surveyor General Code for each farm portion	<p>C0410000000057100000</p> <p>C0410000000057100001</p> <p>C0410000000057100002</p> <p>C0410000000057100003</p>

c) Locality Map:

(show nearest town, scale not smaller than 1:250 000 attached as Appendix 3)

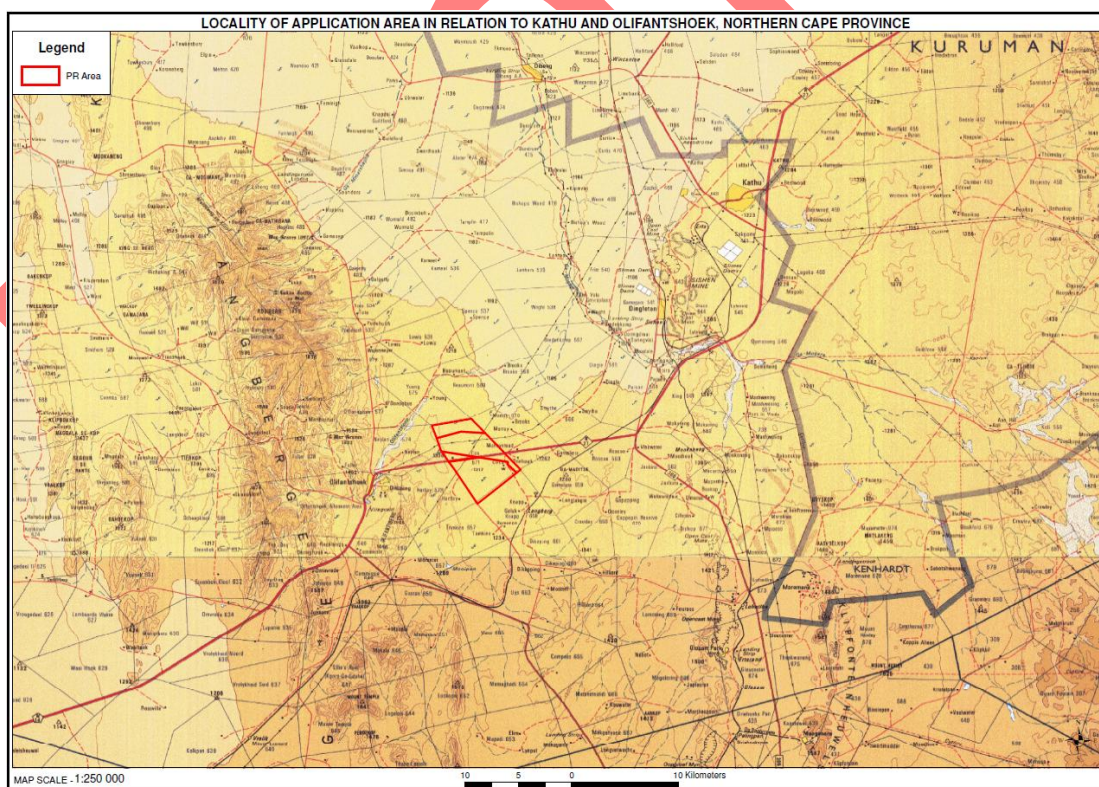

Figure 1 – Locality Map

d) Description of the scope of the proposed overall activity:

i) Listed and specified activities:

(Provide a plan drawn to a scale acceptable to the competent authority but not less than 1:10 000 that shows the location, and area (hectares) of all the aforesaid main and listed activities, and infrastructure to be placed on site and attach as Appendix 4)

A final Site Plan cannot be provided in this early stage of the application process as the locality of the proposed boreholes and trenches is dependent on the results of the following:

- Reconnaissance visit;
- Desktop study;
- Geological mapping; and
- Geophysical Survey

We do; however; insert below a Conceptual Site Plan indicating proposed localities of boreholes and trenches as well as all existing infrastructures and sensitive environmental features (including relevant buffer zones around these) to assist with planning when the results of the abovementioned phases have been obtained.

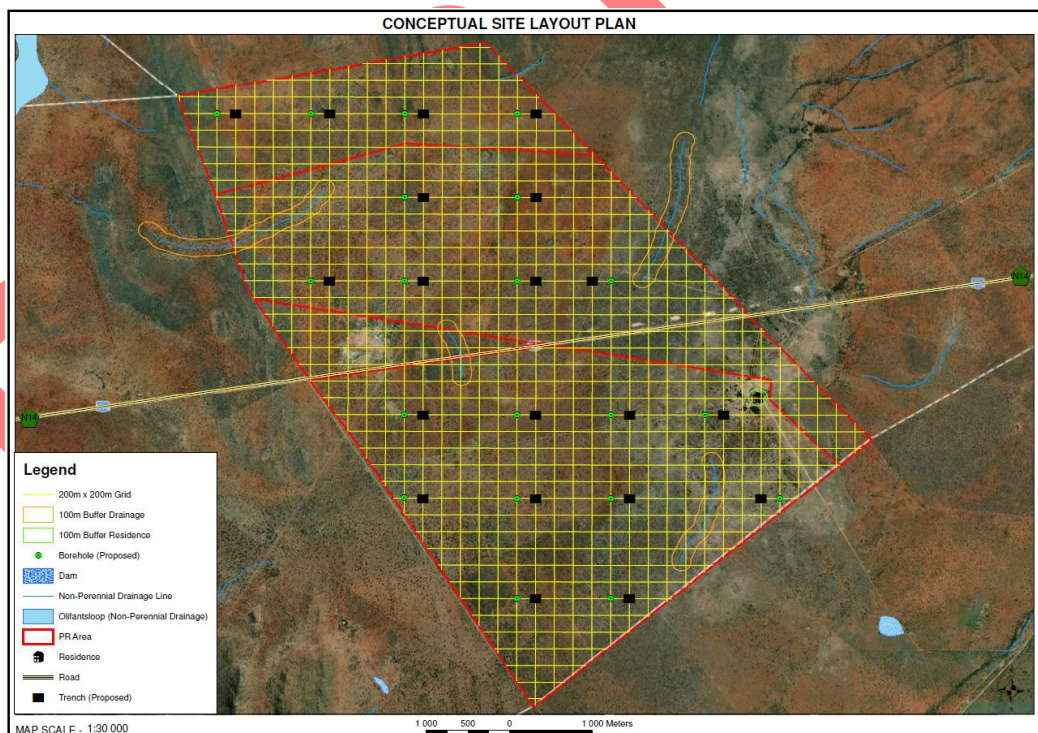

Figure 2 – Conceptual site layout plan

Scoping Report – GEJ Resources (Pty) Ltd

NAME OF ACTIVITY (E.g. For prospecting – drill site, site camp, ablution facility, accommodation, equipment storage, sample storage, site office, access route etc... etc... etc... E.g. for mining, excavations, blasting, stockpiles, discard dumps or dams, loading, hauling and transport, water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc... etc... etc...)		Aerial extent of the Activity Ha or m²	LISTED ACTIVITY (Mark with an X where applicable or affected). 16	Workshop: It is anticipated that the operation will make use of mobile containers for their workshop facilities. This area will also include a compressor area and tyre bay.	3m x 6m = 18m ² each		MPRDA: Section 16 MPRDA: Section 20	N/A

Full description of listed activities applied for:		
MPRDA	Section 16	Application for a Prospecting Right.
MPRDA	Section 20	Permission to remove and dispose of minerals.
NEMA	GNR327 Activity 9	The development of infrastructure exceeding 1 000 meters in length for the bulk transportation of water or storm water:- i) with an internal diameter of 0.36 meters or more; or ii) with a peak throughput of 120 litres per second or more.
NEMA	GNR327 Activity 10	The development and related operation of infrastructure exceeding 1 000 metres in length for the bulk transportation of sewage, effluent, process water, waste water, return water, industrial discharge or slimes i) with an internal diameter of 0,36 meters or more; or ii) with a peak throughput of 120 litres per second or more.
NEMA	GNR327 Activity 14	The development and related operation of facilities or infrastructure, for the storage, or the storage and handling, of a dangerous good, where such storage occurs in containers with a combined capacity of 80 cubic metres or more but not exceeding 500 cubic metres.
NEMA	GNR327 Activity 20	Any activity including the operation of that activity which requires a prospecting right in terms of Section 16 of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002), including- (a) associated infrastructure, structures and earthworks, directly related to prospecting of a mineral resource; or (b) the primary processing of a mineral resource including winning, extraction, classifying, concentrating, crushing, screening or washing; but excluding the secondary processing of a mineral resource, including the smelting, beneficiation, reduction, refining, calcining or gasification of the mineral resource in which case activity 6 in Listing Notice 2 applies.
NEMA	GNR327 Activity 24 (ii)	The development of a road:- (ii) with a reserve wider than 13.5 meters, or where no reserve exists where the road is wider than 8 meters.
NEMA	GNR327 Activity 27	The clearance of an area of 1 hectares or more, but less than 20 hectares of indigenous vegetation, except where such clearance of indigenous vegetation is required for:- i) the undertaking of a linear activity; or ii) maintenance purposes undertaken in accordance with a maintenance management plan.

NEMA	GNR327 Activity 30	Any process or activity identified in terms of Section 53(1) of the National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004).
NEMA	GNR325 Activity 19	The removal and disposal of minerals contemplated in terms of Section 20 of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002), including- (a) associated infrastructure, structures and earthworks, directly related to prospecting of a mineral resource; or (b) the primary processing of a mineral resource including winning, extraction, classifying, concentrating, crushing, screening or washing; but excluding the secondary processing of a mineral resource, including the smelting, beneficiation, reduction, refining, calcining or gasification of the mineral resource in which case activity 6 in this Notice applies.
NEMA	GNR325 Activity 27	The development of a road:- i) with a reserve wider than 30 meters; or ii) catering for more than one lane of traffic in both directions.
NEMA Waste Act	GNR633 Activity 15	National Environmental Management: Waste Act, 2008 (Act No. 59 of 2008); Category A: The establishment or reclamation of a residue stockpile or residue deposit resulting from activities which require a prospecting right or mining permit in terms of the Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002).
NWA	Section 21	Water use: - Section 21(a): Taking water from a water resource; - Section 21(b): Storing water; and - Section 21(g): Disposing of waste in a manner which may detrimentally impact on a water resource.
NWA	GNR704	Regulations published on 4 June 1999 in terms of the National Water Act, 1998 (Act No. 36 of 1998).

ii) Description of the activities to be undertaken:

(Describe methodology or technology to be employed, and for a linear activity, a description of the route of the activity.)

Phase	Activity <small>(what are the activities that are planned to achieve optimal prospecting)</small>	Skill(s) required <small>(refers to the competent personnel that will be employed to achieve the required results)</small>	Timeframe <small>(in months) for the activity)</small>	Outcome <small>(What is the expected deliverable, e.g. Geological report, analytical results, feasibility study, etc.)</small>	Timeframe for outcome <small>(deadline for the expected outcome to be delivered)</small>	What technical expert will sign off on the outcome? <small>(e.g. geologist, mining engineer, surveyor, economist, etc)</small>
1	Reconnaissance visit Desktop study Geological mapping	Geologist	Month 1	Memorandum to address any problems Geological maps	Month 2	Geologist
2	Geophysical Survey	Geophysicist	Month 2 - 6	Map & Report	Month 7	Geophysicist
3	Drilling (Percussion)	Drilling contractor	Months 7 - 12	Drill logs	Month 12	Geologist
4	Analysis of drill samples	Laboratory	Months 7 - 12	Analyses sheets Laboratory Report	Month 12	Laboratory
5	Bulk sampling	Geologist	Month 13 – 34	Bulk sampling results	Month 34	Geologist
6	Consolidation and interpretation of all results/data	Geologist	Months 35 - 36	Detailed results and pre-feasibility reports including resource statements and geological maps/plans	Month 36	Geologist

- Description of planned non-invasive activities:
(These activities do not disturb the land where prospecting will take place e.g. aerial photography, desktop studies, aeromagnetic surveys, etc)

Phase 1:

In order to direct the exploration programme in an efficient manner, there will be a review of all available information and data gathered by previous exploration on the farms. A desktop study will be undertaken of the mineral potential of the area.

A site investigation of the target areas will be undertaken to identify infrastructure and determine any potential problems that may need to be addressed.

Any anomalous features identified will be mapped in detail. The various rock types and their contacts will also be mapped.

Phase 2:

A 10-line kilometer magnetic survey (or any other suitable geophysical method) will be undertaken using a proton 5 magnetometer over selected areas as identified during the desktop study. This study will result in identifying potential mineral mineralization.

Phase 4:

Drill samples will be collected in one-meter intervals and logging will be done by a qualified geologist who will record the lithology, mineralogy, degree of mineralization and structural features. Mineralized samples will be analyzed at an internationally recognized (ISO certified) laboratory.

Phase 6

All the drill- and bulk sampling data will then be modelled to obtain a final interpretation of the potential of the deposit. A detailed feasibility report, containing resource calculations, will be compiled to evaluate the economic viability of the project.

- Description of planned invasive activities:
(These activities result in land disturbances e.g. sampling, drilling, bulk sampling, etc)

Phase 3: Percussion drilling

Percussion drilling will be used initially to identify the position of a suspected base metal deposit. The position of the boreholes is dependent on the results of the review of historical activities, geological mapping, desktop study and geophysical survey.

Twenty boreholes, each 50m deep (can be more or less depending on results), are planned. The collar position of all boreholes will be surveyed. All drilling will be short term and undertaken by a contractor using truck-mounted equipment.

Angled percussion holes are planned to locate and intersect the mineralization. A traverse line or grid drilling is used to identify and define the extent of any mineralization. The sizes of the boreholes drilled will be determined by such factors as cost, proposed sampling, availability of drilling machines and the volume of sample required, among others.

Phase 5: Bulk sampling

Bulk sampling will be conducted during phase 5 of the prospecting period for a period of 22 months.

GEJ plans to bulk sample a total volume of 147 472.53m³ (440 000 tonnes) of minerals.

Provision of 220 000 tonnes bulk sample is made per mineral applied for. This; however; depends solely on the drilling results.

Commodity	Tonnes / Month	Months	Total Tonnes	S.G.	Total m ³
Diamonds	10 000.00	22	220 000.00	3.5	62 857.14
Gold Ore	10 000.00	22	220 000.00	2.6	84 615.38
Total			440 000.00		147 472.53
Waste 1:1 Stripping Ratio	Tonnes / Month	Months	Total Tonnes	S.G.	Total m ³
Waste Rock Material	20 000.00	22	440 000.00	2.5	176 000.00

With the 1:1 stripping ratio the total m³ excavated for the prospecting period calculates to ~323 472.53m³ (~880 000 tonnes).

e) Policy and Legislative Context:

<p>Applicable Legislation and Guidelines used to compile the report (a description of the policy and legislative context within which the development is proposed including an identification of all legislation, policies, plans, guidelines, spatial tools, municipal development planning frameworks and instruments that are applicable to this activity and are to be considered in the assessment process.)</p>	<p>Reference where applied</p>

Draft

f) Need and desirability of the proposed activities:

(Motivate the need and desirability of the proposed development including the need and desirability of the activity in the context of the preferred location.)

Need and desirability is based on the principle of sustainability, set out in the Constitution and in NEMA. Addressing the need and desirability of a development is a way of ensuring sustainable development – in other words, that a development is ecologically sustainable and socially and economically justifiable – and ensuring the simultaneous achievement of the triple bottom-line.

- Need:

Assessment of the geological information available has determined that the area in question may have various mineral targets. In order to ascertain the above and determine the nature, locality and extent of the mineral targets within the prospecting area, it will be necessary that prospecting be undertaken. The prospecting will also determine if there are any features that may have an impact on the economic extraction of the minerals.

The information that will be obtained from the prospecting to be done will be necessary to determine, should the minerals be found, how and where the minerals will be extracted and how much economically viable mineral reserves are available within the proposed prospecting area.

Should the minerals applied for be found in the application area, GEJ will be able to ensure employment opportunities and support to the local business sector for a certain period.

GEJ expects that substantial benefits from the project (should the minerals applied for be found) will accrue to the immediate project area, the sub-region and the Northern Cape Province. These benefits must be offset against the costs of the project, including the impact to the surface owners.

- Desirability:

No	Description	Yes/No
1	Does the proposed land use / development fit the surrounding area?	Yes
2	Does the proposed land use / development conform to the relevant structure plans, SDF and planning visions for the area?	Yes
3	Will the benefits of the proposed land use / development outweigh the negative impacts of it?	Yes
4	Will the proposed land use / development impact on the sense of place?	Yes
5	Will the proposed land use / development set a precedent?	No
6	Will any person's rights be affected by the proposed land use / development?	Yes
7	Will the proposed land use / development compromise the "urban edge"?	No

- Benefits:

No	Description	Yes/No
1	Will the land use / development have any benefits for society in general?	Yes
2	Will the land use / development have any benefits for the local communities where it will be located?	Yes

g) Period for which the environmental authorisation is required:

3 Years

h) Description of the process followed to reach the proposed preferred site:

(NB!! – This section is not about the impact assessment itself; it is about the determination of the specific site layout having taken into consideration (1) the comparison of the originally proposed site plan, the comparison of that plan with the plan of environmental features and current land uses, the issues raised by interested and affected parties, and the consideration of alternatives to the initially proposed site layout as a result.)

(i) Details of all alternatives considered:

With reference to the site plan provided as Appendix 4 and the location of the individual activities on site, provide details of the alternatives considered with respect to:

(a) The property on which or location where it is proposed to undertake the activity:

Title Deed	Property	Landowner
T3058/2007	Remaining Extent of the Farm Cox 571	Mr. O. Smith
T1678/1995	Remaining Extent of Portion 1 of the Farm Cox 571	Mr. A.C. Olivier
T3035/1999	Portion 2 of the Farm Cox 571	Mr. A.J. Roelofse
T414/1992	Portion 3 (a portion of Portion 1) of the Farm Cox 571	Jafrata CC

Alternatives considered:-

GEJ has considered the following:

- The Geological formation that supports the possibility that the minerals applied for could be found within the PR Area.
- The availability of infrastructure, such as a road network, in the immediate surrounding area, which could be utilized to allow easy access to the site.

(b) The type of activity to be undertaken:

GEJ plans to conduct prospecting activities: Percussion drilling and bulk sampling.

Alternatives considered:-

Alternative land uses include: Livestock / Game farming and/or other agricultural farming activities.

GEJ's main economic activity is prospecting/mining and for this reason does not favour these alternative land uses.

(c) The design or layout of the activity:

GEJ plans to establish the following, amongst other, infrastructure on their site during the initial construction (bulk sampling) phase:

- Ablution facilities (chemical toilets)
- Diesel tank
- Generator
- Offices (mobile containers)
- Processing Plant and recycling/settling dam
- Roads (access & haul)
- Salvage Yard
- Security access point
- Stockpile area
- Storage facilities (mobile containers)
- Washbay
- Water tanks (drinking water)
- Weighbridge and weighbridge control room
- Workshops (mobile containers)

Alternatives considered:-

The final locality of the above infrastructure can only be determined after the first stages of the prospecting period (reconnaissance visit; desktop study; geological mapping and drilling) have been finalized.

The following features will be taken into account during the planning phase:

- Locality of any infrastructure (i.e. residential and associated buildings);
- Locality of the ore bodies;
- Topography of the area;
- Sensitive environmental features; and
- Discussions with the surface owners of the land.

(d) The technology to be used in the activity:

All processing plants will be modular.

Diamonds: Trommel Screen, 16ft Rotary Pan.

Gold Ore: Jaw Crusher, Hammer Crusher, Ball Mill, Spiral Classifier, Centrifugal Machine, Shaking Table and Heating Furnace.

Alternatives considered:-

These types of processing plants have been proven to be the most effective technology, thus no viable alternatives have been identified.

(e) The operational aspects of the activity:

Bulk sampling will be done by the conventional opencast method. It will be designed based on the nature of the ore-bodies on the PR Area, which proposes that each resource area be treated as a separate excavation.

Alternatives considered:-

The conventional opencast drill-blast-load-haul method has been proven to be the most cost effective bulk sampling method.

To ensure a minimum impact on the natural environment, bulk sampling will be conducted only on two ore bodies at any one time.

(f) The option of not implementing the activity:

If the activity is not implemented the current land uses will continue.

Five measures of economic impacts can be used to demonstrate the potential effect of the proposed prospecting operation on the local economy:

- Employment - The extent of employment can be measured as number of jobs or in terms of full time equivalents.
- Payroll income - The gross remuneration of employees in terms of salaries and wages.
- Capital Expenditure (CAPEX) - The total amount spent on the purchasing of fixed assets and total spent on construction.
- Operating expenditure and maintenance (OPEX) - The total amount spent locally by businesses on goods and services, excluding salaries and wages as well as rents or interest.
- Revenue - The total value of sales arising from business activity at the prospecting operation.

The abovementioned positive impacts will be lost if the proposed prospecting project is not developed.

(ii) Details of the Public Participation Process Followed:

(Describe the process undertaken to consult interested and affected parties including public meetings and one on one consultation. NB the affected parties must be specifically consulted regardless of whether or not they attended public meetings. Information to be provided to affected parties must include sufficient detail of the intended operation to enable them to assess what impact the activities will have on them or on the use of their land.)

Notification:

Identified interested and/or affected parties were notified of the proposed activity as follows (Proof of notification is attached as Appendix '5'):

- Notification letters were sent to all identified interested and / or affected parties (either by registered mail or by e-mail), for whom contact details could be obtained, on the 8th of September 2022. Attached to each of these letters was a draft Scoping Report, containing information relating to the proposed project, as well as a 'Registration and Comment Form'.

Note: Contact details could not be obtained for all of the IAPs (surface owners / surrounding surface owners). M&S attempted to obtain the information through SearchWorks without any success. M&S trusts that it will be able to obtain the information through other registered interested and/or affected parties after which consultation shall commence with these IAPs. The results of consultation shall be included in the EIA/EMPR document.

- A newspaper advert was placed in the 'Kathu Gazette' local newspaper on the ...
- A notice was placed at the DMRE, Kimberley. A notice board shall be placed at the entrance of the site after a meeting has been held with the surface owners.

Responses have been received from the following IAPs. The responses are summarized in the table below. (Refer to Appendix '6'):

-

Meetings:

To date of submission of this Scoping Report meetings have not been set up with the surface owners. Meetings will be held with the surface owners during the EIA/EMPR phase of the Prospecting Right Application.

(iv) The Environmental attributes associated with the sites:

(1) Baseline Environment:

(a) Type of environment affected by the proposed activity:

(its current geographical, physical, biological, socio-economic and cultural character.)

- **Air quality:**

The PR Area is situated in a rural area approximately 6km east of the town of Olifantshoek and thus the air quality is expected to be good.

- **Archaeological, cultural & heritage environment:**

The Screening Reports, as obtained from the national web-based environmental screening tool, lists the archaeological and palaeontological sensitivities of the PR Area as follows:

Property	Archaeological and Cultural Heritage	Palaeontology
Remaining Extent of the Farm Cox 571	Low	High
Remaining Extent of Portion 1 of the Farm Cox 571	Low	High
Portion 2 of the Farm Cox 571	Low	Medium
Portion 3 (a portion of Portion 1) of the Farm Cox 571	Low	Medium

A specialist shall be appointed to assess the Palaeontological features at the PR Area and the findings of this report will be included in the EIA/EMPR document.

- **Fauna:**

Most large antelope species are absent from the area, although nomad game like Blesbok, Gemsbok, Duiker, Kudu, Steenbok and Springbok occasionally traverse the properties.

The normal array of small mammals and birds that are associated with the Kuruman Mountain Bushveld, Olifantshoek Plains Thornveld and Koranna-Langeberg Mountain Bushveld Vegetation Types might be expected.

- **Flora:**

There are three broad vegetation types found on the PR Area:

- Kuruman Thornveld (SVk 9):
Flat rocky plains and some sloping hills with very well-developed, closed shrub layer and well-developed open tree stratum consisting of *Acacia erioloba*.

Conservation:

- Least threatened.
- Target 16%.
- None conserved in statutory conservation areas.
- Only 2% already transformed.
- Erosion is very low.

- Olifantshoek Plains Thornveld (SVk 13):
A very wide and diverse unit on plains with usually open tree and shrub layers with, for example, *Acacia luederitzii*, *Boscia albitrunca* and *Rhus tenuinervis* and with a usually sparse grass layer.

Conservation:

- Least threatened.
- Target 16%.
- Only 0.3% statutorily conserved in the Witsand Nature Reserve.
- Only about 1% of the area has been transformed.
- Erosion is very low.

- Koranna-Langeberg Mountain Bushveld (SVk 15):
Rugged mountains and steep slopes in parts of the Korannaberg but with few cliffs in the Langeberg to the south. Generally supporting open shrubland with moderately open grass cover. *Croton gratissimus* common in places, becoming particularly diminutive south of the Langeberg.

Conservation:

- Least threatened.
- Target 16%.
- None conserved in statutory conservation areas but partly conserved in private reserves such as the Tswalu Kalahari Reserve.
- Virtually none of the area is transformed.
- Erosion is very low.

Figure 3 - Regional Vegetation Map

- **Geology:**

The geology and soil is described per vegetation type:

- Kuruman Thornveld (SVk 9):
Some Campbell Group dolomite and chert and mostly younger, superficial Kalahari Group sediments, with red wind-blown (0.3 – 1.2m deep) sand.

Locally, rocky pavements are formed in places. Most important land types, Ae, Ai, Ag and Ah, with Hutton soil form.

- Olifantshoek Plains Thornveld (SVk 13):
Red Aeolian sand of Tertiary to Recent age (Kalahari Group) with silcrete and calcrete and some andesitic and basaltic lava of the Griqualand West Supergroup.

Hutton soil forms, deeper than 1.2m, on the overwhelmingly dominant Ae and to a far lesser extent Ah land types.

- Koranna-Langeberg Mountain Bushveld (SVk 15):
The geology of the Korannaberg and Langeberg Mountains consists of quartzite, greywacke and lenses of hematite of the Olifantshoek Supergroup (Mokolian Erathem).

The soils consist of very rocky, shallow sands. Land types mainly Ic, with some Ae.

- **Groundwater:**

The PR Area falls over the D41J quaternary drainage region.

This Drainage Region forms part of the Vaal Major Management Area (nr. 5 in terms of the 'Water Management Areas of South Africa' as published in Government Gazette 40279, 16 September 2016).

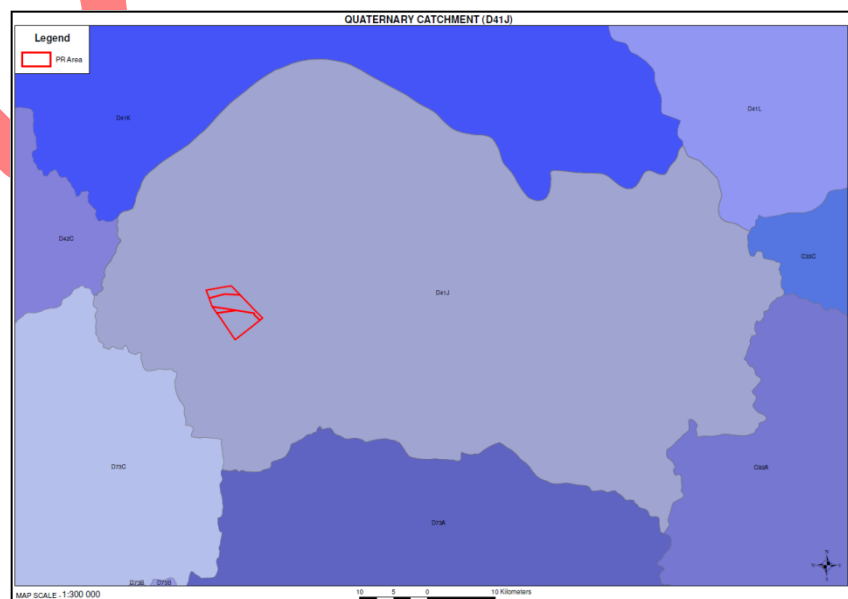

Figure 4 - Quaternary Catchment

- **Noise:**
The only current anticipated source of noise at the PR Area is vehicles travelling on the regional, secondary and farm roads transecting the PR Area and immediate surrounding area.

- **Sensitive landscapes:**
"Sensitive environments" that have statutory protection are the following:
 - Limited development areas (section 23 of the Environment Conservation Act, 1989 (Act 73 of 1989).
 - Protected natural environments and national heritage sites.
 - National, provincial, municipal and private nature reserves.
 - Conservation areas and sites of conservation significance.
 - National monuments and gardens of remembrance.
 - Archaeological and palaeontological sites.
 - Graves and burial sites
 - Lake areas, offshore islands and the admiralty reserve.
 - Estuaries, lagoons, wetlands and lakes.
 - Streams and river channels, and their banks.
 - Dunes and beaches.
 - Caves and sites of geological significance.
 - Battle and burial sites.
 - Habitat and /or breeding sites of Red Data Book species.
 - Areas or sites of outstanding natural beauty.
 - Areas or sites of special scientific interest.
 - Areas or sites of special social, cultural or historical interest.
 - Declared national heritage sites
 - Mountain catchment areas.
 - Areas with eco-tourism potential

The following sensitive environments have been identified within the PR Area:

- Streams and river channels, and their banks:
There are a number of non-perennial drainage lines within the PR Area.

A specialist shall be appointed to conduct a Palaeontological assessment of the PR Area to determine if there are any sites of heritage importance within the area applied for. The findings of this report will be included in the EIA/EMPR document.

Any other sensitive environments shall be identified through the public participation process with input from the surface owners and/or any other interested/affected party. These shall be included in the EIA/EMPR document.

- **Socio-Economic:**
The last census was held in 2022; however these results are not yet available. The following section was compiled using data from Census 2001 and 2011 for the Gamagara Local Municipality.

Description	Census 2001	Census 2011
Total population	41 617	23 202

Young (0 – 14)	25.5%	30.2%
Working age (15 – 64)	71.9%	71.9%
Elderly (65+)	2.6%	3.5%
Dependency ratio	39%	50.9%
Sex ratio	120.1	101
Growth rate	5.84% (2001 – 2011)	0.87% (2001 – 2011)
Population density	16 persons/km ²	-
Unemployment rate	17.7%	27.1%
Youth unemployment rate	22.4%	37.2%
No schooling aged 20+	10.5%	21.4%
Higher education aged 20+	12.6%	9.6%
Matric aged 20+	26.5%	23%
Number of households	10 808	5 306
Number of Agricultural households	1 201	-
Average household size	3.4	3.4
Female headed households	27.7%	31.3%
Formal dwellings	74.4%	84.3%
Housing owned/paying off	34.5%	49%
Flush toilet connected to sewerage	77.6%	70.7%
Weekly refuse removal	90.6%	89%
Piped water inside dwelling	59.1%	61.5%
Electricity for lighting	87.9%	94%

- **Surface water:**

Figure 5 - Surface water

There are a number of non-perennial drainage lines within the PR Area.

(b) Description of the current land uses.

- Current land use:
Livestock / Game farming and/or other agricultural farming activities.
- Evidence of disturbance:
Zama Mining Resources (Pty) Ltd ('ZMR') has been the holder of prospecting rights for iron ore and manganese ore over the PR Area and various other properties since 2013. ZMR has applied for a Mining Right over these properties for iron ore and manganese ore.

(c) Description of specific environmental features and infrastructure on the site.

- Infrastructure:
Existing infrastructure on the PR Area includes:
 - Residences and associated infrastructure;
 - N14 Road;
 - Farm roads;
 - Farm fencing; and
 - Windmills.
- Environmental:
There are a number of non-perennial drainage lines within the PR Area.

(d) Environmental and current land use map:

(Show all environmental and current land use features.)

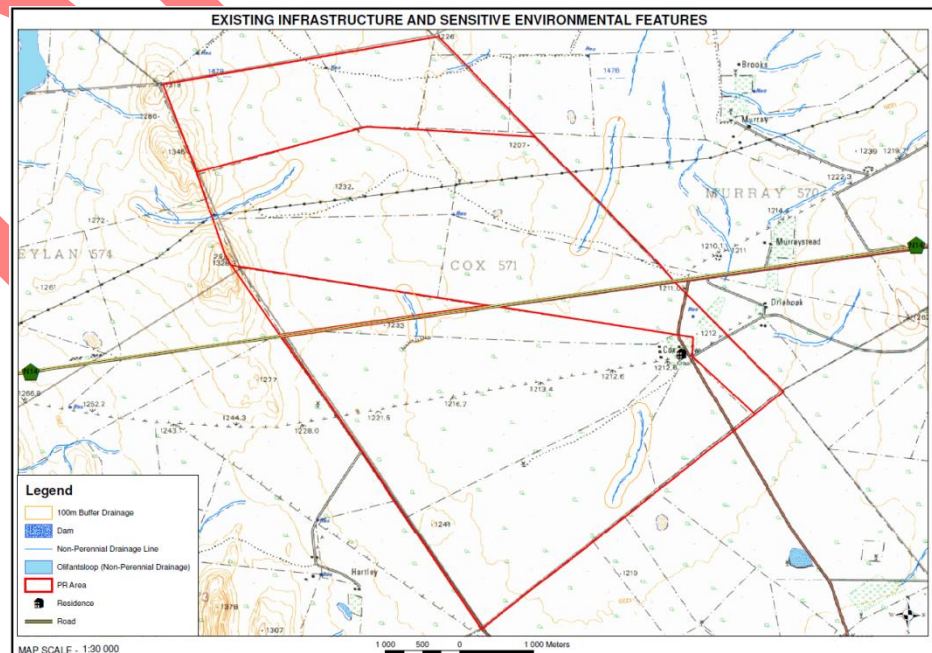

Figure 6 – Current land use and environmental map

(v) **Impacts identified:**

(Provide a list of the potential impacts identified of the activities described in the initial site layout that will be undertaken, as informed by both the typical known impacts of such activities, and as informed by the consultations with affected parties together with the significance, probability and duration of the impacts.)

Impact	Description	Nature	Extent	Duration	Intensity	Probability	Significance		
Air quality	<ul style="list-style-type: none"> Nuisance dust on roads will be created by the excavating equipment hauling material between the open excavation areas, the plant area, stockpile areas and waste dump areas on the site. Nuisance dust will be created by the equipment during excavation activities. Nuisance dust will be created by the drilling and blasting activities. Vehicle and equipment emissions in workshop, stores and office areas. Nuisance dust will be created at the modular processing plants. Nuisance dust will be created in the topsoil storage site, stockpile and waste dump areas when the material is dumped. Nuisance dust will be created when new infrastructure is established. Nuisance dust from the roads transecting the properties and surrounding area. Dust created by surrounding prospecting and mining activities. Fumes and noxious gases generated by blasting. Emissions from vehicles utilizing the road network in the area immediately surrounding the site. 	Negative	Regional	Long term	Low	Definite	Low

Draft

(vi) Methodology used in determining the significance of environmental impacts:

(Describe how the significance, probability and duration of the aforesaid identified impacts that were identified through the consultation process were determined in order to decide the extent to which the initial site layout needs revision.)

The assessment of the impacts has been conducted according to a synthesis of criteria required by the integrated environmental management procedure.

Nature of impact

This is an appraisal of the type of effect the activity would have on the affected environmental component. Its description should include what is being affected, and how.

Extent

The physical and spatial size of the impact. This is classified as follows:

- **Local**
The impacted area extends only as far as the activity, e.g. a footprint.
- **Site**
The impact could affect the whole, or a measurable portion of the property.
- **Regional**
The impact could affect the area including the neighbouring farms, transport routes and the adjoining towns.

Duration

The lifetime of the impact which is measured in the context of the lifetime of the proposed phase (i.e. construction or operation).

- **Short term**
The impact will either disappear with mitigation or will be mitigated through natural process in a short time period.
- **Medium term**
The impact will last up to the end of the mining period, where after it will be entirely negated.
- **Long term**
The impact will continue or last for the entire operational life of the mine, but will be mitigated by direct human action or by natural processes thereafter.
- **Permanent**
The only class of impact, which will be non-transitory. Mitigation either by man or natural process will not occur in such a way or in such a time span that the impact can be considered transient.

Intensity

This describes how destructive, or benign, the impact is. Does it destroy the impacted environment, alter its functioning, or slightly alter it. These are rated as:

- **Low**
This alters the affected environment in such a way that the natural processes or functions are not affected.
- **Medium**
The affected environment is altered, but function and process continue, albeit in a modified way.

- **High**
Function or process of the affected environment is disturbed to the extent where it temporarily or permanently ceases.

This will be a relative evaluation within the context of all the activities and the other impacts within the framework of the project.

Probability

This describes the likelihood of the impacts actually occurring. The impact may occur for any length of time during the life cycle of the activity, and not at any given time. The classes are rated as follows:

- **Improbable**
The possibility of the impact occurring is very low, due either to the circumstances, design or experience.
- **Probable**
There is a possibility that the impact will occur to the extent that provisions must be made therefore.
- **Highly probable**
It is most likely that the impacts will occur at some or other stage of the development.
- **Definite**
The impact will take place regardless of any preventative plans, and mitigation measures or contingency plans will have to be implemented to contain the impact.

Determination of significance

Significance is determined through a synthesis of impact characteristics. Significance is an indication of the importance of the impact in terms of both physical extent and time scale, and therefore indicates the level of mitigation required. The classes are rated as follows:

- **No significance**
The impact is not likely to be substantial and does not require any mitigatory action.
- **Low**
The impact is of little importance, but may require limited mitigation.
- **Medium**
The impact is of importance and therefore considered to have a negative impact. Mitigation is required to reduce the negative impacts to acceptable levels.
- **High**
The impact is of great importance. Failure to mitigate, with the objective to reduce the impact to acceptable levels, could render the entire development option or entire project proposal unacceptable. Mitigation is therefore essential.

(vii) The positive and negative impacts that the proposed activity (in terms of the initial site layout) and alternatives will have on the environment and the community that may be affected:

(Provide a discussion in terms of advantages and disadvantages of the initial site layout compared to alternative layout options to accommodate concerns raised by affected parties.)

A final Site Plan cannot be provided in this early stage of the application process as the locality of the proposed boreholes and trenches is dependent on the results of the following:

- Reconnaissance visit;
- Desktop study;
- Geological mapping; and
- Geophysical survey

The following will be taken into consideration when the site layout is planned:

- Existing infrastructure;
- Sensitive environmental features, including no-prospecting buffer zones;
- Topography of the PR Area;
- Locality of ore bodies;

The negative impacts should be avoided / minimized as far as practically possible to ensure a sustainable prospecting operation.

(viii) The possible mitigation measures that could be applied and the level of risk:

(With regard to the issues and concerns raised by affected parties provide a list of the issues raised and an assessment / discussion of the mitigations or site layout alternatives available to accommodate or address their concerns, together with an assessment of the impacts or risks associated with the mitigation or alternatives considered.)

Impact	Mitigation	Risk
Air quality	<ul style="list-style-type: none"> • Speed limits; • Spraying of surfaces with water (where necessary); • Avoidance of unnecessary removal of vegetation; • Re-vegetation; • Monitoring; • Backfilling and rehabilitation of disturbed areas; and • Controlled drilling and blasting operations, preferably on wind-free days. 	Low
Fauna	<ul style="list-style-type: none"> • Speed limits; • Avoidance of unnecessary removal of vegetation; • Continuous backfilling of open excavations; • Low angle access ramp in excavations; • Continuous rehabilitation of disturbed areas; • Snares & traps removed and destroyed; and • Maintenance of firebreaks. 	Medium
Flora	<ul style="list-style-type: none"> • Avoidance of unnecessary removal of vegetation; • Continuous backfilling of open excavations; • Continuous rehabilitation of disturbed areas; • Maintenance of firebreaks; • No trees felled for firewood; • Obtain relevant permit before removal of protected tree or plant species; and 	High

	<ul style="list-style-type: none"> • Re-seeding where necessary. 	
Ground water	<ul style="list-style-type: none"> • Immediate removal of any hydrocarbon spill; • Maintenance in dedicated area; • Re-fuelling in dedicated area; • Drip pans; • Storage of hydrocarbons in dedicated areas; • Monitoring of groundwater abstraction and quality; and • Clean & Dirty water system. 	Low
Noise	<ul style="list-style-type: none"> • Hearing protection; • Non-metallic washers to join infrastructure; • Working hours; • Controlled drilling & blasting operations; • Silencers on equipment and vehicles; • Acoustic enclosure for generators; and • Distance from residences of surface owners. 	Medium
Soil	<ul style="list-style-type: none"> • Avoidance of unnecessary removal of vegetation; • Continuous backfilling of open excavations; • Continuous rehabilitation of disturbed areas; • Ripping of compacted areas; • Replacing layer of topsoil over backfilled areas; • Maintenance & refuelling in dedicated areas; • Drip pans; • Storage of hydrocarbons in dedicated areas; and • Immediate removal of any hydrocarbon spill. 	Medium
Surface water	<ul style="list-style-type: none"> • Storm water control; • Immediate removal of any hydrocarbon spill; • Maintenance & re-fuelling in dedicated areas; • Drip pans; • Storage of hydrocarbons in dedicated areas; and • Clean & dirty water plan. 	Low
Topography	<ul style="list-style-type: none"> • Continuous backfilling of open excavations; • Replacing layer of topsoil over backfilled areas; • Sloping of rehabilitated and disturbed areas; and • Sloping of topsoil dumps, stockpiles and waste rock dumps. 	Low
Visual	<ul style="list-style-type: none"> • Continuous backfilling of open excavations; • Replacing layer of topsoil over backfilled areas; • Sloping of rehabilitated and disturbed areas; • Sloping of topsoil dumps, stockpiles and waste rock dumps; and • Removal of all infrastructure upon closure. 	Low

- (ix) The outcome of the site selection Matrix:- Final site layout plan:**
 (Provide a final site layout plan as informed by the process of consultation with interested and affected parties.)

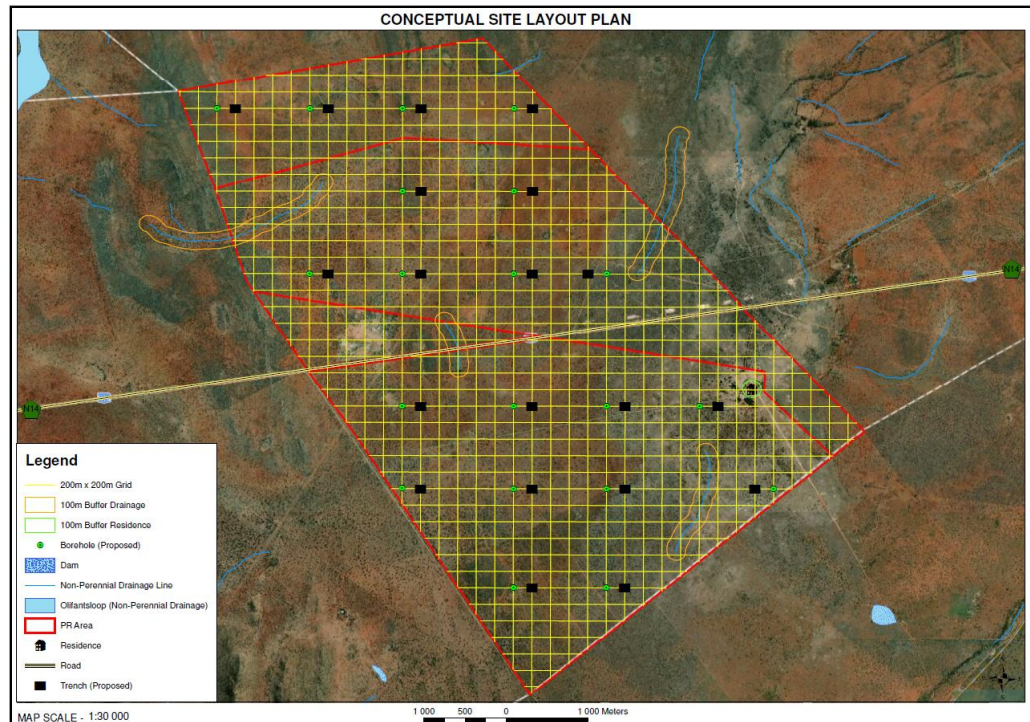

Figure 7 – Conceptual site layout plan

- (x) Motivation where no alternative sites were considered:**

No viable alternative sites were identified for the following reason:

A detailed Site Plan cannot be provided in this early stage of the application process as the locality of the proposed boreholes and trenches is dependent on the results of the following:

- Reconnaissance visit;
- Desktop study;
- Geological mapping; and
- Geophysical survey

- (xi) Statement motivating the preferred site:**

(Provide a statement motivating the final site layout that is proposed.)

GEJ has considered the following:

- The Geological formation that supports the possibility that the minerals applied for could be found within the PR Area.
- The availability of infrastructure, such as a road network, in the immediate surrounding area, which could be utilized to allow easy access to the site.

i) Plan of study for the Environmental Impact Assessment process:

(i) Description of alternatives to be considered including the option of not going ahead with the activity:

- Land use development alternatives:
The site layout may vary, depending on the operational requirements, but the final design and layout of the infrastructure can only be decided upon by the management team after granting and execution of the Prospecting Right.
- No-go option:
The following positive impacts will be lost if the proposed project is not developed:
 - Foreign income and TAX obligations to SARS
 - CAPEX spent locally and regionally
 - Employment
 - Payroll income
 - Operating expenditure and maintenance (OPEX)
 - Revenue

(ii) Description of the aspects to be assessed as part of the environmental impact assessment process:

(The EAP must undertake to assess the aspects affected by each individual mining activity whether listed or not, including activities such as blasting, loading, hauling and transport, and mining activities such as excavations, stockpiles, discard dumps or dams, water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc...etc...etc...)

I, T. Jooste, ID number , herewith undertake to assess all of the aspects affected by each individual activity whether listed or not.

Signature of EAP

Date: _____

(iii) Description of aspects to be assessed by specialists:

The Screening Report, as obtained from the national web-based environmental screening tool, lists the sensitivities of the PR Area as follows:

Property	Agriculture	Animal Species	Aquatic Biodiversity	Archaeological and Cultural Heritage	Civil Aviation	Defence	Palaeontology	Plant Species	Terrestrial Biodiversity
Remaining Extent of the Farm Cox 571	High	Low	Very High	Low	High	Low	High	Low	Very High
Remaining Extent of Portion 1 of the Farm Cox 571	Medium	Low	Very High	Low	High	Low	High	Low	Very High
Portion 2 of the Farm Cox 571	Medium	Low	Very High	Low	High	Low	Medium	Low	Very High
Portion 3 (a portion of Portion 1) of the Farm Cox 571	Medium	Low	Very High	Low	High	Low	Medium	Low	Very High

Sensitive environmental features, i.e. the non-perennial drainage lines, shall be avoided by the placement of a no-prospecting buffer around these.

The relevant specialists, for sensitivities higher than 'Medium' that is not covered by no-prospecting buffer zones, will be appointed to conduct a site visit and assess sensitive environmental features of the PR Area. The findings of the specialist reports shall be included in the EIA/EMPR document.

(iv) Proposed method of assessing the environmental aspects including the proposed method of assessing alternatives:

The assessment of the impacts shall be conducted according to a synthesis of criteria required by the integrated environmental management procedure.

The findings in the specialists' reports will be evaluated and measured against the identified potential impacts that could occur from the prospecting activities.

(v) The proposed method of assessing duration significance:

The lifetime of the impact will be measured in the context of the lifetime of the proposed phase or activity.

- **Short term**
The impact will either disappear with mitigation or will be mitigated through natural process in a short time period.
- **Medium term**
The impact will last up to the end of the mining period, where after it will be entirely negated.
- **Long term**
The impact will continue or last for the entire operational life of the mine, but will be mitigated by direct human action or by natural processes thereafter.
- **Permanent**
The only class of impact, which will be non-transitory. Mitigation either by man or natural process will not occur in such a way or in such a time span that the impact can be considered transient.

(vi) The stages at which the Competent Authority will be consulted:

Consultation with the Competent Authority will take place throughout the application process, however more specifically; consultation will take place before submission of the Scoping Report and again before submission of the EIA/EMPR Report.

(vii) Particulars of the public participation process with regard to the Impact Assessment process that will be conducted:

1. Steps to be taken to notify interested and affected parties:

(These steps must include the steps that will be taken to ensure consultation with the affected parties identified in (h)(ii) herein.)

Registered interested and/or affected parties shall be notified of the EIA process as follows:

- Notification letters;
- Newspapers advert in one local newspaper; and
- Notice board at the entrance of the site.

2. Details of the engagement process to be followed:

(Describe the process to be undertaken to consult interested and affected parties including public meetings and one on one consultation. NB the affected parties must be specifically consulted regardless of whether or not they attended public meetings and record of such consultation will be required in the EIA at a later stage.)

- One-on-One meeting with surface owners (should it be possible to arrange such a meeting) and/or legal occupant.

- Public meeting with all other interested and/or affected parties, should the need arise.

3. Description of the information to be provided to Interested and Affected Parties:

(Information to be provided must include the initial site plan and sufficient detail of the intended operation and the typical impacts of each activity, to enable them to assess what impact the activities will have on them or on the use of their land.)

A draft copy of the EIA / EMPR document will be provided to the surface owners and/or legal occupant of the properties and all other registered interested and / or affected parties for comment and input.

A draft copy of the EIA / EMPR document will be placed at the local municipality for comment and input from any other interested and/or affected party. I&AP's will be notified that the EIA/EMPR is available for review by means of a newspaper advert in one local newspaper.

(viii) Description of the tasks that will be undertaken during the environmental impact assessment process:

The process shall entail the appointment of specialists, review of all available information, impact assessment, consultation and drafting of EIA/EMPR.

Draft

(ix) Measures to avoid, reverse, mitigate, or manage identified impacts and to determine the extent of the residual risks that need to be managed and monitored:

ACTIVITY Whether listed or not listed (e.g. excavations, blasting, stockpiles, discard dumps or dams, loading, hauling and transport, water supply dams and boreholes, accommodation, offices, ablution, stores, workshops, processing plant, storm water control, berms, roads, pipelines, power lines, conveyors, etc...etc...etc...)	POTENTIAL IMPACT (e.g. dust, noise, drainage, surface disturbance, fly rock, surface water contamination, groundwater contamination, air pollution etc...etc...)	MITIGATION TYPE modify, remedy, control or stop (e.g. noise control measures, stormwater control, dust control, rehabilitation, design measures, blasting controls, avoidance, relocation, alternative activity etc... etc...) (e.g. modify through alternative method. Control through management and monitoring through rehabilitation.)	POTENTIAL FOR RESIDUAL RISK
Blasting	<ul style="list-style-type: none"> • Dust • Fly-rock • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance • Surface water contamination 	<ul style="list-style-type: none"> • Dust control and monitoring • Noise control and monitoring • Access control. • Continuous rehabilitation. • Stormwater run-off control. 	Medium
Boreholes	<ul style="list-style-type: none"> • Dust • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance 	<ul style="list-style-type: none"> • Dust control and monitoring • Noise control and monitoring • Continuous rehabilitation 	Medium
Chemical toilets	<ul style="list-style-type: none"> • Soil contamination • Groundwater contamination 	<ul style="list-style-type: none"> • Maintenance of toilets on regular basis. • Monitoring of groundwater quality. • Removal of toilets upon closure. 	Very low
Diesel tanks	<ul style="list-style-type: none"> • Groundwater contamination • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination 	<ul style="list-style-type: none"> • Maintenance of diesel tanks and bund walls. • Oil traps. • Groundwater quality monitoring. • Drip tray at re-fuelling point. 	Medium

	<ul style="list-style-type: none"> • Surface disturbance 	<ul style="list-style-type: none"> • Immediately clean hydrocarbon spill. 	
Excavations	<ul style="list-style-type: none"> • Dust • Groundwater contamination • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination • Surface disturbance • Surface water contamination • Erosion 	<ul style="list-style-type: none"> • Access control • Dust control and monitoring • Groundwater quality monitoring • Noise control and monitoring • Continuous rehabilitation • Stormwater run-off control • Immediately clean hydrocarbon spill • Drip trays • Rock stability control and monitoring • Erosion control 	Medium
Generator	<ul style="list-style-type: none"> • Groundwater contamination • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination • Surface disturbance 	<ul style="list-style-type: none"> • Access control • Maintenance of generator and bund walls • Noise control and monitoring • Oil traps • Groundwater quality monitoring • Immediately clean hydrocarbon spill 	Medium
Office – mobile container	<ul style="list-style-type: none"> • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination • Surface disturbance 	<ul style="list-style-type: none"> • Immediately clean hydrocarbon spill • Rip disturbed areas to allow re-growth of vegetation cover 	Very low
Processing plant	<ul style="list-style-type: none"> • Dust • Noise • Groundwater contamination and usage • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination • Surface disturbance 	<ul style="list-style-type: none"> • Access control • Maintenance of processing plant • Dust control and monitoring • Groundwater quality and level monitoring • Noise control and monitoring • Drip trays • Stormwater run-off control. • Immediately clean hydrocarbon spills • Rip disturbed areas to allow re-growth 	Medium

		of vegetation cover	
Roads	<ul style="list-style-type: none"> • Dust • Groundwater contamination • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance 	<ul style="list-style-type: none"> • Maintenance of roads • Dust control and monitoring • Groundwater quality monitoring • Noise control and monitoring • Speed limits • Stormwater run-off control. • Erosion control • Immediately clean hydrocarbon spills • Rip disturbed areas to allow re-growth of vegetation cover 	Low
Salvage yard	<ul style="list-style-type: none"> • Groundwater contamination • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination • Surface disturbance 	<ul style="list-style-type: none"> • Access control • Maintenance of fence. • Groundwater quality monitoring • Stormwater run-off control • Immediately clean hydrocarbon spill 	Low
Stockpile area	<ul style="list-style-type: none"> • Dust • Groundwater contamination • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance 	<ul style="list-style-type: none"> • Dust control and monitoring • Groundwater quality monitoring • Noise control and monitoring • Drip trays • Stormwater run-off control. • Immediately clean hydrocarbon spills • Rip disturbed areas to allow re-growth of vegetation cover 	Low
Washbay	<ul style="list-style-type: none"> • Groundwater contamination and usage • Removal and disturbance of vegetation cover and natural habitat of fauna • Soil contamination 	<ul style="list-style-type: none"> • Groundwater quality and level monitoring • Concrete floor with oil/water separator • Stormwater run-off control • Immediately clean hydrocarbon spills 	Low
Waste rock dumps	<ul style="list-style-type: none"> • Dust • Groundwater contamination 	<ul style="list-style-type: none"> • Dust control and monitoring • Groundwater quality monitoring 	Low

	<ul style="list-style-type: none"> • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance 	<ul style="list-style-type: none"> • Noise control and monitoring • Stormwater run-off control. • Rip disturbed areas to allow re-growth of vegetation cover 	
Water tank	<ul style="list-style-type: none"> • Groundwater abstraction and usage • Surface disturbance 	<ul style="list-style-type: none"> • Maintain water tanks and structures. • Groundwater levels and quality monitoring. 	Low
Weighbridge and weighbridge control room	<ul style="list-style-type: none"> • Dust • Groundwater contamination • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance 	<ul style="list-style-type: none"> • Access control • Maintenance of weighbridge • Dust control and monitoring • Noise control and monitoring • Groundwater levels and quality monitoring • Immediately clean hydrocarbon spill • Rip disturbed areas to allow re-growth of vegetation cover 	Low
Workshop – mobile containers	<ul style="list-style-type: none"> • Groundwater contamination • Noise • Removal and disturbance of vegetation cover and natural habitat of fauna • Surface disturbance 	<ul style="list-style-type: none"> • Access control • Concrete floor with oil/water separator • Maintenance of mobile containers • Noise control and monitoring • Groundwater quality monitoring • Immediately clean hydrocarbon spill 	Low

(x) Other information required by the Competent Authority:

1. Compliance with the provisions of Sections 24(4)(a) and (b) read with Section 24(3)(a) and (7) of the National Environmental Management Act (Act 107 of 1998), the EIA report must include the:-

a. Impact on the socio-economic conditions of any directly affected person:

(Provide the results of investigation, assessment and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any directly affected person including the landowner, lawful occupier, or, where applicable, potential beneficiaries of any land restitution claim, attach the investigation report as Appendix '7' and confirm that the applicable mitigation is reflected in 2.5.3, 2.11.6 and 2.12 herein.)

- Impact on landowner:
Positive: Compensation of land lost to prospecting activities.
Negative: Loss of agricultural land.
- Impact on other I&AP:
 - To be determined during consultation process. The results shall be included in the EIA/EMPR document.

b. Impact on any national estate referred to in Section 3(2) of the National Heritage Resources Act:

(Provide the results of investigation, assessment and evaluation of the impact of the mining, bulk sampling or alluvial diamond prospecting on any national estate referred to in Section 3(2) of the National Heritage Resources Act, 1999 (Act 25 of 1999) with the exception of the national estate contemplated in Section 3(2)(i)(vi) and (vii) of that Act, attach the investigation report as Appendix '8' and confirm that the applicable mitigation is reflected in 2.5.3, 2.11.6 and 2.12 herein.)

A specialist shall be appointed to conduct a palaeontological assessment. The findings of this report will be included in the EIA/EMPR document.

(xi) Other matters required in terms of Sections 24(4)(a) and (b) of the Act:

(The EAP managing the application must provide the Competent Authority with details, written proof of an investigation as required by Section 24(4)(b)(i) of the Act and motivation if no reasonable or feasible alternatives, as contemplated in sub-regulation 22(2)(h), exist. The EAP must attach such motivation as Appendix '9'.)

No viable alternative sites were identified for the following reason:

A detailed Site Plan cannot be provided in this early stage of the application process as the locality of the proposed boreholes and trenches is dependent on the results of the following:

- Reconnaissance visit;
- Desktop study;
- Geological mapping; and
- Geophysical survey

GEJ has considered the following:

- The Geological formation that supports the possibility that the minerals applied for could be found within the PR Area.
- The availability of infrastructure, such as a road network, in the immediate surrounding area, which could be utilized to allow easy access to the site.

(xii) Undertaking regarding correctness of information:

I, T. Jooste, ID number ..., herewith undertake that the information provided in the foregoing report is correct, and that the comments and inputs from stakeholders and Interested and Affected Parties have been correctly recorded in the report.

Signature of EAP

Date: _____

(xiii) Undertaking regarding level of agreement:

I, T. Jooste, ID number ..., herewith undertake that the information provided in the foregoing report is correct, and that the comments and inputs from stakeholders and Interested and Affected Parties have been correctly recorded in the report.

Signature of EAP
