Dear Stakeholder

ENVIRONMENTAL BASIC ASSESSMENT AND PUBLIC PARTICIPATION PROCESS
KRUISVALLEI HYDROELECTRIC POWER GENERATION SCHEME, FREE STATE PROVINCE

NOTICE OF ENVIRONMENTAL BASIC ASSESSMENT PROCESS

Zevobuzz (Pty) Ltd propose to develop a hydroelectric power generation scheme in the Ash River in the Free State Province. The scheme comprises the previously authorised Lower Kruisvallei (LK) scheme and the previously authorised Middle Kruisvallei (MK) scheme. The project is located on the farm Kruisvallei 190 and farm Middelvallei 130 (referred to as the project site) situated within the Dihlabeng Local Municipality and within the greater Thabo Mofutsanyane District Municipality approximately 13km north west of Clarens. The project will be known as the Kruisvallei Hydroelectric Power Generation Scheme.

Two separate Environmental Impact Assessment (EIA) processes were previously undertaken for the LK and MK schemes. Environmental Authorisation (EA) for LK (DEA reference no. 12/12/20/1876) and MK (DEA reference no. 12/12/20/1875) were issued under the 2006 EIA Regulations in September 2011. Both projects were bid as one single project in the Department of Energy’s Renewable Energy Independent Power Producer Procurement (REIPPPP) Programme in Round 4 and the project was selected as a Preferred Bidder. Through the modelling and analyses undertaken in the final design for the scheme, a number of changes have been identified as being required for the project. These changes would result in changes to the currently authorised projects. After consultation with the competent authority, the Department of Environmental Affairs (DEA), it was confirmed that a new Basic Assessment (BA) process will be undertaken for the scheme, which will consist of all infrastructure for LK and MK, on agreement that the DEA would not lapse the previous EAs until a positive decision has been issued on this current application. This new application will include all infrastructure associated with the Kruisvallei Hydroelectric Power Generation Scheme, including infrastructure previously authorised.
The proposed project will involve the construction of the Lower Kruisvallei (LK) Scheme which will have a development footprint of approximately 8.98ha and the Middle Kruisvallei (MK) which will have a development footprint of approximately 20.4ha, resulting in a total generating capacity of 4.7MW. Electricity generated by the project will feed into and supplement the national electricity grid. The proposed project will include the construction of a new 22kV overhead power line ~16km in length to connect the project to the existing Node Substation. The 22kV power line proposed will not trigger a listed activity within the EIA Regulations of 2014 as amended, and therefore the development of the power line for the Kruisvallei Hydroelectric Power Generation Scheme does not form part of this BA process and application for Environmental Authorisation.

BASIC ASSESSMENT PROCESS

In terms of the Environmental Impact Assessment (EIA) Regulations published in terms of Section 24(5) of the National Environmental Management Act (NEMA, Act No. 107 of 1998), Zevobuzz (Pty) Ltd requires authorisation from the Department of Environmental Affairs (DEA), as the Competent Authority (CA), in consultation with the Free State Department of Economic, Small Business Development, Tourism and Environmental Affairs (DESTEA) for the undertaking of the proposed project. In terms of Sections 24 and 24D of the National Environmental Management Act (No 107 of 1998), as read with the amended EIA Regulations of GN R 326, R327, GN R325 and GN R324, a Basic Assessment process is required to be undertaken for the proposed project.

Savannah Environmental (Pty) Ltd has been appointed as the independent environmental consultant, to undertake the required Basic Assessment to identify and assess all the potential environmental impacts associated with the proposed project and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr). The public participation process, which forms part of the overall Basic Assessment process, will also be undertaken by Savannah Environmental.

The department and/or the organisation which you represent has been identified as a commenting authority for the proposed project. In this regard, please can you provide us with the name and contact details of the relevant contact person at your department who we would liaise with regarding this project. By registering on the project database, you will receive all information relating to the project and will be provided with an opportunity to provide comment and input into the BA process.

Please do not hesitate to contact us should you require additional information and/or clarification regarding the proposed project. Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind regards

Ms Gabriele Stein
Public Participation and Social Consultant

Subject: ACCESS ROADS AND WATERCOURSE CROSSINGS WITHIN THE AUTHORISED IZIDULI EMOYENI WIND ENERGY FACILITY, EASTERN CAPE PROVINCE - NOTICE OF ENVIRONMENTAL BASIC ASSESSMENT PROCESS

Body: Dear Stakeholder,

Windlab Developments South Africa (Pty) Ltd (Windlab) received an Environmental Authorisation (EA) for the proposed Iziduli Emoyeni Wind Energy Facility (previously known as Amakhala Emoyeni Phase 4) on 28 August 2012 from the National Department of Environmental Affairs (DEA Ref: 12/12/20/1754/4). The proposed Wind Energy Facility (WEF) was previously part of the greater project concept known as the Amakhala Emoyeni Wind Energy Facility. In order to align with the Renewable Energy Independent Power Producer Procurement Programme requirements restricting a project size to 140MW), the project was split into four phases.

A previous basic assessment application was submitted by Savannah Environmental Consultants in May 2015. The application was issued an environmental authorisation in July 2015 (Eastern Cape DEDEAT ref: EC02/C/LN183/FM/75-2014), however the construction did not commence within the 24 months from the date of issue and the EA subsequently lapsed. As such, Savannah Environmental (Pty) Ltd has been appointed by Emoyeni Wind Farm Renewable Energy (Pty) Ltd to undertake the required Basic Assessment to identify and assess all the potential environmental impacts associated with the proposed project and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr) in terms of the EIA Regulations 2014 (as amended in April 2017).
Details of the relevant contact person at your organisation who we would liaise with for the project. By registering on the project database, you will receive all information relating to the project and will be provided with an opportunity to provide comment and input into the BA process.

Please do not hesitate to contact me if you require further details in this regard.

Kind regards,

Gabriele Stein

Dear Stakeholder

ENVIRONMENTAL BASIC ASSESSMENT AND
PUBLIC PARTICIPATION PROCESS
KRUISVALLEI HYDROELECTRIC POWER GENERATION SCHEME, FREE STATE PROVINCE

NOTICE OF ENVIRONMENTAL BASIC ASSESSMENT PROCESS

Zevobuzz (Pty) Ltd propose to develop a hydroelectric power generation scheme in the Ash River in the Free State Province. The scheme comprises the previously authorised Lower Kruisvallei (LK) scheme and the previously authorised Middle Kruisvallei (MK) scheme. The project is located on the farm Kruisvallei 190 and farm Middelvallei 130 (referred to as the project site) situated within the Dihlabeng Local Municipality and within the greater Thabo Mofutsanyane District Municipality, approximately 13km north west of Clarens. The project will be known as the Kruisvallei Hydroelectric Power Generation Scheme.

Two separate Environmental Impact Assessment (EIA) processes were previously undertaken for the LK and MK schemes. Environmental Authorisation (EA) for LK (DEA reference no. 12/12/20/1876) and MK (DEA reference no. 12/12/20/1875) were issued under the 2006 EIA Regulations in September 2011. Both projects were bid as one single project in the Department of Energy’s Renewable Energy Independent Power Producer Procurement (REIPPP) Programme in Round 4 and the project was selected as a Preferred Bidder. Through the modelling and analyses undertaken in the final design for the scheme, a number of changes have been identified as being required for the project. These changes would result in changes to the currently authorised projects. After consultation with the competent authority, the Department of Environmental Affairs (DEA), it was confirmed that a new Basic Assessment (BA) process will be undertaken for the scheme, which will consist of all infrastructure for LK and MK, on agreement that the DEA would not lapse the previous EAs until a positive decision has been issued on this current application. This new application will include all infrastructure associated with the Kruisvallei Hydroelectric Power Generation Scheme, including infrastructure previously authorised.

The proposed project will involve the construction of the Lower Kruisvallei (LK) Scheme which will have a development footprint of approximately 8.98ha and the Middle Kruisvallei (MK) which will have a development footprint of approximately 20.4ha, resulting in a total generating capacity of 4.7MW. Electricity generated by the project will feed into and supplement the national electricity grid. The proposed project will include the construction of a new 22kV overhead power line (including an internal power line) ~16km in length to connect the project to the existing Node Substation. The proposed 22kV power line will not trigger a listed activity within the EIA Regulations of 2014 as amended, and therefore the development of the power line for the Kruisvallei Hydroelectric Power Generation Scheme does not form part of this BA process and application for Environmental Authorisation.
BASIC ASSESSMENT PROCESS

The construction of the Kruisvallei Hydroelectric Power Generation Scheme requires Environmental Authorisation (EA) obtained from the Department of Environmental Affairs (DEA) as the Competent Authority (CA), in accordance with the National Environmental Management Act (No. 107 of 1998) (NEMA) and the provisions of the 2014 Environmental Impact Assessment (EIA) Regulations as amended on 07 April 2017, published in GNR 324, GNR 325 and GNR 327, in consultation with the Free State Department of Economic, Small Business Development, Tourism and Environmental Affairs (DESTEA).

In support of an application for environmental authorisation for the project, comprehensive, independent environmental studies must be undertaken in accordance with the EIA Regulations of December 2014, as amended. Savannah Environmental (Pty) Ltd has been appointed as the independent Environmental Consultant, responsible for undertaking the required Basic Assessment process to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr).

AVAILABILITY OF THE BASIC ASSESSMENT (BA) REPORT

A Basic Assessment (BA) Report for the proposed project has been prepared by Savannah Environmental and is available for a 30-day review period from 07 March 2018 – 10 April 2018. You are invited to view the report at the Bethlehem Public Library (Cnr. of President Boshoff and Cambridge Street, Bethlehem). The report is also available for download at www.savannahsa.com. Please note that a password is required to access the downloads page. The password can be requested from Rozanne Els (rozanne@savannahsa.com).

I&APs are advised to submit any written comments on this report to Savannah Environmental on or before 10 April 2018. Comments must be made as written submission to the contact person below via fax, post or email.

Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind regards

Gabriele Stein
Public Participation and Social Consultant

Krusivallei Hydroelectric Power Generation Scheme

Krusivallei Hydroelectric Power Generation Scheme

Project Name: Krusivallei Hydroelectric Power Generation Scheme

Applicant: Zebuzz (Pty) Ltd

Proposed Activity: The construction of the Krusivallei Hydroelectric Power Generation Scheme within the Ask River will comprise of the Lower Krusivallei Scheme with a development footprint of ~89ha and the Middle Krusivallei Scheme with a development footprint of ~104ha. The Scheme will have a total generating capacity of 4.7 MW and will consist of the following infrastructure:

- Canal ~350m in length at the Lower Krusivallei Scheme, consisting of an inlet sill, headrace canal, powerhouse and tailrace canal.
- Canal ~445m in length at the Middle Krusivallei Scheme, consisting of a headrace canal, powerhouse and tailrace canal.
- Associated infrastructure including access roads, temporary coffer dam, laydown area and batching plant.
- A 22kV power line to connect the Krusivallei Hydroelectric Power Generation Scheme to the national grid (i.e. existing Eskom Node Substation) for the evacuation of the generated electricity forms part of the overall infrastructure, but does not require environmental authorisation.

Location: The development will take place on the Ash River and will be located within Farm Krusivallei 190 and Farm Middelvlei 130 in the Dhiaberg Local Municipality and within the greater Thabo Mhoutshanye District Municipality, Free State Province.

Basic Assessment Process: In terms of Sections 14 and 24D of NEMA as read with the EIA Regulations 2014 of G2R326, a Basic Assessment Process is required to be undertaken in support of an application for Environmental Authorisation for the proposed project. An application for Environmental Authorisation for the Krusivallei Hydroelectric Power Generation Scheme will be lodged with the National Department of Environmental Affairs (DEA), as the competent authority. Savannah Environmental is undertaking the required environmental impact assessment and public participation process.

Basic Assessment Report available for Review: A Basic Assessment Report is available for review and comment. The report is available at the Bethlehem Public Library (Cnr. of President Boshoff & Cambridge Street, Bethlehem) from 02 March 2018 – 05 April 2018. The report is also available for download on www.savannahsa.com. The due date for written comments is 05 April 2018.

To obtain further information and register on the project database, please submit your name, contact information and interest in the project to:

**Kruisvallei Hydroelectric Power Generation Scheme**

**Status:** SUBMITTED

**Heritage Authority(s):** SAHRA, HFS

**Case Type:** Section 33 (6) - Statutory Comment Required

**Development Type:** Electrical Infrastructure

**Proposed Description:**

The construction of the Kruisvallei Hydroelectric Power Generation Scheme within the Ash River will comprise of the Lower Kruisvallei Scheme with a development footprint of ~9.0 ha and the Middle Kruisvallei Scheme with a development footprint of ~20.4 ha. The Scheme will have a total generating capacity of 4.7 MW and will consist of the following infrastructure:

- **Canal:** 500 m in length at the Lower Kruisvallei Scheme, consisting of an inlet sill, headrace canal, powerhouse and tailrace canal.
- **Canal:** 446 m in length at the Middle Kruisvallei Scheme, consisting of a headrace canal, powerhouse and tailrace canal. Associated infrastructure including access roads, temporary coffer dam, laydown areas and batching plant. A 22kV power line to connect the Kruisvallei Hydroelectric Power Generation Scheme to the national grid (i.e., existing Eskom Node Substation) for the evacuation of the generated electricity forms part of the overall infrastructure, but does not require environmental authorisation.

Dear Mashudu Marubini

ENVIRONMENTAL BASIC ASSESSMENT AND
PUBLIC PARTICIPATION PROCESS
KRUISVALLEI HYDROELECTRIC POWER GENERATION SCHEME, FREE STATE PROVINCE

NOTICE OF ENVIRONMENTAL BASIC ASSESSMENT PROCESS

Zevobuzz (Pty) Ltd propose to develop a hydroelectric power generation scheme in the Ash River in the Free State Province. The scheme comprises the previously authorised Lower Kruisvallei (LK) scheme and the previously authorised Middle Kruisvallei (MK) scheme. The project is located on the farm Kruisvallei 190 and farm Middelvallei 130 (referred to as the project site) situated within the Dihlabeng Local Municipality and within the greater Thabo Mofutsanyane District Municipality, approximately 13km north west of Clarens. The project will be known as the Kruisvallei Hydroelectric Power Generation Scheme.

Two separate Environmental Impact Assessment (EIA) processes were previously undertaken for the LK and MK schemes. Environmental Authorisation (EA) for LK (DEA reference no. 12/12/20/1876) and MK (DEA reference no. 12/12/20/1875) were issued under the 2006 EIA Regulations in September 2011. Both projects were bid as one single project in the Department of Energy's Renewable Energy Independent Power Producer Procurement (REIPPPP) Programme in Round 4 and the project was selected as a Preferred Bidder. Through the modelling and analyses undertaken in the final design for the scheme, a number of changes have been identified as being required for the project. These changes would result in changes to the currently authorised projects. After consultation with the competent authority, the Department of Environmental Affairs (DEA), it was confirmed that a new Basic Assessment (BA) process will be undertaken for the scheme, which will consist of all infrastructure for LK and MK, on agreement that the DEA would not lapse the previous EAs until a positive decision has been issued on this current application. This new application will include all infrastructure associated with the Kruisvallei Hydroelectric Power Generation Scheme, including infrastructure previously authorised.

The proposed project will involve the construction of the Lower Kruisvallei (LK) Scheme which will have a development footprint of approximately 8.98ha and the Middle Kruisvallei (MK) which will have a development footprint of approximately 20.4ha, resulting in a total generating capacity of 4.7MW. Electricity generated by the project will feed into and supplement the national electricity grid.
The proposed project will include the construction of a new 22kV overhead power line (including an internal power line) ~16km in length to connect the project to the existing Node Substation. The proposed 22kV power line will not trigger a listed activity within the EIA Regulations of 2014 as amended, and therefore the development of the power line for the Kruisvallei Hydroelectric Power Generation Scheme does not form part of this BA process and application for Environmental Authorisation.

**BASIC ASSESSMENT PROCESS**

The construction of the Kruisvallei Hydroelectric Power Generation Scheme requires Environmental Authorisation (EA) obtained from the Department of Environmental Affairs (DEA) as the Competent Authority (CA), in accordance with the National Environmental Management Act (No. 107 of 1998) (NEMA) and the provisions of the 2014 Environmental Impact Assessment (EIA) Regulations as amended on 07 April 2017, published in GNR 324, GNR 325 and GNR 327, in consultation with the Free State Department of Economic, Small Business Development, Tourism and Environmental Affairs (DESTEA).

In support of an application for environmental authorisation for the project, comprehensive, independent environmental studies must be undertaken in accordance with the EIA Regulations of December 2014, as amended. Savannah Environmental (Pty) Ltd has been appointed as the independent Environmental Consultant, responsible for undertaking the required Basic Assessment process to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr).

**AVAILABILITY OF THE BASIC ASSESSMENT (BA) REPORT**

A Basic Assessment (BA) Report for the proposed project has been prepared by Savannah Environmental and is available for a 30-day review period from 07 March 2018 – 10 April 2018. You are invited to view the report at the Bethlehem Public Library (Cnr. of President Boshoff and Cambridge Street, Bethlehem). The report is also available for download at www.savannahsa.com.

I&APs are advised to submit any written comments on this report to Savannah Environmental on or before 10 April 2018. Comments must be made as written submission to the contact person below via fax, post or email.

Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind regards

Gabriele Stein
Public Participation and Social Consultant

ENVIRONMENTAL BASIC ASSESSMENT AND PUBLIC PARTICIPATION PROCESS
KRUISVALLEI HYDROELECTRIC POWER GENERATION SCHEME, FREE STATE PROVINCE

NOTICE OF ENVIRONMENTAL BASIC ASSESSMENT PROCESS

Zevobuzz (Pty) Ltd propose to develop a hydroelectric power generation scheme in the Ash River in the Free State Province. The scheme comprises the previously authorised Lower Kruisvallei (LK) scheme and the previously authorised Middle Kruisvallei (MK) scheme. The project is located on the farm Kruisvallei 190 and farm Middelvallei 130 (referred to as the project site) situated within the Dihlabeng Local Municipality and within the greater Thabo Mofutsanyane District Municipality, approximately 13km north west of Clarens. The project will be known as the Kruisvallei Hydroelectric Power Generation Scheme.

Two separate Environmental Impact Assessment (EIA) processes were previously undertaken for the LK and MK schemes. Environmental Authorisation (EA) for LK (DEA reference no. 12/12/20/1876) and MK (DEA reference no. 12/12/20/1875) were issued under the 2006 EIA Regulations in September 2011. Both projects were bid as one single project in the Department of Energy’s Renewable Energy Independent Power Producer Procurement (REIPPPP) Programme in Round 4 and the project was selected as a Preferred Bidder. Through the modelling and analyses undertaken in the final design for the scheme, a number of changes have been identified as being required for the project. These changes would result in changes to the currently authorised projects. After consultation with the competent authority, the Department of Environmental Affairs (DEA), it was confirmed that a new Basic Assessment (BA) process will be undertaken for the scheme, which will consist of all infrastructure for LK and MK, on agreement that the DEA would not lapse the previous EAs until a positive decision has been issued on this current application. This new application will include all infrastructure associated with the Kruisvallei Hydroelectric Power Generation Scheme, including infrastructure previously authorised.

The proposed project will involve the construction of the Lower Kruisvallei (LK) Scheme which will have a development footprint of approximately 8.98ha and the Middle Kruisvallei (MK) which will have a development footprint of approximately 20.4ha, resulting in a total generating capacity of 4.7MW. Electricity generated by the project will feed into and supplement the national electricity grid.
The proposed project will include the construction of a new 22kV overhead power line (including an internal power line) ~16km in length to connect the project to the existing Node Substation. The proposed 22kV power line will not trigger a listed activity within the EIA Regulations of 2014 as amended, and therefore the development of the power line for the Kruisvallei Hydroelectric Power Generation Scheme does not form part of this BA process and application for Environmental Authorisation.

BASIC ASSESSMENT PROCESS

The construction of the Kruisvallei Hydroelectric Power Generation Scheme requires Environmental Authorisation (EA) obtained from the Department of Environmental Affairs (DEA) as the Competent Authority (CA), in accordance with the National Environmental Management Act (No. 107 of 1998) (NEMA) and the provisions of the 2014 Environmental Impact Assessment (EIA) Regulations as amended on 07 April 2017, published in GNR 324, GNR 325 and GNR 327, in consultation with the Free State Department of Economic, Small Business Development, Tourism and Environmental Affairs (DESTEA).

In support of an application for environmental authorisation for the project, comprehensive, independent environmental studies must be undertaken in accordance with the EIA Regulations of December 2014, as amended. Savannah Environmental (Pty) Ltd has been appointed as the independent Environmental Consultant, responsible for undertaking the required Basic Assessment process to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr).

AVAILABILITY OF THE BASIC ASSESSMENT (BA) REPORT

A Basic Assessment (BA) Report for the proposed project has been prepared by Savannah Environmental and is available for a 30-day review period from 07 March 2018 – 10 April 2018. You are invited to view the report at the Bethlehem Public Library (Cnr. of President Boshoff and Cambridge Street, Bethlehem). The report is also available for download at www.savannahsa.com.

I&APs are advised to submit any written comments on this report to Savannah Environmental on or before 10 April 2018. Comments must be made as written submission to the contact person below via fax, post or email.

Our team welcomes your participation and looks forward to your involvement throughout this process.

After consultation with the competent authority, the Department of Environmental Affairs (DEA), it was confirmed that a new Basic Assessment (BA) process will be undertaken for the scheme, which will consist of all infrastructure for LK and MK, on agreement that the DEA would not lapse the previous EAs until a positive decision has been issued on this current application. This new application will include all infrastructure associated with the Kruisvallei Hydroelectric Power Generation Scheme, including infrastructure previously authorised.

The proposed project will involve the construction of the Lower Kruisvallei (LK) Scheme which will have a development footprint of approximately 8.98ha and the Middle Kruisvallei (MK) which will have a development footprint of approximately 20.4ha, resulting in a total generating capacity of 4.7MW. Electricity generated by the project will feed into and supplement the national electricity grid.
The proposed project will include the construction of a new 22kV overhead power line (including an internal power line) ~16km in length to connect the project to the existing Node Substation. The proposed 22kV power line will not trigger a listed activity within the EIA Regulations of 2014 as amended, and therefore the development of the power line for the Kruisvallei Hydroelectric Power Generation Scheme does not form part of this BA process and application for Environmental Authorisation.

**BASIC ASSESSMENT PROCESS**

The construction of the Kruisvallei Hydroelectric Power Generation Scheme requires Environmental Authorisation (EA) obtained from the Department of Environmental Affairs (DEA) as the Competent Authority (CA), in accordance with the National Environmental Management Act (No. 107 of 1998) (NEMA) and the provisions of the 2014 Environmental Impact Assessment (EIA) Regulations as amended on 07 April 2017, published in GNR 324, GNR 325 and GNR 327, in consultation with the Free State Department of Economic, Small Business Development, Tourism and Environmental Affairs (DESTEA).

In support of an application for environmental authorisation for the project, comprehensive, independent environmental studies must be undertaken in accordance with the EIA Regulations of December 2014, as amended. Savannah Environmental (Pty) Ltd has been appointed as the independent Environmental Consultant, responsible for undertaking the required Basic Assessment process to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr).

**AVAILABILITY OF THE BASIC ASSESSMENT (BA) REPORT**

A Basic Assessment (BA) Report for the proposed project has been prepared by Savannah Environmental and is available for a 30-day review period from 07 March 2018 – 10 April 2018. You are invited to view the report at the Bethlehem Public Library (Cnr. of President Boshoff and Cambridge Street, Bethlehem). The report is also available for download at www.savannahsa.com.

I&APs are advised to submit any written comments on this report to Savannah Environmental on or before 10 April 2018. Comments must be made as written submission to the contact person below via fax, post or email.

Our team welcomes your participation and looks forward to your involvement throughout this process.

Kind regards

Dear W.A Naude

ENVIRONMENTAL BASIC ASSESSMENT AND
PUBLIC PARTICIPATION PROCESS
KRUISVALLEI HYDROELECTRIC POWER GENERATION SCHEME, FREE STATE PROVINCE

NOTICE OF ENVIRONMENTAL BASIC ASSESSMENT PROCESS

Zevobuzz (Pty) Ltd propose to develop a hydroelectric power generation scheme in the Ash River in the Free State Province. The scheme comprises the previously authorised Lower Kruisvallei (LK) scheme and the previously authorised Middle Kruisvallei (MK) scheme. The project is located on the farm Kruisvallei 190 and farm Middelvallei 130 (referred to as the project site) situated within the Dihlabeng Local Municipality and within the greater Thabo Mofutsanyane District Municipality, approximately 13km north west of Clarens. The project will be known as the Kruisvallei Hydroelectric Power Generation Scheme.

Two separate Environmental Impact Assessment (EIA) processes were previously undertaken for the LK and MK schemes. Environmental Authorisation (EA) for LK (DEA reference no. 12/12/20/1876) and MK (DEA reference no. 12/12/20/1875) were issued under the 2006 EIA Regulations in September 2011. Both projects were bid as one single project in the Department of Energy’s Renewable Energy Independent Power Producer Procurement (REIPPPP) Programme in Round 4 and the project was selected as a Preferred Bidder. Through the modelling and analyses undertaken in the final design for the scheme, a number of changes have been identified as being required for the project. These changes would result in changes to the currently authorised projects. After consultation with the competent authority, the Department of Environmental Affairs (DEA), it was confirmed that a new Basic Assessment (BA) process will be undertaken for the scheme, which will consist of all infrastructure for LK and MK, on agreement that the DEA would not lapse the previous EAs until a positive decision has been issued on this current application. This new application will include all infrastructure associated with the Kruisvallei Hydroelectric Power Generation Scheme, including infrastructure previously authorised.

The proposed project will involve the construction of the Lower Kruisvallei (LK) Scheme which will have a development footprint of approximately 8.98ha and the Middle Kruisvallei (MK) which will have a development footprint of approximately 20.4ha, resulting in a total generating capacity of 4.7MW. Electricity generated by the project will feed into and supplement the national electricity grid.
The proposed project will include the construction of a new 22kV overhead power line (including an internal power line) ~16km in length to connect the project to the existing Node Substation. The proposed 22kV power line will not trigger a listed activity within the EIA Regulations of 2014 as amended, and therefore the development of the power line for the Kruisvallei Hydroelectric Power Generation Scheme does not form part of this BA process and application for Environmental Authorisation.

**BASIC ASSESSMENT PROCESS**

The construction of the Kruisvallei Hydroelectric Power Generation Scheme requires Environmental Authorisation (EA) obtained from the Department of Environmental Affairs (DEA) as the Competent Authority (CA), in accordance with the National Environmental Management Act (No. 107 of 1998) (NEMA) and the provisions of the 2014 Environmental Impact Assessment (EIA) Regulations as amended on 07 April 2017, published in GNR 324, GNR 325 and GNR 327, in consultation with the Free State Department of Economic, Small Business Development, Tourism and Environmental Affairs (DESTEA).

In support of an application for environmental authorisation for the project, comprehensive, independent environmental studies must be undertaken in accordance with the EIA Regulations of December 2014, as amended. Savannah Environmental (Pty) Ltd has been appointed as the independent Environmental Consultant, responsible for undertaking the required Basic Assessment process to identify and assess all potential environmental impacts associated with the project for the area as identified, and propose appropriate mitigation and management measures in an Environmental Management Programme (EMPr).

**AVAILABILITY OF THE BASIC ASSESSMENT (BA) REPORT**

A Basic Assessment (BA) Report for the proposed project has been prepared by Savannah Environmental and is available for a 30-day review period from 07 March 2018 – 10 April 2018. You are invited to view the report at the Bethlehem Public Library (Cnr. of President Boshoff and Cambridge Street, Bethlehem). The report is also available for download at www.savannahsa.com.

I&APs are advised to submit any written comments on this report to Savannah Environmental on or before 10 April 2018. Comments must be made as written submission to the contact person below via fax, post or email.

Our team welcomes your participation and looks forward to your involvement throughout this process.
