Gunstfontein Wind Farm (Pty) Ltd received an Environmental Authorisation (EA) for the construction of Gunstfontein Wind Energy Facility (WEF) and associated infrastructure in the Northern Cape Province (DEA ref: 14/12/16/3/3/2/826 on the 25<sup>th</sup> of July 2016.

Dear Hermien

1. Please note that this could have been a typo and therefore it will be corrected.
2. The 90m setback line is for the avifauna and bat sensitivities. However, as you have stated that the avifauna specialist suggested that there should be a 70m setback line. We can work with 70m setback line.

Thanks  
Samke

Good day Ms. Dlamini,

With reference to our conversation regarding the Gunstfontein WEF in the Northern Cape, please see the correspondence from the Department attached.

Two aspect we would like to address in terms of the Departments comments:

1. The Heading refers to farm Funstfontein, could this be corrected in the final motivation report stage to the Farm Gunstfontein.
2. The specific comments under section (a) states that:
  - (i) A layout plan showing the 90m setback line of all turbines must be included in the final report.

We just wanted to gain some understanding on this, in order to advise the applicant on the layout, could you kindly provide us with background as to the 90m setback line that is referred to? Is this in terms of the avifaunal or bat sensitivities?

The avifaunal specialist gave the recommendation that a 70m setback from avifaunal sensitivities and Verreaux Eagle buffers should be sufficient. The layout currently adheres to a 70m setback from these sensitivities. The bat specialist did not recommend a setback distance and recommended that all the bat sensitivities be avoided.

Is there any leniency on this 90m setback distance (could this possibly be reduced this to 70m, as per the specialist recommendation)?

Please advise on the above and we will more ahead accordingly.

Best Regards  
Hermien Slabbert
