

**Civil Aviation Compliance Statement
For the Harmony Moab Khotsong Solar PV Facility application for Environmental Authorisation**

This compliance statement has been prepared by an Environmental Assessment Practitioner. This Compliance Statement is applicable to the Harmony Moab Khotsong Solar PV Facility, which is located at co-ordinate 26° 57'19.052"S, 26°45'12.662"E. The sensitivity rating for the site is as follows:

Table 1: Identified sensitivity in terms of the national web-based screening tool for the development

Identified Specialist Assessment	Identified Sensitivity		Comment
	By DFFE Screening Report	By EAP	
Civil Aviation Assessment	Medium Sensitivity	Low Sensitivity	The small landing strip is located approximately 3km from the proposed development.

A medium sensitivity rating has been indicated by the DFFE screening tool due to the proximity to a landing strip. This indicates a low potential for negative impacts on the civil aviation installation, and a high potential for mitigation of impacts. The landing strip is located 3km north west of the PV development footprint. The location is illustrated in the attached map. The planned facility is not in direct line of the approach/departure line of the landing strip.

The proposed development however, would not negatively affect any civil aviation activity at the landing strip given that:

- the PV panels are <5m in height, as measured from ground level
- the planned facility is not in direct line of the approach/departure line of the landing strip
- the result in the visual assessment undertaken for the PV facility indicates that the glint and glare is considered to be of low significance, due to the long distance in between the proposed PV facility and the airfield. No mitigation of this impact is required since the PV facility is not expected to interfere with aircraft operations at the airfield.
- the facility does not comprise any telecommunications structures that may have potential to interfere with navigation/communication

The proposed development will not have an unacceptable impact on the landing strip. Further assessment of the potential impacts is not required.

During the public participation for the EA Application, the South African Civil Aviation Authority (SACAA) was consulted and invited to attend key stakeholder workshops. No formal response has been provided by SACAA regarding the Harmony Moab Khotsong Solar PV facility.
