Basic Assessment Report in terms of the Environmental Impact Assessment Regulations, 2014, promulgated in terms of the National Environmental Management Act, 1998 (Act No. 107 of 1998), as amended.

Kindly note that:

- This basic assessment report is a standard report that may be required by a competent authority in terms of the EIA Regulations, 2014 and is meant to streamline applications. Please make sure that it is the report used by the particular competent authority for the activity that is being applied for.
- 2. This report format is current as of 07 April 2017. It is the responsibility of the applicant to ascertain whether subsequent versions of the form have been published or produced by the competent authority
- 3. The report must be typed within the spaces provided in the form. The size of the spaces provided is not necessarily indicative of the amount of information to be provided. The report is in the form of a table that can extend itself as each space is filled with typing.
- 4. Where applicable **tick** the boxes that are applicable in the report.
- 5. An incomplete report may be returned to the applicant for revision.
- 6. The use of "not applicable" in the report must be done with circumspection because if it is used in respect of material information that is required by the competent authority for assessing the application, it may result in the rejection of the application as provided for in the regulations.
- 7. This report must be handed in at offices of the relevant competent authority as determined by each authority.
- 8. No faxed or e-mailed reports will be accepted.
- 9. The signature of the EAP on the report must be an original signature.
- 10. The report must be compiled by an independent environmental assessment practitioner.
- 11. Unless protected by law, all information in the report will become public information on receipt by the competent authority. Any interested and affected party should be provided with the information contained in this report on request, during any stage of the application process.
- 12. A competent authority may require that for specified types of activities in defined situations only parts of this report need to be completed.
- 13. Should a specialist report or report on a specialised process be submitted at any stage for any part of this application, the terms of reference for such report must also be submitted.

EXECUTIVE SUMMARY

NSVT Consultants has been appointed by Phokwane Local Municipality as the independent EAP to undertake the Basic Assessment process for the proposed infill development on Portion 42 of farm Guldenskat No. 36, Jan Kempdorp, Northern Cape Province. Phokwane Local Municipality proposes this development to provide housing for middle-income residents. The proposed site is undeveloped, vacant and zoned as a Public Open Space. A basic assessment process was udertaken to identify environmental impacts that the proposed infill development would have on the receiving environment and its surroundings. participation process was undertaken in line with the EIA regulations, to inform and get feedbacks from the identified stakeholders, i.e. Department of Environment and Nature Conservation, Department of Water and Sanitation, Department of Agriculture, Forestry and Fisheries, South African Heritage Resources Agency and Eskom and Interested and Affected Parties, i.e. neighbouring landowners, ward coucillor of Ward 8, Mr. Chwarisang about the proposed project. The draft Basic Assessment Report will be sent to the I&APs for input before the final report is submitted to DENC. To identify environmental impacts associated with the proposed development, a site visit was undertaken, desktop study/literature review, involvement of specialists, i.e. Palaeontologist, Archaeologist and Ecologist.. The impacts that are identified includes; loss of threatened and/or protected species, excesive generation of noise and dust, improper handling and disposal of waste, transformation of open spaces, impact on traffic within area, destruction of archeological artefacts and the spread of HIV/Aids. These impacts were assessed using the Signficance Assessment Methodology, whereby the significance of the impacts were assessed without and with the adoption of mitigation and management measures, and it was based on the nature of the impact, extent and duration, reversibility, probability, magnitude and whether it is cumulative and if there were any residual risks. Findings from the assessment done, it is evident that the significance identified impacts would be reduced greatly with implementation of the outlined mitigation measures and the likelihood of residual impacts will be limited. Most of the impacts will occur during construction activities, therefore has a short term-duration and its intensity could be reduced with mitigation. During construction, job opportunities must favour local community especially for unskilled labour, and local suppliers so that the identified positive impact could be augmented. From the findings of the specialists studies, there is an Archaeological artefact that has to be removed prior to construction and the species that needs to be incorporated in the layout or relocated thus require a permit or license needs to be obtained from the respective authorities prior to vegetation clearance or site preparation. The municipality has adequate bulk services capacity to service the proposed development. The proposed infill development is in line with the Integrated Development Plan, Spatial Development Plan and the Environmental Management Framework. Given the above information, the EAP hereby recommends that the project be authorised provided the recommendations, conditions and mitigation measures outlined in the Basic Assessment Report and Environmental Management Prpgramme are adhered to. The EAP is of the opinion that DENC and the competent authority have been provided with adequate information to enable them to make an informed decision regarding the proposed infill development.

SECTION F: A	APPENDIXES	43

SECTION A: ACTIVITY INFORMATION

Has a specialist been consulted to assist with the completion of this section?

YES

If YES, please complete the form entitled "Details of specialist and declaration of interest" for the specialist appointed and attach in Appendix I.

1. ACTIVITY DESCRIPTION

a) Describe the project associated with the listed activities applied for

The applicant, Phokwane Local Municipality intends to develop 45 middle income residential area with units of an average size of 900m² to 1000m² on Portion 42 of farm Geldunskat No 36 in Jan Kempdorp, which is approximately 6.30 hectares. The proposed site is located on the southwestern direction of the town. The proposed development is an infill development because it is a vacant and undeveloped land that is currently zoned as an open space; therefore, the land use will have change to a residential area as a result of the proposed activity.

b) Provide a detailed description of the listed activities associated with the project as applied for

Listed activity as described in GN 327, 325 and 324	Description of project activity
GNR 327 Listing Notice 1 Activity 27: The clearance of an area of 1 hectare or more but less than 20 hectares of indigenous vegetation, except where such clearance of Indigenous vegetation is required for-	The proposed development in Jan Kempdorp is in an area that is approximately 6 hectares in size, whereby its indigenous vegetation will be subjected to clearance.
(i) The undertaking of linear activity or	
(ii) Maintenance purposes undertaken in accordance with maintenance management plan,	
GNR 324 Listing Notice 3 Activity 12(g)(iv): The clearance of an area of 300 square metres or more of indigenous vegetation on land, where, at the time of the coming into effect of this Notice or thereafter such land was zoned open space, conservation or had an equivalent zoning.	The area proposed, zoned as an open space, will be cleared of all its indigenous vegetation to make way for envisaged developments within the proposed development footprint.

2. FEASIBLE AND REASONABLE ALTERNATIVES

"alternatives", in relation to a proposed activity, means different means of meeting the general purpose and requirements of the activity, which may include alternatives to—

- (a) the property on which or location where it is proposed to undertake the activity;
- (b) the type of activity to be undertaken;
- (c) the design or layout of the activity;
- (d) the technology to be used in the activity;
- (e) the operational aspects of the activity; and
- (f) the option of not implementing the activity.

Describe alternatives that are considered in this application as required by Appendix 1 (3)(h), Regulation 2014. Alternatives should include a consideration of all possible means by which the purpose and need of the proposed activity (NOT PROJECT) could be accomplished in the specific instance taking account of the interest of the applicant in the activity. The no-go alternative must in all cases be included in the assessment phase as the baseline against which the impacts of the other alternatives are assessed.

The determination of whether site or activity (including different processes, etc.) or both is appropriate needs to be informed by the specific circumstances of the activity and its environment. After receipt of this report the, competent authority may also request the applicant to assess additional alternatives that could possibly accomplish the purpose and need of the proposed activity if it is clear that realistic alternatives have not been considered to a reasonable extent.

Indicate the position of the activity using the latitude and longitude of the centre point of the site for each alternative site. The co-ordinates should be in degrees, minutes and seconds. The projection that must be used in all cases is the WGS84 spheroid in a national or local projection.

a) Site alternatives

Alternative 1 (preferred alternative)		
Description	Lat (DDMMSS)	Long (DDMMSS)
The proposed site is nestled between two frequently used gravel roads, namely; Voortrekker Way as well as Kersie Street. The current surrounding is of a slightly sprawling suburban environment hence, the residential development is an infill. In proximity of the site is cultivated land across Kersie Str. into the North West Province. There are small rock formations scattered across the site as one move further towards Kersie Street. There is an overhead powerline along the southern section of the site. The site has minimal grass cover and trees.	S 27º55'42.86"	E 24º49'54.91.
Alternative 2		
Description	Lat (DDMMSS)	Long (DDMMSS)

Middle/Additional point of the activity		
 End point of the activity 		
Alternative S3 (if any)		
 Starting point of the activity 		
 Middle/Additional point of the activity 		

For route alternatives that are longer than 500m, please provide an addendum with co-ordinates taken every 250 meters along the route for each alternative alignment.

In the case of an area being under application, please provide the co-ordinates of the corners of the site as indicated on the lay-out map provided in Appendix A of this form.

b) Lay-out alternatives

End point of the activity

Alternative 1 (preferred alternative)		
Description	Lat (DDMMSS)	Long (DDMMSS)
The point for which the development footprint begins is where	S 27°55'48.52"	E24°49'52.32"
the Voortrekker Way tar road ends and the gravel road begins,	S 27°55'42.30	E 24°49'49.73"
the development footprint stretches 181.71 metres north west	S 27°55'37.83	E 24°49'54.00"
of the area, 39.12 metres south east and 194.15 metres east	S 27°55'39.10"	E 24°49'54.29"
on the north side of the proposed development site towards	S 27°55'38.10"	E 24°50'01.27"
Kersie Street.	S 27°55'42.73"	E 24°50'00.71"
On the Southern side of the proposed development, the		
proposed site begins where Voortrekker Way and Kersie Street		
meet, the southern side stretches for 412.43 metres towards		
the eastern side to close off the proposed development along		
Kersie Street.		
The size of the proposed area is approximately 6.30 hectares,		
which will accommodate 45 middle income residential area with		
units of an average size of 900m ² to 1000m ² . The development		
will have 37 residential units, 2 public open spaces and 2 land		
units to be used for infrastructure-transport purposes. It will		
have 3 access roads, with 2 branching off from Voortrekker		
Street on the Western side and one from the existing gravel		
road, on the South eastern side.		
Alternative 2		
Description	Lat (DDMMSS)	Long (DDMMSS)
N/A		
Alternative 3		
Description	Lat (DDMMSS)	Long (DDMMSS)
N/A		

c) Technology alternatives

Alternative 1 (preferred alternative)		
The technological techniques that will be used in the proposed development must adhere to and not		
be in contravention of the Phokwane Local Municipality's bylaws with regards to the standards of		
construction that should be implemented of which must complement the surrounding urban		
environment.		
Alternative 2		
Alternative 3		

d) Other alternatives (e.g. scheduling, demand, input, scale and design alternatives)

Alternative 1 (preferred alternative)		
Phokwane local Municipality intend to develop 37 land units on		
approximately 6.30 hectares plot to meet the growing demand	S 27º55'43.31"	E 24º49'54.12".
for middle and high-income housing in the region.		
Alternative 2		
N/A		
Alternative 3		
N/A		

e) No-go alternative

If the development doesn't go ahead as planned, the area will remain an open space that will be threatened by land grab due to housing need. There will still be a need for middle-income housing in the Jan Kempdorp area. The municipality will have to consider looking for undeveloped land outside the urban edge and this could increase the municipality's environmental and spatial footprint.

Paragraphs 3 – 13 below should be completed for each alternative.

3. PHYSICAL SIZE OF THE ACTIVITY

a) Indicate the physical size of the preferred activity/technology as well as alternative activities/technologies (footprints):

Alternative:	Size of the activity:
Alternative A1 ¹ (preferred activity alternative)	63000m ²
Alternative A2 (if any)	m ²
Alternative A3 (if any)	m ²

or, for linear activities:

ctivity:
N/Am
m
m

¹ "Alternative A.." refer to activity, process, technology or other alternatives.

b) Indicate the size of the alternative sites or servitudes (within which the above footprints will occur):

Alternative: Size of the

Alternative A1 (preferred activity alternative)

Alternative A2 (if any)

Alternative A3 (if any)

site/servitude:	
	63000m ²
	m^2
	m²

4. SITE ACCESS

Does ready access to the site exist?

If NO, what is the distance over which a new access road will be built

Describe the type of access road planned:

There are no plans to develop an access road to the proposed site by virtue of the existing two road networks that can lead one to the proposed development site, namely; Voortrekker Way and Kersie Street. The development will have 3 access roads, 1 on the western side and 2 on the southern side. The existing gravel road will have to be improved to a surfaced road.

Include the position of the access road on the site plan and required map, as well as an indication of the road in relation to the site.

5. LOCALITY MAP

An A3 locality map must be attached to the back of this document, as Appendix A. The scale of the locality map must be relevant to the size of the development (at least 1:50 000. For linear activities of more than 25 kilometres, a smaller scale e.g. 1:250 000 can be used. The scale must be indicated on the map.). The map must indicate the following:

- an accurate indication of the project site position as well as the positions of the alternative sites, if any;
- indication of all the alternatives identified;
- closest town (s;)
- road access from all major roads in the area;
- road names or numbers of all major roads as well as the roads that provide access to the site(s);
- all roads within a 1km radius of the site or alternative sites; and
- a north arrow;
- a legend; and
- locality GPS co-ordinates (Indicate the position of the activity using the latitude and longitude of the
 centre point of the site for each alternative site. The co-ordinates should be in degrees and decimal
 minutes. The minutes should have at least three decimals to ensure adequate accuracy. The
 projection that must be used in all cases is the WGS84 spheroid in a national or local projection).

Locality Map is attached hereto as Appendix A1.

6. LAYOUT/ROUTE PLAN

A detailed site or route plan(s) must be prepared for each alternative site or alternative activity. It must be attached as Appendix A to this document.

The site or route plans must indicate the following:

- the property boundaries and numbers of all the properties within 50 metres of the site;
- the current land use as well as the land use zoning of the site;
- the current land use as well as the land use zoning each of the properties adjoining the site or sites;
- the exact position of each listed activity applied for (including alternatives);
- servitude(s) indicating the purpose of the servitude;
- a legend; and
- a north arrow.

Layout Plan is attached hereto as Appendix A2.

7. SENSITIVITY MAP

The layout/route plan as indicated above must be overlain with a sensitivity map that indicates all the sensitive areas associated with the site, including, but not limited to:

- watercourses:
- the 1:100 year flood line (where available or where it is required by DWS);
- ridges;
- cultural and historical features;
- areas with indigenous vegetation (even if it is degraded or infested with alien species); and
- critical biodiversity areas.

The sensitivity map must also cover areas within 100m of the site and must be attached in Appendix A.

Sensitivity Map is attached hereto as Appendix A3.

8. SITE PHOTOGRAPHS

Colour photographs from the centre of the site must be taken in at least the eight major compass directions with a description of each photograph. Photographs must be attached under Appendix B to this report. It must be supplemented with additional photographs of relevant features on the site, if applicable.

Photographic History attached hereto as Appendix B.

9. FACILITY ILLUSTRATION

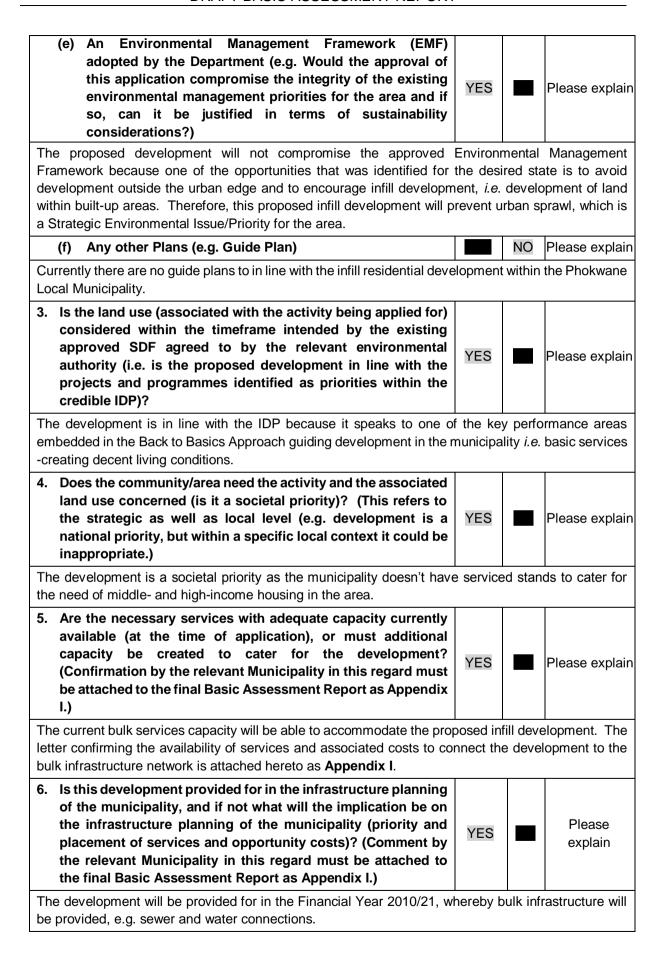

A detailed illustration of the activity must be provided at a scale of at least 1:200 as Appendix C for activities that include structures. The illustrations must be to scale and must represent a realistic image of the planned activity. The illustration must give a representative view of the activity.

No facility illustration attached.

10. ACTIVITY MOTIVATION

Motivate and explain the need and desirability of the activity (including demand for the activity):

1. Is the activity permitted in terms of the property's existing land use rights?		NO	Please explain
The current land use is categorised as Public Open Space as indicated attached hereto as Appendix J . The approximately 6.30 hectares land be rezoned as an entity that can be subjected to urban development.			•
2. Will the activity be in line with the following?			
(a) Provincial Spatial Development Framework (PSDF)	YES		Please explain
The proposed development is in line with the Provincial Spatial Develop to the nature of the in which proposed development is undertaked development throughout the province". Therefore, Phokwane Local Environmental Assessment Practitioners (NSVT Consultants) to carry of Assessment in order to ascertain the feasibility of developing the propose impacts on the receiving environment are promoting sustainable development. The PSDF furthermore stipulates ""planning and land management development by enhancing environmental integrity and human we efficiency within a defined geographical area, the boundaries of which a with environmental, social and economic criteria" (NC PSDF 2013:17) cater for middle income residents as currently the municipality cannot part of the EIA process, specialists' studies were undertaken to ensure and/or Red Data Species are protected to a greater extent.	ken to Municout the I ed site, opment that ell-being are determent the comment that the comment the comment that the comment t	facilitat sipality Environ without within to promo g throu rmined develop te grea	e sustainable by appointing mental Impact have adverse heir municipal te sustainable ugh economic in accordance ment will also t demand. As
(b) Urban edge / Edge of Built environment for the area	YES		Please explain
The proposed development, although adjacent to the North West bound edge of Jan Kempdorp as well as the boundary of the Phokwane Local	-		ithin the urban
c) Integrated Development Plan (IDP) and Spatial Development Framework (SDF) of the Local Municipality (e.g. would the approval of this application compromise the integrity of the existing approved and credible municipal IDP and SDF?).	YES		Please explain
The proposed infill development seeks to pursue spatial, economic particularly in the proposed region. Therefore, the proposed residual compromise the integrity of the approved SDF as it is in line with 2 objective. Objective 4: To improve connectivity in PLM (1) locally in and between 7: To develop sustainable settlements that provide the environment	lential o ctives of een sett	develop Spatial Iement	ment will not development, and Objective
inhabitants to live healthy, dignified and productive lives. This will als challenges, i.e. lack in diversity of housing and lack of land for housing, currently are addressed through this development.		e that t	he key spatial
inhabitants to live healthy, dignified and productive lives. This will als challenges, i.e. lack in diversity of housing and lack of land for housing,		e that t	he key spatial

7. Is this project part of a national programme to address an issue of national concern or importance?

NO Please explain

The proposed residential development is for the sole beneficiation of the residents of Jan Kempdorp as well as the surrounding area within the jurisdiction of the Phokwane Local Municipality.

8. Do location factors favour this land use (associated with the activity applied for) at this place? (This relates to the contextualisation of the proposed land use on this site within its broader context.)

Please explain

The area to the north of the proposed site is a formalized residential development, which is divided by a fence. Therefore, it can be considered as an extension of the existing residential area as no fragmentation of vast natural areas will be disturbed. The land to the southern side is within the North West Province, and the proposed side and the area used for agricultural purposes, i.e. cultivated fields is divided by the existing gravel road.

9. Is the development the best practicable environmental option for this land/site?

YES

Please explain

Although the proposed site is zoned as an open space, it is subjected to uncontrolled grazing, illegal dumping site, and other anthropogenic activities, e.g. clearing vegetation along the fence that is bordering the area on the northern side. Therefore, the infill development will ensure that the area is no longer subjected to environmental impacts associated with the activities currently taking place on site. The layout has also 2 units identified for open spaces, which will ensure there is still habitat for birds and insects. The existing significantly sized Vachellia erioloba trees have been incorporated in the layout. In the long-term the development will result in less environmental impacts on the environment as most of the impacts will be during construction phase, meaning, they are short term, when compared to the current impacts taking place. The environmental cost will also be acceptable to society as there will be availability of serviced stands to benefit middle- and high-income residents within the municipal area especially Jan Kempdorp.

10. Will the benefits of the proposed land use/development outweigh the negative impacts of it?

YES

Please explain

With careful planning and practicing due diligence during the construction phase, together with proper site re-instatement any potential environmental impacts will be reduced. This will negate the longterm significant impacts imposed on the respective systems. Therefore, mitigation measures have been provided to ensure that the positive impacts outweigh the negative impacts.

11. Will the proposed land use/development set a precedent for similar activities in the area (local municipality)?

YES

Please explain

The land use development will serve as a precedent for future developments, whereby PLM's vacant land and Public Open Spaces can be developed for residential use. However, these developments will be subjected to spatial planning legislation to ensure that the required number of open spaces in the area is maintained.

12. Will any person's rights be negatively affected by the proposed activity/ies?

Please explain

With reference to the public participation conducted, no objections with regards to the development has come to light, therefore, the proposed development or associated activity will not affect any person's rights.

13. Will the proposed activity/ies compromise the "urban edge" as defined by the local municipality?

NO

Please explain

The proposed site is well within the urban edge of the Phokwane local Municipality as indicated in the map attached hereto as **Appendix J**.

14. Will the proposed activity/ies contribute to any of the 17 Strategic Integrated Projects (SIPS)?

YES

Please explain

The proposed development forms part of the 17 Strategic Integrated Projects. SIP 7: <u>Integrated urban space and public transport programme</u>;

"Coordinate planning and implementation of public transport, <u>human settlement</u>, economic and social infrastructure and location decisions into sustainable urban settlements".

According to the above-mentioned SIP 7, the proposed development may contribute to the envisaged integration with regards to urban space.

15. What will the benefits be to society in general and to the local communities?

Please explain

The proposed site would benefit the Jan Kempdorp residents in need of middle-income housing. The income generated for selling the land parcels, will enable the municipality to use for improvement of their infrastructure, which in turn will improve their responsibility in providing basic services to the local community.

16. Any other need and desirability considerations related to the proposed activity?

Please explain

The proposed infill development would address the need for more residential space catering middle and high income in Jan Kempdorp.

17. How does the project fit into the National Development Plan for 2030?

Please explain

According to the National Development Plan for 2030, the proposed development would be suitable in the sense that "Rising income and employment, combined with a stable outlook for interest rates, can promote small-scale construction in the residential construction and housing renovation market – a key employment driver. Similarly, more and better-quality public housing has strong linkages to local supplier industries, promoting growth and employment" therefore, the proposed residential development is in line with the national strategy with regards to promoting growth. The proposed site is suitable for the proposed infill as it is close to social basic amenities, therefore the carbon footprint wouldn't be increased significantly. The lives of the people within middle income bracket will be improved through the provision of land that could be used for housing development.

18. Please describe how the general objectives of Integrated Environmental Management as set out in section 23 of NEMA have been taken into account.

The objectives outline below are processes the Phokwane local Municipality have taken into account in order to be in line with relevant environmental legislation:

- "(a) Promote the integration of the principles of environmental management set out in section 2 into the making of all decisions which may have a significant effect on the environment;" in this instance Phokwane Local Municipality appointed environmental assessment practitioners to conduct a study in order to certify whether the proposed residential development would feasible or not.
- (b) identify, predict and evaluate the actual and potential impact on the environment, socioeconomic conditions and cultural heritage, the risks and consequences and alternatives and options for mitigation of activities, with a view to minimising negative impacts, maximising benefits, and promoting compliance with the principles of environmental management; NSVT appointed environmental specialists to provide adequate overview of whether the proposed site is feasible and it has yielded positive results
- (c) ensure that the effects of activities on the environment receive adequate consideration before actions are taken in connection with them; Plant species in the proposed development footprint will be removed whenever construction commences as recommended by the Ecological Specialist Study
- (d) ensure adequate and appropriate opportunity for public participation in decisions that may affect the environment; Public participation was conducted by placing notices at various public institutions whereby the public have access, e.g., Jan kempdorp municipal office and library. Neighbouring residents received pamphlets with regards to the proposed development adjacent to their properties and a project poster onsite for the residents to identify.
- (e) ensure the consideration of environmental attributes in management and decision-making which may have a significant effect on the environment; **Ecological and Heritage impact studies have** been conducted and the recommendations will be adhered to once construction commences
- (f) identify and employ the modes of environmental management best suited to ensuring that a particular activity is pursued in accordance with the principles of environmental management; <u>An Environmental Management Plan will be given to the contractor in order for him/her to adhere all the recommendations outlined in the document.</u>

19. Please describe how the principles of environmental management as set out in section 2 of NEMA have been taken into account.

The principles of Environmental Management have been considered in the proposed expansion by ensuring that it is socially, environmentally and economically sustainable. This has been accomplished by considering that the loss of biodiversity and disturbance of the ecosystem are minimised, degradation of the environment minimised and the negative impacts on people's environmental rights are prevented. A Best Practicable Environmental Option was pursued during the identification of an area suitable to establishing the residential development and the infill development was deemed a best option. A comprehensive public participation was undertaken as part of the impact assessment and environmental governance was promoted and the needs and interest of the local community were considered during the public participation process. Due to the location of the proposed site in relation to the residents, it is economically feasible as there won't be excessive transportation costs.

11. APPLICABLE LEGISLATION, POLICIES AND/OR GUIDELINES

List all legislation, policies and/or guidelines of any sphere of government that are applicable to the application as contemplated in the EIA regulations, if applicable:

Title of legislation, policy	Applicability to the project	Administering	Date

	management will be transported		
	resources will be impacted.		
	The reports and its findings		
	will be submitted to SAHRA		
National Mater Ast 4000	via SAHRIS.	Department of Water	00
National Water Act, 1998	The act recognizes that the	Department of Water	06
(Act 36 of 1998)	protection of the quality of	Affairs	December
	water resources is necessary		1999
	to ensure sustainability of the		
	Nation's Water Resources in		
	the interest of all water users.		
	The potential impact due to		
	the proposed expansion		
	could result in the pollution of		
	the surface and groundwater,		
	especially when used for		
	human consumption.		
	Therefore, municipality		
	should ensure that no water		
	resources should be		
	negatively impacted by the		
	proposed residential		
	development. There should		
	be measures in place to		
	prevent pollution and		
	degradation of water		
	resources to ensure that the		
	water quality is protected.	D	00 1
Occupational Health and	It provides for the safety and	Department of Labour	23 June
Safety Act, 1993 (Act 85 of	health of persons at work and		1993
1993)	in connection with the use of		
	plant and machinery. It further		
	provides for the protection of		
	people other than people at		
	work from hazards arising out		
	of or in connection with the		
	activities from people at work.		
	Therefore, during		
	construction the site must be		
	kept in a safe working environment.		
Mineral and Petroleum	This is to ensure the	Department of Mineral	01 May
Resources Development	sustainable utilisation of the	Resources	2004
· ·	country's mineral and	1/69001069	2004
Act (Act 28 of 2002)	petroleum resources.		
	Therefore, should any		
	mineral be needed during the		
	construction period, eg.		
	Gravel for road material then		
	the necessary applications		
	must be submitted to the		
	Department to obtain the		
	required permit/right and		
	required permitting it and		

	Environmental Authorisation.		
	No borrowing of material must		
	be allowed without the		
	necessary permits.		
Conservation of Agricultural	It is aimed at prohibiting the	Department of	01 June

1983)	control measures. Therefore,	and Fisheries	
	measures must be in place to		
	ensure there is control of		
	weed growth so that it doesn't		
	spread to the adjacent pecan		
	farms.		

12. WASTE, EFFLUENT, EMISSION AND NOISE MANAGEMENT

a) Solid waste management

Will the activity produce solid construction waste during the construction/initiation phase?

If YES, what estimated quantity will be produced per month?

How will the construction solid waste be disposed of (describe)?

Construction waste will consist of construction (builder's) rubble and general waste from the workforce, which will be contained in waste skips/refuse bins before disposal. The waste will be disposed of by using trucks or manual transport methods.

Where will the construction solid waste be disposed of (describe)?

The waste generated by the activity will be disposed of in the Jan Kempdorp landfill site located north east of the proposed development.

Will the activity produce solid waste during its operational phase? If YES, what estimated quantity will be produced per month? How will the solid waste be disposed of (describe)?

During the operational phase, the new residential development will be given the same level of waste management service delivery as the current urban development adjacent to it. The solid waste will be disposed of by municipal waste pickers to the local solid waste site located on the eastern side of Jan Kempdorp. Waste to be generated include food waste, paper, cardboard, plastics, textiles, leather, yard wastes, wood glass, tin cans, aluminum, other metals, ashes, garden waste, special wastes (e-waste).

If the solid waste will be disposed of into a municipal waste stream, indicate which registered landfill site will be used.

N/A

Where will the solid waste be disposed of if it does not feed into a municipal waste stream (describe)?

N/A

If the solid waste (construction or operational phases) will not be disposed of in a registered landfill site or be taken up in a municipal waste stream, then the applicant should consult with the competent authority to determine whether it is necessary to change to an application for scoping and EIA.

Can any part NEM:WA?	of the solid waste be classified as haz	ardous in	terms of the		NO
	he competent authority and request a cha for a waste permit in terms of the NE	-	• •

	by-products such as exhaust fumes from				
-	foundations during the construction phase				

the EMP.

d) Waste permit

Will any aspect of the activity produce waste that will require a waste permit in terms of the NEM:WA?

If YES, please submit evidence that an application for a waste permit has been submitted to the competent authority

e) Generation of noise

Will the activity generate noise?

If YES, is it controlled by any legislation of any sphere of government?

Describe the noise in terms of type and level:

The only sources of noise would be vehicular in nature and the workers; however, it will be during normal working to working hours and short-term. During operation, the noise levels will be minimal as it is now, *i.e.* normal residential area noise level and type.

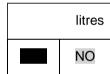

13. WATER USE

Please indicate the source(s) of water that will be used for the activity by ticking the appropriate box(es):

If water is to be extracted from groundwater, river, stream, dam, lake or any other natural feature, please indicate the volume that will be extracted per month:

Does the activity require a water use authorisation (general authorisation or water use license) from the Department of Water Affairs?

If YES, please provide proof that the application has been submitted to the Department of Water Affairs.

14. ENERGY EFFICIENCY

Describe the design measures, if any, which have been taken to ensure that the activity is energy efficient:

No energy efficiency design measures have been incorporated in the activity thus far. However, the municipality should ensure that the building plans approved, do comply with energy usage in building provisions in the amended National Building Regulations, to ensure that energy is used efficiently without compromising user needs.

Describe how alternative energy sources have been taken into account or been built into the design of the activity, if any:

Although, no energy efficiency design measures have been incorporated in the activity as indicated above. The designs to be approved must be in accordance with the SANS 104000-XA in terms of the regulations XA3². The design elements of the buildings must ensure the orientation of the building, use of natural light and insulation, so that they are able to be cool in summer and warm in winter, naturally. This will lessen the amount of energy that will be consumed for heating and cooling of buildings.

SECTION B: SITE/AREA/PROPERTY DESCRIPTION

lm	po	rta	nt	n	ot	es	:

1.	For linear activities (pipelines, etc) as well as activities that cover very large sites, it may be
	necessary to complete this section for each part of the site that has a significantly different
	environment. In such cases please complete copies of Section B and indicate the area, which is
	covered by each copy No. on the Site Plan.

Section B Copy No. (e.g. A):	
------------------------------	--

- 2. Paragraphs 1 6 below must be completed for each alternative.
- 3. Has a specialist been consulted to assist with the completion of this section? YES If YES, please complete the form entitled "Details of specialist and declaration of interest" for each specialist thus appointed and attach it in Appendix I. All specialist reports must be contained in Appendix D.

Property description/physi cal address:

Province	Northern Cape
District	Frances Baard District Municipality
Municipality	
Local Municipality	Phokwane Local Municipality
Ward Number(s)	8
Farm name and	Guldenskat 36-HN
number	
Portion number	42
SG Code	C0810000000003600042

Where a large number of properties are involved (e.g. linear activities), please attach a full list to this application including the same information as indicated above.

Current land-use zoning as per local municipality IDP/records:

Open Space Zone 1.			

In instances where there is more than one current land-use zoning, please attach a list of current land use zonings that also indicate which portions each use pertains to, to this application.

Is a change of land-use or a consent use application required?

YES	

1. GRADIENT OF THE SITE

Indicate the general gradient of the site.

Alternative S1:

	Flat	1:50 – 1:20	1:20 – 1:15	1:15 – 1:10	1:10 – 1:7,5	1:7,5 – 1:5	Steeper
							than 1:5
Α	Iternative S2	(if any):					
	Flat	1:50 – 1:20	1:20 – 1:15	1:15 – 1:10	1:10 – 1:7,5	1:7,5 – 1:5	Steeper
							than 1:5

	Flat	1:50 – 1:20	1:20 – 1:15	1:15 – 1:10	1:10 – 1:7,5	1:7,5 – 1:5	Steeper
							than 1:5

1. LOCATION IN LANDSCAPE

Indicate the landform(s) that best describes the site:

2.1 Ridgeline	2.4 Closed valley		2.7 Undulating plain / low hills	
2.2 Plateau	2.5 Open valley		2.8 Dune	
2.3 Side slope of hill/mountain	2.6 Plain	Х	2.9 Seafront	
2.10 At sea				

2. GROUNDWATER, SOIL AND GEOLOGICAL STABILITY OF THE SITE

Is the site(s) located on any of the following?

Shallow water table (less than 1.5m deep)	
Dolomite, sinkhole or doline areas	
Seasonally wet soils (often close to water	
bodies)	
Unstable rocky slopes or steep slopes with	
loose soil	
Dispersive soils (soils that dissolve in water)	
Soils with high clay content (clay fraction more	
than 40%)	
Any other unstable soil or geological feature	
An area sensitive to erosion	

NO

YES	NO			

Alternative S2

(if any):	
YES	NO

Alternative S3

If you are unsure about any of the above or if you are concerned that any of the above aspects may be an issue of concern in the application, an appropriate specialist should be appointed to assist in the completion of this section. Information in respect of the above will often be available as part of the project information or at the planning sections of local authorities. Where it exists, the 1:50 000 scale Regional Geotechnical Maps prepared by the Council for Geo Science may also be consulted.

3. GROUNDCOVER

Indicate the types of groundcover present on the site. The location of all identified rare or endangered species or other elements should be accurately indicated on the site plan(s).

Natural veld - good condition ^E	Natural veld with scattered aliens ^E	Natural veld with heavy alien infestation ^E	Veld dominated by alien species ^E	Gardens
Sport field	Cultivated land	Paved surface	Building or other structure	Bare soil

If any of the boxes marked with an "E" "is ticked, please consult an appropriate specialist to assist in the completion of this section if the environmental assessment practitioner doesn't have the necessary expertise.

4. SURFACE WATER

Indicate the surface water present on and or adjacent to the site and alternative sites?

Perennial River	NO	
Non-Perennial River	NO	
Permanent Wetland	NO	
Seasonal Wetland	NO	
Artificial Wetland	NO	
Estuarine / Lagoonal wetland	NO	

If any of the boxes marked YES or UNSURE is ticked, please provide a description of the relevant watercourse.

5. LAND USE CHARACTER OF SURROUNDING AREA

Indicate land uses and/or prominent features that currently occur within a 500m radius of the site and give description of how this influences the application or may be impacted upon by the application:

Natural area	Dam or reservoir	Polo fields
Low density residential	Hospital/medical centre	Filling station ^H
Medium density residential	School	Landfill or waste treatment site
High density residential	Tertiary education facility	Plantation
Informal	Church	Agriculture
Retail commercial &	Old age home	River, stream or wetland
warehousing	Old age nome	itiver, stream or wettand
Light industrial	Sewage treatment plant ^A	Nature conservation area
Medium industrial AN	Train station or shunting yard N	Mountain, Koppie or ridge
Heavy industrial AN	Railway line N	Museum
Power station	Major road (4 lanes or more) N	Historical building
Office/consulting room	Airport N	Protected Area

Military or police base/station/compound	Harbour	Graveyard
Spoil heap or slimes dam ^A	Sport facilities	Archaeological site
Quarry, sand or borrow pit	Golf course	Other land uses (describe)

If any of the boxes marked with an "N" "are ticked, how this impact will / be impacted upon by the proposed activity? Specify and explain:

N/A

If any of the boxes marked with an "An" are ticked, how will this impact / be impacted upon by the proposed activity? Specify and explain:

N/A

If any of the boxes marked with an "H" are ticked, how will this impact / be impacted upon by the proposed activity? Specify and explain:

N/A

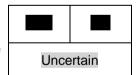

Does the proposed site (including any alternative sites) fall within any of the following:

Critical Biodiversity Area (as per provincial conservation plan)		NO
Core area of a protected area?		NO
Buffer area of a protected area?		NO
Planned expansion area of an existing protected area?		NO
Existing offset area associated with a previous Environmental Authorisation?		NO
Buffer area of the SKA?		NO

If the answer to any of these questions was YES, a map indicating the affected area must be included in Appendix A.

6. CULTURAL/HISTORICAL FEATURES

Are there any signs of culturally or historically significant elements, as defined in section 2 of the National Heritage Resources Act, 1999, (Act No. 25 of 1999), including Archaeological or paleontological sites, on or close (within 20m) to the site? If YES, explain:

According to the findings of the Archaeological Assessment, the heritage features that were found on-site include ruin of farm trough, single Stone Age Flake (Quartizite) and an unearthed block of calcrete, which contained an embedded Earlier Stone Age (Acheulean) biface.

If uncertain, conduct a specialist investigation by a recognised specialist in the field (archaeology or palaeontology) to establish whether there is such a feature(s) present on or close to the site. Briefly explain the findings of the specialist:

According to the findings of the Archaeological Assessment, the heritage features that were found on-site include ruin of farm trough, single Stone Age Flake (Quartizite) and an unearthed block of calcrete, which contained an embedded Earlier Stone Age (Acheulean) biface. However, the development may go ahead as planned but the unearthed concrete block must be taken to McGregor Museum before the commencement of construction.

The findings of the Palaeontological Investigation, it is indicated that the proposed site is underlain by Platberg Group, which according to the Sahris Palaeontology Map, has a low palaeontological significance. Therefore, the Palaeontologist recommended that the no further Palaeontological Studies, ground truthing and/or specialist mitigation are required pending the discovery of newly discovered fossils. Therefore, the proposed development is deemed appropriate and feasible.

Will any building or structure older than 60 years be affected in any way? Is it necessary to apply for a permit in terms of the National Heritage Resources Act, 1999 (Act 25 of 1999)?

NO
NO

If YES, please provide proof that this permit application has been submitted to SAHRA or the relevant provincial authority.

The Archaeological and Palaeontological Impact Assessment Reports are attached hereto as **Appendix D1** and **D2** respectively.

7. SOCIO-ECONOMIC CHARACTER

a) Local Municipality

Please provide details on the socio-economic character of the local municipality in which the proposed site(s) are situated.

Level of unemployment:

Majority of Phokwane Local Municipality's population is uneconomically active or unemployed. In 2011 the unemployment rate stood at 37,6% as indicated in the IDP 2012/2017. In 2014, employment (formal and informal) was 11 183 people and unemployment were 9807 people. However, there has been a steadily increase in unemployment in the area and this can be attributed to the layoffs in the agricultural sector due to the drought conditions experienced. Employment in the area is mostly dominated by community services and trade as most of these are concentrated in Hartswater.

Economic profile of local municipality:

The main economic activities in the municipal area are agriculture (42%), private household (12%), wholesale and retail trade (11%) and community (10%). It is evident that agriculture is the main activity that is practiced because 70.4% of the municipal area is currently utilized for cultivation. Hartswater Central Business District (CBD) is the main commercial town with most of the activity being retail and it is regarded as the main commercial node for Phokwane as well as to nearby settlements in the North West Province.

Level of education:

According to the 2016 Community Surveys conducted by Stats SA, there is a decrease in children of school going age that don't attend school and there is an increase among those that matriculated.

However, there is a decline in higher education. There is no tertiary education facility found in Phokwane therefore for higher education the people must go to other areas but Jan Kempdorp, has 9 schools.

The number of people in the Phokwane Municipal area with no schooling is lower than the number of people with some schooling exposure for 2011. It is imperative to observe that more and more people over the past 10 years have been getting some form of level education. This will impact on the skills that are available in our municipal area.

b) Socio-economic value of the activity

What is the expected capital value of the activity on completion? What is the expected yearly income that will be generated by or as a result of the activity? Will the activity contribute to service infrastructure? Is the activity a public amenity? How many new employment opportunities will be created in the development and construction phase of the activity/ies? What is the expected value of the employment opportunities during the development and construction phase? What percentage of this will accrue to previously disadvantaged individuals? How many permanent new employment opportunities will be created during the operational phase of the activity? What is the expected current value of the employment opportunities during the first 10 years?

'	What percentage of this will accrue to previously disadvantaged individuals?
_	DIODIVEDOITY

BIODIVERSITY

Please note: The Department may request specialist input/studies depending on the nature of the biodiversity occurring on the site and potential impact(s) of the proposed activity/ies. To assist with the identification of the biodiversity occurring on site and the ecosystem status consult http://bgis.sanbi.org or BGIShelp@sanbi.org. Information is also available on compact disc (cd) from the Biodiversity-GIS Unit, Ph (021) 799 8698. This information may be updated from time to time and it is the applicant/ EAP's responsibility to ensure that the latest version is used. A map of the relevant biodiversity information (including an indication of the habitat conditions as per (b) below) and must be provided as an overlay map to the property/site plan as Appendix D to this report.

a) Indicate the applicable biodiversity planning categories of all areas on site and indicate the reason(s) provided in the biodiversity plan for the selection of the specific area as part of the specific category)

Systematic Biodiversity Planning Category			Category	If CBA or ESA, indicate the reason(s) for its selection in biodiversity plan
Critical Biodiversity Area (CBA)	Ecological Support Area (ESA)	Other Natural Area (ONA)	No Natural Area Remaining (NNR)	The entire assessment area could potentially be viewed as forming part of an ecological corridor towards the formally protected area buffer zone, located directly to the west of the assessment area, which is categorised as a Critical Biodiversity Area two (CBA 2). The area forms part of the buffer zone surrounding the formally protected Ganspan Waterfowl Nature Reserve, which is located approximately 5 km west of the assessment area.

b) Indicate and describe the habitat condition on site

Habitat Condition	Percentage of habitat condition class (adding up to 100%)	Description and additional Comments and Observations (including additional insight into condition, e.g. poor land management practises, presence of quarries, grazing, harvesting regimes etc).
Natural	%	N/A
Near Natural (includes areas with low to moderate level of alien invasive plants)	100%	The area is moderately disturbed and degraded state and due to its location, i.e. in proximity of the residential development and agricultural land it is subjected to historic anthropogenic disturbances, e.g. earthmoving activities, grazing, illegal dumping of waste and builder's rubble, overhead transmission line and footpaths traversing the area. As a result, natural habitat and biota is moderately transformed.
Degraded (includes areas heavily invaded by alien plants)	%	N/A
Transformed (includes cultivation, dams, urban, plantation, roads, etc)	%	N/A

c) Complete the table to indicate:

- (i) the type of vegetation, including its ecosystem status, present on the site; and
- (ii) whether an aquatic ecosystem is present on site.

Terrestrial Ecosystems		Aquatic Ecos	ystems	
Ecosystem threat	Critical	Wetland (including rivers,		
status as per the National	Endangered	depressions, channelled and unchanneled wetlands, flats,	Estuary	Coastline
Environmental	Vulnerable	seeps pans, and artificial	Estuary	Coasimie
Management:		wetlands)		

Terrestrial Ecos	ystems		Aquatic Ecos	ystems	5	
Biodiversity Act (Act No. 10 of 2004)	Least Threatened	NO			NO	NO

 Please provide a description of the vegetation type and/or aquatic ecosystem present on site, including any important biodiversity features/information identified on site (e.g. threatened species and special habitats)

The entire assessment area falls within the Kimberley Thornveld vegetation type (SVk 4), which is classified as least threatened (SANBI, 2006). The Present Ecological State is Class C as it is moderately modified. There are Nationally protected tree species, *Vachelllia erioloba*, provincially protected species, clumps of *Aloe grandidentata*, individuals of the Provincially specially protected *Harpagophytum procumbens* and *Pergularia daemia*, and *Riocreuxia torulosa* occurring onsite. Some of the sections are subjected to bush encroachment and there is also presence of legally declared invasive of Category 3, Categorym1b) and undesired species and the overgrazed grass layer.

The Ecological Impact Assessment Report is attached hereto as **Appendix D2**.

SECTION C: PUBLIC PARTICIPATION

1. ADVERTISEMENT AND NOTICE

Publication name	Diamond Fields Advertiser	
Date published	30 th May 2019	
Site notice position	Latitude	Longitude
	27°55'38.90"S	24°50'1.18"E
Date placed	30 th May 2019	

Include proof of the placement of the relevant advertisements and notices in Appendix E1.

Proof of placement of the advert in the local newspaper, on-site notice and posters at prominent places is attached hereto as Appendix E1.

2. DETERMINATION OF APPROPRIATE MEASURES

Provide details of the measures taken to include all potential I&APs as required by Regulation 41(2)(e) and 41(6) of GN 733.

Pamphlets were distributed to the neighbouring residents and some were left at the municipal office. Posters were placed at the notice board of the municipality and library. Photographs of the posters placed at prominent places are included in Appendix E1.

Key stakeholders (other than organs of state) identified in terms of Regulation 41(2)(b) of GN 733

Title, Name and Surname	Affiliation/ key stakeholde	r Contact details (tel number or
	status	e-mail address)
Councillor Chwarisang	Ward 8 Councillor	065 526 7715
Mr. Anton Howarth	Registered I&AP	082 948 2331
MI. Aliton Howartii	Registered t&AP	ahowarth@lantic.net
Mr. W.R. Tintinger	Registered I&AP	nkfd@mweb.co.za/
		rtintinger@gmail.com
Mr. Hugo Van Wyk	Vaalharts Water	082 524 8618
Mr. Hugo Van Wyk	vaaiilaits vvatei	hugo@vhwater.co.za

Include proof that the key stakeholder received written notification of the proposed activities as Appendix E2. This proof may include any of the following:

- e-mail delivery reports;
- registered mail receipts;
- courier waybills;
- signed acknowledgements of receipt; and/or
- or any other proof as agreed upon by the competent authority.

There are no proof identified key stakeholders received notification, but the Draft Basic Assessment will be couriered to all the stakeholders and the courier waybills will be attached.

3. ISSUES RAISED BY INTERESTED AND AFFECTED PARTIES

Summary of main issues raised by I&APs	Summary of response from EAP
Who will pay for the provision of bulk services	The infill development has been budgeted for the
because Phokwane is under administration?	2020/2021 Financial Year.
How will the residents be stopped from invading	Informing the municipality immediately there is
the proposed site?	any activities associated with land grabbing. A
	board will be placed by the municipality to notify
	illegal occupation of the proposed site is
	prohibited.
How will the local community be informed when	It will be done through the ward councillor and he
construction is about to start and recruited?	will be notified timeously once the construction
	phase is about to commence.

4. COMMENTS AND RESPONSE REPORT

The practitioner must record all comments received from I&APs and respond to each comment before the Draft BAR is submitted. The comments and responses must be captured in a comments and response report as prescribed in the EIA regulations and be attached to the Final BAR as Appendix E3.

The recorded Comments and Responses is attached hereto as Appendix E3.

5. AUTHORITY PARTICIPATION

Authorities and organs of state identified as key stakeholders:

Authority/Organ	Contact	Tel No	Fax No	e-mail	Postal
of State	person (Title,				address
	Name and				
	Surname)				
DENC	Ms. Dorien			DWerth@ncpg.gov.za	Private
	Werth	053	053		Bag
		807	807		X6102
		7300	7328		Kimberley
					8300
Department of	Mr. Philani			msimangop@dws.gov.za	Private
Water and	Msimango	053	053		Bag
Sanitation	Ms. Lerato	836	831	mokhoantlel@dws.gov.za	X6101
	Mokhoantle	7649	4534		Kimberley
					8300
Department of	Ms. Jacoline	054	-	jacolinema@daff.gov.za	P.O. Box
Agriculture,	Mans	338			2782
Forestry and		5909			Upington
Fisheries					8801
Eskom	Ms. Andrea van	053	053	vgenseal@eskom.co.za	
	Gensen	830	831		
		5911	2641		

Include proof that the Authorities and Organs of State received written notification of the proposed activities as appendix E4.

In the case of renewable energy projects, Eskom and the SKA Project Office must be included in the list of Organs of State.

There are no proof of received notifications sent to Authorities and Organs of State, but the Draft Basic Assessment will be couriered to all the stakeholders and the courier waybills will be attached in the Final BAR.

6. CONSULTATION WITH OTHER STAKEHOLDERS

Note that, for any activities (linear or other) where deviation from the public participation requirements may be appropriate, the person conducting the public participation process may deviate from the requirements of that sub-regulation to the extent and in the manner as may be agreed to by the competent authority.

Proof of any such agreement must be provided, where applicable. Application for any deviation from the regulations relating to the public participation process must be submitted prior to the commencement of the public participation process.

No deviation on the requirements of the Public Participation Process.

A list of registered I&APs must be included as appendix E5.

A list of registered I&APs is attached hereto as Appendix E5.

DRAFT BASIC ASSESSMENT REPORT

Copies of any correspondence and minutes of any meetings held must be included in Appendix E6.

Copies of Correspondences and Minutes of a Focus Group Meeting is attached hereto as Appendix E6.

SECTION D: IMPACT ASSESSMENT

The assessment of impacts must adhere to the minimum requirements in the EIA Regulations, 2014 and should take applicable official guidelines into account. The issues raised by interested and affected parties should also be addressed in the assessment of impacts.

1. IMPACTS THAT MAY RESULT FROM THE PLANNING AND DESIGN, CONSTRUCTION, OPERATIONAL, DECOMMISSIONING AND CLOSURE PHASES AS WELL AS PROPOSED MANAGEMENT OF IDENTIFIED IMPACTS AND PROPOSED MITIGATION MEASURES

Provide a summary and anticipated significance of the potential direct, indirect and cumulative impacts that are likely to occur as a result of the planning and design phase, construction phase, operational phase, decommissioning and closure phase, including impacts relating to the choice of site/activity/technology alternatives as well as the mitigation measures that may eliminate or reduce the potential impacts listed. This impact assessment must be applied to all the identified alternatives to the activities identified in Section A (2) of this report.

Activity	Impact summary	Significance	Proposed mitigation
Alternative 1 (preferred alternative)			
Socio-	Direct impacts:	Medium	See Appendix F

A complete impact assessment in terms of Regulation 19(3) of GN 733 must be included as Appendix F.

 $\ensuremath{\mathsf{A}}$ complete Impact Assessment is attached hereto as Appendix F.

2. ENVIRONMENTAL IMPACT STATEMENT

Taking the assessment of potential impacts into account, please provide an environmental impact statement that summarises the impact that the proposed activity and its alternatives may have on the environment <u>after</u> the management and mitigation of impacts have been taken into account, with specific reference to types of impacts, duration of impacts, likelihood of potential impacts actually occurring and the significance of impacts.

Alternative A (preferred alternative)

The report has assessed the potential impacts and provided mitigation measures to ensure that the impact on the receiving environment is avoided or minimal. The identified positive impact is creation of job opportunities, which should benefit the local community as a management measure, so that they are able to improve the local economy, although the impact its temporary, the general workers and subcontractors will have a new skill and an improvement in their CIBD level. The magnitude is of a medium significance because it will only extend to the Jan Kempdorp. Most of the negative impacts although unavoidable, they are short term as they occur during the construction phase, their extent is to the site or local and they are reversible. These impacts are considered to have an active effect especially during construction phase; these impacts include the effects on air quality, noise nuisance, spread of alien invasive species management of waste and traffic flow impact due to construction-related activities. However, their significance may be reduced from medium, very high or high to insignificant as the damage on the environment will be very limited and this could be attained with the implementation of the outlined mitigation measures and the adherence to the Environmental Management Programme. The other negative impact is associated with destruction or damage of the Nationally and Provincially protected species, which occurs on the proposed site but the impact can be reduced by incorporating significantly old species into the layout and removal of some of the species for relocation (search and rescue), then the impact will be reduced from very high to low with adoption of the mitigation. With mitigation, the identified Archaeological artefact on site will not be damaged by the construction and will be put for better use as it will be displayed at the museum, therefore the impact is insignificant and the extent will be from footprint to provincial as it will be able to be viewed by the most people at McGregor Museum within the Northern Cape area. The permanent impact is the transformation of public open spaces but with mitigation, whereby the ecological corridor is maintained and one of the identified protected Vachellia erioloba tree is incorporated in the layout design, there is no absolute loss and the significance is low. There ecological corridor will ensure continued ecological connectivity of remaining fragmented undeveloped areas towards the formally protected area buffer zone as well as provide for the potential movement of fauna and flora through these areas.

The neighbouring residents are prone to be affected by the impacts related to the construction activities, but these impacts are short-term and will cease when the site is fully operational, however, to reduce the significance, there should be careful planning of construction activities by the municipality, developer and contractor, and Environmental Awareness Training must be implemented prior to any construction activities, and there should be on-site management and implementation of outlined mitigation measures and adherence to the compiled Environmental Management Plan. No farming activities will be impacted by the development, considering it is the dominant economical sector in the municipality and uncontrolled overgrazing on site will stop. Development of the site will not compromise ecological connectivity with the surrounding natural areas when the total vegetation unit is taken into consideration. The site earmarked for the expansion is well located and easily accessible as there are existing roads that will be used to access the area. The development will also curb urban sprawl and meet the strategic environmental priority in urban areas as contained in the Environmental Management Framework.

Alternative B

Alternative C

No-go alternative (compulsory)

The urban settlement adjacent to the proposed development is filled with residents, in conjunction with being fully occupied, there is a growing number of residents that will need the proposed development to come to fruition in order to meet their housing needs. By opting out of constructing the residential development, it may lead to a multitude of industries not being able to retain their labour because of the lack of housing opportunity for the middle class in Jan Kempdorp. If the infill development, doesn't go ahead as planned, then the proposed site will be subjected to the anthropogenic activities on site and these will have more impact on the environment because they aren't managed/controlled. There is also a high probability of nationally and provincially protected species being damaged and/or removed without obtaining a permit from the competent authority.

SECTION E. RECOMMENDATION OF PRACTITIONER

Is the information contained in this report and the documentation attached hereto
sufficient to make a decision in respect of the activity applied for (in the view of
the environmental assessment practitioner)?

If "NO", indicate the aspects that should be assessed further as part of a Scoping and EIA process before a decision can be made (list the aspects that require further assessment).

	•	•	•	•
N/A				

If "YES", please list any recommended conditions, including mitigation measures that should be considered for inclusion in any authorisation that may be granted by the competent authority in respect of the application.

ECO should be appointed for monthly environmental compliance monitoring during the construction phase of the provision of bulk services.

The EMPr must form part of the tender documentation for construction activities during provision of services and approval of the building plans so that all developers can adhere to it during the construction phase.

An Ecologist must be appointed to obtain a Provincial Flora Permit for the removal of a minimum 5 clumps of the species *Aloe grandidentata* prior to the commencement of any vegetation clearance and the adequately relocated to a suitable and similar area in the area. A tree removal licence should also be obtained for the removal of the protected *Vachellia erioloba* species that couldn't be incorporated in the layout, prior to commencement of construction activities, if possible, the trees may be replanted on the open spaces' units.

The surrounding residents be informed prior to the commencement of construction activities.

Given the above, it is recommended that the proposed development should go ahead as planned.

Is an EMPr attached?

The EMPr must be attached as Appendix G.

The details of the EAP who compiled the BAR and the expertise of the EAP to perform the Basic Assessment process must be included as Appendix H.

Details of the EAP (CV) are attached hereto as Appendix H.

If any specialist reports were used during the compilation of this BAR, please attach the declaration of interest for each specialist in Appendix I.

Declaration of Specialists are attached hereto as Appendix I.

Any other information relevant to this application and not previously included must be attached in Appendix J.

The additional information is Copy of the Zoning Certificate of the proposed site and the Map showing the Jan Kempdorp urban edge attached hereto as Appendix J.
